Jamaica Bay Y. C.

Thursday, Aug. 29.

THE Jamaica Bay Y. C. sailed a regatta on Aug. 29, the course being from a line between the club house flagstaff and a flag buoy anchored opposite, around the black buoy off Block House Point; thence around Broad Channel flag buoy. The larger classes sailed over three times and the smaller ones twice.

The start was from the gun, a separate start for each class. The wind was light from the south. The times were:

	Start.	Finish.	Corrected.
CLASS A—CABIN SLOOPS, 22 TO 30FT			
Marble Heart, G. S. Johnson	1 45 35	6 50 00	5 13 45
Phalarope, R. L. Brasher	1 36 15	6 43 00	5 06 45
CLASS C—CABIN CATBOATS, 24FT. AND OVER.			
Molly Bawn, F. M. Brown	1 45 38	7 06 00	5 20 22
Adelaide, Thos. Willis	1 45 38	Did not finish.	
Pathfinder, B. F. Daly	1 45 38	Did not finish.	
CLASS E—OPEN CATBOATS, 20 AND UNDER 24FT.			
Bennie B., C. E. Pearsall	1 50 45	Disabled.	
Lillie S., O. L. Schwencke	1 50 45	6 26 21	4 35 36
Leisure, Wm. Scheer	1 50 45	6 30 20	4 37 40
CLASS F—OPEN CATBOATS, 17 AND UNDER 20FT.			
Anita, J. E. O'Donohue	1 55 44	Did not finish.	
Lochinvar, J. F. Sabio	1 55 44	5 24 32	3 28 48
CLASS G—OPEN CATBOATS, UNDER 17FT.			
Vitesse, L. M. Pearsall	2 06 34	6 01 30	3 55 06

The winners were: Class A, Phalarope; class C, Molly Bawn; class E, Lillie S.; class F, Lochinvar; class G, Vitesse. A pennant was also awarded to Lochinvar for the best time over the course.

Larchmont Y. C.

LARCHMONT—LONG ISLAND SOUND.

Saturday, Aug. 31.

THE special races of the Larchmont Y. C. for the 34ft., 21ft. and cabin cat classes were sailed on Aug. 31 in a fresh south wind, the times being:

	Start.	1st Round.	Finish.	Elapsed.
SPECIAL 34FT. CLASS.				
Dragoon	12 22 58	2 23 42	4 23 08	4 00 10

Rifle Range and Gallery.

Revolver Shooting in England.

LONDON, Eng., Aug. 7.—At the North London Rifle Club to-day Mr. Winans made a highest possible score almost at once. This is his seventh made in competition this year—two at Bisley, one at the South London Rifle Club and four at this club. Scores to-day:

Twenty yards, stationary target:

Walter Winans	777777—42	A W Carter	655655—32
C Knapp	676676—38	Capt Earle	657345—30
Comber	477676—37	Capt Evans	554455—28
Luff	537766—34	Joyce	753346—28

At the South London Rifle Club on Aug. 1 Mr. Winans also made a highest possible score at 20yds. Several of the other competitors also improved their totals for the revolver championship of the club. Scores:

Twenty yards:

Walter Winans	777777—42	Clementi-Smith	767567—38
E Howe	766777—40	C Knapp	575657—35
Lieut Howard	777757—40		

Fifty yards:

Walter Winans	775766—38	C Knapp	446776—34
Clementi-Smith	565577—35	Lieut J Howard	435527—26
E Howe	665747—35		

Below are details of how the scores stand for the revolver championship of the club, Mr. Winans equaling now his winning score of last year:

Walter Winans	42 41 41 40 40	40 39 39—322
C Knapp	40 40 38 38 30	38 35 34—293
E Howe	40 39 38 37 37	35 33 32—291
T W Heath	39 39 39 39 38	37 37 36—306
J Howard	40 38 37 36 36	34 32 31—283
Clementi-Smith	38 36 35 34 31	35 31 27—267

Aug. 1l.—To-day was a perfect shooting day except for a little wind occasionally. At the New London Rifle club the following scores were made. Mr. Winans did not compete, as he had promised to do some exhibition shooting on that day at a fête in his grounds, of which we give some details below. The gusts of wind made fancy shooting rather uncertain.

Twenty yards, alternate hands, stationary target:

Knapp	777775—40	Lieut Howard	773366—31
B Comber	475775—35	Diggins	5546 —29
Luff	737765—33	E Howe	554427—27
W A Hare	627565—31	A J Comber	567333—27

At the South London Rifle Club there was no shooting this week, so the scores for the revolver championship of that club have not changed.

A cup, value £20, will be given for revolver shooting at the rifle gallery, 19 Swallow street, Picadilly, London, shortly. Visitors to London should drop in; S. & W. revolvers with gallery ammunition can be used. The shoot will be open to all comers for some months, but further details have not been published yet.

The fête above referred to by our correspondent is thus described in a London daily:

"Under more favorable auspices than was the case last year, the third annual fête of the Bagshot Habitation of the Primrose League was held on Wednesday in the lovely grounds of Lightwater Grange, the Bagshot residence of Mr. Walter Winans. Thanks to the fine weather, a very large gathering assembled, and everything passed off most successfully. As usual, Mr. Winans placed his grounds unreservedly at the disposal of the habitation, and, in addition, provided a programme of amusements which enabled every one to thoroughly enjoy themselves. Swings, roundabouts and shooting galleries occupied prominent places in the afternoon's amusement, and, in addition, the marvelous revolver shooting of Mr. Winans and the scarcely less meritable performances of Baron Heeiy de Worms fairly electrified every one. Some of Mr. Winans's shots looked almost impossible until one saw them done. Among them may be mentioned the extinguishing of a candle, splitting a card placed edgeways, simultaneously smashing two balls, one of which was swinging, and breaking two balls with a revolver held in each hand."

Cincinnati Riflemen.

CINCINNATI, O , Aug. 25.—The following scores were made by members of the Cincinnati Rifle Association at their range to-day. Conditions: 200yds., strictly off-hand, 3lb. trigger pull, rifles under 10lbs. weight, at the standard target, 7-ring black. Scores:

Gindele	8 7 9 9 10 7 8 9 10 9	—86
	7 7 10 10 8 7 7 8 9 10	—83

Pacific Slope Riflemen.

SAN FRANCISCO, Cal., Aug. 25.—Scores of the Columbia Pistol and Rifle Club for the month were:

Aug. 11.—All-Comers' Rifle.—D. W. McLaughlin 87, Dr. L. O. Rodgers 85.

All-Comers' Pistol, 50yds.—C. M. Daiss 95, S. Carr 93, J. E. Gorman 92, Dr. Rodgers 89, H. B. Dorrell 88.

Regular club medals, no re-entry:

Rifle, champion class: Dr. Rodgers 80, A. H. Pape 80, D. W. McLaughlin 79.

First class: Capt. Klein 71, P. Bohr 87, C. Perry 60.

Second class: F. Dennis 77, Dorrell 74, Gorman 73, Kennedy 73.

Pistol, champion class: S. Carr 91, Daiss 90, Pape 85.

First class: Dr. Rodgers 91, Gorman 88, Klein 86, McLaughlin 72.

Second class: Dennis 83, Dorrell 82, Crane 72, Kennedy 62.

The second monthly contest was held to-day. Scores:

All-comers' rifle: Dr. L. O. Rodgers 87.

All-comers' Springfield: F. Poulter 44.

All-comers' pistol: Daiss 93, Dr. Rodgers 91.

All-comers' ladies' .22cal, rifle: Mrs. Crane 94.

The two days' fall festival of the California Schuetzen Club was terminated to-day. Both artistically and financially it was a success. There were upward of 100 contestants. Scores:

King target, 10 shots only: H. Strecker 221, D. W. McLaughlin 218, Glinderman 216, Brunotti 214.

Man target, 4 shots to a target: Dr. L. O. Rodgers 18, 19, 20, 20—77, John Utschig 76, Glinderman 76, Utschig, Jr. 76, Thierbach 75.

Honorary target: D. W. McLaughlin 24, 25, 25—74, H. Strecker 72, O. Bremer 71, Finking 71, Dr. Rodgers 70, Attinger 70.

Target for members only, 3 shots allowed: Finking 66, Brunotti 65, Meyer 65, Berteisen 65, Enge 65, Dr. Muffe 64, McLaughlin 64, Gebret 62.

ROEEL.

Lyman Rapid-Fire Target.

THE Lyman rapid-fire rifle targets are finding much favor. They are in two sizes, for 25yds. and 50yds. The smaller one sent post-paid for r15 cents a dozen, the larger one for 25 cents a dozen, by the Forest and Stream Publishing Co.

Trap-Shooting.

All ties divided unless otherwise reported.

If you want your shoot to be announced here send in notice like the following:

FIXTURES.

Sept. 6-7.—WARREN, O.—Tournament of the Warren Gun Club. H. B. Perkins, Jr., Sec'y.

Sept. 7.—SPRINGFIELD, N. J.—Team shoot between the Union Gun Club, of Springfield, and the Endeavor Gun Club, of Jersey City.

Sept. 10-12.—INDIANAPOLIS, Ind.—First annual tournament of the Limited Gun Club. Royal Robinson, Sec'y.

Sept. 10-13.—DETROIT, Mich.—The Des-Chree-Shos-Ka annual tournament, under the management of Jack Parker.

Sept. 10-13.—ST. PAUL, Minn.—Annual tournament of the St. Paul Gun Club; John P. Burkhard, Manager.

Sept. 11-12.—FRANKFORT, Kansas.—Tournament of the Frankfort Gun Club.

Sept. 11-13.—LANCASTER, Pa.—Tournament of the Lancaster Gun Club; first day, targets; second day, live birds.

Sept. 12.—ELKWOOD FARE, N. J.—Live bird handicap for Riverton Cup of 1883; 20 birds per man, $20 entrance, 30 yards all.

Sept. —.—FREDONIA, N. Y.—Tournament of the Clover Trap and Target Company. $1,000 added money.

Sept. 24-26.—ROCHESTER, N. Y.—Fourth annual tournament of the Rochester Rod and Gun Club; $500 added money; H. M. Stewart, Sec'y.

Sept. 27, 28.—HARRISBURG, Pa.—Fall tournament of the Harrisburg Shooting Association; first day, targets; second day, live birds. H. B. Shoop, Sec'y.

Oct. 3.—RED BANK, N. J.—Ninth tournament of the New Jersey Trap-Shooters' League, under the auspices of the Riverside Gun Club Shooting commences at 10 A. M.; league contest at 2 P. M.

Oct. 8-10.—SHERIDAN, Wyo.—Tournament of the Sheridan Gun Club, under the management of Frank Crabill and Mark R. Perkins.

Oct. 9-11.—NEWBURGH, N. Y.—West Newburgh G. and R. Association tournament. W. C. Gibb, Sec'y.

Oct. 15-17.—ALEDO, Ill.—Annual tournament of the Aledo Gun Club; live birds and targets. J. W. McRoberts, Chairman of programme committee.

Oct. 16-17.—WEIR CITY, Kan.—Live-bird championship of the State under the auspices of the Business Men's Gun Club.

Oct. 23-24.—ELIZABETH, N. J.—Fourth bi-monthly tournament of the Elizabeth Gun Club; first day, targets; second day, live birds.

Oct. 23-25.—ATLANTA, Ga.—Annual tournament of the Clarke Hardware Company; targets; $700 added money.

Oct. 25-26.—SEATTLE, Wash.—First annual tournament of the Washington State Sportsman's Association, under the auspices of the Seattle Gun Club; live birds and targets. C. F. Graff, Sec'y.

Oct. 27-30.—SAN ANTONIO, Texas.—First annual tournament of the San Antonio Gun Club; $1,000 added money. Willard L. Simpson, Sec'y.

Nov. 5-7.—KEWANEE, Ill.—Annual tournament of the Kewanee Gun Club.

1896.

Jan. 4-5—PHOENIX, Ariz.—Annual tournament of the Arizona State Sportsmen's Association.

Jan. 9-11.—SAN ANTONIO, Texas.—Grand mid-winter tournament, under the management of Texas Field; $2,500 added.

April 1-3.—NEW YORK.—Interstate Association's Fourth Annual Grand American Handicap.

May 5-8.—NEW YORK.—Tournament of the American E. C. Powder Company; $2,000 added money.

June 8-13 —BUFFALO, N. Y.—Thirty eighth annual tournament of the New York State Association for the Protection of Fish and Game, under the auspices of the Audubon Gun Club. E. W. Smith, Sec'y.

May (second week) —MEMPHIS, Tenn.—Tournament of the Memphis Gun Club, $2,000 added money.

May 26-28.—FRANKFORT, Kan.—Annual tournament of the Kansas State Sportsmen's Association.

May 30-June 1.—MILWAUKEE, Wis.—Eleventh annual tournament of the South Side Gun Club.

June 17-19.—CLEVELAND, O.—Third annual tournament of the Chamberlin Cartridge and Target Company.

DRIVERS AND TWISTERS.

Club secretaries are invited to send their scores for publication in these columns, also any news notes they may care to have printed.

Another big shoot is advertised for Elkwood Park, the date set being Sept. 12. The particulars are contained in the following note: "The Riverton cup of 1883 will be shot for on Sept. 12 at 12 o'clock; 20 live birds per man, $20 entrance, birds extra at 25 cents each, class shooting, 30yds. all; $100 will be taken from the purse to pay for the cup, that amount to be handed to the widow of the late winner, W. D. Campbell, Esq. If ten entries or more, 25 per cent. of the purse and the cup to the winner, 50 per cent. second money, 25 per cent. third money." In explanation of the above it may be said that the Riverton cup referred to was donated by the Riverton Club in 1883, competition being open to the following clubs: Central Gun Club, of Long Branch; Orange, Westminster Kennel Club, Philadelphia Gun Club, Maryland Gun Club, Foresters, of Reading, Pa.; Rockaway, Staten Island, Queens County Hunt Club, Meadow Brook Kennel Club, South Side Sporting Club. The contest took place on April 14, 1883, the cup being won by the team of four men representing the Central Gun Club, the following being the score: Dr. Zolnowski 12, W. G. Murphy 10, E. S. Chapin 9, E. G. Murphy 13, total 44, each man shooting at 15 birds. The cup was then put up by the club for competition among its members, the late W. D. Campbell winning it as above stated. The cup itself is a very handsome trophy, and has some interesting connections with the past.

So far we have heard of three competitors for the privilege of holding the Grand American Handicap on their grounds—Elkwood Park, Willard Park and the racetrack at Guttenburg, N. J. The latter place, we understand, could be secured and is certainly fairly handy were it not for a tedious ride of full forty minutes in trolley cars. The accommodations at Willard Park, should that place be chosen again, will be considerably superior to what they were last April. Boyce Bros., the proprietors of Willard Park, intend to build a club house of ample size right behind the score, if they are given the privilege of holding the shoot on their grounds. Elkwood Park has many advantages, and Phil Daly, Jr., is willing to do anything in reason to get the big shoot on his grounds. The ample grand stand, with its excellent interior fittings, would make a splendid club house, and can be thoroughly warmed in case of cold weather, such as may be expected early in April. Trains from New York, one hour's run, can be stopped right at the gates of the park, while less than half a mile away there is a capital hotel at Branchport which can readily accommodate all who may prefer to stop there rather than run back and forth between Elkwood Park and New York city. Long Branch, too, is only a short distance away.

Target shooters at Babylon, L. I., have organized a gun club, the title of the organization being the Oak Island Gun Club. The officers elected were: George Ewing, Pres.; George Magown, Vice-Pres.; George S. Mott, Sec.-Treas. Mr. Mott is the superintendent of the Westminster Kennel Club's shooting grounds and is quite an expert target shot, as the following facts attest: In three straight heats he has won the silver cup recently presented to the club, emblematic of the championship of Babylon. The club will hold semi-monthly shoots at the Oak Island grounds. Mr. Magown has presented a silver cup for competition under the following conditions: 25 targets per man, unknown angles, ties, miss and out, the cup to be won three times before becoming the property of any one person.

The Audubon Gun Club, of Buffalo, N. Y., have claimed dates for the annual tournament and convention of the New York State Association for the Protection of Fish and Game. In a letter, dated Aug. 29, Mr. E. W. Smith, secretary of that club, writes: "The New York State Sportsmen's convention and tournament for 1896 will be held at Buffalo the week commencing June 8, under the auspices of the Audubon Gun Club of that city. This club is one of the oldest and largest clubs in the United States, and its aim will be to make this shoot the largest and best ever held. Many of the events on the programme will be open to all. For particulars address E. W. Smith, Sec'y, 21 West Eagle street, Buffalo, N. Y."

Phil Daly, Jr., has been very fortunate in the matter of events that have been shot at his new grounds at Elkwood, N. J. The 100-target handicap race shot a few weeks ago was an entire success. It was promptly followed by a four-handed match at live birds on Aug. 30 which, so far as we can ascertain without going over our files, which cover the past twenty-one years, establishes a new record in live bird matches. We cannot recall any instance where four men engaged in a two-men team race at 100 birds per man, 200 to the team, each score 90 per cent. or better. It will probably be a long time before, given similar conditions and the same class of birds, that record will be beaten.

Manager John P. Burkhard, of the St. Paul (Minn.) Gun Club, has sent us a copy of the programme for the tournament of that club, which takes place next week, Sept. 10-13. It was received too late for any extended notice, but there is one point that should be touched upon: "Winner of first money will be handicapped 2yds. In no case will it be extended beyond 2yds. or the 18yds. mark, nor will any other form of handicap be resorted to. * * * Any one caught dropping for place or figuring for averages will forfeit his right to participate in the division of the purse." Reduced State Fair railroad rates have been secured from all points tributary to St. Paul.

The Clarke Hardware Company, of Atlanta, Ga., writes us under date of Aug. 27: "Owing to the encouragement received from leading shooters throughout the country, we have decided to add another $100 to the amount originally named—$600—as added to our shoot, held Oct. 23, 24 and 25. This will make $700 added money altogether." As the above shoot takes place at Atlanta while the great exposition is in full blast, there is certain to be a large number of shooters who will take advantage of the low railroad rates and put in an appearance at the tournament.

There is some talk of a team race at live birds being brought off at Dexter Park, L. I., in the near future. The idea of Mr. Lippack, the proprietor of Dexter Park, is to throw the event open to teams from clubs with grounds in the vicinity of New York. The number of men to a team is undecided, but we should imagine that there would be many more entries if the teams are of five men instead of double that number, as has been suggested. Very few clubs could make up a 10-men team; several could put 5-men teams into the field.

Next week is a big one in the trap-shooting world: Sept. 10-12, the Limited Gun Club's shoot at Indianapolis, Ind.; 10-13 are the dates of Jack Parker's shoot at Detroit, Mich.; same dates, the annual tournament of the St. Paul, Minn., Gun Club; 10-12, the tournament of the Frankfort, Kans., Gun Club; 11-13, the tournament of the Lancaster, Pa., Gun Club; and Sept. 12, the shoot for the Riverton Cup of 1883, at Elkwood Park, N. J.

Jack Parker will have quite a delegation of Eastern shooters at his shoot next week. The programme is attractive enough, and the boys know that they will have all the shooting they want if they attend a tournament at Detroit. They may not all make money, as a rule very few do that nowadays, but they are bound to have a good shoot and a smoothly run tournament.

A synopsis of the programme for the Rochester Rod and Gun Club's tournament on Sept. 24-26 is noted elsewhere. Mr. H. M. Stewart, the secretary, is hustling to make the shoot a success. With $500 added to the purses there is little reason for fear on the part of the management that they will have any trouble in hunting entries.

Mr. David Brown, president of the West Newburgh Gun and Rifle Association, of Newburgh, N. Y., writes us as follows: "We hold our annual fall tournament of Oct. 9, 10 and 11; first two days, targets; third day, live birds. We give $20, $15, $10 and $5 to the shooters making the four best averages in all events on both days."

The Muskegon (Mich.) Gun Club has notified the Valley City Gun Club, of Grand Rapids, Mich., of its intention of challenging for the State team championship trophy now held by the latter club. The match will probably come off during the State Fair at Grand Rapids.

Messner, the winner of this year's Grand American Handicap, and E. H. McWhorter, both of Pittsburgh, Pa., have been shooting some pretty close races lately. On Aug. 23 Messner won by 93 to 91; on Aug. 31 he won by 94 to 93.

The programme of the Rochester, N. Y., Gun Club's tournament is worth reading. The club adds good money, and adds it wisely.

The San Antonio (Texas) Gun Club has decided to add $1,000 to the purses at its tournament, which is to be held on Oct. 27-30.

EDWARD BANKS.

Shooting Accident at Nyack.

THE unfortunate shooting accident at the Nyack, N. Y., tournament on Saturday afternoon, Aug. 24, was the result of criminal carelessness on the part of a "scout" or "pot-hunter." The story of the affair is as follows:

The Nyack Club had erected a tent for the accommodation of its guests, and in front of this tent three live-bird traps had been placed in position. The shooting had attracted a fair crowd of spectators, among the number being some ladies and children, some of whom were standing to the right of the score, alongside the tent. Behind them, some 40yds. away, was a young "pot-hunter" who was on the lookout for escaping pigeons. The last bird in a 4-bird sweep was released; it was a right-quartering incomer, was hit, but flew low over the boundary, crossing directly between the "pot-hunter" and the spectators above mentioned. In his excitement at seeing a pigeon coming his way, the young man apparently saw nothing but the bird, as he fired both barrels at it right into the crowd. Some eight or nine persons were injured, a man inside the tent being among the number shot. A woman received eight or ten pellets in her forehead, and it is a wonderful thing that not an eye was touched. In fact, so far as we can learn, no one was really seriously injured.

Although we believe in permitting "scouting" on humanitarian grounds alone, yet this instance strengthens us in our belief that all such "scouts" should be appointed by, and be under the control of, the gun club holding the shoot.

As Others See Us.

HARRISBURG, Pa., Aug. 30.—*Editor Forest and Stream:* I feel that I would be doing you an injustice if I did not compliment you on the very able and thorough manner in which your Mr. Banks has written up the Pennsylvania State Sportsmen's Association's annual gathering. It is a veritable pleasure for every one connected with the Association to read the proceedings as they appear in your valuable journal, and to know that they are correct and true is of untold value to those interested in the State organization. It proves two things at least, ability and fidelity, and when one takes into consideration the circumstances under which the greater part of this work must be accomplished and the information obtained, it speaks doubly for the reporter, and cannot fail of appreciation to all the readers of FOREST AND STREAM.

J. H. WORDEN,
President Pennsylvania State Sportsmen's Association.

West Newburgh G. and R. Association.

NEWBURGH, N. Y., Aug 29.—The weekly prize shoot of the West Newburgh Gun and Rifle Association was held this afternoon. As the scores given below show, Dickson won a heat for the first prize, Wood and Stansborough each scoring one-half a heat for second prize. Conditions: 10 singles, known angles, 3 pairs and 9 singles, unknown angles: Scores:

Dickson	1111111000	11 10 10	111110111—3—22
Wood	1111110111	10 00 10	110111011—2—20
Stansborough	0100101111	10 10 01	111111110—3—20
Harrison	0000100101	10 11 00	001010110—8—18

DAVID BROWN, Pres.

The Rochester Programme.

ROCHESTER, N. Y., Aug. 31.—Inclosed find copy of programme as arranged for our shoot, which takes place Sept. 24, 25, 26.

First Day.—No. 1, 20 bluerocks, entrance $3; No. 2, 20 bluerocks, entrance $3, $30 added; No. 3, 20 bluerocks, entrance $3; No. 4, 20 bluerock, entrance $3, $30 added; No. 5, 20 bluerocks, entrance $3; No. 6, 25 bluerocks, entrance $4, $50 added; No. 7, 20 bluerocks, entrance $3; No. 8, 20 bluerocks, entrance $3, $30 added.

Second day, same as first.

Third Day.—No. 1, 20 bluerocks, entrance $3; No. 2, 20 bluerocks, entrance $3, $35 added; No. 3, 20 bluerocks, entrance $3; No. 4*, 50 bluerocks, entrance $5, $50 added; No. 5, 20 bluerocks, entrance $3; No. 6, 25 bluerocks, entrance $4, $50 added; No. 7, 20 bluerocks, entrance $3; No. 8, 20 bluerocks, entrance $3, $35 added.

*Event No. 4 is the Walsrode Powder Co.'s contest.

For general average there will be five cash prizes aggregating $50.

H. M. STEWART.

Worcester Gun Club.

WORCESTER, Mass., Aug. 24.—The following scores were made by members of the Worcester Gun Club this afternoon:

Randall	9	7	8	7	Tougas	5	9	9	5
Parker	9	10	9	5	Norcross	8	7	4	8
F Forehand	6	7	7	11	Hoyle	10	9	8	0
Estabrook	10	7	9	7	Ide	8	8	7	4
Kinnicutt	6	8	5	12	Goodeel	7	5	8	4
Claflin	6	5	3	15	C Forehand	7	9	7	1
Bucklin	3	10	8	2	Allen	4	6	5	8
Davis	9	8	7	4	Snell	9	7	4	0

The Manitou Farmers Won.

NORTH GREECE, N. Y., Aug. 22.—To-day the champions of the Rochester Rod and Gun Club shot a team race with the Manitou Beach Rod and Gun Club on the latter's grounds. The members of the Manitou Club being nearly all farmers and a bountiful harvest having been secured, they felt like doing the "champs" of Rochester—and they did it. Following is the score:

Manitou Beach.

J M Lowden	1011111101111011111—17
C Skinners	1111111111001111110—17
E Elliott	1111111111011111001—17
B Rickman	1111101101101111111—16
A Rickman	1110111111001111111—17
Byer	1111110011111101011—17
C Lane	1111111011111111011—18—121

Rochester.

H Myer	1111111111110111011—18

Norton	1111001110101111111—16
Hicks	0111111101111111111—17
H Stewart	0011111010011111011—15
S Glover	1111111111111110111—19—112

The Interstate at Charlotte.

CHARLOTTE, N. C., Aug. 29.—This shoot was brought to a successful close to-day after three days of clear but excessively warm weather. The unanimous verdict of the participants is that it was the most enjoyable affair of this kind held during the season. Charlotte, a beautiful and typical Southern city, never looked more lovely than at this season in her suit of summer green. All who may happen to come in contact with the people of this city will always remember them pleasantly. Many a shooter felt deep regret as the time drew near when he had to leave the beautiful scene and the genial companionship of our grand old Col. Anthony and Messrs. Stokes, Todd, Carson, Justice and others of the Charlotte Club.

The office was presided over by that popular and typical Virginia gentleman, Col. W. N. Wellford, of Lynchburg, Va., assisted by Mr. Todd, the "lightning calculator" of the Charlotte Club, and Mr. Archie Stokes, the warm friend of all men. Mr. John Carson rendered great service as referee.

It is needless to speak of that "lovable" character, Elmer Shaner, whose management of a tournament has always been pronounced perfect. The Interstate Association should erect to him a monument for faithful service.

The grounds are beautifully located in the rear of Latta Park, at the terminus of the electric car line in the suburbs of the city. These grounds were in every respect as described in the programme.

This shoot was noticeable for the feeling of good fellowship that seemed to pervade the very atmosphere itself, and no incident occurred to mar the pleasure of the participants. The dinner served by the popular proprietors of the Buford Hotel is seldom equaled at shoots or surpassed by many first-class hotels.

Col. Anthony was somewhat disappointed in the number of attendants, but was more than compensated in the *personnel* of those who did attend. As can be seen by the scores a shooter who could not make 90 per cent. found it warm in the company of such shooters. It is due Messrs. Connor, Van Dyke, Col. Anthony and Mr. Lindsay, who were contestants in the two-men 50-bird team race on the 28th, to mention that they were forced to shoot the last half of the race in the dark, otherwise the result might have been different, and it is reasonable to suppose that Connor and Van Dyke would have been the victors, as they had four birds more to their credit than any other pair at the end of the first half, Connor breaking 25 straight and Van Dyke 24 out of 25.

Among those present from a distance were: Rolla Heikes, Dayton, O.; John Connor and Judge Lindsay, Knoxville; B. W. Claridge, Baltimore; B. H. Worthen, Capt. Swann and G. Peterman, Charleston, N. C.; G. Empie, W. W. Dornin, W. L. Moorman, T. F. Nelson and Col. W. N. Wellford, Lynchburg, Va.; U. M. C. Thomas ("Old Happy") representing the U. M. C. Co.; Noel Money, of E. C. Powder Co.; Carl von Lengerke, of Von Lengerke & Detmold, N. Y., representing Schultze powder; F. Van Dyke, of the Winchester Repeating Arms Co.; D. M. Porterfield, Vicksburg, Miss., representing DuPont's powder; J. L. Fonda, Greensboro, N. C.; L. D. Thomas, Baltimore, representing Froisdorf powder; H. P. Collins, Baltimore, also representing DuPont't powder; our ever congenial friend Lieut. A. W. du Bray, representative of Parker gun, and F. C. Etheridge, Macon, Ga.

All were disappointed upon learning that the "Father of Shooters," Wm. Wagner, of Washington, D. C., could not be present owing to sickness in his family.

Among the non-participants present was W. B. Leffingwell, the well-known writer on wildfowl shooting, etc.

The shooters all expressed their appreciation of the kind treatment and entertainment received by them at the hands of the citizens of Charlotte and of the managers of Central and Buford hotels.

First and Second Days.

In the tables given below, the experts' and amateurs' scores are given separately. Events Nos. 1 to 10 were shot on the first day, Nos. 11 to 20 on the second day. The Charlotte Gun Club added $10 to every 15-target event and $15 to every 20-target event during the tournament:

The special team races, two men to a team, 50 targets per man, unknown angles, $5 per man, were shot on the first and second days. The first one resulted in Empie and Claridge, and Money and Heikes, tieing for first place, Heikes running 50 straight; both teams scored 96 out of the 100. The scores in that race are as follows:

Money	1111111111111111111111111111111111111111101101—46
Heikes	1111111111111111111111111111111111111111111111111111—50—96

CHOKE BORE.

Hindmarsh—Biscoe.

TOPEKA, Kan., Aug. 26.—*Editor Forest and Stream:* A friendly match at live pigeons occurred on the grounds of the West Side Gun Club, Friday, Aug. 23, between Messrs. P. J. Hindmarsh and L. Biscoe, members of the above-named organization. The participants being excellent trap-shots, the match created considerable interest. The day was very warm, but heavy clouds obscured the sun during the shoot, and culminated in a drenching downpour just at the close. A heavy south wind blew from the shooters to the traps, and aided the birds to a great extent. Mr. Hindmarsh had one dead out of bounds, as did Mr. Biscoe, though a good many were hit hard that got away.

The birds were an indifferent lot, with some very hard drives to the right and several swift straightaways, which required the best of judgment to stop. The luck of the birds proved greatly in favor of Mr. Hindmarsh, who killed his last 15 very nicely. Inclosed is the score, Mr. J. C. Clark acting as referee; Mr. C. H. Morton, scorer; Mr. Arnold, trap-puller. Conditions: 25 live pigeons per man, 28yds. rise, 50yds. boundary, A. S. A. rules to govern.

Mr. Hindmarsh shot a Remington hammerless 12-bore, his load being 3drms. E. C., 1⅛ No. 7 soft shot and 3¼ E. C., 1⅛ No. 6 soft shot in first and second as named, loaded in Smokeless shells by J. C. Elliott. Mr. Biscoe used a Smith hammerless 12-bore, Smokeless shells and E. C. powder; 2¾drms. in the first and 3 in the second, with No. 7½ and 7 shot as above:

Keating	1101001110100001010010010—12

The Endeavor's Tournament.

THE Endeavor Gun Club, of Jersey City, N. J., held its annual tournament on Monday (Labor Day), Sept 2, at its grounds, Marion, N. J. Although the day was all that it should have been the attendance was not up to the mark, several well-known shooters from Jersey being absent. Among the number missing were: Tom Keller, Charlie Smith, Neaf Apgar, Charlie Hebbard, Major Breintnall, Tom Brantingham, the boys from the Boiling Springs, W. N. Drake, etc. Still thirty-two shooters put in an appearance, some 2,000 targets being thrown during the day's sport. Noel Money easily carried off the honors (and the money) by breaking 102 out of a nominal 105, an average of 97.1; his actual score was 102 out of 104, as he didn't fire at his first target in event No. 10, traps in reversed order, being under the impression that the wrong trap had been pulled. His actual average for the afternoon was therefore just over 98. The scores made were as follows:

Events:	1	2	3	4	5	6	7	8	9	10	11	12

Messner Wins Two Straight.

PITTSBURG, Pa., Aug. 31.—As we have already stated in our columns, a series of three 100 live-bird matches was arranged some time ago between J. G. Messner, winner of this year's Grand American Handicap, and E. H. McWhorter, both of this city. Each match was for $100 a side.

The first match took place on Aug. 23, the birds being a very good lot and the scene of the shoot being the Country Club's grounds. Elmer E. Shaner acted as referee. The score given below shows that Messner won by two birds, scoring 93 to McWhorter's 91:

J G Messner	2112211222222222222221222—25
	1222222222312022112122222—24
	1112110202112121121221210—22
	0222222222112111021220202—23—93
E H McWhorter	2321212200221312212212210—22
	2222222222112210102022111—22
	1011212201121112221121121—23
	2212212222222222211102221—21—91

The second match was shot to-day on the same grounds, the birds generally being only a moderate lot. The match was exceedingly close. At the end of the 75th round the score was a tie with 70 all. In the 84th round Messner lost his bird, putting McWhorter one ahead. This state of things continued until the 94th round, when the score was again a tie, McWhorter losing his bird. In the next round Messner went one ahead, his opponent losing his 95th bird also. That lost the match for McWhorter by one bird, as both killed out straight. W. S. Bell acted as referee in the absence of Mr. Shaner. Score:

McWhorter	2221022221220212222212122—23

No. 8, same as No. 7: Coleman 15, Walton 15, Gilmore 15.

C. F. ROOD, Sec'y.

Maplewood Again Defeats Peekskill.

MAPLEWOOD, N. J., Aug. 24.—The Peekskill, N. Y., Gun Club met with its second successive defeat to-day at the hands of the home team. The scores are not as high as in the first match which was shot off on the Peekskill grounds, but the wind blew so strongly that the targets were extremely erratic in flight and in consequence hard to hit, although the match was at known traps and angles. At the end of the first half a single break in favor of Maplewood was all that separated the teams. On their arrival at about 1 P. M. the Peekskill team was the guest of the Maplewood team, a capital dinner being served:

Team race, six-men teams, 50 targets per man, known angles:

Maplewood.

H. H. STEVENS, Sec'y.

Ivins-Ballard vs. Hoey-Murphy.

ELKWOOD PARK, N. J.—The property of Phil Daly, of Long Branch, N. J., has been the scene of some excellent live-bird shooting during the past two weeks. The park itself contains an excellent mile track, as fast as any in the States, and one which is much frequented by owners of trotters, pacers and bicycles. Bicyclists know well the records recently credited to this track. Its career as a pigeon-shooting arena is of very recent date. Target, or clay-pigeon shooting, was auspiciously inaugurated on Aug. 15, on which date seventeen shooters took part in a 100-target handicap race, $10 entrance, the winner turning up in Capt. E. B. Wadsworth, of Boston, Mass., who scored 100 out of his 110. His club, the Boston Shooting Association, was also represented by Orrin R. Dickey, who made the great score of 97 out of his 100 targets, tieing for second money with Charlie Smith, of Plainfield, N. J., who was allowed six extra targets to shoot at.

BALLARD DEFEATS IVINS.

One or two live-bird matches of more or less importance have also been recorded since the opening of the park to shooters, and prior to Friday, Aug. 30. One of these matches was a 50 live-bird race, shot on Aug. 23, the contestants being A. L. Ivins, of Seabright, N. J., and Bland Ballard, of Louisville, Ky. The conditions were: 50 live birds per man, Ivins allowing Ballard 1yd. The score, which is given below, shows that Ballard won by two birds, killing 47 to 45. Out of the eight birds recorded as lost, but one or two at the most got away ungathered, the others being dead out of bounds. The miss-and-out which followed, and which was won by Ivins with the capital score of 16 straight, was composed of Ivins, Ballard and two men whose names are well known to pigeon shooters of this country, one of them also being the possessor of a capital record before Euroneau traps—Fred Hoey and Edgar G. Murphy. Following are the scores made on that day:

B Ballard (29)	221●2121112●1122122112212—23	
	2222222221232●2122222221—24	—47
A L Ivins (30)	2122211213021222201221121—23	
	1222110220221112222111201—22	—45

Miss and out:

Ivins	2211112122121112—16	Ballard	221222222220 —10
Hoey	2222112212122110—15	Murphy	221210 — 5

The result of the above meeting was the making of a four-handed match between the shooters named, the teams being Hoey and Murphy vs. Ballard and Ivins, and the conditions: to shoot on Aug. 30, at 2 P. M., $500 a side, play or pay, 30yds. all, 50yds. boundary, 100 live birds per man, 200 to the team, Hurlingham rules governed, with the exception that a shooter was privileged to choose whether his bird should be gathered by dog or man.

A BIG CONTRACT.

When the match was first made public, there was a perceptible murmur of astonishment at the apparent temerity of the backer of Ballard and Ivins in "stacking up," to use an accepted phrase, against two such shots as Hoey and Murphy are known to be. The records of those two men are well known and their capabilities have been respected by shooters when making matches. It is true that Ivins has shown that he can kill good fast birds. On April 4, 5, of this year, he showed up well in the Grand American Handicap, killing 18 straight before he missed, a fast circling outgoer from No. 2 trap beating him in the nineteenth round. His next six birds were killed in good style, the score showing his total to be 24 out of 25. Later, on July 6, he won the Hollywood Futurity Handicap, at West End, N. J., scoring again 24 out of 25, and tieing George Work, of the Carteret Gun Club, and Junius H. Davis, of the Riverton Gun Club, for first, second and third moneys and the cup. They agreed to divide the pot, shooting off at 10 birds each for the cup. Ivins scored 10 to Davis's 9 and Work's 8, thus winning the trophy. But Ballard was an unknown quantity. His score of 47 out of 50, given above, was not generally known, and his record in the Hollwood Futurity was not encouraging. In that race, standing on the 26yds. mark, he lost 4 out of his first 6 birds, 3 of them dead out of bounds, and retiring. It should be mentioned that in that race Ivins stood at 28yds., Davis at 27 and Work at 30yds. On paper, therefore, it looked something like a cinch for Hoey and Murphy when the match now under discussion was first announced. The result shows that the backer of Ivins and Ballard, who was none other we believe that Mr. Percy Dobbins, of New York City and Long Branch, knew pretty well what he was doing.

THEY WERE GOOD BIRDS.

In preparing for the match, Phil Daly, Jr., and Harry Chanfrau, "Kit, the Arkansas Traveler," who is at present summering at the Elkwood Inn, worked hard to secure the comfort of the contestants and spectators, the latter arriving in considerable numbers. Gilbert, of Philadelphia, had been requisitioned for 1,000 of his best birds, out of which 400 were to be selected for the match. To insure proper handling, Gilbert sent his son along to look after the birds. As for the birds themselves, they were a splendid lot of flyers, all blue and not a "peep" among them. With a wind to aid them, it is safe to say that the lowest score made that afternoon would have been hard to equal. As it was, with a wind that blew from the southeast, the traps facing slightly to the north of east, they furnished as fine a lot of fast, twisting birds as we have seen for many a long day. Flying low against the wind, they imitated the flight of an English snipe to perfection, but such ruses seldom availed them much. As a natural result of the direction of the wind, left-quartering incomers were, in the majority of instances, extremely fast birds, making the boundary seem very close to No. 1 trap.

MILO IS A GREAT RETRIEVER.

Among the other preliminaries, it may be mentioned that Mr. John S. Hoey was appointed referee, Mr. Hoey's selection being a natural one and entirely warranted by his work in like positions during the past. The retrieving, except when a man was called for, was done by an Irish setter, Milo, two and a half years old, the property of J. Vone Emmons, secretary of the Central Gun Club, of Long Branch, and by Spot, an English setter, the property of Ivins. Without wishing to detract from the merits of the work done by Ivins's dog, that performed by Milo deserves special mention, being of a kind too seldom witnessed at such gatherings. Mr. Emmons has his dog under the most perfect control. There is no need to hold him at the score, whether it is his turn to retrieve the bird or not. He won't go unless he gets the word. Two or three times he was sent after a bird through an error, "man" having been called for. A shrill whistle from his master's lips arrested him instantly, and he returned to his post with tail wagging and a smile in his eyes. It was extremely pretty work and called forth the applause of the crowd on more than one occasion.

Two by-birds per man were allowed by the referee, and then Fred Hoey was called to the score. He killed a fast bird from No. 2 trap and Ivins took his place. He drew an incomer from No. 1, which was also scored. Then Edgar Murphy stepped to the score and snapped a bird over No. 1 trap, not giving the bird a chance to declare itself. Ballard's bird, a right-quarterer from No. 4, was then grassed, Ballard shooting while he masticated a mouthful of lunch, having arrived too late on the grounds to eat his lunch in a more leisurely manner.

THE FIRST MISS.

The first miss came quickly, Hoey slipping up on an easy one from No. 2. The next miss came from the other side, Ivins losing his sixth bird, a fast left-quarterer from No. 3, dead over the boundary. That tied the score, but the tie was soon broken, Hoey losing another, a driver from No. 4, but by no means a fast bird. Whether he hit it or not, the bird didn't lose a feather. Then Murphy lost his twelfth bird, a towerer from No. 5 that was hit hard with the first, but slobbered with the second, the bird coming back over his head and falling dead out of bounds. This put Ivins and Ballard two ahead, but the betting, which at the start was 60 to 50 on Hoey and Murphy, did not change at all. Ivins reduced the lead to one by losing his fourteenth bird, a circler to the left from No. 1, on which he used poor judgment. The bird fell dead on the track just over the boundary. Ballard, who had been shooting a great gait all this time, and using his second barrel with telling effect, tied the score when his eighteenth bird, a fast one from No. 3, carried his load over the boundary. Fred Hoey, who was having decidedly the worst of the birds, promptly gave the other side a lead of two at the end of the 25th round by dropping his nineteenth and twenty-fourth birds; the latter, a circling outgoer to the left, was apparently untouched. The score at the quarter-pole was therefore: Hoey 21, Murphy 24; total 45; Ivins 23, Ballard 24; total 47.

SECOND SERIES.

In the 26th round Ivins lost another bird dead out of bounds. The bird was a very fast left-quartering driver from No. 2, and was hit hard with both barrels. Murphy's 31st bird caused the next cypher to be registered, the bird, a quick one from No. 1, just carrying the shot over the low wire boundary. As Ballard missed his 32d, a fast left-quarterer from No. 1, which he shot behind with both barrels, and as Ivins missed his bird in the succeeding round, the score was again a tie, a fresh impulse being given to the betting. Fred Hoey, however, made a bad break, losing his 34th and 35th birds, putting his opponents two to the good once more. His 34th bird was a slow circling incomer to the left, a bird that ninety out of a hundred ought to have killed, and one that he won't miss again in a month of Sundays. His 35th, on the other hand, was a corker of a type that we see too few of nowadays. During the remainder of the second round no further change was made, as, although Ivins lost his 36th bird dead out of bounds, Hoey evened up that miss by losing his 45th, a bird that surely ought to have been easily scored. Thus the half-mile post found both parties in the same position that they were at the end of the first 25—two ahead for Ballard and Ivins.

THIRD SERIES.

In the third series Fred Hoey began what proved to be a remarkable exhibition of his skill with the gun. It is true that both he and Murphy lost their 53d birds, thus giving Ballard and Ivins a substantial lead of four, but after that miss Hoey settled down and made the longest run of the day—42 straight. Hoey's miss was an excusable one, the bird twisting like a quail in a thick brush; Murphy's bird was one that caused an exclamation of surprise to escape from the crowd when they saw that it had been missed, as it was an easy one. Again the lead was reduced to two by Ballard's miss of his 97th and Ivins's miss of his 10th bird in this series, the birds being respectively in the 59th and 60th rounds of the match. Ballard's bird should have been killed, but he handicapped himself too much by waiting a long time with his second barrel. Ivins's bird was one of the sort that "we all miss when we get them." Murphy dropped his 63d and 68th birds, neutralizing the last two misses and placing the other side once more two in the lead. Ballard drew a very fast low-flying driver from No. 5 trap in the 71st round and let it get away from him, being too careful with that great second barrel of his. The close of the third series thus saw a series of one for the Ballard-Ivins combination, the scores standing: Hoey 67, Murphy 70, total 137; Ivins 69, Ballard 71; total 140.

FOURTH SERIES.

The spectators had long since become aware that they were in for a shooting match, and at this point every shot was watched with intense interest, the applause being both frequent and well merited, some excellent work being done by all the men, but particularly by Hoey, who was taking them all alike and downing his birds in capital time. The first nine birds of this series were all scored to each man. Then came a break. Ivins got a little slow and appeared as if the strain was telling upon him. His 85th, an easy bird, got away from him, and his 87th also added a cypher to his score. As Murphy had lost his 86th dead out of bounds, the lead was still two for the other side. Ivins's 88th bird gave him heart disease, flying in the extreme outer boundary, where it was retrieved by Dr. Knowlton, who was acting as handler for Ivins. It was a piece of good luck that seemed to put his eyes all right again, as he killed out straight. The end of the 91st round saw Ballard and Ivins still two in the lead, but Ballard reduced the lead to only a single bird by losing his 92d, a swift skimmer from No. 4 that zigzagged as he flew toward Branchport. Each man was applauded loudly as he killed his birds in the next three rounds, the tension on the feelings of the spectators being too great for many of them. This was evidenced when in the 95th round Fred Hoey's bird, an extraordinary fast, twisting left-quartering driver from No. 2 trap, carried both charges of shot out of bounds. It was then that several of the spectators forgot all their claims to sportsmanship and cheered, because that miss made their dollars all the safer. After Ivins had killed his bird, Ballard said something to the referee, whereupon Mr. Hoey turned to the crowd and said, "Gentlemen, we don't object to your applauding a good shot; but we do object to your applauding when a man misses." Then the other part of the crowd cheered, and none more loudly than Messrs. Ballard and Ivins. The 96th round saw three cyphers added to the score. Hoey, who may have been upset by the behavior of the crowd in the previous round, let an easy one get over the boundary; Murphy drew a corker from No. 1 that was calculated to beat anybody, while Ballard scored his worst miss of the day by letting a simple-minded bird get away untouched. With the lead of four against them again, and only three more birds each to shoot at, the cause of Hoey and Murphy was a lost one. All killed those birds with the exception of Ballard, who lost his last one, another easy bird, dead out of bounds. A good amount of money had been wagered that Ballard's score would beat Murphy's. Murphy finished with 93, while Ballard had 93 to his credit, and only had to kill to win the bets that had been made. As it was, he tied Murphy's score, losing his bird, as stated above.

PROBABLY A RECORD.

Thus ended a great match, and one that has probably established a record. We can call to mind no other four-handed match in which all the contestants have scored 90 or better. When the quality of the birds is taken into consideration, the records of the men are very little short of phenomenal. Fred. Hoey's position as lowest scorer is undoubtedly due to his having been accustomed while in Europe to birds that are nard and fast flyers all the time; the somewhat uneven character of the ground seemed to have tripped him. He killed his difficult birds as well as ever; it was the easy ones that he let get away from him. Murphy shot very well indeed. Considering how long he has been away from the traps, he showed excellent judgment and did some very quick work, killing his birds cleanly. We understand that neither Ivins nor Ballard have ever shot a 100-bird race before. If that is the case they flew at high game, and what is more came out on top. Ivins shot well throughout, with the exception of that small period covered by the eighty-fifth to the eighty-eighth rounds, when there seemed some danger of his going to pieces. His score of 92 was the result of sterling work, and stamps him as a man to be respected by handicappers in the future. Ballard, who is a stranger in these parts, won a great many friends by his free and easy bearing at all times, never for one instant losing his self-control, but steadily pumping in his deadly second barrel with telling effect. Edgar Murphy is unquestionably a fine second-barrel shot, but in our opinion Ballard is his superior in that respect. He may be slow with it, but he is very sure; it is true he lost a bird or two when quicker work with his second might have scored them. Still, 93 out of 100 first-class birds shows that he did not hold the gun very far out of line.

THE FALL OF THE TRAPS.

It is always a point of interest to know just how the traps fell to each man. Although in the detailed score given below the trap number is given in the upper line of each series, yet for the sake of sparing readers of FOREST AND STREAM the trouble of figuring it for themselves the following table is given:

	No. 1.	No. 2.	No. 3.	No. 4.	No. 5.
Hoey	18	30	19	14	19
Murphy	27	19	16	16	22
Ivins	18	18	23	26	15
Ballard	30	19	13	20	18
	93	86	71	76	74

In examining these figures it should be borne in mind that a fairly stroag wind blew almost directly from No. 5 trap toward the shooter.

THE GUNS AND LOADS.

In the matter of guns and powders used the following will be of interest: Fred Hoey—Purdey, with (we believe) 48grs of Schultze in an Eley (London) shell; Murphy—Francotte, E. C., U. M. C. Trap shell; Ivins—Francotte, Schultze, V. L. & D. Special; Ballard—Greener, same powder and shell as Ivins.

THE SCORE IN DETAIL.

Below is given the score in detail, a perusal of which will readily show the flight of the bird, number of the trap and whether the bird was killed with the first or second barrel, or whether it got away, dead out of bounds being marked as usual by a small black dot. If it can be beaten for completeness we would like to know it in order that we may be in a position to give our readers the best of everything. The high runs were: Hoey, 42 and 10; Murphy, 21, 18, 17, 11 and 10; Ivins, 24, 22, 13 and 11; Ballard, 26, 20, 17, 13 and 11. The score is as follows:

EDWARD BANKS.

Trap around Altoona.

ALTOONA, Pa., Aug. 24.—The first of the series of races between six-men teams of the Altoona Gun Club and the Huntingdon (Pa.) Gun Club took place on the latter's grounds to-day. As previously stated in a former issue of FOREST AND STREAM, these contests were gotten up at the instance of the Huntingdon Club, which is a new organization and desires by coming in contact with its more experienced Mountain City neighbors to gain such information as will enable it to become prominent in shooting circles. It has some very good young material, and I shall be very much disappointed if in next year's tournaments they are not figuring among first place men.

The club gave us indeed a right royal reception on this occasion; in fact, the town was at the disposal of the score or more of Altoona representatives, and a lasting friendship will no doubt be the result. The officers of the home club are: Al Flemming, President; R. K. Foster, Secretary; L. R. Leister, Treasurer, and A. A. Williams, Captain.

The grounds are conveniently located just outside the borough limits along the old Pennsylvania canal. They have a full set of blue-rock traps and one of Charlie Hebbard's empire wire pulls. The arrangement of buildings and fixtures can be improved upon and no doubt will be in the near future. The threatening weather and final rainstorm kept a number of the more tender shooters at the hotel during the sweepstake events and marred somewhat the pleasure of the occasion. As it was the entries reached the twenty mark. The purses in sweeps were divided 50, 30 and 20 per cent. All the sweeps were 10-target events, known angles. The scores follow:

Events:	1	2	3	4	5	Events:	1	2	3	4	5
Bookwalter	4	8	7	8	..	De Forest	..	6	6	6	..
Killits	6	6	8	3	4	Corbin	..	1	..	5	..
Bell	6	8	9	7	8	Forney	..	..	7	8	..
Clover	8	4	8	7	7	Houck	..	..	8	8	..
King	7	6	7	6	6	McCahan	..	..	3	7	..
Fleming	8	8	6	7	..	Decker	..	..	8	..	..
Murray	5	7	4	6	..	Kelly	..	..	7	8	..
Leister	5	3	4	3	..	Greenberg	..	..	..	4	..
Stewart	..	6	5	8	..	Hastings	..	..	..	6	..
Green	..	9	8	7	..	Williams	..	..	..	7	..

The team race was as follows: six men to a team, 15 targets per man, known angles:

Altoona.	Huntington.

The next contest of the series will be a shoot at the Wopsononock grounds on Sept. 14.

Aug. 31.—Below are some live-bird scores shot to-day by members of the Altoona, Pa., Rod and Gun Club. Both events are at 10 live birds per man, handicap rise. Score:

GRANT.

Home City Gun Club.

SPRINGFIELD, O., Aug. 29.—At the regular monthly tournament given by the Home City Gun Club, Aug. 27, the scores inclosed were made. The traps worked well. Raymond, Dando, Jack, Shorty Bacon and Young carried off the honors. It was an ideal day for the sport and the boys all took advantage of it. Empire traps and targets were used.

HUGH L. FORD, Lieut.

Paducah Gun Club.

PADUCAH, Ky., Aug. 27.—The members of the gun club here held a shoot to-day, the scores given below being made. Mr. J. C. Crane, of Memphis, Tenn., was a guest of the club and shot away up. Memphis shooters had better take care of Mr. Crane. The birds were thrown by hand from the trap house, 10 and 12-gauge guns standing at 16yds., 14 and 16-gauge guns at 14yds. Scores:

WESTERN TRAPS.

CHAN. POWERS'S TOWN.

CHICAGO, Ill., Aug. 24.—Returning talent from the Independent Gun Club tournament, at Decatur, Ill. (Chan. Powers's town), report a very lively and interesting shoot. The experts like Rolla Heikes, Tom Marshall and Eddie Bingham made something of a killing, and were perhaps not loved heartily on that account by the less experienced, though they were entertained cordially by all the local men and went away pleased with their reception. Chan. Powers did his best, and that is a great deal, to make the shoot the successful affair it was. Targets were thrown very hard and far, and the shooting was that for the high-class ones. The programme was interesting and varied. Following are the scores:

First Day.

Events:	1	2	3	4	5	6	7	8	9	10	11	12	13	14

EUREKA BEATS GARFIELD AGAIN.

On Saturday afternoon, Aug. 24, at the Garfield grounds, the return race in the Eureka-Garfield Club competition was shot, Eureka having won the two preceding contests of 18-men and 5-men teams respectively. To-day Eureka won again, leaving the impression that she carries a trifle too heavy a battery for Garfield in the target game. To-day's race was at 25 targets, known traps, unknown angles, 18-men teams, Eureka going out ahead by 15 birds. The competition between these two clubs has been extremely pleasant and enjoyable, and the two clubs are so evenly balanced in shooting ability that these little events create a great deal of interest. After the race to-day the teams and other club men engaged in sweep shooting until evening. The unusual sight of a lady shooting in the squad line was afforded, Mrs. Dr. Carson handling the gun with a grace and accuracy which leaves one to believe that here may be a new line of outdoor sport for ladies. Old Hoss Stannard continued to-day his red-hot gait at targets, going the 25 straight in the club race. To balance him, Mr. T. P. Hicks for the Garfields put up a score of 24 out of the 25. There were no others. Following are the scores made in the team race:

Eureka.		Garfield.	
Stannard	25	Hicks	24
Bingham	22	Patterson	21
Von Lengerke	22	Dr Hodson	21
Steck	21	Mott	21
Goodrich	21	Skinner	21
Buck	21	Bowers	21
Dr Carson	20	Smith	19
Glover	20	Coppernoll	19
H J Carson	20	Dr Shaw	18
Morgan	20	Fehrman	18
Cleaver	18	Richards	18
Airey	17	Palmer	18
J L Jones	17	Tefft	15
Smethells	16	Kuss	15
Ferguson	16—296	Brown	12—281

NO LIMIT.

Mr. Royal Robinson, the secretary of the Limited Gun Club, of Indianapolis, Ind., in sending on the programme of the club tournament, Sept. 10, 11 and 12, writes pleasantly as follows:

"We modestly claim the finest grounds, etc., on earth, and have some ideas as to management which we think will insure the success of the meeting and the comfort of visitors. You know a good thing when you see it and we would like to have FOREST AND STREAM with us. We recognize that FOREST AND STREAM has been a great factor in the elevation of the standard of trap-shooting, and hope to have commendation of our efforts in that direction."

There is no limit in the commendation deserved by the Limited Gun Club in its efforts to make and keep the sport of trap-shooting a pure and pleasant one. The programme issued is a very tasteful one and bespeaks a good time on good ground, in a good city and with good company. Indiana is more advanced than Chicago. They do not shoot 10-gauges at the same score with 12-gauges. Indeed, they do not shoot them at all. The announcement is made on the front cover page that "Manufacturers' agents, professionals, 10-gauge guns and black powder will be barred." Indianapolis is progressive. She may not can as much horse meat as Chicago, but she reads more and thinks more on trap matters and is nearer to a nineteenth century standard. One observes further that the Pumphrey equitable system is thought "deserving of a trial," and will be used in three shoots each day. Shooters will be classified as they enter and will be shifted only when it is clear they are out of their class. It is evident that the management has spent much thought over the questions involved in the effort to give a shoot for shooters who wish sport and who wish it fair and square. I can not conceive any higher aim or destiny for trap-shooting than that.

It is interesting to note that the Limited Gun Club has this season had faith enough in itself and its purposes to spend over $5,000 in the purchase, improvement and equipment of its handsome shooting grounds. The Limited Gun Club is not limited. It lives in no pent-up Utica. It has before it an unlimited future and I hope it will have no end of a good successful time at its tournament. Tournaments like these, be they big or little, are worth more than all the big wide open shoots, where the old rounder system and the ways of the past prevail. They indicate a sort of trap-shooting that has come to stay, and that is what we all want.

THE LOSS OF NOEL MONEY.

I infer from the following letter from Tom Divine, in Memphis, that Mr. Noel Money is lost somewhere down in Tennessee, near Memphis. If so, I can commend his judgment, for there is no better place on earth to be lost in, and if the dove-shooting is as good down there now as it was a year ago I should not blame Mr. Money for striking work and staying down there for the rest of his natural life. Mr. Divine writes thus of the circumstance:

"At New Orleans meeting was one Noel Money, known as the E. C. Powder King No. 2, who forced himself upon our delegation, and of course you know us well enough to understand that we had to take care of him. He was not satisfied with eating and drinking up everything that we were able to pay for in New Orleans, but became so thoroughly infatuated with the company of the Memphis boys that he concluded he would make a little run up to Memphis. Nobody invited him, I don't think anybody wanted him, but we would have been perfectly willing to have brought him this far and let him go on. But when he got here he expressed himself as being still better pleased with the company, and said he was going out to Willie Bennett's house and live for a week or ten days, and 'wouldn't I come along and stay with him.' I told him I was much obliged to him; but I didn't like to impose on Mr. Bennett, that he was a poor man and had a large family —thinking perhaps this would get him to move on. He laughed at it as a good joke. Bennett saw that there was no way of getting clear of entertaining him, so he asked me to please keep him up town long enough for him to go home and lock up his spoons. This precaution was taken on account of the fact that Messrs. Money, Guessaz and George carried off some of the Tennessee Club's spoons on the night of the little banquet during our recent shoot in June.

"Mr. Money looked rather down-hearted at the first meal over at Bennett's house, from the fact that there was no silver in sight. Rations were short and we hired the cook to be discourteous, but he is still here and I believe he is going to stay all summer.

"Last Wednesday Messrs. Money, Allen, Bennett and Divine went out in the country thirteen or fourteen miles and had an elegant dove shoot. I don't think I ever saw any one enjoy himself more than Money. He chased the birds from field to field and shot like wildfire. We are preparing to go out again to-day at 12.

"Below I give you the score of a match shoot yesterday evening, $25 a side, 100 birds to a man, between Noel Money and Abe Frank on one side, and Irby Bennett and Tom Divine on the other. Money made the best score, making 70 out of the last 75 shot at. Divine came next, Frank next, and Bennett next, as you will see. Money made 91 out of 100, Divine 88, Frank 86, and Bennett 85.

"Everything points to the pleasant meeting of our sportsmen friends at Bobo's between the 5th and 10th of November next. We have the grounds selected for our camp, and our party, consisting of seven, will be composed of as fine thoroughbred sportsmen as ever went to the camp. I look forward to this meeting with a great deal of pleasure. Should you see our friend Dick Merrill, tell him to keep in good form and be ready for the fray. Tell Organ that he is not expected, though I suppose he will come. Messrs. Bennett and Divine will represent Memphis at Charlotte, N. C. Mr. Money says that he will be present if he can leave the doves long enough. Everything points to an enjoyable reunion of shooting cranks.

"We think down here that FOREST AND STREAM is the greatest sporting paper in America."

COOK COUNTY TOURNAMENT.

CHICAGO, Ill., Aug. 31.—After a week of rain and mud, the elements concluded to let up and give Charlie Grubbs a chance for his tournament, yesterday and to-day, this including the first monthly club team shoot of the Cook County Trap-Shooters' League. The weather proved all right, but the attendance was quite small, perhaps due to the distance of the grounds from the business part of the city.

The tournament was held on the Cicero Gun Club grounds, some ten or twelve miles west, by cable or trolley, on Madison street. These grounds are quite good of themselves, pleasantly located in a bend of the timber which lines the Des Plaines River. The club house lies near and below the grade of the railway tracks, and there is a fair sweep of level ground in front of the score. The background of green timber proved a hard one and straight scores were few. Shooting was steady and everything was very smooth and pleasant, thanks to the care taken by Mr. Grubbs. A number of ladies were present and all that lacked was shooters. As this shoot was a benefit for Charlie Grubbs, for the purpose of sending his sick son to a better climate, one hopes that he netted a good sum clear after all.

FRIDAY.

In the first event Fox, Ruble, Grubbs and Jefferson were among the upper moneys. In No. 2, 15 birds, Ruble led with 14, Steck and Bowers 13. In No. 3, 20 birds, Ruble was straight, Steck 19, A. W. Adams 19. In No. 4, 25 birds, Steck was 24, Eich 23, Ruble 22. In No. 5, 10 birds, Hicks and Eich tied on 10, Ruble, Liddy and Bingham 9. In No. 6, 15 birds, Bingham was 14, Hicks and Bowers 11. In No. 7, 20 birds, Ruble was 17, Bingham and Liddy 15, Hicks and Lowry 13. In a shoot at five pairs, Ruble was first alone, 10 straight. In the sweeps following, Ruble, Steck, Bingham, Eich and Hicks kept near the first two moneys. The entries ran about ten or twelve to the sweep and a great many sweeps were therefore shot off. At match No. 14, 15 birds, there were only five entries: Bingham 15, Steck and Eich 14, Hicks 13, Tucker 12, Palmer 11. In No. 15, 10 birds, Ruble was 9, Bingham and Hicks 8.

SATURDAY.

On Saturday the weather continued fine and the attendance picked up a little, but the entries ran only into the third or fourth squads. Ruble, Bingham and Stannard forged ahead and Adams picked up a bit in his gait. The sweeps were small. In No. 6, 20 birds, there were eleven entries; Stannard, Adams and Ruble tied on 19, Bingham was 18, Bowers and Frothingham 17. Match No. 7 fell in the afternoon, and had eighteen entries, more shooters being able to come out on Saturday afternoon. This event was at 25 birds, and Hicks got $8, out of it with 23 for high score. Stannard and Goodrich tied on 22; Ruble, Steck, Bingham, Frothingham, Adams and Von Lengerke all tied on 21. Nobody got rich after the close of the Cook County Trap-Shooters' League monthly club contest. Small sweeps of nature similar to above continued till evening.

THE COOK COUNTY LEAGUE CONTEST.

Three teams only qualified for the first monthly club team contest of the Cook County Trap-Shooters' League—Eureka, Garfield and Cicero teams. Eureka once again demonstrated her ability to outshoot her rivals, and one bystander from Halstead street remarked enigmatically that "She trun de boots inter dem odders." Following are the scores:

Cook County League club contest, six-men teams, 25 targets, for the Mussey club championship medal:

Eureka Gun Club.

Bingham	1011111101011111111111111—22
Goodrich	1111111101011111010111011—20

Goethe	1110011101000110110000101O—13— 86

PRAIRIE GUN CLUB TOURNAMENT.

Prairie Gun Club holds its second annual two days' tournament and clambake, Sept. 7 and 8. Two live-bird events are to be shot each day, and a good target programme is offered. The shoot will be held at Lyons (Riverside), which is readily accessible via C. B. & Q. Railroad.

WATSON'S NEW PARK.

The encroaching city once more forces John Watson to move his shooting park. This old reliable meeting place of the Chicago shooters and the shooters of many other States will still be at Burnside Station, but will now be found on the electric line, right near the old grounds. The same conditions will obtain, and the birds will be as tough as ever and the service as good.

MICHIGAN LEAGUE WINNERS.

The winners of the individual championship medals in the Michigan State League tournament this week were expert John Parker, of Detroit; semi-expert G. Fleischer, of Detroit, and amateur George J. Cutler, of Ionia.

MILWAUKEE MAN WINS.

George Dieter, of the South Side Gun Club, of Milwaukee, and J. J. Smith, of the Evanston Gun Club, of Evanston, Ill., shot at 100 birds Aug. 29 for $100 a side. Dieter won by a score of 88 to 86 out of a possible 100.

ILLINOIS CLUB TEAMS.

In the club team contest of different towns shot at the midsummer tournament of the Kewanee Gun Club Neponset won first, Canton second and Kewanee third. Scores at 15 targets:

Neponset—Norton 10, Lyle 15, Studley 15, Robinson 14, Snow 13, E. Miller 11; total, 78.

Canton—Howat 14, Miller 13, O'Neill 11, Reader 11, Thompson 15, McQuaid 13; total 77.

Kewanee—Huckins 14, Day 14, Baker 13, Kellogg 11, Faull 10, Sharp 11; total, 71.

WISCONSIN CLUB TEAMS

The progress of the Wisconsin club team contests which have been progressing among clubs located mainly in the southern portion of the State is thus reported by dispatches from Milwaukee, Aug. 27:

"The Hartland Gun Club this afternoon forfeited the match for the Burnham medals to the South Side Gun Club. The medals were therefore awarded to the Oconomowoc Gun Club. The contest this afternoon between the Hartland Gun Club and the South Side Gun Club terminated the series of shoots arranged by the home club for the Burnham medals. The matches were begun May 14 by the Jolly Gun Club, the score being: Jolly Club 111, South Side Club 106. The next shoot was May 21 with the Waukesha Club No. 1, with the following score: Waukesha 107, South Side 109. The Waukesha Club No. 2, June 11, ran up a score of 112 to the South Side's 107. June 25 the score with the Hustisford Club was: Hustisford 108, South Side 105. July 9 the biggest scores of the season were made both by the home and the visiting club, the figures being: Oconomowoc 116, South Side 118. The contest July 23 resulted as follows: Sheboygan 103, South Side 112. Aug. 6 the Racine Club scored 110 and the South Side 111. The Columbus team defeated the home team Aug. 15, 112 to 107. There are five separate medals awarded to each member of the team making the highest score. This is only for the visiting teams, however, as the Milwaukee club is not competing for the medals, which are presented by Mr. John F. Burnham, one of their members."

DIANA LIVE-BIRD DAY.

Down at Diana Club grounds, on the Kankakee River, in Indiana, some very spirited little live-bird affairs sometimes take place. At the Diana Club medal contest this week, and in the sweeps shot following, about 200 birds were trapped. Six members shot. The club medal was won by Henry Ehlers, the strong man with the gun. This makes the second time Mr. Ehlers has won the medal, which must be won four times to be owned individually. Following are the scores, at 15 live birds:

Ehlers	111•111111111—14	S Klein	111111110011100—11
P Willems	110110011111111—12	L Kuraka	110110110010011— 9
C Burmeister	111011111101001—11	W H Weber	101100101111000— 8

JACK PARKER'S SHOOT.

Remember Jack Parker's tournament, Detroit, Sept. 10, 11, 12 and 13. It will be a corker. The picture on Jack's programmes is not his own. It was taken from an actor. E. HOUGH.

909 SECURITY BUILDING, Chicago.

Michigan City Visits Grand Junction.

GRAND JUNCTION, Tenn., Aug. 24.—A very pleasant afternoon was spent at the traps here to-day. Charles W. Tway, of Michigan City, Miss., and M. L. Brewer, of Lamar, Miss., came over and set the boys a merry pace, in fact, too fast for our boys to carry. The home team consisted of F. Prewitt, J. Prewitt, B. Prewitt, G. Mitchell, W. Mitchell, Graham and Lee. Tway set the pace, breaking 90 out of the 100 shot at, and the shooting was hard; too, shooting down hill and the trappers throwing the birds up and down the line. Below see scores:

No. 1, 10 singles: F. Prewitt 8, G. Mitchell 5, J. Prewitt 5, Tway 9, Brewer 8.

No. 2, same: T. Prewitt 6, G. Mitchell 5, J. Prewitt 6, Tway 8, Brewer 6.

No. 3, same: W. Mitchell 5, Brewer 6, Tway 9, F. Prewitt 9, G. Mitchell 6, J. Prewitt 5.

No. 4: This event created great interest. The Michigan City Club vs. Grand Junction Club, two men to team, 25 targets per man:

Michigan City.	
Brewer	0111111111111101111111010—21
Tway	1111111111111111111111110—21—45
Grand Junction.	
F Prewitt	1101100101110110101110111—17
G Mitchell	1111010011010011100110101O—15—32

No. 5, 10 singles: B. Prewitt 5, W. Mitchell 8, Tway 8, J. Prewitt 4.

No. 6, two-men teams, 10 singles per man: Tway 8, Brewer 8—16; T. Prewitt 5, G. Mitchell 8—13; B. Prewitt 2, J. Prewitt 5—7; Lee 3, Graham 4—7; W. Mitchell 6, Prewitt 6—12.

No. 6, 25 singles:

Graham	0100101010000100010000000— 6
B Prewitt	1101110101100100010011100—13
Brewer	1111100010101100010111000—13
Tway	1111111111101111111111111—24

ITINERANT.

PUBLISHERS' DEPARTMENT.

Sleeping Bag.

Messrs. Hulbert Bros. & Co. have perfected a Sleeping Bag that is designed to fill a long-felt want among all kinds of sportsmen and people whose occupation necessitates their sleeping out of doors.

The bag as shown by the illustration is fastened by patent snap fasteners, such as are used on gloves, but much larger in size. The top of the bag is made so that it comes well up around the neck and fastens down the front for a cape, making an absolute protection for the entire body. The back being 64in. wide and 6ft. long, gives perfect freedom to the movements of the legs and arms, instead of being bound up immovably, as is the case when bound up in an ordinary blanket, and it is but the work of a moment to get out, which can be done much more quickly than with the square-shaped covers.

With this Sleeping Bag, closed as it is at the bottom and sides, it is not necessary that another person wrap you up, and it is impossible to kick your feet out and catch cold.

Its shape also makes it very valuable as a knapsack for carrying clothes.

It is an all-wool heavy blanket, closely felted, with a soft nap inside, and will be comfortable even in zero weather; they come in three weights, the extra heavy being particularly suitable for the Northwest, and in three colors, namely, Red, Gray and Dark-Gray. As they retail from $6 to $10 each, it will be readily appreciated that they are within the reach of all.

Duck Decoys.

Mr. G. W. Stevens, Jr., of Weedsport, N. Y., who has succeeded to the business of H. A. Stevens, the well-known manufacturer of wooden decoys, has issued a circular in which he says:

"How often it is you meet a friend just in from a ducking trip without getting any ducks, saying: 'There are lots of ducks, but they would not decoy.' Look over his outfit, and nine times out of ten you will find he has a very fine gun of the latest pattern, made by one of the best makers, and clothing to match. Look at his decoys; they are a cheap, ill-shaped decoy, not much better than a block of wood, painted with a cheap paint that is coming off every time they are used, and perhaps painted by a man that never saw a duck sitting on the water in its natural state, and if he did could not get the colors and put them where they belong. Painting a decoy in natural colors is a trade in itself that requires years of practice. You can kill ducks with a cheap gun and good stools, but you can't decoy the old birds with your fine gun and poor decoys; they will detect them at once."

A New Epoch.

To keep abreast of the times every sportsman should study the recent catalogues of the rifle and cartridge companies. New rifles and new ammunition for these and the older guns as well are appearing with great frequency, and a new epoch has begun. For example the Union Metallic Cartridge Company in their last catalogue call attention to the following "new goods recently put upon the market:" Primers for smokeless powders; .32 short cartridges with mushroom bullet; .32 long rifle cartridges, rim and center fire with inside lubricant; .32, .38 and .44 Smith & Wesson cartridges with self-lubricating bullets; .25-25 Stevens and .25-36 Marlin cartridges; .236 Navy, .30 Gov't and other cartridges with metal-cased and mushroom bullets, and a list of smokeless powder cartridges from the .22 short to the .45-90.

Marlin Repeating Rifle.

The Marlin Fire Arms Company of New Haven, Conn., is out with a new catalogue that includes their most recent improvements in repeating rifles and which contains information of interest to every rifle shooter.

The new .25-20, .25-36 and .30-30 smokeless rifles are fully described and improvements in standard ammunition for Marlin Repeaters are noted.

"Hunting and Fishing along the Northwestern Line"

is the title of a booklet recently issued by the Chicago & Northwestern Railway. It is profusely illustrated, and gives information in detail concerning the best hunting and fishing grounds in the West and Northwest. Copies will be mailed free to any address upon application to W. B. Kniskern, General Passenger and Ticket Agent, Chicago & Northwestern Railway, Chicago, Ill.—*Adv.*

It will give us great pleasure to forward a copy of our catalogue to any one who "goes a-fishing." Some people charge for their catalogues, some charge for the postage, some charge for both. We are more than willing to give away our catalogues and prepay postage on them. No angler, after looking at the catalogue, can resist buying from us or from our trade-customers all the fishing-tackle he can afford to pay for. That is where WE get back a good deal more than cost of catalogue and postage.

ABBEY & IMBRIE,

18 VESEY STREET, NEW YORK CITY

MARSTERS HAS WORMS.

Sand Worms, 12c. per dozen. White or Blood Worms, 25c. per dozen.

I am with you again with lower prices for Fishing Tackle. I find by experience that putting down the prices and increasing the quality, increases my business every year.

FOREST AND STREAM'S OUTDOOR SCENES.

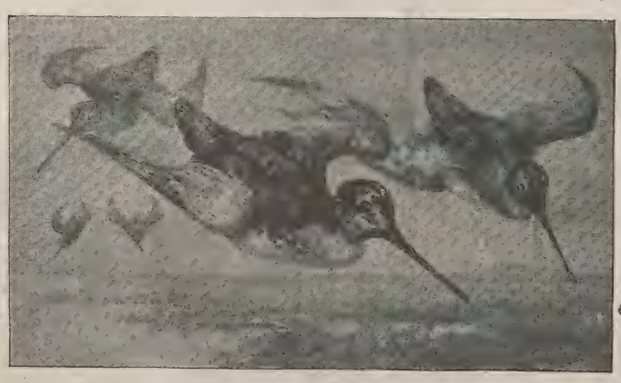
FROM ORIGINALS IN WATER COLORS AND OIL, PAINTED EXPRESSLY FOR THE FOREST AND STREAM.

HE'S GOT THEM.

AS PREMIUMS.

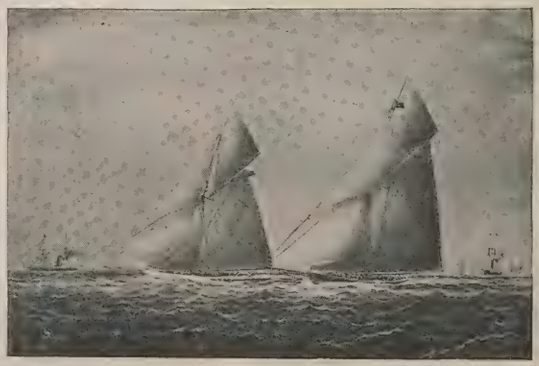
We have prepared as premiums a set of four beautiful and artistic reproductions of original paintings of realistic outdoor scenes. The art work is the best obtainable in New York; the pictures are rich in effect and are intended for framing. They are done in 12 colors. The yacht race is from an oil painting; the others from water colors. The scenes are shown in the small cuts herewith. The plates are 14¾ x 19in. The pictures are sent both to **new** subscribers and to **old** subscribers upon renewal, on the following terms:

Forest and Stream *one year and the four pictures*, $5.
Forest and Stream *6 months and any two pictures*, $3.



If subscribing for 6 mos. designate by title the two pictures desired. Single pictures will be sold separately, price $1.50 each, or the set, $5. Remit by express or postal money order, payable to Forest and Stream Publishing Co., 318 Broadway, New York.

The pictures are sent by mail, postpaid, wrapped in tube.



Copies of them may be seen at this office, and inspection is invited.

The FOREST AND STREAM is put to press on Tuesdays. Correspondence intended for publication should reach us by Mondays and as much earlier as may be practicable.

SEEING THE RACE.

IT was a poor heart that didn't quicken its beats somewhat at the magnificent naval pageant presented on Saturday morning last by the procession of gaily decked craft, steam and sailing, that passed in an endless stream down the Narrows and out toward the Hook between the hours of 8 A. M. and noon.

Large iron steamboats, packed from stem to stern on every deck with eager passengers; trim little steam yachts, making no fuss, but getting there in the majority of cases as fast as the best of their bigger brethren; the floating palaces Valiant and Nourmahal; ocean-going tugs that puffed and snorted asthmatically in their endeavors to keep up with the procession; schooners and cutters bound out under tow—they were all there; not one was missing. It was a glorious spectacle, and one calculated to make an American swell with pride as he looked upon a sight that could not be duplicated anywhere on the face of the sea.

Little wonder was it then that the English crew, which mans Mr. Laycock's Valhalla, grouped themselves on the forecastle of that great yacht, and gazed open-eyed at the scene which greeted them as the early morning mists floated away from the vicinity of the Sandy Hook Lightship, where the Valhalla had anchored this morning after a race across the Atlantic to see the meeting between the Defender and the Valkyrie. For that was the cause of all New York and a large portion of the United States going down to the sea in ships on this morning.

If the interest taken in these now almost annual attempts to wrest from our grasp the silver mug, known as the America's Cup, is to be gauged by the crowds that were present at the first race of the series of 1895, then it is plain that the ownership of that Cup is felt to be of almost national importance. Surely never was such a fleet of pleasure craft before assembled in the neighborhood of Sandy Hook's dull red boat, known as the Sandy Hook Light.

The start itself was inspiriting enough. For a few minutes it began to look as if the Cup was in danger. The Valkyrie was apparently vindicating what is supposed to be her claim as a light-weather boat. The gap between her and the hope of all America was widening perceptibly, and in Valkyrie's favor. It was an anxious time just then. Field glasses were closed viciously by many an old "sea dog," as the daily press delights to term a yachtsman who has seen some service, and who knows the main sheet from a tow rope.

It was just then that the yellow dog would have been lynched had the public had their way. On all sides rose a wail: "Throw the yellow dog overboard!" Many—that is, all who could—retired to the fleshpots, and were enjoying life as best they could under the then existing conditions as they supposed them to be. If the Defender was to lose, let them at least be thankful that they could eat, and let them pour out some libations to Bacchus in order that we might have better luck next time.

Some half hour later a mighty and spontaneous shout went up from the fleet. The Valkyrie, which had appeared to unnautical eyes to be far ahead, had tried to cross Defender's bows and had had to give it up, failing in the attempt. The Defender was ahead and the people recognized that fact. "What's the matter with the yellow dog?" "He's all right!" So quickly was the Defender's mascot once more enrolled as an honorable member of an honorable ship's crew. The cheers which greeted the crossing of the Valkyrie's bows by the Defender a few minutes later were hardly less enthusiastic than those given previously. They were the natural effervescence that resulted when it was seen that the American craft and crew were once more in the lead.

The Valkyrie was still in the mists that were falling when the Defender crossed the line and placed the first heat for the America's Cup to her credit. Long and loud did the whistles blow and the cannons roar. Everybody knew everybody else and nobody felt lonely save here and there a sympathizer with the Valkyrie, now looming up as she, too—some 8m. behind—neared the line. The applause that greeted her was, if less prolonged, no less hearty than that which had been given to her conqueror. It was a tribute to English pluck, grit and skill, and as such was well deserved.

Then it was all over, and the enormous fleet began its usual race for home. The event of the day was sailed over and over again on every boat in that fleet. Men who prior to this race did not know the difference between a catboat and a schooner now talked glibly of port tacks and luffing. It had been a great day's outing, and the result had been satisfactory.

The only thing that marred the day had been the behavior of some of the steamboat captains, who in their endeavors to give their passengers a near view of the racers had overstepped the bounds of reason and had bothered both boats at different periods of the race. Strong words were said about these captains, and they are answerable for more than one bad mark on the pages of the books kept by the recording angel. Fair play is a jewel, but those fellows can't tell the difference between a brilliant and a crystal.

SIDE-HUNTING.

THE question of side-hunts is up again. Deputy Game Warden Chas. Weichsler, who sent us the report of the Port Huron Fish Protective Club's fishing tournament, in which two sides fished to see which could catch the most fish tells us that these semi-annual competitions are the life to the club. They stimulate interest in the organization, give it the support of the increased membership and bring to it influential and law-observing men. Here is one case at least in which a side-fishing has for defense more than a simple consideration of the fun there is in it.

The Columbia Rifle and Pistol Club, of Rochester, N. Y., held a side-hunt on Monday of last week, fifty-four men on a side. The various animals and birds were scored with credits from 60 points for a skunk or fox and 40 for a woodchuck to 5 for an English sparrow; 30 for gray squirrel, 25 for partridge, woodcock, wild duck, rabbit or red squirrel; 20 for chipmunk, snipe or plover. In its editorial comment on the tournament the *Post-Express* suggested that the 108 contestants, who included in their ranks "physicians, city officers, prominent business men and professional men," could plan such a campaign only through their thoughtlessness. "We suggest," it said, "that they immediately strike from their list every bird and animal that may be classed as game and offer points only for fox, weasel, skunk, crane, woodchuck, hawk, crow, kingfisher, blackbird and sparrow. Let the shooting be restricted to the birds and animals that are outlawed. At a time when strenuous efforts are making to protect game of all kinds a club of sportsmen ought not to see how much game they can destroy in order to win a supper."

In reply to this Mr. C. M. McChesney, president of the club, contends that every animal or bird named on the list is properly placed there; that the scores for vermin are larger than those for game; that as to the game varieties, "we know of no just reason why the members of this club are not as entitled to shoot them in season, as provided by law, as any other sportsmen." He adds that the record of the first side-hunt held last year proves that the amount of vermin destroyed on such an occasion is vastly in excess of the game. The only weapon allowed contestants is a .22cal. rifle. In the hunt of 1894 not a single black or gray squirrel was secured, nor a partridge, woodcock, duck nor snipe; while scores of woodchucks and hundreds of English sparrows were destroyed. And he contends "that if this and many more clubs would have such hunts more often under the rules and regulations that govern the hunt of this club next Monday, the strenuous efforts now being made to protect legitimate game and song birds would meet with a greater degree of success."

The contest of last week was marked by a big score of English sparrows, which in number so far exceeded the other classes of game, that the side-hunt was practically a vermin-destroying campaign. The club is made up very largely, we believe, of men who never shoot in the field, and who upon an occasion like this can not be expected to pot much true game with their small rifles. From this it might be argued that the printed criticisms on the club's hunt are more just in their application to the abstract question of side-hunts than they are to this case. In general, side-hunting is an unworthy form of sport, because unquestionably it does encourage the spirit of indiscriminate killing. A certain proportion of game shooters—it is, of course, impracticable to determine just what the proportion may be—do kill whatever they come upon, whether it flies or runs or crawls; if it moves they bang away at it. Nothing is too large or too small—from a barnyard rooster to a peewee—they pot it. Such shooting may be sportsmanlike in Europe—it is not in America. We do not mean to imply that side-hunters go to such extremes in their contests, but that the influence of side-hunting is to beget extremely hazy notions as to what constitutes legitimate game.

BULLETS AND BRONZE.

ON the summit of Mount Mitchell, in North Carolina, a bronze monument marks the grave of Prof. Elisha Mitchell, who lost his life while engaged in an exploration of the peak. The monument was intended to commemorate the life and services of a good man; it has been perverted into an enduring memorial of the littleness and vulgarity of human nature, for it has been defiled by the scratched-in names of visitors to the spot, and its sides are defaced with indentations made by bullets, which it is charged have been fired at the monument by sportsmen. It is not to be believed for a moment that any sportsman is guilty of the offense. Definitions of just what constitutes an individual's claim to the title of true sportsman differ very widely, but never yet have we heard the term defined in a way that would include among the ranks of sportsmen the empty-noddled, coarse minded and irreverent desecrators of memorials to the illustrious dead. The bullet marks on the Mitchell bronze predicate rifles or revolvers, and men to shoot them, but not sportsmen. The individuals who have worked this abomoinable desecration belong with those who in the National Yellowstone Park thought it a smart thing to steal from the summit of Mount Sheridan the autographs of Sheridan and others deposited there by them to commemorate their visit.

OUT OF THEIR PLACE IN HISTORY.

JERRY GREENING, the famous bear hunter of Pike county, Pennsylvania, is dead. From time out of memory he had been a picturesque figure of the community, or more strictly speaking of it not. For Greening came closely to classification among men out of their place in history; individuals who have come upon the stage at a time when their peculiar genius is a bit belated. Greening belonged rightly to the bear-fight era of the progress of civilization; he should have lived in the days of Boone and Crockett, and might have made a name and fame with them. As it was he got here just after the country had ceased to require frontier bear fighting and deer killing.

There are scores of Jerry Greenings left. You may include in the category every man who brags of his prowess with the gun and preaches the doctrine that the game laws were not made for him to keep. Bannock Indian, Jackson's Hole hide hunter, Princeton student poaching in Wyoming, these and scores of other folks much nearer home than Wyoming, all are out of their place in history. The proper time for them and for their activity with powder and bullet has long since passed away.

The best thing such people can do is to try to adapt themselves to the world as they find it to-day.

THE THREE STAGES.

THESE are the three stages of man's life on the waters.

First, the fishing of boyhood, a care-free pastime of the days of youth that know neither responsibility nor worry.

Second, the fishing of older years, when one must wrest a holiday or vacation—when he can, not always when he would—from a calendar full of hamperings, of work and responsibility.

Third, the fishing of those who have earned the opportunity along with the other good things of the world by having accumulated the means to enjoy themselves, or by having passed beyond the years of drive and application, and have come to the days of rest and enjoyment of the good things of life.

Happy is he who has had or is to have his share of fishing in any one of these three stages.

Thrice blessed is he into whose life fortune has decreed a generous measure of all three.

The Sportsman Tourist.

THE EVENING OF AUG. 1, 1895.

An Indian, a salmon, a syenite rock. The salmon lies upon the grizzly slope of syenite, and the Indian, fitting his wet moccasins to the rough foothold, rests one end of my gaff against the silvery scales of the big salmon to prevent him from sliding back into his roaring home.

The sun is setting, and for a brief moment the rays seem to warm the bleak hills of white caribou moss and the dark gullies of stunted black spruce, but the warmth is in the color. The steel-gray clouds come westward from the ice-blocked straits of Belle Isle with a fine bracing air, but there is no suggestion of real midsummer. A white-throated sparrow among the wild peas pipes loudly to a neighbor up among the chicoutai berries and then sweetly and clearly the spiritual notes of a hermit thrush ring out farewells to the day that is passing.

The salmon has never known any other river but this one. His mother hid the egg securely under a heap of clean sparkling sand in a shallow tributary of the river away up on the great Labrador plateau one day in October, and then hurried back to the sea before the ice caught her. The sheldrakes and wild geese had returned in the springtime before the little salmon had worked his way out of the egg and up through the sand into the clear water of the brook. Two years he spent in the river as a gay parr, splashing out after the ephemeridæ on the surface, scooting after the dodging sticklebacks and slyly waiting for the small eels to venture away from their protecting stones. Then he lost his scarlet spots, and coming down the river in smolt colors went out among the rocky islands in the Gulf of St. Lawrence where sea plants make red and yellow thickets at the bottom. At first he caught snappy crustaceans and tender sandlaunces, and found such an abundance of food that he soon grew to proportions which enabled him to grapple with a capelin or smelt. By the end of his third year he dared to rush into a scattering school of herrings and select the fattest one for himself, and in his fourth year, as a trim grilse, he appeared again in the river, coming up with his older anadromous relatives on their migration. He did not have to keep an eye on the voracious sea trout now, and he escaped the seals easily because they chased the larger salmon and did not give him much attention. He felt the pride of a mature fish, however, and a superiority over his sisters who needed to wait in the sea a longer time before they were ready to accompany him up to the old homestead in summer.

In six or seven years he became a wonderfully strong salmon, making annual trips up the river and fearing nothing but the otters and the bears when he lay in shallow currents at rest. The osprey and the golden eagle occasionally dropped down at him from out of the sky, but they stopped when they were near enough to see how swift the water was in which he rested with such apparent ease. The onset of the hissing chute and the smothering white water of the exploding falls were to him nothing more than a challenge to try his strength. He would first leap into the air below the falls and take a good look at them, for they could kill him stone dead in an instant if he were to allow it. After looking at the falls he would run up more closely and hold his head out of the confusing, boiling foam for an inspection of the easiest-looking place. Then he would spring 6ft. or 8ft. into the thunder, and hurled back violently with injury to his dignity he would gather his powers for a mighty effort, and in one clear parabola of 12ft. or 14ft. would sail through the air over the flying water at the foot of the falls and force himself up through the awful current to a resting-place in the eddy above.

This he would do when the day was bright and clear, but through the night and on dark days he would remain quietly in favorite places where the water ran 3ft. or 4ft. deep at the rate of about two miles per hour, over pebbles and cobblestones. It looked as though he remained in the open current without a motion, but on close observation one could see that his nose was behind a cobblestone large enough to make a little sunken eddy, and that his tail curved a bit from side to side. After mounting the first rapid near the sea he usually spent two weeks in the pool above, and then on ascending the second fall he remained for a week in the next pool, and in that way he proceeded like any experienced traveler who has learned how to enjoy himself and find comfort on the road. When he first went into the fresh water every year his colors were startlingly silvery, gleaming in the light that winnowed down through the crinkles of swift water. Ten days later his back and gill covers and fins began to become blackish, and his sides were a trifle less silvery. Two months later, at the headwaters of the river, his colors were distinctly black and reddish. From the first day of his entrance into the river the kipper hook on his under jaw began to grow, and his rounded sides became flatter, because he did not eat while in the river. He would often jump at a fluttering miller or a little shiner at the surface just to keep his mouth in working order, but that would not be called eating.

Last year while passing through the estuary from the sea he was gilled in Monsieur Jules's net, but he soon thrashed himself out of that predicament, leaving a ring mark around his neck where the net had torn away the scales. Two years ago he chose the wrong spot for a leap—at the falls—and was thrown back over the rocks so quickly that his side was badly torn and one pectoral fin was split lengthwise. So back he went down river and into the sea until the wounds were healed, knowing that if he remained in fresh water saprolegnia would grow in the injured tissues and make him an invalid. He returned to the upper waters of the river in time to find a mate who did not object to his scars any more than the German maiden objects to the duel marks on the cheeks of her lover; but it was necessary for him to drive away a ridiculous little parr and two or three rivals, one of which locked jaws with him and did not let go until he had damaged his kipper hook.

This year the scarred old veteran came up from the Gulf three weeks ago, but he waited in brackish water below the first rapid for a week until the temperature of the river had risen to 50°, and then in the first pool he did not feel much like jumping for exercise or at passing flies until the water was 5° or 6° warmer yet. It is hard for a salmon to keep quiet for a very long time though, and one need not stand by a pool many minutes to learn if salmon are there or not.

I did not care particularly to catch this fine old fish just now because we had had sport enough for one day. First I had hooked an enormous salmon that sulked at the bottom for two hours, in spite of all my efforts to move him; and then when he was beginning to tire the hook came away all at once, and so easily that one wondered at it having held so long. Another salmon had given me a violent chase down the rapids and I had torn my clothes, lost my hat and scratched my hands in leaping over rocks while trying to follow him; but he finally ran out all of 120yds. of line, whacked my rod straight under water and broke away. After that I landed two large salmon and a sea trout. No one would crave any more physical exertion after that sort of work and so Jo-mul and I had gone back to camp.

We were sitting at the edge of the rocks in front of of camp making the smelt jump at a cast of small flies, while Caribou Charley cooked the young murres that he had condescended to collect for supper, along with a pailful of cloudberries and hairy currants. Several smelt would dart at the flies at once, and I told Jo-mul of the common saying among white men that salmon fishing spoiled a man for any other sort of sport with the rod, and asked him if we had not many and many a time rigged up a light rod and gone to fishing for smelt, forktail charrs, whitefish, sea trout or brook trout while a dozen leaping salmon were in sight. Then again, after a fine salmon had been brought to gaff, we have gone down the bay and had no end of fun digging clams and pulling lobsters out from under the rocks, or we have gone up to deep water and fished on the bottom for lake trout with a plain vulgar hook and sinker, when salmon would have risen to almost any cast of the fly in the pools. No! I am suspicious of the color of the blood of a sportsman who is ruined by salmon fishing. Nevertheless, a salmon is the greatest prize that is obtained by the fisherman.

While we sat waiting for supper an hour ago and were catching the smelts in order to fill in all chinks of time, two or three fish that looked like ouananiche began to leap and play a few yards out in the stream, so I got the salmon rod out again in order to catch one of them for identification. The Jock Scott fly was cast gently into the smooth gliding rapid water at the head of a short but noisy chute, and when the fly rounded up and rippled the water at the end of a straightened line this great salmon unexpectedly appeared. He advanced close up to the fly, almost touched it with his blunt nose, stood poised for a moment in the current and then turned away, making a swirl that boiled the water up in a smooth, round dome at the place where he had been an instant before. He was given time to settle back to his resting-place, and then the fly went out to search for him again. This time he came with a rush, and opening a great mouth that shut the fly in completely, he turned to disappear again; but feeling the hook and the tightening line he leaped 8ft. into the air, shook his head savagely, and bending his body into a bow struck at the line with his tail while high in air. The water splashed to the shore and splattered the rocks as he splurged under again, and then with the speed of an express train he rushed 50yds. out into the river and made a graceful broad jump of 15ft. over the surface. Turning sharply down stream, he shot instantly through the chute, stopping to whirl once in the broken water, and then took out 100yds. of line so swiftly that it fairly took my breath away before I could jump over the rocks and follow him along the shore. Up he went into the air again and then back into the current, yanking his head furiously back and forth with measured strokes. His next move was to march up behind a rock in deep water, where he sulked, remaining in the same place for ten minutes, and giving little nervous twitches on the line, which was drawn so tightly in the water that it hummed a tune in G minor, and cut the water so that a little transparent sheet an inch high stood straight up.

In twenty or thirty minutes the salmon had become sufficiently tired to allow me to guide him into shallow water near Jo-mul, who struck him fairly with the gaff and lifted him out upon the rock at his feet. A beautiful fish it is, and one that required a pretty good knowledge of his habits in order to take him out of the element in which he was well equipped for methods of escape.

As for Jo-mul, who stands there so erect and solemn upon the rock holding the salmon with the gaff, he too has habits and a life history. His long black hair is cut evenly around at the level of his shoulders, and his straight thin nose, high cheekbones and dark skin mark the man whose ancestors were perhaps here with the indigenous animals. He is not at all like a white man, although he says that he can speak English. I asked him if he had ever seen a moose so far north and he replied, "Seen um be markin on de paper." That was an unusually good and long answer for him. As a rule it is necessary to ask him a question several times before he makes any kind of an answer in Cree, lumberman French or English. He is not morose, but like others of his race he has failed to develop the bump of language. I do not remember to have seen him laugh but once, and that was when I asked him to cut enough fire-wood to last for several days. It was a good joke. Nothing appeals to an Indian's sense of the ludicrous like the idea of laying up anything in advance. He tries to imitate Caribou Charley and me in some things and I do not dare to leave my toothbrush out or he surely would try it. He still prefers to lean over the river Narcissus like when parting his hair in the morning instead of using our more civilized mirror, which is made by sinking a rubber coat tail in a pan of water.

Every year in July Jo-mul comes down to the coast and disposes of his canoe load of furs to some trader. A fine black mink skin is worth two dollars, so for that the trader gives him a five cent pipe on which he has placed the value of two dollars. His skins of beaver, otter, fox, marten, lynx, fisher, wolverine and bear are traded off for pickles, Florida water, gunpowder, tobacco and the simplest necessaries in the way of clothing and provisions, but usually to pay the last year's debt; and the things that he wants are advanced to him, for he is known as an honest Indian. That means that he has learned that advances will not be made unless debts are paid. An Indian is apt to be relatively honest. Jo-mul would probably not steal a gold watch because he does not know what it is good for, but it would not be safe to leave a pound of pork near him. He would cross himself with one hand while purloining the pork with the other, for the missions have not been without their influence in this region.

Jo-mul has a wife and two children, but his ideas of family are not troublesome, and he would not feel so very badly if some young brave were to run off with his comely daughter before marriage, especially if the young brave could furnish food enough and would give the daughter a bright red ribbon or two. After Jo-mul has traded off his furs and has lain about camp for four or five weeks the family start off on their annual trip into the interior, to come down the river in the following year just as the salmon are going up. Jo-mul has few motives or ambitions beyond those of any of the large animals of this latitude. He would never think of making a pet of any wild animal. He would not live a moral life for its own reward because there would be great difficulty in explaining to him the nature of that reward. He would not be content with four meals a day if he could get eight, and he does not feel like working when he is full of food and wants to sleep.

He seems to live for the purpose of completing a round of life. One round begins with the water bacteria which are eaten by infusoria, which are eaten by mollusks, which are eaten by fish, which are eaten by Jo-mul, who will be eaten by bacteria in turn if he is not careful in shooting the rapids. Another round begins with the land plants, which are eaten by the caribou, which are eaten by Jo-mul, who will be eaten by the bacteria and turned over to the land plants again if he is careful about shooting the rapids. Thus will Jo-mul fill his place in the economy of nature, and apparently there is no other mission for him on earth.

The syenite rock is about the only thing near camp which has no habits. It lies there partly submerged beneath the sullen current. It is waiting.

Robert T. Morris.

AN OUTING IN THE SIERRAS.—I.

Man Island, Cal., Aug. 25.—*Editor Forest and Stream:* I have but lately returned from an outing in the Sierras, and I have a fancy that a few lines from Piseco, giving some events of the same, will not be unwelcome to some of the old-time Forest and Stream readers.

Of course, my object was trout fishing, and my objective point Webber Lake, where I was assured that the fishing was all that could be desired.

Leaving Sacramento at 10 P. M., the sunrise next morning found me taking an ante-breakfast constitutional on the railway platform at Summit; and not wondering—for there was a good sharp frost in my vicinity—that the surrounding peaks were not capped but trimmed with snow. By the way, isn't that well-worn expression, "snow-capped peaks," very generally out of place, however poetic? My experience in summer time is that the peaks are bare, the winds having swept the snow into the cañons and gulches, except in case of very high ones—Shasta, Ranier, St. Elias, etc.

An hour after I landed at Truckee, and after a lot more exercise with a tough steak and unpalatable breakfast at the station hotel, watched first with interest the loading up and starting for Lake Tahoe of two large six-horse stages; then took the front seat of the smaller four-horser alongside of Al. Richardson, the driver, bound for Webber Lake, some twenty-six miles away.

On the accompanying chart you wouldn't find Webber Lake if I had not put it in myself; for it is a railway map, and the lake is too small for notice. But little as it is, it's a good place for a lone fisherman at the proper time.

The morning grew rapidly warm, and the first part of the drive, through an alkali plains looking country, was anything but pleasant. Sage brush and dock are not interesting, but the dust was abundant and attracted a great deal of my attention. At Sage Hen, ten miles—a city composed of one house, the station and a couple of barns—we changed horses; and at Curry, six miles further on, I was transferred to a spring wagon with double team for the further drive of ten miles, the stage going on to Sierra City. This part of the route was delightful, being mostly through brush land; and at noon I reached Webber Lake Hotel, where I was assigned to a most comfortable room and supplied with a most excellent dinner, most pleasantly served; and here I tried for the first time the virtues of the rainbow trout, and found them good.

Through the courtesy of Judge John Hunt, of San Francisco, I was soon after dinner outfitted with good boat and boatman, Mr. O'Rear, and joined the procession, which, soon distributing itself around the lake, was vigorously and persistently whipping the surface.

About four hours of that work without a strike, while it sunburned and tired my unaccustomed wrists, satisfied me; and I laid off until evening, when, after another good try, I accomplished the same results.

I had arrived too late. Up to within a day or two the fishing had been excellent, with many good trout taken; but then had come a hot wave and all of the trout had sought refuge in the deep water, from which no fly could seduce them. I was not alone in my ill luck. Several gentlemen, better casters than I, and with much experience of the lake, tied my score, and but very few much exceeded it. The lake is a small one, not over a mile, I should think, in diameter. It is nearly circular and suggests a crater. Around the edges there is a circular bank, deepening from two or three to ten or twelve feet; then comes the blue water and a depth of over 80ft. In June and July, and again in September, the trout disport themselves on this shelf and take a well-cast fly with avidity, and many good scores of good fish are made, in proportion almost though with the skill and power of the fisherman. It's the longest cast (from a boat) that hooks the trout, for the water is so wonderfully clear that no bungling pays. The trout are mostly rainbow, although a few eastern trout are beginning to respond; about 200 of these were put as fry into this lake about three years ago.

That evening I had about made up my mind to wander along, but found the company of guests so pleasant that I thought better of it, and the next morning tried it again, my score tieing that of everybody else and my own of the day before.

Mr. O'Rear was disconsolate, and suggested that if I didn't mind a hard climb, and would take the chances of getting no trout at all, he would insure me, if I got any, a big one, if I would try the Lake of the Woods. I was in just the frame of mind to take chances, for at Webber I was satisfied that I had nothing to lose. So after lunch

we started straight away up a high hill; and in seventy minutes, of which at least thirty were spent in resting and puffing under pine trees, we had gone one and a half miles and ascended about 1,000ft—total above sea level (Webber 6,925, ascent 1,000), 7,925ft. I found not only the very pretty little lake set into the mountain top, but as well that climbing at this latitude is hard work. There was also a boat, whose lines indicated that in case of need it could without alteration be used as a wagon box.

Well, we tried that lake with flies, and we trolled with a Wilson spinner on one side, an Emerich on the other, from one end to the other—not a very long pull fortunately, for the surface is not over forty acres in extent; but we didn't find a trout. Then Mr. O'Rear suggested a trial at still-fishing with minnows, at a certain spot where there was a break in the encircling shelf, and the water was 10 or 12ft. deep. We did, and in less than a minute I was fast to the largest trout that up to that moment I had ever struck. For a little space he—or she rather—fought, then surrendered; and in less than ten minutes there was alongside, quiet enough to be picked up (for we had forgotten to take a landing net), a female *Salmo salvalinus fontinalis*, charr, eastern trout, which weighed after bleeding 4½lbs., and this trout was less than four years old, undoubtedly one of the fry put in in September, 1891. Ten minutes after readjusting I had another strike that promised business. At the first dash fully 30yds. rushed from my reel, so fast that once my tip went into the water; then there was a dead stop. I reeled in a little to start business, but there was no response beyond the dead weight, and I brought that trout alongside, as I might have done a dead one; nor did she show life until Mr. O'Rear missed his clutch, when for a minute or so she was lively. This too, as are all in the lake, was an eastern trout weighing 3¾lbs. I have had a fish of not 1lb. weight give me in the Adirondacks twice as much work as did the two of combined weight 7½lbs., and neither was badly hurt in hooking. My hook was a fly hook, about No. 14, stripped of its feathers, and my rod was a light split-bamboo. There is but one thing to account for the loss of the game qualities: they were overgrown and fat.

As the shades of night were falling fast, we returned to the hotel, where, through the influence of my two fish, I was accorded great honors and glory as high hook. Said I to the pretty young lady, daughter of my host, who took care of me at the table, "Am I too late for supper?" Said she, "Indeed you are not; after what you have done to-day, you are welcome to be late as you please, you will be looked out for."

The next day Judge Hunt and I started early for the same lake, carrying our luncheon with us and a hundred or more good minnows. We spent the forenoon in tantalization. Right under us and all around us, coming in out of the gloom and going out again, were many great trout, one at least we were sure considerably larger than my big one of the day before; but they treated our minnows with silent disdain. It was like looking into an aquarium, and a very pretty sight it was. But they had breakfasted; and at noon we left them, and after our lunch waited until 3 P. M., then started to try them again, first with fly and spinner, as on the day before, then with the minnow; and we were soon having sport again. But—there is so often a but—he, accustomed to fly-fishing only, and I to having my boatman look out for my minnows, we had neglected them, and we had but five alive. With them we got five strikes, of which we caught three, weighing from 2 to 3lbs., the smaller a male, which just before taking the Judge's hook had taken mine, with so vigorous a dash out from and back under a submerged tree trunk that he took my leader or part of it as well, which the Judge returned to me a few minutes after. It is a disputed point whether the fish in this lake are reproducing. Our females all contained spawn, but there is little if any positive testimony that young trout have been seen in the lake. It is thought that in the only suitable place for spawning—viz., the outlet—the combined effect of the severe cold in winter, together with the great mass of snow that accumulates, freezes the stream to the bottom, and the superimposed snow assists in crushing and killing the spawn. Mr. O'Rear's son, a bright boy, old enough and experienced enough to know a trout when he sees one, is positive that in the spring he saw young trout in the outlet. There were in the weights of the five fish we caught extremes from 2 to 4½lbs., and we saw one we were sure was larger; is not that too great a difference as between fish of the same age, raised in the same small lake, and subject to the same influences? I am inclined to believe that, while probably many are killed by the winter, yet some escape, and that the stock is increasing. Be this as it may, the fish commissioners have put in a lot of black bass and the chances are now against the trout.

The flies, which on Webber Lake were the favorites, were the caddis, black ant and coachman. Beside the rainbow and eastern trout there is taken occasionally a McCloud River, differing from the rainbow in that even in the smaller fish the red stripe that marks the large rainbow is also its peculiarity, and the many hued spots which the young rainbow has along its sides are missing. I compared a pair, each about 8in. long.

Rainbows weighing from 5 to 10lbs. (I was told) have been taken in this lake; the largest I saw was a 2-pounder. If the fishing had not come to an end until September I could have enjoyed a much longer stay at the Webber Lake Hotel. There was a small but select coterie of guests, and our evening reunions were as those of a family. But I did want to catch a few trout without having to climb a thousand feet to do it, and then still-fish. So on Monday, July 29, after dinner, Judge Hunt and I—for both enjoy stream fishing better than from a boat—took our departure for Boca, a most convenient resort on the Truckee River. The guests, the landlord and his family, and I fancy every one from some miles around assembled to bid us good-by and wish us good luck, as at 2 P. M. we started in a comfortable spring wagon, driven by Charlie—I guess that's the only name he's known by—and at 6 P. M. he landed us at the Boca Hotel, where we spent a few days most pleasantly and profitably, as I will tell you next week. PISECO.

The FOREST AND STREAM *is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday, and as much earlier as practicable.*

GAME NOTES WITH PENCIL AND CAMERA.—III.

[*Concluded from page 202.*]

WHEN we reached the head of the north branch of Warderley Brook we got out on the bog for a short tour of inspection. Caribou sign was very abundant and there was plenty of evidence of moose also, but we saw no game in the flesh. Returning to the canoe we headed once more for camp. While the stream was still very narrow in turning a sharp bend we came upon deer number ten. This was a magnificent buck whose spreading antlers almost rivaled those of an elk. He was standing facing away from us and did not change his position when he lifted his head and looked at us, warned of our approach by a slight noise as the canoe slipped through the lilypads. At that moment a fringe of low bushes still intervened in front of the lens of the large camera, and fearing he would not wait I raised the small camera and took a snap shot. Contrary to all precedent the buck never budged, but stood there gazing at us with calm dignity. Jock was not slow to take advantage of the opportunity and as if by

NUMBER TEN.

magic I felt the canoe move into a better position. There was not a sound and surely no apparent motion in the man who handled the paddle so adroitly.

The instant the bow was clear of the bushes I pressed the bulb of the large camera, not a moment too soon, however, for the buck had seen enough and was off. For fully five minutes we heard him whistling.

A short distance below we paddled right up to a doe in plain sight and secured a photograph. She ran back and whistled and protested if anything more vociferously than the buck. No copyrighted actress ever made more fuss over a similar occurrence. This was our eleventh and last deer for the day. Dusk was fast approaching and with it the air, for the first time since we had been in the woods, had died away. This I think accounted for our luck with the two last deer.

Further down the stream we saw a muskrat swimming close in the shadow of the darkest shore. Recollecting that Jock had told me that muskrats have more than one rutting season (though the last was probably over), I suggested to him to try this rat and see if he could call him.

Jock pursued his lips together and forcing the air out a little to one side made a whimpering sound, on hearing which the muskrat changed his course and swam directly toward the canoe. We both sat motionless till he came within perhaps 15ft., when suddenly Jock raised his paddle, and with a splash and ludicrous haste the rat had changed ends and disappeared. "The beaver," commented Jock, "makes two distinct splashes when he dives."

We resolved to take advantage of the calm and try a little flashlight photography that night, but it soon began raining and the wind came up again, and we were obliged to give up our plan. The following morning, however, was an ideal day of the kind we had long been awaiting. The sky was cloudy and low, and the air was perfectly still. We got an early start and at 5 A. M. were already some distance from camp. It was about this time that we spied, far up the bank of the stream, three very dark-colored creatures coming toward us at a jog trot, looking not unlike mules on a towpath. At first we thought them moose, but Jock soon saw they were not, and in a low tone conveyed the information that they were caribou. Meanwhile he had been paddling swiftly toward them, reversing the tactics adopted with deer, which called for a stealthy approach.

The caribou were now plainly visible. Neither of the three had horns, and from their size we judged them to be a cow and yearling calves. They were quite black in color as seen from in front, and they trotted along with the peculiar mincing step of circus ponies. Whether they saw us or not at first I cannot say, but if so, they did not pay the slightest attention to us.

When about 100ft. distant two swerved as if to go back on the bog, while the third stopped. Fearing to wait any longer I made an exposure with the large camera, which, it may be as well to state at once, did not materialize, owing to the insufficient light. At this the large caribou trotted over to the other two and together they moved back on the bog.

We could now see that their rumps and under parts were white.

Hoping to get another picture where I could use a slower exposure, I got Jock to put me ashore on the bog. I intended to reload the large camera, but before I could take any action the largest caribou came running back to have another look at us. She came up to within 50 or 60ft. and looked us over critically as if to inquire our business on the bog, and I recollect an impulse to throw a stone at her. I refrained, however, and instead tried a picture with the small camera.

Hoping she would still stand, I then began preparations for reloading the large camera, but she had other business to attend to and left almost immediately, without however exhibiting any symptoms of alarm.

I followed the three caribou for some distance, sighting them occasionally, but they were going too fast, and I soon had to give up the pursuit. When last sighted they were traveling at about the same speed as when we had first seen them.

Our first deer for the day was the fiftieth seen since entering the woods. We saw its back above a tussock at the side of the stream, and approached till it was within the dead line of 100ft., but bushes intervened, and the deer, a doe, was off without presenting a good shot.

Jock was standing up in the canoe looking over the bog when I saw our fifty-first deer. This was a spike buck that popped up his head from among the thick growth of a swamp 60ft. to our left. I swung the large camera around to cover him, but he had withdrawn his head.

Number fifty-two was a small buck that we came upon while rounding a bend in the stream. He was standing erect fronting us, and his clean-cut limbs could be seen down to the water's edge, which just covered his feet. He was a little beyond camera range when I snapped. He ran back out of sight and began whistling.

In reloading, as luck would have it, I made more noise than usual. Incidentally I caught my sleeve in the stem of a bough which was a part of our blind, and the result was a loud bang that I felt sure would alarm any other game in our neighborhood. Meanwhile the small buck was still whistling.

Despite all this, however, when we came in sight of the bank 100ft. below, there stood a magnificent buck awaiting our approach.

Numbers fifty-four, fifty-five and fifty-six were together, a doe and two fawns. I took one picture with the large camera, which shows the doe and one fawn, and a second with the kodak immediately after in which both fawns appear standing close together at their mother's side, with ears cocked in imitation of her; but unfortunately the motion of the canoe shows in both these plates.

Fifty-seven was a doe, who saw us a long way off. She stood at the water's edge and watched us, and when we were distant about 125yds. began to paw the mud with one foot, and soon after to whistle. She let us come within 200ft., however, before running.

Fifty-eight was a spike buck that we came upon around a corner in the stream. He fed unconcernedly while we paddled up through the lilypads inshore, though he looked us over now and then. When distant about 150ft., however, he began to grow nervous, and I made the exposure, having more plates than pictures.

Fifty-nine and sixty were bucks. We came within 50ft. of the first, which was standing gazing intently at the other a couple of hundred feet further on. As fifty-nine turned his head and caught our eyes I released the shutter.

It was now 8 o'clock and we had reason to expect an unusually successful day, for we had already seen eleven deer and three caribou. We had ascended the North Branch as far as navigable, and were back at its juncture with the South Branch. This latter was destined to be still more prolific of deer.

Hardly had we turned our canoe into this stream when we saw bounding away over the bog four large deer, which we took to be bucks, while a short distance above a fifth—an enormous old fellow—stood on a point watching us. He evidently did not like our appearance, for he soon followed the others. Presumably we had broken up a "stag party." This was 8:35 A. M., and we had seen sixteen deer that day. Two bends further in the stream we came upon a doe and yearling fawn, which latter was of a deep red color—almost brown. We took a photograph, though the deer were hardly within range. The two stood back on the bog within easy gun shot for some time before their curiosity was fully satisfied. It was then 8:40 A. M. and our record for the day was eighteen deer, or sixty-six in all.

Number sixty-seven was sighted at 8:50 A. M. This was a doe, standing on a point. She heard our approach, the canoe making considerable noise going through the lilypads, and was off when we were still 100yds. away. This branch of the stream was in places nearly choked with pads, which hindered our progress and made it difficult to get close to a deer without being heard.

Number sixty-eight was a doe that stood behind some bushes on the bog. She was running when we saw her. At 8:58 we saw two more deer, a buck and yearling, some distance back on the bog. This made a total of twenty-two deer before 9 A. M., or seventy deer in all seen in the last six days.

Number seventy-one was a spike buck seen at 9:05. He turned and looked over his shoulder when a hundred feet back from the stream. I reached for the kodak, but he was gone.

Number seventy-two. 9:10. Jock standing up saw another deer disappear among the trees.

At this juncture a heavy rain squall came up, and that ended our deer exhibit for the time being with a record of an even two dozen, of which the last thirteen had been seen within less than three-quarters of an hour.

We got to camp and ate some lunch about 10 o'clock, and then, the rain having ceased, we broke camp and proceeded down the main stream to the lake.

Just below the carry we saw deer number seventy-three, a doe. She was moving down the shore, and coming to a log in her way 3 or 4ft. high leaped over it gracefully. At first we thought she had seen us and was off, but the next instant she turned down to the water's edge and was just reaching for a lilypad when something made her look up. The canoe was slipping noiselessly toward her head on, with never a motion to reveal its human freight. We were within range and ready to photograph her at any moment.

The doe seemed riveted to the spot by an uncontrollable fascination. She raised her head higher and higher with little jerks, as if letting out reefs in her neck, till I took pity on her and released the shutter, thus breaking the spell.

Numbers seventy-four and seventy-five were in company, a lordly buck and a comely doe. They came out from the shelter of the trees directly ahead, and walked side by side down to the water. The wind was beginning to blow again in a gusty way from behind, and though 150yds. away we knew the deer must soon scent us. The doe, with more delicate discernment, was the first to do this. She made several nervous little leaps, but was ashamed to run away, while as yet the buck had noticed nothing, and in deference to his less acute senses she seemed almost to doubt her own. The buck looked up lazily to see what startled her, and the same instant an unmistakable whiff of our presence was borne to his nostrils. He did not stand on the order of his going, but ungallantly led the way for his fair companion.

This was at 11:45 A. M. Five minutes after noon we sighted our last deer for the day, numbers seventy-six and seventy-seven. These were two does which allowed us to come fairly close, but not quite as near as we desired.

Despite wind and unfavorable weather which ruled the major part of the six days we were on Sebois Grand Lake, we had seen an average, lacking a small fraction of thirteen deer per day.

We camped that night at the "Thoroughfare," and the following morning got an early start for the flesh pots of civilization. Just below camp we came rather unexpectedly upon a doe walking on the shore. The large camera was in readiness, however, and we secured her picture, though she was too much in shade for a satisfactory result. On White Horse Lake we saw our seventy-ninth and last deer, but did not get close enough to determine its sex.

We reached Hay Brook without further incident. While ascending this stream we heard voices, and rounding a bend came face to face with a party of Canucks out for an outing. There were two men and two women in a tiny flat-bottomed boat, which was in fact so small that its human cargo lapped over the sides and threatened to spill.

"Your boat is pretty well loaded," we remarked.

"Yes," replied one of the women in a high nasal tone, "but we can't do nothing more'n get drownded."

One of the men possibly recognized Jock as a warden. At any rate he endeavored to conceal an old Henry repeating rifle that had been placed in the boat convenient to his hand. It would have been hard for them to explain what this rifle had to do with their ostensible fishing trip.

That night we reached civilization, putting up at Hackett's comfortable hostlery in Patten about 11 o'clock. We were still seven miles from the railroad, but we were happy, for we were in a country where even a game warden could get three square meals a day with meat enough and to spare.

In summing up the results of our expedition it must be remembered that we labored under unusually unfavorable conditions for game photography. Perfectly calm weather is an essential for the highest degree of success in this department. The walls of forest trees that follow the winding shores of the streams and lakes make eddies and back currents in the steadiest winds, and the best laid plans of approach are likely to be spoiled if the wind is stirring at all.

Then, too, the time for seeing game in greatest abundance along the water had passed, as the fly season was practically over. We saw no deer standing submerged in the water, as would have been the case if the flies were bothersome, and none that had not come for food or to drink.

We had missed the best season purposely, however, for we wanted to find the bucks with well-grown antlers, and not the undeveloped ones of the early summer.

Our desire to find moose and caribou kept us constantly on the move, whereas if we had looked for deer only we could no doubt have adopted more successful tactics. The deer had certain recognized feeding grounds, such as the neighborhood of the sand beeches already mentioned, and on still days one could undoubtedly get very close shots by laying in ambush at some well-selected spot and letting the deer come up to him, instead of attempting the much more difficult task of approaching them.

This plan, however, would require plenty of leisure on the part of the photographer, for only a few pictures could be taken at any one time, and he might have to wait several weeks for a suitable day.

The subject of game photography is one of fascinating interest, and one that is bound to commend itself more and more to the sportsman. It possesses in a high degree the charm and uncertainty of hunting, in which the unexpected always happens, and it is not hampered by any close season.

Many business men who find it impossible to be in the woods during the shooting season will find a source of consolation in game photography which will compensate for the actual killing. In fact, the number of sportsmen who have taken up this department is already great.

A good apparatus is essential for the best results, and the sportsman should have plenty of time at his disposal; but under favorable circumstances it is possible for a man familiar with his game to take wonderful pictures with a very ordinary camera.

As in hunting, so with this sport: success, after all, is largely a matter of luck. J. B. BURNHAM.

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday, and as much earlier as practicable.

BACK NUMBERS OVERHAULED.

THE day was finished, dishes were washed, and the usual after supper pipe was weaving fantastic curls of hazy blue against the light of the camp-fire.

Ed and I sat silently enjoying ourselves as was usual with us after a good day with rod and gun, speaking but little, and that little mostly in Chinook, which we both speak, and which Ed in particular is partial to. He is a "queer duck" anyhow, this old partner of mine, queer in his speech, queer in his thoughts, and—well, just queer any way you take him. He is tall, lank in build, knotty and shrivelled as an oak stump, and just as tough, too. He doesn't know what fear means, and is as tireless as a machine man would be. Unless he happens to get into a retrospective mood he is seldom talkative, is ordinarily silent and rather Indianlike in his ways and movements, prefers to make a motion in place of a word whenever he can (and those lean arms and hands of his can speak volumes, too), has a way of taking in all there is in sight with a quick, restless glance, and above all is a thorough sportsman and a homespun naturalist. A better man and a better partner for camp or tramp is not yet born; that's Ed, and Ed's my partner.

Fifteen years have come and gone and our friendship has only been made stronger by many, many outings together, where we have tested each other by that test which will prove a man either a "good man to tie to" or quickly drop him from your calculations when a "trip" is under consideration. We all know one such man, but few of us are lucky enough to know two.

Ed and I have climbed peaks, tramped alkali deserts, canoed down boiling, roaring mountain streams and voyaged calmer waters; pulled a Winchester down on big game, and "surrounded" the festive cotton-tail and squirrel in company, and incidentally watched the wildest of "Klookwallie" dances, where hideously painted, masked and "decorated" savages, clad in little more than their complexions and decorations, danced themselves into a frenzy around a fire whose fitful light only lent a creepiness to the whole business.

It occasionally happens, when the surroundings are right and the Tah-mah-na-wis stirs him, that Ed gets a talkative streak and we hold a retrospective kind of a pow-wow over our pipes.

This evening I saw he was in the mood, so I waited patiently to see what was coming, for Ed is a good story teller when he warms up and is always interesting. He started with "Say, Comanch, I wonder if a feller's head ain't kinder like one o' these new snap-shot cameras where you put in a roll o' stuff and shoot at everything you see tull it's all used up? Seems like it. Now fer instance, I set here 'n' smoke 'n' look at the fire 'n' don't see it, just see lots of other things, places where you 'n' me have been all over twenty States, times we've had and things we've been mixed up with, one way 'n' 'nother for a long while back. Don't it look like turnin' a crank 'n' rollin' a lot o' pictures along sost you can see 'em all over again when you get to thinkin'?"

"Well, since you put it in that way, Ed, it does look about right, but I suppose we've got the drop on the camera because we don't have to stop and develop and print our negatives."

"Nope, I reckon not. Just kind of takes a picture, develops it, and prints it right out in the natural colors 'n' everything, sort o' automatic like, I reckon. Anyway it gits 'em and that's all that's necessary. I was just a thinkin' o' that little fishin' trip we had up in Washington, time we got that big feller under the log jam, mind? Don't believe I'll ever forget that little crick 'n' the way the sun shone on them big pins 'n' cedars, one on top the other, far as you could see. Say, d'you know, Comanch, I like to kind of study out where one color lets up 'n' 'nother one begins, when I'm out this way; fact is, that's more'n half of bein' out doors anyhow, that 'n' the sounds you hear. R'member that old wildcat that came up 'n' yowled 'n' pestered us so long that night we camped out on Kara Crick, up in the Black Hills? 'N' you ain't forgot the grunt that old bear give that night we was all so skeard down in the Wasatch Range in Utah, I'll bet.

"But say, Comanch, haw! haw! haw! [puff, puff, puff, as he raked a live coal out of the fire and patted it down on a new "fill" with a long, bony forefinger and leaned back smiling]; by gum, I've laughed more times 'n' harder about the time you rolled down that crick bank back in Nebraska, when you found it was skunk instead o' mink. Course we was kids 'n' tenderfeet then, 'n' didn't know they's a heap o' difference 'tween skunk tracks 'n' mink tracks, but it didn't take you a day's travel to roll down that bank after you found old Mr. Skunk 'n' his family all at home, now you bet. Gosh, I can see you yet! Haw! haw! haw!

"That was the day we see the coyotes ketch Mr. Jack Rabbit, too, r'member? They done that pretty slick, didn't they? How do you reckon they sensed it that a rabbit run in a circle 'n' come back to where he started from? That fattest one knew enough to lay still tull his pardner run the jack around to him anyhow, 'n' didn't they do the finish up brown? We couldn't ha' beat 'em ourselves.

"That was a cultas trip we made to the Platte in '81, too. Huntin' a whole week stiddy for one measly old honker is pretty tough, but—I d'know, I guess we didn't lose much anyhow. Had a week out doors and c'nsider'ble trampin' and cold, frosty mornin's mixed, even if we didn't get some geese.

"What I like to remember best, though, is when we was boys 'n' goin' to school, not that the school cut much figger, but the long summer days we used to have when we went fishin' 'n' swimmin' 'n' puddled around the river, spyin' out birds' nests 'n' watchin' 'em tull the little ones could fly. R'member how the sunshine would dance on the water 'n' the trees throwed shadders a mile long, 'n' got shorter 'n' shorter as we paddled toward 'em? 'N' mus'rats paddled along in the dusk 'n' made a lot o' wrinkles in the water?

"I used to like to hear the flickers 'n' blackbirds 'n' orioles, 'n' things that was always whisperin' 'n' talking' things over 'mongst themselves up in the trees when we slid by in the canoe, too.

"There's a heap o' company in wild critters after you learn their language, 'n' we learnt it pretty early. The snakes 'n' bugs come in for their share of study 'n' pokin' up, too, them days. Mud turtles seem about the only thing that looks the same to me now as they did them days when we was boys along the river. The days seem shorter 'n' hotter, 'n' the sun don't seem to shine half so bright either as it did then to me; do they to you?"

"No, I don't think it does either, partner, and we never have that careless, free feeling that we enjoyed then, for responsibilities have come up, and our care-free life has gone with the sunshine of those days when life was one continual holiday, with no restraint but school to bother us."

"Ah-e-e; klosh tumtum," said Ed, dropping into the Chinook dialect again; a sign I knew to mean the pow-wow was over, for Ed, true to the Indian part of his nature, had noticed that the blaze had given place to a bed of coals, and that stops the Indian story teller's tongue and sends the papooses into the tepee until another time. Ed knocked the ashes from his pipe bowl, remarked that he "smelled a south wind for to-morrow" and rolled up in his blankets, overlooking the "mountain feathers" in favor of just plain, hard ground. In two minutes he was fast asleep, a sound, quiet sleep without any snore attachment too, yet the rustle of a leaf or the soft footfall of a prowling coyote will wake him as quickly and effectively as a cannon shot would. But as I remarked, "Ed is a queer duck, anyhow." EL COMANCHO.

THE OUTING OF SIX.—III.

Vermilion Ranch. An Alcove in the Pink Cliffs.

WHEN we crossed Asay Creek on the morning of June 20 and commenced the ascent of the Great Divide, there arose in front of us the first of a series of rock forms with which we were soon to become familiar. Its name describes it perfectly—"The Castle"—and as it rose from the pine forest, crowning a low ridge, it seemed like a time-battered ruin of the middle ages. Near this castle was Hoyt's ranch and we easily followed the tracks in the dust made in the gray of the morning by Perry and Ted. Nor were these the only tracks we saw, for we were approaching a land of big bucks, and once we saw the plain footprint of a "kitty." We traveled slowly, wasting a great deal of ammunition with little to show for it, but it was necessary for the team to rest frequently. Botanically, the morning was memorable for its onotheras and phloxes.

At 11 o'clock we reached Hoyt's and found that our comrades, failing to get a deer, had indulged in the luxury of a shave. Thereupon the rest of the outfit followed suit. There was a reason for this. We expected to camp for the night at Seegmiller's ranch and there were two young ladies there who, during the past year, had been fellow-students with Andrew, Perry and Ted. Leaving Hoyt's at 2 o'clock Tim put on an extra team, which took us to the summit in quick time.

Of course we had to stop on the ridge to take in the grand view. The heavy timber obstructed the outlook in many directions, but toward the north and east, far as the eye could reach, was the white wall of the East Fork, and to the south and west ran the pink wall and the tawny cliffs of the cretaceous, and the white of the juassic and, like a narrow ribbon, against the gray of the desert, the rich maroon of the Trias, and beyond that, where earth mingled with the southern sky, the hazy purple of the Buckskins, 100 miles away. Then downhill we went, along our zig-zag journey into the great basin of the Colorado; out of the land of high plateaus and into the district of tables and terraces, of buttes and mesas, of cliffs and cañons. The aspens gave place to the oaks and we found a realm of geological and botanical antitheses.

To quote from Capt. Dutton's report:

"The region is for the most part a desert of the barrenest kind. At levels below 7,000ft. the heat is intense and the air is dry in the extreme. The vegetation is very scanty, and even the ubiquitous sage is sparse and stunted. Here and there the cedar is seen, the hardiest of arborescent plants, but it is dwarfed and sickly and seeks the shadiest nooks. At higher levels the vegetation becomes more abundant and varied. Above 8,000ft. the plateaus are forest-clad and the ground is carpeted with rank grass and an exuberant growth of beautiful summer flowers. The summers there are cool and moist, the winters severe and attended with heavy snowfall."

Crossing the headwaters of the Rio Virgin, we skirted for many miles the base of the highest of the great terraces, between the forest and the desert. Then without any appreciable fall in elevation we came to a cultivated plain, perhaps half a mile across. On the further side were the pink cliffs, and this was the valley of Upper Kanab Creek. Before us was a ranch with a very large barn and a diminutive house. Thinking that this might be our stopping place we sent Collie (the most susceptible member of the party) forward to reconnoiter and get directions. As he failed to materialize as soon as we expected, we went in search of him and found him perched upon the gate and singing "Sweet Marie" in true Texas style. He informed us that he had fallen in love. He went to the door and knocked. A damsel "with bay hair, an open countenance and one eye gray and one brown" presently appeared. Of her he asked, "Does Mr. Seegmiller live here?" She, vouchsafing no reply, shut the door, but upon his rendering the first stanza of "Sweet Marie" in his pathetic manner the door was again opened and he was informed that Mr. Seegmiller lived two miles up the creek. Thereupon the vision disappeared, and Collie had gone on with the song in hopes that the curtain would once more rise upon the bay-haired beauty.

The ranches of Upper Kanab were much more attractive than those that we had seen on the Upper Sevier. There was a wealth of hay and grain on the bottomlands and rich feed on the hillsides. The houses were large and comfortable. Barns were barns and not sheds, and the cattle and horses were all well-bred and not the ordinary Utah range stock. The valley narrowed into a gateway. One road was steep to the top of the portal, then—where the pink cliffs made a mighty re-entrant angle into the heart of the Markagunt plateau, lay in all its beauty Vermilion Ranch. There was the emerald of the grain, the deeper verdure of orchard and of native grass, the purple of the half-blossomed lucerne; then a background of deciduous timber, the leaves a silvery white in the slanting light of the afternoon, and after all, around the whole valley, the delicate tinting and fantastic forms of the eocene cliffs varying, in the rays of the setting sun, from salmon pink to rosy red and crowned with a black row of giant pines that marked the rim of the Great Basin.

It had been my good fortune on my trip to Long Valley the previous week to meet Mr. Seegmiller (familiarly known as "Uncle Dan") and our camping on his ranch showed our hearty appreciation of his most courteous

invitation. I can hardly say camped, for during our stay we were Mr. Seegmiller's guests, and our camp life consisted simply in sleeping in our own blankets. It was a pleasure once more to sit down to a meal that we did not cook ourselves and to get bread that was baked in an oven. Mr. Seegmiller was an enthusiastic horseman—a breeder of both running and draft stock. For years he has had an unbeaten stable in southern Utah. We also noticed thoroughbred Jersey bulls, Holsteins, Berkshires and other famous breeds of cattle, swine and sheep. In the ranch there are 1,800 acres under fence, and as all the springs in the vicinity of Upper Kanab Creek are covered by this patent, sheepmen have kept at a distance. Hence our host has a little game preserve of his own, the deer being reserved for the especial use of himself and friends. He told us where the best shooting was to be obtained, and before daylight the next morning Andrew and Doc were out with their rifles. Business prevented my accompanying them. Botanically speaking, we were in a new world and the region was immensely rich from a paleontological standpoint.

After breakfast Collie, having in a measure slept off his bay-haired infatuation, shod two of the horses; Perry rode seven miles to the post office to mail some letters, and I geologized. The pink cliffs are of lower eocene age, and consist of uniformly bedded lake marls. The fossils are well defined and belong to a brackish-water period. The fresh-water deposits of the higher eocene I did not have time to study.

A little before noon our hunters returned, tired and hungry, but without a deer, though they claimed to have killed one and lost it in the timber. This was their story: After going up half a mile from the house they turned into a side cañon that seemed to be a natural feeding ground. This soon forked. Doc took one hollow, Andrew the other. In a short time Andrew heard Doc's Winchester give nine barks just as rapidly as the lever could be worked. He thought a whole herd was being exterminated. Presently he saw a yearling buck, evidently greatly scared, cross the ridge 150yds. ahead of him. He gave it one shot and it fell, but was instantly on its feet and down the ridge again on Doc's side, but he did not fire. It was the first time he had ever seen a wild deer, though he was born and raised in Utah, and the buck ague was too much for him. Doc's story was the same as Andrew's, and he admitted that the deer was very close to him when he first shot. The two followed the bloody trail for about 300yds. and then lost it. The buck was going through the heavy timber in the direction of the creek, and Andrew thought that he could not last long, as he was shot through the body just back of the heart. While searching for deer No. 1, Doc started a second even closer to him than the other, and put two ineffectual shots after it before it said "good-by."

At 4 o'clock we all started to search for the lost deer. If we could not find it we could at least botanize. Doc paced off the distance at which he made his nine shots and found it to be 75yds. The shots at the other deer were from 35 to 50yds. But Doc was not ashamed. He was more deer hungry than ever. In vain we beat the forest for two hours; no deer could be found. The botanists and ornithologists did well, and the names of a few species will show the nature of the flora: *Thalictrum fendleri*, Engelm.; *Delphinium elatum*, var. *occidentale*, Watson; *Astragalus lonchocarpus*, Torr.; *Frasera speciosa*, Dougl.; *Pentstemon kingii*, Watson.

When within a mile of the house on our return trip, at a crossing of the creek I saw Collie stop suddenly and throw up his hands. I rode hurriedly up. There, with his nose in the water, dead in the act of drinking, lay our lost buck—a two-year-old with antlers in the velvet. He was strapped across the saddle and we walked back well contented with the day's efforts in all directions.

Early on Saturday morning we set out on our thirty-seven-mile drive through Kanab Cañon to Kanab. The road was for the last twenty-five miles either rocky or heavy with sand. Water was scarce, so we expected a hard trip. Perry, Ted and Collie took the wagon, the rest of us the buckboard. Seven miles below Vermilion Ranch the waters of the creek were exhausted and from this point to the head of the cañon the natives eked out a precarious livelihood by dry farming. Here the buckboard stopped at the ranch of Andrew Siler and the wagon was sent on. We told the boys that we would overtake them in an hour or two. Siler, who is an invalid at present, has been a noted botanical collector throughout this region and he gave us many valuable "pointers" concerning our trip in Arizona. His specialty has been the *cacti*, and while he knows nothing of systematic botany his field notes are invaluable. He showed us many letters from Dr. Gray, Dr. Parry, Dr. Englemann and many of the old worthies that have passed into the "silent land" and wished that he could accompany us. At 1 o'clock we started on the trail of our companions and an hour later were at the head of the cañon, into which we passed, and for fifteen miles our view was hemmed in by narrow and lofty walls. At the head of the cañon was a small spring where we watered our team, and supposed of course that in accordance with instructions the other boys had done the same. We were in the picturesque realm of the cretaceous—a region of yellow sandstones and clay-sholes, bent, twisted, flexed, broken, unconformable, and withal the most interesting of geological studies. In many places it was capped with a thin stratum of lava and occasionally we saw lava ridges that had once filled the stream beds, the cretaceous and jurassic having now worn away and left volcanic hills in marked contrast to their surroundings. Interesting, too, was the study of birds and flowers. During the afternoon we found three species of pentstemon, including the rare *P. palmeri*, but of *Compositæ* and *Leguminosæ* we found more than of all other orders combined. About 4 o'clock we found Collie's saddle horse that had been tied behind the sheep wagon munching the lupines by the wayside, and an hour later we caught the wagon itself. It was stuck in the sand and the horses that had not been watered since the morning, and no one could remember watering them then, were completely played out. We changed teams, but to no purpose, so I mounted Baldy and started on a twelve-mile ride to Kanab for assistance. We did not know how far it was to water, but two miles after leaving the boys I struck a large stream as it came out of the Vermilion cliffs at what is known as the Headwaters, and I felt no more uneasiness, for I knew that if they made this spot they could easily camp until morning. From this point Kanab Creek flows on without sinking and it is becoming the redeemer of the desert, but as I saw the carcasses in the mud about Headwaters, I actually pitied the people who have to use that water for culinary purposes. About 7 o'clock I reached Kanab Dam, that reservoirs the water for the lower country. I was conscious of a change of temperature and altitude. About me grew tree cacti and tall yuccas, then the vermilion walls receded on either side and before me stretched the great Arizona desert, but on its hither side, nestling in the very jaws of the Triassic Palisades, embowered in trees and in all the beauty of early summer, lay the little village of Kanab.

I was so covered with dust and perspiration that hair, face, canvas coat and blue overalls were of one hue—a kind of hybrid between a Chinese joss and a Washoe mud-eater—but I made the best of necessity and going boldly to a house inquired: "Is Mr. Robinson at home?" The young lady who answered my knock looked at me a moment and then, raising her hands in holy horror, exclaimed: "Good heavens! It's Mr. W.!"

Mr. Robinson was at home and in fifteen minutes I was enjoying the luxury of a much-needed bath. Then came supper, after which Mr. Robinson took me over to the store and we talked over matters. The general impression was that the boys would camp at Headwaters and it would not be necessary to send for them. While we were yet talking (at 10:30 P. M.) the buckboard drove up, having on it the five other members of the party and leading the two used-up nags. I noticed that Doc looked "blue," the first time that I had ever seen him in that condition, and Elsie was missing. Perry was getting out a revolver to shoot a coyote that trotted ahead of the team. In some way the weapon was discharged and the bullet passed entirely through Elsie's body. Nothing could save her, so a grace shot put an end to her suffering. This cast a gloom over the entire party, though we were devoutly thankful that the accident had no more disastrous results. In spite of the hour Mr. Robinson took the whole party to his house and his good wife got supper for the crowd. It was almost midnight when we were ready to retire. Andrew and I stayed at Mr. Robinson's, Mr. John Brown took Perry and Collie home with him. Bishop Johnson entertained Doc and Ted, and the next morning Mr. William Lewis took his team and made a twenty-four mile trip to get our wagon. To these four gentlemen, especially to Mr. Joseph E. Robinson, "The Six" are under lasting obligations, not only for that particular night, but for all our stay in the southern country.

Most of these men were perfectly familiar with the Grand Cañon. They had been with the Powell and other expeditions and the way in which they discussed the relative merits of Capt. Dutton and Mr. Walcott showed an intimate acquaintance with these geological lights. It takes camp life to learn a man through and through.

As our Sunday clothes were in the sheep wagon, we could not go to Sunday-school, so under the guidance of Messrs Robinson and Brown we climbed the vermilion parapet immediately east of town and surveyed the country from Mount Trumbull to the Paria and as far south as the distant San Francisco Mountains of Arizona. Kanab seemed a very oasis in the desert. It was beautiful and prosperous. Its fields extend for five miles south of the town, and the houses are embowered in orchards of peach, plum and apricot, and in vineyards as beautiful if not as large as those of California. Though remote from a railroad, I believe that the wealth of the community will ultimately lie in its dried fruits and raisins. To-day it is in flocks and herds. The great range is the desert and the Buckskins. Its elevation is about 5,000ft.; population about 600; distance from Provo by one route about 312 miles; climate, hot in summer, with cool nights, and delightful winters. So much for a description of the settlement where I suppose no other reader of FOREST AND STREAM will ever penetrate—a village that has never experienced a "boom," and where every one is prosperous, there being neither doctor, lawyer nor real estate agent within seventy miles. The sociability of the people is one of the most charming features of the community.

From the signal point we noticed two large reservoirs south of the town, and these in spring and fall are excellent ducking resorts. Monday and Tuesday the boys devoted to birds, botany and general collecting. I had no time for excursions. I felt worn out. From dawn till midnight I was busy determining species of all kinds, classifying our mineralogical and geological rarities and writing up notes. The boys in addition to their regular work explored some mounds in the southwest field and secured arrow heads, axes, pottery and bones for their trouble. On Monday Doc shot a bird on the lower reservoir that he thought to be a small canvasback. It proved a "lesser scaup duck" (*Aythya affinis, cit*).

The list of birds shot from Seegmiller's ranch until we left Kanab is as follows:

Molothrus ater obscurus, Gmel.—Dwarf cowbird.
Chondestes grammacus strigatus, Swains.—Western lark sparrow (supplanting the desert horned lark south of the Basin).
Junco cinereus dorsalis, Henry.—Red-backed junco.
Pipilo aberti, Baird.—Abert's towhee.
Piranga rubra cooperi, Ridgw.—Cooper's tanager.
Geothlypis macgillivrayi, Aud.—Macgillivray's warbler.
Icteria virens longicauda, Lawr.—Long-tailed chat.
Harporlynchus crissalis, Henry.—Crissal thrasher.
Catherpes mexicanus conspersus, Ridgw.—Cañon wren.
Thryothorus bewickii bairdi, S. and G.—Baird's wren.
Salpinctes obsoletus, Say.—Rock wren.

On Tuesday afternoon we decided that it would be impossible for us to take the sheep wagon across the desert and through the mountains, and a Mr. Rider kindly let us have his buckboard without charge. We were fortunate in securing the services of "Uncle John" Stewart to guide us to the Grand Basin Cañon. Mr. Stewart has accompanied the U. S. Survey on several expeditions. He was the first white man to set foot in DeMotte Park, and during the present season he has a sheep herd within a few miles of Point Sublime. Mr. Stewart offered to accompany us, and all arrangements being completed at 10 o'clock on Wednesday morning, June 26, we set out on the last stage of our journey.

SHOSHONE.

Tours to the South via Pennsylvania Railroad.

Two very attractive early autumn tours are announced by the Pennsylvania Railroad Company. They include the battlefield of Gettysburg, picturesque Blue Mountain, Luray Caverns, the Natural Bridge, Grottoes of the Shenandoah, the cities of Richmond and Washington, and Mt. Vernon. The tours cover a period of ten days, and will start from New York in special trains of parlor cars on Sept. 24 and Oct. 8. Round-trip rate, including all necessary expenses, $55 from New York, $53 from Philadelphia, and proportionate rates from other points.

For detailed itinerary apply to Ticket Agents or to Tourist Agent, 1196 Broadway, New York, or Room 411, Broad Street Station, Philadelphia.—*Adv.*

Natural History.

THREE MEALS IN ONE DAY.

ON one of the few glowing July days which nature pettishly casts among the dainty delights of the Northwestern summer, a party of nephews and nieces gathered about the invalid's hammock to say good-by before a day's jaunt among the lakes and dells of the most beautiful region of all (nameless here forevermore).

On other summers the invalid had been eyes and tongue for the party, interpreter of the rede inscribed by Dame Nature herself, and more than one noticed the wistful look which passed over his face as he playfully predicted the spoil with which each should return.

"But, Uncle," said saucy May, with an unusual touch of sympathy in her voice, "I dare say that you will gather more of what you used to call the spoil of the eyes from your own hammock in our dooryard than all the rest of us in twenty miles of outing." "We shall see," was the quiet reply; and they hurried away, sending back pleasant wishes for a comfortable day to the patient sufferer under the trees. At twilight that evening the party reassembled on the wide veranda, and after disposing themselves each in his most reposeful attitude, the comparison of the treasure trove began. 'Twas a mort of miscellany, including torn skirts and stone bruises. But the universal conclusion was that the day was too hot for anything to happen worth seeing in the world of nature.

"Why, the very catbirds came out of hiding with their beaks open and feathers a-droop, completely wilted," chimed in Charlie.

"But what did you bag, Uncle?" said May; "display your catch."

"Well, children, I was more fortunate than any one who has yet reported, for I captured three meals—a breakfast, dinner and supper—and the *menu* was in each case a genuine surprise."

Knowing that the invalid had for weeks subsisted on almost nothing but clam broth and oatmeal, a look of offended knowledge began to appear until the invalid continued: "Scarcely had your steps died away when sedate Mme. Robin made her appearance, and yonder in the shade of the syringia began preparations for her own breakfast in a most matter-of-fact manner. The ground is kept damp by the sprinkler, as you know, but look as I might, I could see nothing on the scanty and short turf to supply so hearty a guest. Darting from point to point with decisive alertness, each time the bird seized upon something string-like and evidently luscious. Then with head on one side in a listening attitude, she stood until the next spring. At first I thought madam was pulling up succulent roots or runners, but as she approached it was apparent that the breakfast consisted of plump, wriggling earth-worms. Yes, fish-worms, if you prefer. 'Well, Mrs. R.,' said I, 'if you can catch worms, so can I.' But the vaunt proved beyond my power. Lie quiet as I might, no worm could I see. Perhaps robin has more delicate hearing than we, and holds her wise head atilt to catch, if not the footfall, let us say the 'wigglefall' of the prey. But it soon became plain that it was to accommodate vision and not hearing that the head was cocked on one side, so that the lateral eyes might be in line of the proposed spring. Little heaps of sand pellets showed the activity of the worms, and as the tip of the body of his wormship was thrust up above the burrow to rear these little monuments of the eternal annuloid industry it became the promptly accepted signal for breakfast."

"Well, Uncle, how about dinner?"

"Ah, that was a tragic and as my French friend over the way says, 'a heart rendering' matter. About 10 o'clock a little gathering of bluejays occurred on the telegraph pole and telephone brackets yonder. There was a vast deal of vociferous chattering and tail gesticulation, interspersed frequently with the indescribable, goblin-like jodel which is the most characteristic note of the bird. You all know what I mean—the bird seems to have an unusually uncouth vocable stuck in his throat which he can neither pronounce nor swallow, and in dismay he shakes himself violently up and down, during which process the sound rattles with metallic resonance back and forth. Well, after a great deal of parley, during which one seemed to hear 'Now, you do it,' 'Oh, you are afraid,' etc., finally one jay more resolute than the rest set off directly for the porch, where my hammock had been hung, with an air of business about every movement. After a series of skulking flights a sudden dash brought the robber into the midst of the Virginia creeper over the side entrance where, you know, Dame Chipping Sparrow has her home and brood of half-grown children. There was a shrill *chir-r-r-r-r-r* and many-voiced scream, till at last the evicted mother came flouncing down at my feet, keeping up a plaintive *chip-chip*, which seemed to me imploring help; but before help could be offered the gay blue robber was off with a screaming babe in his beak—thus dinner was announced in the house of Cyanurus and another Rama went into mourning in my very ears.

"The third meal was after another manner. You all know the flicker, that degenerate woodpecker who has allied himself with the terrestrial tribes which, independently of any other bond than the common habit, seem to have adopted the crescent on the breast as their heraldic symbol (witness the meadow lark, horned lark, killdee and others). But although familiar enough with the wild proddings and burrowings of the flicker, I was unable to explain the action of two of them who were busying themselves just at sunset in the path across the lawn. They seemed to be thrusting their clumsy beaks full length into the soil and then pumping vigorously out and in for a moment. Occasionally one of the birds would turn his beak straight toward the zenith and perform a strange sort of ceremonial dance with neck outstretched and contorted body. Closer examination showed that Messrs. Flicker had discovered a group of ant nests and thrusting their beaks into the crowded avenues were assisting outpouring multitudes into the capacious throat. The pumping motion was accompanied by vigorous action of the barbed, sticky and singularly flexible tongue, but occasionally an active ant, deviating from the intended pathway, found opportunity to register his disapproval of the whole performance by sundry stinging bites, and this may explain the gyrations which I was at first inclined to explain as a ceremonial adoration of the setting sun. It was, in fact, not unlike the dance performed by Harry here when he tried to dig up a granary of black ants last summer to see how their home had been formed.

Thus, you see, I captured three unexpected meals to-day."

"All of which shows," began Simeon sententiously, "that"—but May cut him short with "Don't put any impertinent moral at the end of Uncle's *menu* card."

CLARENCE L. HERRICK.

NEW MEXICO.

THE FLORIDA MANATEE.

THE last two generations have witnessed such a destruction of animal life in this country that it is appalling to look ahead and see what the future has in store for us. Our larger animals and birds are going with such rapidity, and the wilder parts of the country to which they have been driven are being cleared and settled so fast, that the end of many species, still common in places, is already plainly in sight.

Man is, of course, the real cause, in almost every case, of the extermination of a species, although often the end comes by some natural calamity, as, for example, the tragic end of the great auk.

When a species has become, through the persecution of man, reduced to a mere remnant that persists either from the inaccessible nature of the country to which it has taken refuge, or from the wariness the few surviving individuals have developed, it takes but a small change in its surroundings to wipe it forever from the face of the earth.

The winter of 1894–95 has been a most disastrous one and has shown us on how slight a change in temperature the life or death of a whole species depends. Two such winters in succession would in all probability exterminate the bluebird, the snowbird and many others that winter in the Carolinian zone. These birds went into the winter in their full numbers and strength, and yet this summer they are so rare that I have not seen a single bluebird in the Plymouth county (Mass.) country, where usually they are one of the common breeding birds. Think what a proportionate reduction in numbers must mean then to a species already on the verge of extinction.

The cold in Florida of the last winter was unprecedented, and the mortality among fish in the shallow water was such as I never thought to witness. The birds suffered very much, but as far as I could tell few died as far south as where I was, Oak Lodge, on the East Peninsula, opposite Micco. Here, at 5 o'clock on the morning of Feb. 12, the thermometer registered 20°Fahr., and on the next morning at the same hour only 23°. It was a strange experience to walk over from the frozen sand add see every little puddle covered with ice on a trail overhung by the sub-tropical vegetation of a Florida hammock with a north wind blowing in my face that chilled me to the bones. The cold of these two days and nights was intense.

On Feb. 19, Mr. Walter L. Gibson came across the river to tell me he had found two manatee that had been killed by the "freeze," and the next day I went over to take possession of them. They were both found where they had floated ashore on the bank of the Sebastian River, one about four and the other two miles from its confluence with the Indian River. I found to my great regret that both were too far gone to hope to save the skins and the only thing to be done was to save the skeletons, which we began to macerate out at once. One was an old female of very large size, measuring from the end of the nose to the end of the tail 11ft. 4in. The other, a young male, measuring from the end of the nose to the end of the tail 6ft. 4in.* Both skeletons are now in the collection of E. A. and O. Bangs, Boston, Mass.

These manatee were two of the survivors of the herd of eight which had, for the past year, been living in the St. Lucie and Sebastian rivers and that part of the Indian River which is between these two. For two years the manatee has been protected by a State law and this herd had come together in consequence and probably consisted of most of the manatee of this region that, freed from persecution, had collected into a herd, as was their wont in old times when the rivers were theirs.

Mr. Gibson told me that often he has stood on the railroad bridge that spans the Sebastian, and seen this herd pass under him and counted them over and over again and knew every individual in it. After the first "freeze" of last winter, in December, three of the manatee were found ashore, dead, in different places and no live ones were seen. Whether any of this herd pulled through both "freezes" is impossible to say, but five out of the eight are accounted for, and it seems likely that more died than were found, as a great part of their range was not covered, and their carcasses might easily have escaped detection even in places that were visited. It does not take long for a dead body to disappear in Florida, and the manatee as they lay half under water would soon have been disposed of, the crabs doing the business below the surface and the turkey buzzards above.

The manatee is extremely sensitive to a change in the temperature of the water. This was noticed by Mr. Conklin to be the case with the one that was kept alive in the Zoölogical Garden of Central Park in New York, and Mr. C. J. Maynard told me that he knew of three large manatee that were killed in the "freeze" of 1886 and washed up near Palm Beach. The 1886 "freeze" was very mild compared with those of last winter. In 1886 the mangroves hardly suffered at all, while last winter, 1894 and 1895, nearly every tree along the whole stretch of the Indian River was killed to the ground.

In both "freezes" last winter the cold came without any warning and the change of temperature was so sudden that the only chance for the manatee to escape certain death lay in their being able to reach deep water before they were overcome by the cold.

The region from the Sebastian to the St. Lucie has, for a number of years, been the only part of the Indian River where the manatee were seen. Here, besides the herd of eight, now reduced to three at the very outside, there were some solitary scattering individuals, how many it is impossible to say, as the manatee has become very shy, but it is safe to assume that the scattering ones fared no better than did the herd, and that the reduction in numbers from the cold of last winter was very great.

There are still, however, a few manatee alive in the Sebastian River. In a letter I lately received from Mr. Gibson he told me that in the end of March he surprised several manatee lying together on a mud flat, high up the Sebastian River. As soon as they heard him they made a rush for deep water, throwing the mud and water 15ft. high in the violence of their flight.

I made many careful inquiries among the people who live along the river and would be in the way of knowing of the manatee and its diminution of numbers of late years, but got surprisingly little information of any value except from Mr. Gibson, to whom I have so often referred, and Mr. Fritz Ulrich, a German of more than ordinary intelligence, who has spent the last fifteen years dreaming his life away among the birds and animals of the Indian River. They were all his friends. The panthers knew his voice and answered him from the wilderness, and the owls came from their hiding-places and flew about him to his call, and the little lizards fed from his hand. But it is all gone now, and there only remains of the great life of the river a small terrified remnant, and in its stead the railroad train hurries along the west bank, and hideous towns and more hideous hotels and cottages have sprung up everywhere among the pines. It is now eight years since Mr. Ulrich saw a living manatee, but when he first came to the river fifteen years ago they were still common, and he often saw them from the door of his little house at The Narrows passing up and down the river, and occasionally he saw them at play, when they would roll up, one behind the other, like the coils of a great sea serpent.

The spring and summer of 1894 were so dry that the salt water went nearly to the head of the fresh-water streams and killed out the "manatee grass,"† of which the manatee are especially fond, and the poor brutes had to fall back on the leaves of the mangroves, a food not much to their liking, which they reach by laboriously dragging their huge bodies half out of water. Mr. Gibson spent a great part of that summer up the Sebastian, where he was catching paraquets, and on several occasions he saw the herd of eight feeding in this manner.

The manatee is an animal of the highest economic value and one that the Indian River, with its fresh-water tributaries, seems able to support in large numbers, and it would be more than mere sentiment to regret its disappearance, should it become a thing of the past. But there is still a chance for it. There are some manatee alive now in the Sebastian River and these have passed through the cold of a winter such as no living man in Florida has known before; they are protected by law, and the netting‡ has been stopped; and in spite of the small annual increase—the female bringing forth but one calf a year—it should slowly come up again to something like its old numbers.—*Outram Bangs in American Naturalist.*

* The Florida manatee grows but little larger than this female. The two largest I ever heard of were two caught in the St. Lucie River by Mr. August Park, of Sebastian, Florida. One in August, 1889, that measured 13ft. 7in. long, and one in June of the same year that measured 12ft. long and estimated at 2,000lbs. weight.

† I regret that I am unable to give a more definite name to this plant, never having seen it myself, but it was described to me as a tender, ribbon-like grass, the blades of which are about ½in. wide and 4ft. or 5ft. long. It grows with the ends of the blades and the blossoms resting in the water, and is found in only a few of the fresh-water streams of southeast Florida.

‡ For a full account of this most successful method of destroying the manatee, see an article in FOREST AND STREAM, XIII., 1889, pp. 1005, 1006, by Mr. J. Francis Le Baron.

Do Panthers Play with their Prey?

Editor Forest and Stream:

The panthers' leap and the panthers' scream have been discussed if not settled to everyone's satisfaction. Now let us hear what those who know have to tell concerning the question whether the panther plays with its prey before killing, as the domestic cat does with mice. Who can say whether any of the large cats have this habit? I once heard an old Indian tell how his brother-in-law saw a panther in the Adirondacks playing with a hare, but it was a second-hand story of doubtful origin.

ANDSOOSE.

Albino Deer.

ONE of the greatest curiosities ever seen in this part of the country was brought in yesterday. It is a genuine white deer. It is snow white all over even to its horns, not a particle of color appears on it anywhere. It was shot by Hugh McDonald near Butternut Lake. It was taken to Henry Gantzman, the taxidermist, and will be mounted.—*Eagle River (Wis) Review.*

Game Bag and Gun.

DAKOTA CHICKEN GROUNDS.

NORTHWOOD, N. D., Aug. 26.—The grouse coveys of this region are being invaded by the guns of the Twin Cities. St. Paul sportsmen particularly have had their blasts after the local prairie hen. Never in the recollection of the local chick has there been made such well-organized attempts at large bags and seldom, if ever, has there been such utter disappointment come to the hearts of the men who are accustomed to wearing hot gun barrels through the golden stubble-edge.

For years the beautiful valley of the Cheyenne has been noted as a rendezvous for pinnated grouse. No gamier bird whirrs over the Western plain. A wilder mark than the Eastern prairie chicken, in habit much like the Canada grouse, the ruffed, gray-white denizen of the buffalo grass is by far the most interesting to sportsmen. In the fertile valley of the Cheyenne there is close cover, shade and water. The cover affords the security which is exacted by the wild nature of the bird. The shade is its habitat during the hot hours of the day, and the water its natural necessity. For miles to the east and west of the picturesque river, Norway's sons are this year smiling upon a lavish yield. It matters not that their huts are black, their children uncouth and their sense of a finer civilization stinted, all they care to know is their gift of nature, so abundantly in evidence in every field. And the valley of the Cheyenne is quaintly featured. Its tillers are Norsemen, its hills are northern, and its natural phenomena is pitched in that minor key, so tuneful of the Scandinavian races.

Upon the ripe richness of yellow grain seas the wild grouse preys, and to find him and bag him is the prayer and the pleasure of the sportsman and the dog. But alas! for this general gratification. The season in the Dakotas, and especially in its southern and western sections, has expressed itself most unfavorably as to game of any kind. A measure of more serious prosperity will soon be realized at the mouth of the grain sack, a prospect at which all Dakota delights. But as for game—upland and aquatic—"well," the farmers say, "the crop o' chickens isn't what they used to was."

At this juncture the mystery of the situation begins. Those learned in the haunts and habits of upland game dare to only theorize at the astonishing scarcity of birds in this, one of their most favored regions.

For several years a St. Paul party has tenanted a shack near Michigan City, just west of Cooperstown. The lodge lies in the midst of one of the greatest bird haunts in the West. Learning that the party had quartered there this week, I made my way from the Cheyenne and invaded their retreat. I found M. D. Munn, brown as a buck; the genial C. B. Yale, of the legal department of the Great Northern; Drs. J. A. Quinn and C. A. Wheaton, each as happy as if he owned the earth and all the flies therein; Dr. H. M. Wheeler, of Grand Forks, a great shot and a fine fellow who discloses his good-fellowship in being Dr. Quinn's life-long friend; and finally Dr. Walter Courtney, of Brainerd, whom it would be a boon for all Western sportsmen to know. There was also a howling wilderness of dogs, three plainsmen drivers and an ebony cook. The department of the interior of this brawn and hearty company was skillfully administered to by one George Ethiopia Davis, of St. Peter street tonsorial celebrity, and one of the best amateur performers at the gridiron and waffle foundry in the West. It is the delight of Minnesotans to observe the sporting proclivities of this aggregation. Drs. Quinn and Wheaton shoot everything but craps; Mr. Munn and Mr. Yale are great fishermen and have caught many things besides a cold. The medical fraternity present, constituting a hospital corps, were seen to administer a hypodermic injection of shot as deftly as they do fermented poisons. *Materia medica* is essential in some camps.

This company has hunted about a week. In every feature but bag, the outing seems to have been a glorious respite from the herculean efforts to earn a living in town. So far, nobody has been able to find the birds. The stubble-edges near the wire and sour grass, the sloughs and water pockets, the coolies and swails, and the sage hillocks all are flushed clean of everything which resembles a grouse.

The dry condition of the weather, the absence, often, of dew, conduces to anything but sport. The dryness dissipates what scent there may be, and the dogs give up the chase in disgust. Where, in pond and lake beds, there should be water, only the baked white alkili gleams in the sun.

Local observers of game breeding declare the failure of the chicken season is due to several causes. There are those who say it is simply because the late spring frost ruined the hatching. Then there are those who say that the late June rains killed the broods. Added to these is that class which points to dry lake beds and declares that although a very temperate bird, the chicken has got to drink. The truth is, there is no water in that country except that issued from farm wells. There is little corn growing to afford birds a chance to drink dew from a leaf-crotch, and the State being prohibition anyway, everything has gone dry and quit. But if the Cheyenne country and the plains along the southern tributaries of the Red River are barren of sport, it is refreshing to learn that in the lake regions of our own State there will be an abundance when the season opens, on Sept. 1. I have held confab with the natives all along the Great Northern R. R. from St. Paul to Minot, and it is my opinion that there is a plenitude of game wherever there is water. All migratory birds will find this element of their subsistence, as the instance of their absence near breeding haunts during the present drought would indicate.

A verification of this belief comes in a report from Willow City, just south of the Turtle Mountain region, a dense thicket studded with live spring lakes and muck swails. A St. Paul party entered this field last Sunday. The company is composed of Hon. Albert Scheffer, Hon. William Hamm, Paul Hauser and Otto Miller. They report a large bag of ruffed grouse, mallard, teal and redhead ducks. Willow City is about fourteen miles south of Bottineau, the northern terminus of the Great Northern road, in the midst of the Turtle Mountains, a few miles south of the Canadian border. I camped three weeks in these mountains last October, with St. Paul parties and Capt. Anson, of the Chicago ball club. The country is a fastness for moose, antelope and bear, and the lakes swarm with canvasback ducks, geese and swan.

The *Dispatch* party was made up at Northwood under the espionage of Herr Thomas Gjerdrum and his aide, Robert L McKellar, both of the North Dakota Milling Association, and Col. C. F. Singular, of Minneapolis. Herr Gjerdrum is one of the most aggressive and popular leaders of the Norwegian people in the Dakotas. He is the scion of a noble family, the estates of which are still the pride of those who bear its name. In his native land Herr Gjerdrum was a great yachtsman, and his narrative of cruises in the seas of the midnight sun are inspiring. He is the only representative of his family in this country, and he has come to his people in the Dakotas with a home always open with its hospitality to his race. Mme. Gjerdrum is an accomplished musician and the mother of a young family of marked refinement.

Herr Gjerdrum's *Dispatch* equipment consisted of three teams, six dogs and five guns. The stores and provisions were almost sumptuous, and the relish of everything was of the fullest. We drove overland from Larimore, 170 miles, in five days, went past Cooperstown, through the Cheyenne hunter's paradise—Lakes Jessie, Red Willow and Pickerel. There, in a country noted for its feathered game, our bag was very paltry. We shared the fate of the medicine men, Drs. Quinn, Wheaton, Wheeler and Courtney, and our local Talleyrand, Mr. Munn. Under Herr Gjerdrum's guidance and princely hospitality the *Dispatch* party learned where the game "was not," an achievement in itself of value to sportsmen. There is good shooting south of Rugby, at Pleasant Lakes, north of Devil's Lake, and all through that section; at Alexandria, Hallock, St. Vincent and in the Red Lake country; and at Ashley they say chickens have never been so plentiful. Generally all along the Great Northern the shooting is good where the situation is near water, bottom lands and short cover. I met Ben Schurmeier on the line the other day and learned that he was bound for Pembina, where, he says, "you simply can't miss 'em."

Deputy Clerk of the Supreme Court Helm is on the

rampage somewhere up here, and D. C. Shepard, Hod Thompson, H. P. Upham and son are scheduled to leave St. Paul in a few days equipped with Mr. Shepard's special car. Judge Kerr and E. S. Warner are out at Klondarf, and when our season opens next Sunday there will be trouble for birds and dogs all along the Great Northern.

The game warden at the State line in Grand Forks is alert. It is unlawful to carry or ship game from the Dakotas. As the law, passed by the Dakota Legislature last winter, imposing a tax of $25 a man on non-resident sportsmen, cannot go into effect until Dec. 1, 1895, hunters from other States are shooting in Dakota fields. So the game warden at Grand Forks runs a dozen dogs into the east-bound baggage car, observes their sniffling, and when a suspicious trunk or box is pointed by one of the dogs the package is attacked from behind with a dark lantern and jimmy. Where there appears to be a warrant for doing so the thing is opened, and if birds are found there is trouble in somebody's clothes. The other day one of the dogs pointed a bottle. That was opened also, but no trouble ensued.

THE VANISHING WILD TURKEY.

I REMARKED on in a paper that had the honor to appear in FOREST AND STREAM that the "woodcock was destined to follow the wild turkey in Canada on the path of extinction." The wild turkey will of course go first. In the New England States and in most of the Middle States he is practically extinct, except some preserved birds, and his final extermination all over North America is only a matter of time. In Ontario, Canada, he is confined to a few townships in the counties of Lambton and Kent, with a few birds in the counties along Lake Erie. In all these places he is now nominally preserved, which, however, does not prevent any one who knows how to set about it being able to buy a wild turkey during the fall in Toronto, London or any of the larger cities.

It is a pity, for shooting the wild turkey is a grand sport for the man who does not mind roughing it. Some twelve years ago I shot my first wild turkey in the district first mentioned. I had been shooting in the little town of Bothwell with a friend, a Mr. C. A flock of turkeys had while we were there come through some woods within two miles of the town. We saw their tracks in the light snow (it was in November), but saw no birds. They were on the travel, as the turkey often is, a fact which his pursuer discovers very soon indeed. We got some quail and rabbits, and a few ruffed grouse, but the turkeys had emigrated. My comrade was called away home, and shortly after his departure I made the acquaintance of a fine old Highlander, a Mr. R., who had a bush farm in the woods, twenty-eight miles back. He said, "if I didn't mind going back with him to his place next day, and living a little rough, I could get lots of shots at turkey and deer too." I jumped at the offer, and next day after a rough drive in a farm wagon got to my friend's farm early in the afternoon. Though the roads were real backwoods roads, the distance was made in remarkable time, for my friend was feeling pretty good for various reasons, and most of the way was traversed at a gallop. However, I got there alive, and as the afternoon was young, started to prospect. I saw tracks both of deer and turkey in the bush, quite near the house, but saw no big game; so toward evening I turned my attention to the partridge, which were plentiful, and soon shot eleven. I also missed some, though they were tame, and rose close to the gun.

Next day I was out early. There was a great forest near the house thirty miles or more through without hut or clearing, all hard wood; not a pine tree did I see all the time I was there; free from brush, except in the black ash swamps, which intersected the rolling beech ridges. A beautifully easy bush to get lost in, as I found out some days afterward. I betook myself to its skirts and was soon prowling along enjoying to the full that feeling that Sir Samuel Baker so well expresses in one of his graphic sporting books, "the delight the sportsman feels when wandering along through a new country, full of game, on the lookout for anything that may turn up."

Tracks, both deer and turkey, were plenty, and I was on the lookout all over me. Before very long I saw through the great open woods about 200yds. away perched on the bough of a large beech tree a great bird, whose glittering bronze plumage told me at once that here was a turkey at last. I stealthily approached, but he saw me before I got within 100yds. of him, and was off. I stamped my foot on the ground with vexation, when a noise like a dozen grouse getting up close by, made me wheel round. Another turkey, who had been watching ME while I was stalking the first, had taken that opportunity to depart. I promptly gave him both barrels at about 40yds. distance, and he went smash into the crotch of a big buttonwood and then slid to the ground, bringing a shower of bark and twigs with him. He weighed 18lbs. I slung that bird over my shoulder and went straight home, for I didn't want to be lost in those woods before I'd shown him to somebody.

The afternoon of the same day I got my first shot at a deer, while out with the son of Mr. R. as a guide. We pumped the deer out of an oak top cut down and left by lumberers. He was not 35yds. from us when he started, and I missed that deer with both barrels, loaded with buckshot, though I could have hit a rabbit nearly every time at that distance. Of course buck fever was what was the matter with me, but what was the matter with the guide? He missed the deer too, though he had killed scores before. Did my buck fever infect him, or was that deer bewitched? We followed him three miles without finding blood or hair before we'd acknowledge that we'd both missed him.

Next day I shot a fine buck on a runway as he was driven past me by hounds, an honest and fair way of killing deer, not like the murderers driving them into water and shooting them out of a canoe 5yds. off. I used a 12-bore gun, one barrel loaded with ball and the other with buckshot—better weapon than the rifle for this kind of shooting, where there is liable to be so much brush and small trees. The deer got the ball straight through him, perforating his liver and breaking a rib on the other side, and seven of the light buckshot in his ribs, and yet that buck ran half a mile before he fell. I afterward got three more deer and six turkeys, besides a lot of partridge, quail and other small game.

Most of the turkey I got by a way of hunting then prevalent in that district, and very deadly, though there is nothing unsportsmanlike about it. You wait for a deep light fall of snow, when the turkeys can't travel easily, and then set out. You find the track of a flock and push them for all they're worth. They will soon find out some enemy is after them, and begin to run. Before long one bird will leave the flock, and go off either to the right or left. Follow that bird. Before you have gone a hundred yards you will find him hidden in some dense bit of brush or some other cover. He will let you get well within shot before he rises, so it's your fault if you don't get him. It is always the heaviest and best birds that leave the rest to hide thus early, so you acquire the "flower of the flock" at once. I fear I shall never have shooting like this I have briefly related in Canada again. The turkey is very good eating; it pays to shoot him for the market, where he finds a ready sale at a high price. These things mark him out for early destruction. The only chance for keeping any number of them in North America will be their preservation in the national parks. But even in these their wandering and migratory habits will be against them.

REGINALD GOURLAY.

ADIRONDACK DEER.

Editor Forest and Stream:

A little while ago, if I remember correctly, a man wrote a letter to the FOREST AND STREAM in which a sentence to this effect appeared:

"Stop the crusting of deer and let the little evil, if it is an evil, of hounding go." That man ought to have known better. Judging from his letter he knew more or less about the Adirondacks, had visited them and had hunted there to some extent. After what he wrote as quoted above, one would believe that that is the way he killed his deer, and that being the case, he should know that it is a tolerably easy method by which to procure them. The idea of calling hounding deer "a little evil" or none at all is saddening to one who has seen the deer steadily decreasing—withering before dogs, as it were, like leaves over a camp-fire.

When the law prohibiting hounding is passed, and is enforced, it will do away with hounds to a large extent. They may be retained to hunt foxes perhaps, but the best fox-hounds are not as a rule good deer dogs, and some lawless men will use dogs still to kill deer. Yet the law will make the practice odious to the visiting sportsmen and dangerous to the visiting head hunters, and a growing sentiment, even now perceptible among woodsmen, and a prominent standard among sportsmen who think, will in time eradicate all desire to hunt deer with dogs, and when a few men—two or three—of a locality begin to carry out the necessary provision that dogs seen after deer may or must be shot, pot-hunters will think the expense too great and cease their persuit of deer in so barbarous a manner.

I rode from Morehouseville to Northwood a while ago with Mr. Wilson, of Colvin's Adirondack survey, and we were discussing hounding and still-hunting. He was rather astonished that people allowed dogs to be used in hunting deer. Up where he lived, in the southern part of St. Lawrence county (I think), a dog running deer, if seen by a woodsman, was shot. There the deer were increasing.

But here, from Northwood to the West Canada Creek lakes, from the Fulton Chain to Piseco, where hounding is the favorite way, the deer are decreasing rapidly, notwithstanding apparent increase due to the deer being driven out of the woods by lumbermen and their operations.

All summer long at various times I have heard of deer being around, of their occasionally coming in sight of the clearings, and those who told me of the deer usually—and I do not remember of a man who didn't—end up their story with: "If they'd only keep their blamed dogs tied up, deer would be thick hereabouts." But dogs must be exercised, and the best deer dogs when released make at once for the woods and do not return sometimes for days at a stretch. These dogs would gradually die away and the deer would get thicker and more easily accessible to both visitors and natives.

The influence of clubs like the Adirondack League is very great in a region like this, and their members by not killing does have had a very great influence for the increase of deer, or rather, perhaps, this has made the decrease less rapid than if they had killed everything their numerous and handsome hounds put into the water. But think what a difference there would be if the League would stop hounding on its preserves and shoot the dogs that run there. It would have the support of 75 per cent. of the woodsmen, and in time the remaining 25 per cent. would grow used to the order of things and become supporters of the practice of dog shooting. It is to be feared, however, that no such thing as this will be done.

From time to time we read in the FOREST AND STREAM of trips to the Maine woods, of which the story of "My First Caribou," in the issue of Aug. 24, by Mr. Irving H. Pomeroy, is an example. The deer, judging from the news reports, are so commonly killed as to be scarcely worth mentioning, and yet the above-mentioned letter shows that in some localities at least they are very numerous. As for instance: "* * * shot a nice four-year-old buck with good antlers; fired at two other deer, and probably heard twenty or thirty whistling and stamping the ground." I do not mean to say that so many as that ought to be seen or heard in any given place in the Adirondacks, because from the nature of things it is hardly possible except in yards; but what I would like to call attention to is that a region famous the world over for years and years as a land of sports, visited by thousands of hunters yearly, should yet furnish such sport as Mr. Pomeroy and hosts of others have described in the FOREST AND STREAM. I remember having read in one of Capt. Farrar's books about how a party of young fellows caught a live deer, and how one day dogs ran three deer down through the camp, and seeing the camp deer attacked it. Then the boys killed them. Later two men came that way, and as Capt. Farrar pictured them—vicious, hang-dog sneaks—one saw how the upright class of woodsmen in Maine regarded hounders. They have their reward in deer, caribou, moose and easier consciences.

I heard the story of the last moose killed hereabouts, and it was fitting that it should be a monster of its kind, with antlers of tremendous size—a creature to be remembered, even though others of the same kind abounded. He had lived around these woods for years; he was often seen and his great tracks led through many a swamp and across trails often with men still-hunting after. But they did not get him.

One fall day the hounds struck his trail over in the town of Ohio, and with that yelping, running cry they followed where the old moose led. He knew it was a race for life; perhaps he knew his time had come. That day, that night, he ran them with head down and with weary, hopeful persistence he ran along a road through Russia. Behind came the hounds, "noble creatures" and bloodthirsty brutes. They were tired too.

Right at the little settlement ran the moose. There was a shot, another and another, then more, and soon the street was full of men, boys and dogs.

The old moose staggered, plunged forward, then stood erect, as if the blood was not pouring out of his sides, and turned his big head around to gaze on his pursuers. He sank down then and died. Even in those days the dogs destroyed, and if it hadn't been for them the moose would have held their own for years and years in the Adirondacks.

Blow out the jack lights, burn the lumber camps and kill the dogs. RAYMOND S. SPEARS.

NORTHWOOD, N. Y.

CONNECTICUT PARTRIDGE SNARES.

Editor Forest and Stream:

From where I sit while writing this article the eye can roam over as favorable a section of country for the propagation of small game as can be found anywhere in New England, and yet it is but seven miles from here to the center of the third largest city in New England. A mile to the west a range of forest-covered hills raise their verdured sides to a height of some 500ft. above the level of Lond Island Sound.

In numerous places the sides of these semi-mountains rise in nearly abrupt rocky cliffs, whose crevices and miniature caves form for crafty foxes and corn-filching coons secure abiding places into which to retreat when hard pressed by pursuing hounds. It almost seems that Mother Nature has provided these safe retreats for their especial benefit.

The view from the summit of these hills is at any time of the year grand, but at this season it is exceedingly so. Extending from their eastern and western slopes, the eye of the beholder roams over alternating stretches of timbered and meadow land. From the western side one looks down upon miles of this wooded and meadow land, through which, like a narrow ribbon of silver, flows a fair-sized trout stream. In the springtime, should a person be so fortunate as to spend the right kind of a day on this stream, if a careful, cautious angler, he would be well repaid by securing a fairly filled creel of medium-sized speckled trout. Although these fish, as a rule, do not attain to any great size, still the extreme brightness of their spots, firmness of flesh and other excellent qualities cannot be surpassed anywhere.

To the east and north rise other lofty hills, whose verdancy, as they roll away in the dim distance, changes from green to one unbroken line of indigo. To the south, hidden by the shielding foliage of giant elms, lies the city; while stretching away from its feet and basking in the rays of Old Sol the bosom of the commerce-dotted Sound glitters in scintillating radiance.

When the day is nearly spent and the sun, as it seems, sinks to sleep in a bed of verdancy behind these hills, when the afterglow of crimson, indigo and gold has given place to twilight, then here in the springtime will be heard the whip-poor-will call and other evening sounds of spring as they issue forth from meadow and wild wood.

Now it is but natural to suppose that in a tract of country so abundantly supplied by Mother Nature with everything so essential to their propagation it would be an easy matter to find in plentiful numbers that most noble of American game birds—the partridge. That this section, however, is almost entirely devoid of partridges is only too true. Where six or seven years ago a fair hand with the gun, on a day's tramp after these birds, would meet with fair success, he now considers himself fortunate if he gets a shot at one. It must not for an instant be supposed that the nearly extinction of this noble bird in this section is due to the shooter; nothing of the kind. I invite anybody who wishes to know what really is the cause of this thinning out to take a walk with me any day within a month of the opening of the shooting season, or long after the law is on, and I will show to him such an (almost) unending string of strangling snares as to turn his heart sick while his feet demolish them. Through the woods that line the streams, stretching their unlawful lengths at the base of the hills, and covering their sides and summits, extending to the north, east, south and west over miles of country, nothing but snares, snares, snares.

Now it is not natural to suppose that the persons who indulge in this business of snaring do so for the sport or pastime there is in it. I have no way of proving it, still I have heard it whispered that persons whose apparent respectability would naturally lead a person to believe otherwise have made it a business—in and out of season—of purchasing for a good price the ill-gotten spoils of these law-breaking snares, and shipping the same to a New York market. Whether there is anything other than rumor in these reports I do not know, but this much I do know, snaring is carried on so extensively that, unless something is done to put a stop to it, it will soon be impossible to find a single bird hereabout. Should this article aid in any way in bringing the attention of the proper authorities to this prevailing evil, then will I rest content in the knowledge of the fact that I have performed a duty. WILLIAM H. AVIS.

HAMDEN, CONN., Sept. 3.

In a New York County.

SMITHVILLE FLATS, N. Y.—*Editor Forest and Stream:* The partridge shooting in Chenango county has been unusually fair this fall. Woodcock, owing to the dryness of the season, are not so abundant as they will be later. George P. Finnigan made the following scores the opening days of the season: Aug. 16, two woodcock and twenty partridge; 17, five woodcock and six partridge; 19, four woodcock and six partridge; 20, eighteen partridge; 21, twelve partridge; 22, two woodcock and eighteen partridge; 23, eleven partridge; 27 (one-half day), five partridge; 28, one woodcock and eight partridge; 29, four woodcock and eleven partridge; 30, one woodcock and thirty-one partridge. Total for eleven shooting days of nineteen woodcock and one hundred and forty-six partridge. B.

GAME SHOOTING RANGE.

Editor Forest and Stream:

The question of what is the limit of distance at which large game should be shot at depends almost wholly, I think, on the rifle and the man using it. Too many sportsmen go after big game in a sort of haphazard manner, often taking a rifle they have never tested in any way.

Rifles as a rule shoot accurately, but often the sights get slightly displaced and no one but an expert would notice it unless testing at a target. I once tried a rifle for a companion who had just missed a very easy shot at a deer. The sights of this rifle looked to be in place, but a careful test at 50yds. showed it shot about a foot high and some 15in. to the right. A few moments' work with a hammer and file and it shot where it was held.

I will give two instances showing how shots which should have been sure were missed. A couple of years ago I spent two days at a camp in Maine. There were three men there and we were in a good caribou region, and in spite of deep soft snow and hard traveling I put in all my time looking for game. On the second morning one of the party said he had had enough of such walking and should stay in camp. On the afternoon he went out on the lake near camp to try his snowshoes, taking his rifle. Looking up he saw five caribou quite a distance away coming down the lake; he slipped into the woods behind a fallen spruce and waited. The caribou came straight toward him and stopped within 40yds. Four shots were fired at the bull who was leading, and the man who did the shooting said that caribou never winked. At the fourth shot they all turned and ran up the lake. Now this man wanted badly to kill a caribou and said he would have given $50 to have killed the two largest, and that he never expected to get another such chance.

Again, when hunting near Dunraven bog in Nova Scotia I was shown where a moose was called up for a sportsman, the bull came readily to the call and was seen quite a distance away coming along the edge of a bog. He came up and stopped broadside to the sportsman in plain sight on the open bog 35yds. away, and was shot at and missed three times. Now, for men who will shoot in this way I should say the proper distance for an absolutely sure shot would be for the animal to stand within 3ft. of the muzzle of the rifle.

I have always been rather particular about the rifle and cartridges I use for large game. I spent over a week's time and a great many cartridges regulating my sights for distances from 50 to 400yds., and have them so marked that I can tell at a glance whether they have become displaced, and I have also shot hundreds of cartridges at various objects at different estimated distances. Of course there is a good deal of work in it, but I feel I have been repaid, as I have killed some large game, and so far have not lost a fair shot through lack of knowledge of my rifle. It is a poor time to find there is something wrong with your sights just after you have missed an easy shot at a moose or caribou or deer.

Your correspondent Tiam, of Nova Scotia, has evidently taken pains to become acquainted with his rifle, and I certainly think he was justified in expecting to kill the moose he speaks of. I would take such a chance; and have faith in my rifle and confidence in my ability to hold it, to think I can kill such shots. Of course I prefer easier shots, and it is better to have a big bull standing still inside of 100yds. I saw six moose which were killed at the following distances: One at 175, one at 220, one at 235, one at 295, and two at between 450 and 500yds. The first four were killed with five shots, the last two had a number of shots fired at each. The men who made the above shots I know personally, and they are all good cool shots and also pretty good judges of distances, and under such conditions, I think a man stands a pretty good chance at such shots as the one described by Tiam. There have been times when I felt like taking any sort of a chance. Tramping day after day when still-hunting and failing to even find signs of the game I was after, or lying out night after night when calling moose, has a great tendency to break resolutions made before starting on the hunting trip.

If a man really means to bind himself to shoot only when he is absolutely sure, my advice to him is not to go moose hunting. Stay at home and talk about what you would do—it is much easier. C. M. STARK.

DUNBARTON, N. H.

NEW HAMPSHIRE GUN AND GAME.

NASHUA, N. H., Sept. 6.—The safety of nitro powders is an important subject to any sportsman using it. I have used nitro powders for a number of years with excellent results, the only advantage, though (to my mind), being the absence of smoke—an enormous advantage when shooting in the brush or in the open on a damp day. My charge is 2½drs. With 3drs. there is a perceptible recoil or jump to the gun, and I cannot see that either penetration or pattern is improved by the extra ½dr. While I occasionally hear rumors of accidents with nitro powders I have no personal knowledge of any, and if a number have happened with properly loaded cartridges and well-made guns, I should feel inclined to return to "soft coal" and avoid all danger. It would not surprise me much, though, to hear of one or two 'most any day—one of them being a gentleman whom I met on the train recently, and who blandly informed me that he thought "3½drs. of nitro about right for woodcock" in a low-priced gun.

I have never heard of partridge (ruffed grouse) being as plenty as this year; reports of large coveys came from all parts of the State and our sportsmen are eagerly looking forward to the 15th, when the season opens.

Our last Legislature changed the date from the 1st to the 15th on partridges and woodcock (a most excellent change I think), but in doing so they left the law on squirrels and rabbits as at present, Sept. 1. The result is a "hash," and I have no doubt many birds have been killed by so-called rabbit hunters already. I believe in a uniform game law for this State, so that a man in the woods may legally kill anything that runs or flies after the season opens. Personally I prefer the 15th, but should rather see it the 1st than the way it is now.

On deer it seems to me our legislators made a bad break. They not only abolished hounding (a good move), but they cut the season off Nov. 15, thus putting a stop to the best of the still-hunting, as the snow does not arrive till Nov. 1 or thereabouts. And I believe the result will be a great many deer killed out of season.

On a recent visit to Coos county I met and talked with a number of guides and residents who are largely dependent on visiting sportsmen for their ready money, and the feeling toward the new law (from what I heard) is decidedly hostile. With the open season extending to Jan. 1, which seems to be eminently proper, then some residents would feel more like aiding an enforcement of the law than they do at present. There are plenty of deer in New Hampshire and I cannot understand why the best part of the season for still-hunting is cut off. However, deer don't interest me much. A good steady pointer, a good friend to enjoy the sport, and a dozen partridges and woodcock at the end of the day, that is enough for me.

By the way, why can't Dr. Robt. T. Morris tell us a little more of his experiences shooting ruffed grouse? I remember an article by him which appeared (in FOREST AND STREAM) about three years ago. It was one of the best descriptions I ever read. Though, as I am a little bit "daft" on the grouse question, perhaps I am not a qualified judge. B.

MAINE GAME AND FISH.

BOSTON, Sept. 4.—The reports concerning partridge, or ruffed grouse, in the Maine and New Hampshire woods have not been better for years. A prominent lumberman in Boston, Mr. O. H. Smith, with mills at Bartlett, New Hampshire, says that he has had a man or two in the woods exploring for lumber nearly all summer. These men say that they do not remember having seen as many partridges. Mr. Smith is himself a lover of the rifle, and will try the birds, if time permits. An Upton, Maine, guide writes a Boston merchant, who is very found of partridge shooting in that State, that the birds are unusually plenty in his vicinity. This is probably no "guide's story," for he is a guide that can and will tell the truth. J. A. French, of Andover, Me., writes me that partridges are more plenty than usual, and as for deer they are frequently seen feeding in the fields, and are far more abundant than last year even.

Fish Commissioner Henry O. Stanley was in Boston the other day. He believes that the shooting season in his State cannot be otherwise than a prosperous one. The Commissioners, with their men, have been in the woods and the wooded section a good deal, attending to the protection and propagation of fish and game, and it is Mr. Stanley's opinion that partridges are unusually plenty in nearly all parts of the State. But the gunners must remember that the legal shooting season for these birds does not begin till Sept. 20 instead of the 1st, as under the old law. But the open season on woodcock and ducks begins on the 1st of the month. Deer Mr. Stanley finds to be most remarkably plentiful. The Commissioners have lately made a trip up the river from Parmachenee Lake to Little Parmachenee. They went up with the view of giving a hearing under a petition for closing this river to trout fishing and making it a better breeding place for trout. On the way, six miles on the river, fifteen deer, by actual count, were seen. In other sections, where the Commissioners have been, they are also remarkably plentiful. Mr. Stanley freely expresses the opinion that there are twice as many deer in Maine as last year, when, it will be remembered, they were most remarkably plenty. It is something of a surprise to him, this increase in deer, and yet a matter of a good deal of satisfaction. He well remembers fifty years ago, when, with his father, he made a trip to the Rangeleys, fishing and hunting, they saw several moose—in fact shot a big moose. But not a deer did they see; not even the tracks of deer to any extent. Mr. Stanley laughingly remarks that there are more deer in Maine than sheep, and further adds that a deer is worth as much to the people of the State as a sheep for food, and a great deal more to draw the patronage of sportsmen. There are deer in almost every town in Maine.

At the State Fair in Lewiston, Me., this week, the State Commissioners of Fisheries and Game will make an exhibit of the native fish of the State, from the State's own hatcheries. The exhibit will be in glass cases, the same as the World's Fair exhibit at Chicago, in which the FOREST AND STREAM took so much interest. Some very remarkable features will be shown, illustrating the growth and propagation of fish. A very large salmon will be shown, raised in the hatcheries at Lake Auburn. Trout of several sizes will also be shown, both native and foreign. Their growth will be made a particular feature.

Sept. 6.—Monday, Sept. 2, was another legal holiday in Massachusetts—Labor Day. The gunners generally took to the seashore with gun in hand. The day was fine, but the universal report was: "Very few birds, all along the coast." At Biddeford pool the gunners got few birds. At Plum Island and Castle Island there were a number of gunners, but they got no summer yellow-legs. Harry Powers says that there was considerable shooting going on over on the other side of the island from where his stand is located, but he has since learned that they were getting peep only. L. W. DePass was down to Marshfield and Cictuate for the day, and he seems to have had better success than most. He got about twenty birds in all—a number of yellow-legs and several grass birds. But even he reports the shooting bad. He says that he should have taken 75 to 100 birds. The Plummers, of the leather trade, were down on the Cape at a favorite shooting ground, but they got very few birds. The theory advanced by almost all is that a big storm is needed to drive the birds inshore.

I saw a gentleman yesterday just in from a trip among the farmers in New Hampshire buying produce. He says that he left the train at Gorham, and looking back a few rods down the track, he with others saw a deer quietly feeding not far from the iron, though the train had just passed. He talked with the farmers in that section and from there on to Colebrook. They all claimed that the deer have been so numerous as to destroy their oats and their beans. One farmer declares that he had a half acre of peas entirely destroyed. They came in at night. He says that the law protects the deer and he is not allowed to protect his crops. He thinks that the State should be responsible for his peas—another argument for downing the game laws. A gentleman well posted in farming in the back New England towns remarked that with ten bushels of oats, five bushels of peas and a barrel of beans he would guarantee to pay for every honest and actual loss the farmers of Maine and New Hampshire have sustained this year from deer.

Mr. Gardner Chapin, with his son of fourteen, will start for Aroostook county, Me., this week. They will try ...e fishing at several points along the Aroostook Railroad, and after the 20th the boy will use his shotgun on whatever partridges he can find. A year or more ago his father made him a Christmas present of a breechloading shotgun, and the boy has been "wild" to use it on actual game ever since. They will make an extended trip from Maine into New Brunswick, and it is likely that the boy will get such a taste of actual gunning as will make him a thorough convert.

A private letter from Lewiston, Me., informs me that the fisheries exhibit at the State Fair, now in session in that town, is attracting more attention than was expected even. The exhibit is under the direction of the Commissioners, and directly managed by Superintendent Merrill, of the Lake Auburn hatcheries. There are ten large tanks, showing trout and salmon of all sizes, from the little fish of a few months old up to a salmon that is over 2ft. in length. SPECIAL.

IN SOUTH FLORIDA.

FORT MEADE, Fla., Aug. 31.—One of our farmers within the town limits has just reported a fine bunch of young turkeys feeding daily in his field, and it arouses my enthusiasm so that, as I cannot shoot them yet, I want to let off steam through the safety valve of my pencil.

Last year fourteen wild turkeys were killed within our town limits (which on the east side are bounded by the Peace River) by Nov. 14, whereas the season opens only Nov. 1; but I happen to know that eight of them were killed before the season opened, and if the same thing occurs this year I think it likely that the town and county treasuries will be the richer, as we have a few genuine sportsmen, who are waking up to the necessity of observing the seasons, even in south Florida, and the formation of a sportsmen's protective association is being seriously talked of.

Our fishing has been remarkably good this spring and summer, both in the streams and lakes, and very fine catches have been the rule. One party caught seventy-eight black bass (locally called trout) in Crooked Lake in fifty minutes, none under 1½lbs., mostly from 2 to 4lbs., and a few as high as 10lbs. in weight.

Our outlook for quail this year is fine—large coveys and plenty of them reported from every quarter.

I have lived in England, hunted in Scotland and Ireland, and once only in France, as well as resided three years in the Northwest, and this eclipses any place I ever saw for hunting and fishing. It strikes me that if some of your readers only knew the actual position here hundreds of them would come to the sunny South this winter and help us out.

Snipe, quail, doves, turkeys, deer, bear are numerous, and all within a day's drive, while those who want 'gator shooting can find plenty of sport. J. NORTHCOTT.

Caliber for Big Game Shooting.

Editor Forest and Stream:

I have read the article of Lieut. Charles F. Kieffers, Fort Buford, North Dakota, in your issue of July 6, and in justice to the manufacturers of the small caliber rifles would like you to correct the mistaken idea which some people may get through reading the article above referred to.

Lieut. Kieffers states that in shooting the nickel steel-jacketed, 30cal. bullet he did not get the killing or stopping power that he did with his large caliber rifle, and I am not at all surprised, for these nickel steel-jacketed bullets are not made for sporting but for military purposes, where the first consideration is great penetration, and it has been proven that with these bullets more men would be disabled than killed, which result is, for obvious reasons, desirable in warfare.

If, however, the part-mantled bullet be used, Lieut. Kieffers would find that it would stop as much if not more than the large caliber, as the protruding soft lead point, on impact with the target, and owing to the immense velocity, spreads out (mushrooms), making a wound as large if not larger than a .45caliber ball, and furthermore, he would have a much lighter gun and ammunition to carry on his trip, giving a much greater muzzle velocity and consequently flatter trajectory. A. H. F.

Pennsylvania Game.

DILLINGERSVILLE, Pa., Sept. 2.—Grass plover have been very plenty the past month, large bags have been made daily by the local gunners. From the early part of August until within a few days large flocks have been passing over on their way south. The birds are in fine condition. I killed sixteen last week in about two hours, five or six of them were so fat that they burst open on striking the ground.

To-day the squirrel season opens and as I am writing I can hear the crack of the guns on the neighboring hills. I expect some very good bags will be made, as from all reports they are plenty.

Quail and rabbits will also be quite plenty for this section of the State. I took a walk with my dogs yesterday although it was the Sabbath, and located two nice coveys within half a mile of the village. There are also a few pheasants to be had on the Lehigh and Coal Mountains, but I suppose as in other years they soon get to know how far No. 6 shot will shoot and most always give you the benefit of the doubt. Smart bird is Mr. Grouse.

L. W. M.

Picking Off Grouse Heads.

PORTLAND, Ind., Sept. 6.—*Editor Forest and Stream:* I suppose I am one of the fellows to whom Dick of Connecticut refers in this week's FOREST AND STREAM. I have no doubt Dick can clip a grouse's head with a rifle, and I don't see why he should question others' ability to do so. True, it takes quick work if the grouse is slipping away through a thicket of underbrush, for their heads are still scarcely more than a second; but I have picked many a one. In fact, I don't shoot at any other part of the bird, nor with anything but a rifle.

In northern Michigan, in a thicket near camp one evening in October, 1890, I stood on a log and with a .32-20 Winchester shot the head off a ruffed grouse that was walking in the brush. At the crack of the gun another one jumped upon a small log and started away from me, and I swung my gun around and picked its head. I then stepped the distance—just twenty-nine long steps to the first and thirty-three to the second. Do you believe it Brother Dick? G. W. CUNNINGHAM.

CHICAGO AND THE WEST.

The Case of Rebellious Goldstein.

CHICAGO, Ill., Sept. 7.—One day this week Mr. A. Goldstein, an Irishman who shoots around Thayer, Ind., stepped off the train at Polk street station. Mr. Goldstein had a bright, glad smile on his face and a big game bag on his back. He was thinking what a fine Sunday dinner, yet, the little Goldsteins were going to have, already, of the prairie chickens he was carrying in his game bag. Deputy Warden S. L. Hough (who isn't any relation of mine, though he is a better looking man than I am) was standing in the depot and he noticed Mr. Goldstein's smile and also his game bag. He asked Mr. Goldstein to let him look in the bag, and finding therein three illegal chickens he took the entire outfit in charge and brought Mr. Goldstein before Justice Foster, who is now pondering over how much he ought to soak him for. Mr. Goldstein's lawyer was going to lick Deputy Hough and then scatter his fragments, but he didn't do that, being perhaps absent-minded. Mr. Goldstein rebels very much at the loss of that Sunday dinner.

Deputy Hough lives at Hinsdale, a Chicago suburb, and has been doing good work among the early chicken shooters and Sunday bird killers who infest the fields and prairies west of the city. He has a raid or two formulated for next Sunday and thinks he will make a good haul. He tells me that he saw a covey of over a dozen chickens this week near Wheaton, and says that really quite a number of these birds have bred this year within twenty-five miles of the heart of the city. It is astonishing how the old prairie chicken clings to its old favorite breeding grounds of upper Illinois. If I had time I think I could make a goodish bag of these birds in Illinois, even after the opening date, Sept. 15.

There is a sigular bit of unwritten history which comes up in connection with the visit of Mr. S. L. Hough to this office yesterday (I had never met him before). It seems that Mr. Hough was once in the U. S. Secret Service, and while there learned a thing or two. It was he, and not Warden Chas. H. Blow, who originated and wrote the decoy letter which opened the big game freezer at Kewanee, Ill. Warden Blow, of course, took all the credit for that, though he mishandled the case after it was begun. His deputy cheerfully accords the warden the credit which the latter is in the habit of cheerfully ascribing to himself, but in this I cannot quite concur. It is, for reasons stated above, not a matter of family pride (though you can hypothecate your cherished existence any one wearing that name is all right anyhow on the game-freezer question); but it is due the public that something of the real nature be made known of our illustrious warden, Chas. H. Wind.

It has been the custom of the wardens here under the Illinois law to seize illegal game when found and to seize also the gun and equipment of the law-breaker. This was the cause of the ire of Mr. Goldstein's lawyer, "You can't take that stuff!" he cried. "But I have," was the reply. All of which reminds me of a story told me by my friend Dave Crane. It seems that Mr. Crane was once on a railway car in Cincinnati, which car happened to be transferring toward home the remains of a German picnic. Evidently there had been some music and perhaps a little beer, for the band was coming home and it was sleepy. The man who played the bass drum fell off into a doze, and as he slept the conductor touched his shoulder and asked him for his ticket. The musician awoke, rubbed his eyes, fumbled in his pocket, and at length declared he had lost his ticket.

"Oh, come, look again," said the conductor; "you can't have lost your ticket, you know!"

The bass drum man felt again, and then cast a sudden pained glance around him as another idea crossed his mind. He missed his big drum, which should have been resting by his side, but which some one had no doubt appropriated somewhere while he was asleep. He thought solemnly for a time while the conductor stood waiting, and then said, with an air of firm conviction, "Vat makes you t'ink I gouldn't lose dot ticket? I haf lost a bass drum!"

The Prairie Chicken Crop.

It is too early yet to get a great deal of news from the legal chicken shooters, and the news in possession of the "sooners" who had been shooting a month ahead of time is something hard to get hold of. It is likely that the chicken crop is not so good as common in Dakota and northwestern Nebraska, but better than common in Wisconsin, Illinois and Iowa—States once shot out, but now slowly regaining their head of game under the growing sentiment in favor of protection. One party just back from North Dakota, Mr. F. S. Baird and Mr. M. R. Bortree, ascribe a scarcity of chickens to a peculiar source. The farmers had been spreading a great deal of poison for gophers, and it was thought that the birds had been destroyed by this. These gentlemen killed only eighty birds in three weeks. There is another agency to which I think we could trace scarcity of birds in many regions, and that is early, illegal, destructive and inconsiderate use of the shotgun, by men who are butchers by trade or practice, by so-called sportsmen, or by men who think they are sportsmen. Our friends may have been following in the wake of such an agency, which is apt to be about as bad as poison. There is no game bird living so helpless against the shotgun as the pinnated grouse. It may be futile hope to wish to see so grand a bird preserved for another generation, but it seems too bad when one thinks of the old stubble fields and grass lands of Illinois and Iowa, which once carried so many of them, and which now are entirely robbed of them.

The Duck Crop.

It is still too early to get word of the duck crop this fall, except in so far as the local birds are concerned. From Horicon marsh comes word of comparatively small shooting so far. At Maksawba Club grounds, on the Kankakee, there was practically no shooting whatever. Sometimes there are a few woodducks there, but this year they seem to have traveled the long, cold road to freezerdom a trifle ahead of time. The glory of the Kankakee has departed.

Personal.

Mr. George E. Cole, of this city, who has been president of a number of our active protective associations in the past, but who resigned from such work a few years ago, is in harness now on a different line, his rare executive ability having made him a necessity in the council committee of the Civic Federation, the local representative of the "better government" movement which now seems needful in large cities like Chicago.

Mr. Wilbur Dubois, of Cincinnati, is a sportsman of a very pleasant and desirable sort, as all of us know who were with him on the hunting trip in Texas last winter. It is with regret, therefore, that I note indications that Mr. Dubois has created wrong impressions in the minds of many as to his real character. Under his quiet demeanor he has had things up his sleeve. The last number of the *Midland Magazine* contains a poem, "Types," by Mr. Wilbur Dubois, and inquiry certifies me that he is him. We did not think Mr. Dubois was going to do this when he was along on the hunt. The worst of it is, it is pretty good poetry too.

Mr. and Mrs. Winfield S. Bell, of Pittsburg, Pa., stopped to call at the Western office of FOREST AND STREAM to-day on their way West. Mr. Bell judges in the Manitoba Club field trials next week at Morris, Man. The club is to be congratulated on securing so good and desirable a judge. Mrs. Bell has never seen the dogs out in a chicken country, and justly anticipates a pleasure. Mr. Bell declares himself as one of those who do not think ability to run fast is the one desirable quality in a bird dog, and in that far I am sure I agree with him. To a plain citizen like myself, who is just folks, the wonder may sometimes arise what field trials are all about. Being just folks, I could never see why a "bench type" should be different from a "field type," or why a field type should be different from just a plain dog that a fellow can go out and have a lot of fun shooting some birds over. Suppose we say that bench shows and field trials have a business side to them. To whom do these business winners wish to sell their stock? Why, certainly to the amateur sportsman, the bone and sinew of the whole sportsman fabric, the man who subscribes to the sporting papers, who reads the advertisements, and buys the sporting dogs and the sporting goods. The amateur sportsman is the man to be considered. And yet my business winners have been trying to sell him a sort of dog that is in no way suited to his needs—that races, but does not retrieve, etc., etc., in short, a mighty poor kind of meat dog. This is the business side of it, and yet, being just plain folks, I could never for the life of me see just where the business sense of it came in. Alas! for my old chicken dog. I wish I had him now. But what business winner is advertising—not winners, but just dogs; not rangers, but plain dogs; not wonders, but just chicken dogs as is chicken dogs? I want to learn just what shows and trials are doing for the plain folks of this country, who don't know points in the bench, but do know points in the field when they see them, and like to see them whenever they go hunting. No one has ever written the Mort de Chicken Dog, but there is a chance here for an epic of regret.

Where "Forest and Stream" is at.

To-day I saw something which surprised me, not because of its sort, but on account of its size. I was in the store of Jas. H. Fisk, of this city, one of the advertisers in the FOREST AND STREAM. "Next year I think I shall use no paper but FOREST AND STREAM," said Mr. Fisk to me, "because it brings me more returns than any or all of the others." Mr. Fisk then proceeded to show me the reason for his conviction. He has kept a check list of all inquirers coming in from his different advertisements. Some of these he could not trace, as the writer did not name the paper in which he had seen the advt. This collection was marked "Miscellaneous," and it was the largest of any under any head. The method of record was to make a mark for each response to the advt., these marks being placed opposite each paper's name. Six upright marks were made and then a cross or "tally" mark made across the row. FOREST AND STREAM had three rows of these tallies opposite its name, or forty-eight tallies in all. A Chicago weekly publication, in which the advt. had been running for only one month less time, had only eighteen tallies to show. The other papers, mostly printed in New York, were not in the competition. Of course I knew that FOREST AND STREAM was far in the lead of all the sporting papers, but I did not know the lead was in so strong a per cent. as this. Mr. Fisk was originally averse to advertising in FOREST AND STREAM, because he thought it "more of an Eastern paper." He doesn't think that now. The relative value of FOREST AND STREAM to Chicago and Western advertisers was never more clearly and unmistakably shown.

Mr. Fisk told me that he sold goods all over the country through FOREST AND STREAM, and that lately he sold a bill of $30 worth of goods to a man in Boston. Not long ago the John Wilkinson Co., of Chicago, told me they had just outfitted complete a party of New York men who were going up into Maine. There are some things about the sporting goods trade which cannot be decided out of hand and without a little investigation.

A New Tent.

The growth of the bicycle has caused Mr. A. S. Comstock, the Protean man, to come out with a new Protean bicycle tent. This is a Protean split in two, making it 4×6ft. in size, big enough for a man, a dog and a bike, and weighing only 4lbs.

Is this the Pine-Nut Bear.

I am in recent receipt of the following letter from Mr. C. H. Blanchard, of Silver City, Juab county, Utah, which may prove of interest to others beside myself. He says: "Like you, I believe in William Tell, me! Your pursuit of the scientific fellows on the question of the species of deer and bear, as well as the horned snakes, is interesting, and we hope you will continue the controversy until these questions are settled as we are leaning something withal. Inclosed please find a slip cut from a newspaper which gives an account of what would seem to be a new species of bear."

The clipping reads as follows:

"A NEW SPECIES OF BEAR.—A bear that seems to be certainly a new variety, and is regarded by some as of a distinct species, is reported from our arctic domain of Alaska, where it frequents the vicinity of the Mount St. Elias glaciers. It is of moderate size and is thus described by W. H. Dall, the naturalist, writing to Science from Sitka, under date of June 25: 'The general color of the animal resembles that of a silver fox. The fur is not very long, but remarkably soft and with a rich under-fur of a bluish-black shade, numbers of the longer hairs being white, or having the distal half white and the bastal part slaty. The dorsal line from the tip of the nose to the rump, the back of the very short ears and the outer faces of the limbs are jet black. Numerous long white hairs issue from the ears; black and silver is the prevalent pelage of the sides, neck and rump; the under surface of the belly and the sinuses behind the limbs are grayish-white or even nearly pure white, I am told, in some cases. The sides of the muzzle and the lower anterior part of the cheeks are of a bright tan color, a character I have not seen in any other American bear; and this character is said to be invariable. There is no tint of brown elsewhere in the pelage. There is no tail visible on the pelts. The claws are small, very much curved, sharp, black above and lighter below; the animal evidently can climb trees, which the brown bear cannot do.

'This bear is known to range about the St. Elias glaciers, especially near Yakutat, and a single specimen has been killed on the mountains as far east as Juneau. About thirty-five skins have been brought to Sitka, mostly from Yakutat. A mounted skin, the only one known as yet (said to contain the skull), is in the possession of Mr. Frank A. Bartlett, of Port Townsend, Wash.'"

The main trouble with the old hunters as against Science seems to have been that they did not know a sinus when they saw it. A bear without any sinus is, as I understand it, no good from a scientific standpoint, whereas a bear with copious sinuses is a howling scientific success. As this bear is fixed up all right on the sinus line, and as it was viewed by a scientist and not by a hunter, it may stand a good chance of getting into the kingdom of Science, where all well-regulated animals should go.

As to this being the pine-nut bear, one can only say *Quien sabe?* Old Bill Hamilton says that no naturalist ever saw a pine-nut bear, and that the old hunters only saw a few of them. The Alaska bear does not tally exactly with the pine-nut bear, or rather, one cannot tell exactly whether it does or not, except in one respect. The sharp, curved claws were mentioned to me both by Bill Hamilton and A. Gottschalk, of Bozeman, a fur dealer of experience, as peculiarities of the pine-nut bear. Of course I have written to Mr. Bartlett and asked him to tell us more about his specimen.

Can They Climb?

Science advises us that we have only two kinds of bear, the black and the grizzly. We are told that the black bear climbs trees, the grizzly never. Yet we are also told that the cinnamon bear is only a grizzly bear with a red coat. But Kit Carson, though no scientist, tells of two cinnamon bears that he saw climb a tree. I have had five different hunters tell me of cases of the cinnamon bear climbing trees, and I have had old hunters express surprise at the statement that they do not so climb. Hitherto Science has never observed the phenomenon of a climbing cinnamon, perhaps because Science has always reserved the right to climb the tree itself. I never saw a cinnamon bear climb a tree myself, but if I had it would make no difference, for I am not a scientist. All we can hope is that this new bear may prove itself capable of passing the civil service examination in sinuses and ability to climb; and then maybe we can call it *Ursus canadensis*, or *virginiensis*, or something of that sort, since it is found in Alaska. That will be all right.

E. HOUGH.

909 SECURITY BUILDING, Chicago.

For Park Buffalo Protection.

UNION LEAGUE CLUB, New York,—*Editor Forest and Stream:* As a constant reader of FOREST AND STREAM I have always taken great interest in its efforts to save from extermination the big game of this country and especially in the efforts which it has put forth to save the buffalo.

Reading recently of the continued slaughter of the Yellowstone Park herd, the thought has occurred to me why could not a part of the favorite feeding grounds of the buffalo in the Yellowstone Park be fenced off with a wire fence, into which the animals could be driven and allowed to breed in peace and safety.

Hay also could be provided for them in unusually cold winters.

I do not suppose there is any Government appropriation which could be used for fencing the necessary land, which should be of large area, but I suggest that the money be raised by private subscription.

I should be willing to contribute my mite, and if all others who are interested in the preservation of the buffalo would do likewise a sufficient sum would soon be raised.

Trusting that FOREST AND STREAM will be willing to undertake the task of receiving subscriptions and seeing to the application of the fund.

A CONSTANT READER.

Some Sound Doctrine.

EVERY physician must know that if civilized man would only follow his instincts in respect to fresh air, sunlight, exercise, food, water, bathing, etc., he would be far healthier, happier, and even more moral than he now is. Our dyspeptic race would be better in every way for a greater indulgence in "the pleasures of the table" (including at least twenty-two minutes for dinner), for more catlike basking in the sun, for a good deal more "barbaric indolence," for more rebellion against the fiendish old saw that "Satan finds some mischief still for idle hands to do," for a more frequent giving way to the impulse to fling the yardstick out of the window and the ledger under the desk, and away to the woods, the fields, and the mountains! If the grown man would but run away and "go swimmin'," as the boy does!—*Medical News, Aug. 24.*

"Singgamble."

CENTRAL LAKE, Mich., Sept. 2.—The very full and interesting reply of El Comancho to my query about the "singgamble fire" has been read and re-read with great interest, and I tender him my sincere thanks for his courteous attention to my request.

I had hoped to meet him this season in his own country, also to cast a fly with Judge Greene and do two or three other things which cannot properly be managed this side of the Rockies, but I find that I must wait awhile.

KELPIE.

Minnesota Game.

WARREN, Minn., Sept. 2.—The chicken crop is unusually short this season throughout this section of the Northwest. It is due chiefly to heavy rains during the hatching season.

There will undoubtedly be an abundance of ducks and geese as well as deer.

Parties contemplating a season with Minnesota's big game will do well to read the new game law. REMAC.

The Editor's Ultimatum.

KELPIE sends us this from an East Jordan, Mich., paper: "Notice.—No more fish lies will be printed in this paper unless the editor stands in. For every pound of trout brought into the office and left there, we will lie 10lbs., for every pike left we will lie one muscallonge, for every shiner we will lie one large black bass, and for every large black bass we will lie one whale. This is final."

"Hunting and Fishing along the Northwestern Line"

is the title of a booklet recently issued by the Chicago & Northwestern Railway. It is profusely illustrated, and gives information in detail concerning the best hunting and fishing grounds in the West and Northwest. Copies will be mailed free to any address upon application to W. B. Kniskern, General Passenger and Ticket Agent, Chicago & Northwestern Railway, Chicago, Ill.—*Adv.*

Sea and River Fishing.

LONG PINE TROUT.

GRAND ISLAND, Neb., Aug. 18.—Up in the northwestern part of Nebraska, in the dreary Sand Hill region, is the little town of Long Pine, situated on the banks of Long Pine Creek. It is justly celebrated for its beauty of scenery as well as for the trout that hide in the cool depths of the creek which comes rushing down a pine-clad cañon. Clear, cold and sparkling, a welcome relief to the throat parched with the hot sand and alkali dust of the surrounding country, for twenty miles or more it dashes along with many a wind and twist through deep gorges and under overhanging branches, fittingly bearing the title of the Yosemite of Nebraska. On the banks is annually held the Chautauqua meeting, and in the waters those in attendance find many a tempting string of brook and rainbow trout, for the stream has been plentifully stocked with both varieties.

There, a short time ago, in company with an Omaha friend I passed a couple of very pleasant days, with thirty-four trout (mostly rainbow) as my share of the spoils. Thirty-four fish are not many for two days' work, to be sure; but every one of them furnished some pleasant sport, and I had some of the prettiest scenery in the States on which to feast my eyes.

Long Pine Creek is not an ideal spot for a lazy man, for each fish taken is the result of much hard climbing and scrambling over rocks and through underbrush. Never in my experience have I met with a more difficult stream to fish. The sides of the cañon are very steep and end only at the water's edge; and where the bank is not standing on edge it is covered with a dense and almost impenetrable mass of scrub oaks and briars, through which one must force his way with imminent peril to tackle and clothes alike. I hope the Recording Angel didn't listen too closely to our remarks at times when our rods and lines got tangled up in those thickets more than usual, and more particularly on one occasion when my line became looped on an oak branch and the barb of my hook fastened itself into the ball of my thumb at the same time; for just then my foot slipped and I slid into the creek 10ft. below. I think I understand now why fish make such a fuss over being hooked. Well, I dug the barb out with my knife and climbed up the bank again and untangled my line and went on, and my companion held my language accountable for a thunder shower that came up about that time.

Unlike most streams, it is impossible to wade, for the creek has deep holes every few rods that plunge one in over his head, and these generally occur at places where the banks are from 10 to 30ft. above the creek bed, and so straight up in the air that it is impossible to climb them. These same banks render it almost impossible to land many fish, for they have to be hauled up the banks by main force, and many of them drop off; but there seems to be no other way for it.

This is, I suppose, as good a place as any to launch forth in a thrilling description of how the "scintillating beauties" flashed and sparkled as they cavorted around and madly rushed with lightning-like speed for our dancing flies which floated so lifelike on the surface, where they (the aforesaid flies) had been skillfully and delicately cast by ourselves. I know it would sound very pretty if I could tell how, reaching carefully over the brush, I delivered my cast with unerring aim some fifty or more feet away, just at the exact spot in which a giant *Fontanalis* lurked, and how by artistic manipulation I hooked the "beauty of the crimson sides" and landed the "prince with the rainbow hues" in my creel; but unfortunately I cannot do it, and right here is where my angler readers quit my poor little story "dead cold." For candor compels me to state that we caught them with minnows, just plain every-day minnows, and some of them only chubs at that. But the trout seemed to like them. Now I delight to read about the airy grace with which the fly is dropped upon the waters, how owing to the skill at the rear end of the outfit some hoary-headed old sinner of a fish was deceived into trying to make a lunch of the dainty concoction of steel and feathers, and somewhere not long ago I read a definition of an angler, which described him as a sort of superior being, who would use nothing but an artificial fly. Anyone who would or could use live bait was unworthy of that proud title, and just a common plug fisherman and a club generally whose sordid soul could not soar higher than the level of a bullhead—a no account pot-hunter, anyhow. Now, all that made me feel very bad, and I determined to reform. So when I started on this trip I hunted up my fly book, looked its contents over and invested a few shekels in a new supply, swore a mighty oath on the butt joint of my old fly-rod that I'd be an angler or "bust." And so, filled with an ambition to imitate the deeds of the bright and shining lights of the craft, "I hied me to the stream" (if the editor will permit it). Once there I worked hard and diligently until I nearly wore my rod and tackle out whipping that old stream for the fish that never came. Perhaps I had been a backslider too long and my arm had lost its cunning (if it had ever possessed any), for not a fish would deign to notice my artful lines. I tried every fly in my book and when I wore them out sent for more, but it was no use—they just wouldn't have them at any price.

About the time I wore out my last fly I spied a grasshopper on the bank and stuck him on a hook. Alas! for he gentle angler. He was once more transformed into a plain, everyday fisher-man, and hooked a 1½lb. trout at the first cast.

On questioning the local fishermen I learned that the trout in that stream positively refuse to be seduced by any known or artificial fly. They tell me that time and again it has been tried with the same unvarying lack of success by every trout fisherman who ever came there. Perhaps the right fly has not yet been tried on that stream. I used, however, over a dozen different varieties and had never a strike.

The fish in the stream are all of good size. The smallest I caught was 7in. long, and I landed a couple that weighed 2lbs. each several hours after being taken out of the water. Most of those I caught ran from 9 to 12in. long. I am told that further down the stream fish of 3 or 4lbs. are sometimes caught. I learned that, however, too late to be of service to me. Some day I mean to go back there and take a look for them, but I have not yet determined whether I will increase my stock of flies or invest in a bright tin minnow bucket. W. R. HALL.

FROM THE KINGFISHER WHO STAYED HOME.

CENTRAL LAKE, Mich., Aug. 31.—When the Grand Lama asked of George Kennan his reason for believing that the earth is round, he replied about as follows: "There are many reasons, but perhaps the strongest and most convincing is that I have been around it."

Naturally somewhat bashful, I have taken no part in the bass controversy, besides it is only some sixteen or seventeen years since I began to fish in bass-haunted waters, so that I cannot be supposed to have learned everything that is learnable about this fish. Nevertheless I cannot refuse to respond to the appeal of Samuel, the ancient, and I hereby certify that the Green Lake bass did precisely as Sam has stated in your issue of Aug. 31. And wherefore not? He wound the line around the snag, just as Sam knew he would do if he could; and had it been possible to prevent him Sam would have done it.

That bass which we didn't get was the only good thing we found at Green Lake. It was placed there for an all-wise purpose, it was intended doubtless strictly as a corroborative bass, and as such the spearmen of Interlochen had passed it by that it might eventually snag Old Sam's tackle and receive honorable mention in FOREST AND STREAM. I hope it is still in Green Lake.

All the books in all the lama series of Tibet could not convince Kennan that in believing that he had traveled around the globe he was the victim of a delusion, and no authority, anatomical or otherwise, is sufficient to persuade me that the black bass does not leap and shake its head on occasion. Not exactly for the reasons assigned by the Critic in the play, but nevertheless "as if there was something in it" which he didn't like. That the rest of the creature may be simultaneously agitated does not affect the truth of the statement. Some thirty odd years ago Genio Scott spoke of the maskinongé as "shaking the squid until it jingles," and to quote from the "Life of Captain Simon Suggs": "If Bob Smith kin do it, I kin do it."

When fast to a black bass it is not usual for me to think of keeping the fish at the top of the water. If I did I should need heavier tackle. I use a pliant rod, and if I think the fish is about to break, move the tip sidewise. I never intentionally give a bass slack line.

I doubt not that experience of certain waters in which I have never fished might affect my views concerning that which a bass may do under given circumstances, but just at present I may say that I have seen no statement made by Old Sam or Kingfisher which I could call in question. Any tyro in angling who follows their instructions can hardly go wrong, and I would as soon have them to back me in an angling contest as any two men between the pole and the equator.

I can see in my mind's eye just about how my Kingfisher brethren looked when seated in the old camp chairs around the fire on the banks of the Manistique, with the white tents gleaming against the dark foliage in the background, and the Colonel's old "sunflower" hat looming through the smoke; and can easily believe that there was little difference of opinion among them on that bass question. Had it been practicable I too should have been there, sitting in the chair marked "K.," but—. Well, we shall see what the summer of '96 may have in store for us. KELPIE.

Editor Forest and Stream:

Have noticed with much interest the controversy on the leaping bass question and am sure Old Sam has it about right in your issue of Aug. 31. Now, if bass do not shake themselves when in the air can Simpson or some one else explain how last week, when fishing with small frog for bait, I had a strike from a small bass (about 2lbs. should think), he came out of water on the strike, and not being securely hooked threw bait and hook at least 4ft. sideways from him? If that was not a true shake, I never saw one. It has been my experience to have a bass when hooked keep up a most decided shaking both in and out of water. How do you account for that zigzagging of a hooked bass when in the water? his course is about the shape of chain lightning; the same as in the air, a continual shake and struggle to free himself. As to the leaping question the highest leap that I am sure of was on the Assibet River below Rockbottom, Mass., where a 3lb. bass leaped into a boat containing a man and two ladies gathering water lilies. It made things quite lively for a few moments, but the bass lost his life by that leap.

For the benefit of Boston fishermen and others, let me say that very good bass fishing can be had now at Boon's Pond, Whitman's crossing, on Marlboro branch of Fitchburg R. R. I have got a number this season of 4lbs. and over.

As Old Sam asks, can not somebody explain satisfactorily why bass bite in such an erratic manner? As the old French guide says, "Some days they will, some days they won't, by gosh I don't know." F. H. M.

MARLBORO, Mass.

Wisconsin Maskalonge.

THREE LAKES, Wis.—Messrs. W. W. and E. M. Mossman, of Omaha, Neb., caught in three days on the Eagle chain of lakes five maskalonge, two largest 30lbs. each. Fishing is good. F. R. FRENCH.

Boston Anglers.

SEPT. 7.—Mr. C. A. Rogers speaks in the best of terms of Castleton River, Vermont, for trout fishing. He had good sport there recently, taking twenty or thirty trout, the largest running up to a pound and even a little above. He says that the river is easily reached from Boston, and that it is a swift-running stream in the early season, but that now it is mostly pools. Mr. E. B. Haskell, of the Boston *Herald*, is just back from an extended trip into Maine with his family. They visited the camp, Allerton Lodge, on the east shore of Mooselucmaguntic, and found some good fly-fishing. His son Hal is still there, where he will remain till the legal shooting season. There are reports of good fly-fishing at the Upper Dam. Mr. Patrick Kelley, of Cambridge, who has fished the pools there for so many years with good success, is about starting for the old fishing grounds. There are few men more in love with fly-casting than he. His outfit is also of the best, and his neighbor shares it, if needed. Mr. Kelley fished in the South two years ago, and it is worth hearing his account of the Southern fisherman and his rig.

SPECIAL.

Steel River Trout.

PORT ARTHUR, Ont., Sept. 2.—Messrs. L. H. & M. Smith, of Strathroy, Ont., have been spending a week trout fishing in Steel River, near Jackfish Bay, Lake Superior. They had splendid sport, the largest fish taken by them weighing over 5lbs. They have now left for a month's shooting around Quappelle, Manitoba. They had their famous English setter bitches Nimo and Rheabe with them and expect to have good shooting on prairie chickens, which are reported to be plentiful.

J. E. NEWSOME.

Game and Fish Protection.

New York Protectors.

ALBANY, N. Y., Sept. 7.—*Editor Forest and Stream:* The inclosed is a list of the protectors and the districts assigned them by the Commission at their meeting held last Wednesday. JOHN LIBERTY.

J. WARREN POND (Albany), Chief Protector.

MANNISTER C. WORTS (Oswego), JOHN E. LEAVITT (Johnstown), assistants.

Districts.

1. EGBERT R. BENJAMIN (Bay Shore), Suffolk, Queens, Kings and Richmond.
2. HARRY LIPPMAN (Washington Market), New York and Westchester.
3. WILLET KID (Newburgh), Orange, Rockland and Putnam.
4. MATTHEW KENNEDY (Hudson), Columbia, Rensselaer and Dutchess.
5. IRA B. ELMENDORF (Brodhead), Ulster, Greene and Albany.
6. J. D. LAWRENCE (Bloomville), Delaware and Sullivan.
7. LESTER S. EMMONS (Oneonta), Otsego, Schoharie and Chenango.
8. WM. A. TEN EYCK (Ballston Spa), Saratoga and Schenectady.
9. SENECA N. PROUTY (Whitehall), Washington and all the lake shore towns in Essex except Chesterfield.
10. ALVIN WINSLOW (Stony Creek), Warren and the southern tier of towns in Essex.
11. ———, Hamilton and all of Essex except that covered by the 9th, 10th and 12th Districts.
12. BENTLEY S. MORRILL (Plattsburgh), Clinton and the northern tier of towns in Essex.
13. JAS. W. LITTLEJOHN (Loon Lake), Franklin county.
14. EMMET J. LOBDELL (Northville), Fulton and Montgomery and southern tier of Hamilton to and including Lake Pleasant.
15. AUSTIN B. KLOCK (Herkimer), Herkimer county.
16. EUGENE HATHAWAY (Harrisville), Lewis county.
17. ARCHIBALD MURI (Fine), St. Lawrence except the town of Hammond.
18. JOS. NORTHUP (Alexandria Bay), Jefferson and town of Hammond in St. Lawrence.
19. RILEY M. RUSH (Camden), Oneida and Madison.
20. ORLA S. POTTER (Sandy Creek), Oswego county.
21. SPENCER HAWN (Cicero), Onondaga county.
22. JAMES H. LAMPHERE (Weedsport), Cayuga and all of Seneca north of Auburn branch of N. Y. C. R. R.
23. MOSES E. SAWYER (Waverly), Tioga, Broome and Cortland.
24. GEO. B. SMITH (Horseheads), Chemung, Tompkins, Schuyler and all of Seneca south of Auburn branch of N. Y. C. R. R.
25. JOHN L. ACKLEY (Penn Yan), Yates and Steuben.
26. GEO. CARVER (Lyons), Wayne.
27. WALLACE L. REED (Canandaigua), Ontario and Livingston.
28. EDGAR I. BROOKS (Rochester), Monroe and Orleans.
29. DANIEL N. POMEROY (Lockport), Niagara and Erie.
30. BARNARD SALISBURY (Ellicottville), Cattaraugus and Chatauqua.
31. T. H. DONNELLY (Perry), Wyoming, Genesee and Alleghany.

SEBASTIAN HERBACH (Woodhaven) to have entire charge of oyster region.

EDGAR HICKS and JOHN FERGUSON, assistants.

The Kennel.

FIXTURES.

BENCH SHOWS.

Sept. 17 to 20.—Rhode Island State Fair Association's third annual bench show, Narragansett Park, Providence, R. I.

Sept. 17 to 20.—Orange county Fair Bench Show, Newburgh, N. Y. Robert Johnson, Sec'y.

Sept. 17 to 20.—Montreal Kennel Association's show, Montreal, Can. Geo. K. Lanigan, Hon Sec'y-Treas.

Sept. 17 to 20.—Milwaukee Kennel and Pet Stock Association's first annual bench show, Milwaukee, Wis. F. S. Morrison, Sec'y.

Sept. 18 to 20.—Omaha Kennel Club's second annual show, Omaha, Neb. E. L. Marston, Sec'y.

Oct. 8 to 11.—Danbury, Conn.—Danbury Agricultural Society. G. L. Rundle, Sec'y.

1896.

Feb. 19 to 22.—Westminster Kennel Club's twentieth annual dog show, Madison Square Garden, New York. James Mortimer, Supt.

FIELD TRIALS.

Oct. 22.—Columbus, Wis.—Northwestern Beagle Club's third annual trials. Louis Steffen, Sec'y, Milwaukee.

Oct. 29.—Assonet Neck, Mass.—New England Field Trial Club's fourth annual trials. Arthur R. Sharp, Sec'y, Taunton, Mass.

—. Morris, Man.—Northwestern Field Trials Club's Champion Stake. Thos. Johnson, Sec'y, Winnipeg.

Oct. 30-31.—Monongahela Valley Association Trials, Greene county, Pa. W. H. Beazell, Sec'y, Homestead.

Nov. 5.—Chatham, Ont.—International F. T. Club. W. B. Wells, Sec'y.

Nov. 5.—Oxford, Mass.—New England Beagle Club trials. W. S. Clark, Sec'y.
Nov. 7.—Newton, N. C.—U. S. Field Trial Club's Trials A. W. B. Stafford, Sec'y, Trenton, Tenn.
Nov. 11.—Hempstead, L. I.—National Beagle Club of America, fifth annual trials. Geo. W. Rogers, Sec'y, 250 West Twenty-second street, New York.
Nov. 18.—Eastern F. T. Club, at Newton, N. C. W. A. Coster, Sec'y, Saratoga Springs, N. Y.
Nov. 25.—Continental Field Trials Club's quail trials at Newton. P. T. Madison, Sec'y, Indianapolis, Ind.
Dec. 2 to 4.—High Point, N. C.—Irish Setter Club's trials. Geo. H. Thompson, Sec'y.

1896.

Jan. 20.—Bakersfield, Cal.—Pacific Coast Field Trial Club. J. M. Kilgarif, Sec'y.
Jan. 20.—West Point, Miss.—U. S. F. T. C. trials. W. B. Stafford, Sec'y.
Feb. 3.—West Point, Miss.—Southern F. T. C. seventh annual trials. T. M. Brumby, Sec'y.

COURSING.

Sept. 24.—Lisbon, N. D.—Cheyenne Valley Coursing Club's meeting. H. C. Waterhouse, Sec'y.
Oct 1.—Aberdeen, S. D.—Aberdeen Coursing Club's meeting. J. H. Davis, Sec'y.
Oct. 8.—Huron, S. D.—American Waterloo Cup. F. B. Coyne, Sec'y.
Oct. 23.—Goodland, Kan.—Altcar Coursing Club's meeting. T. W. Bartels, Sec'y.
Oct. 28 —Goodland, Kan.—Kenmore Coursing Club's meeting. C. F. Weber, Sec'y.

THE DOG'S IMMORTALITY.

Previous articles on this topic have been: May 25, a review of Dr. Adams's book, 'Where is my Dog? or, Is Man Alone Immortal?" June 29, "The Language of Dogs," by Gazehound; Aug. 10, "The Dog's Immortality," by Ego; Aug. 24, "The Dog's Immortality," by Charles Josiah Adams; Sept. 7, "The Dog's Immortality," by Ego and by Hermit. Mr. Adams's book is published by Fowler & Wells, of this city.

ST. AUGUSTINE, Fla., Aug. 30.—*Editor Forest and Stream:* I am very glad the Rev. Mr. Adams continues the discussion in your issue of Aug. 24 in regard to the dog's immortality. There is no better field in which to continue the debate than the FOREST AND STREAM, for its multitude of readers are—or at least a great majority of them—acute and sympathetic observers of animals, and better and more accurate observers in this line than the greater number of professed scientific observers, and especially than the most of the members of the clerical profession, for they have all their old theological notions standing in the way of a calm observation of the facts.

If there is any faculty of man which the dog does not show in some degree, I have failed to observe it.

I will not weary the readers by a repetition of the facts which have come under my own observation and which I have already told in the FOREST AND STREAM as to the intelligence of the dog, and which all go toward a clear establishment of the ego as the exhibition of the same faculties in man.

The fashion has been and still is to call all or almost all the evidences of intelligence in animals instinct, which has always appeared to me to be only another way of dodging the force of facts. It in no way helps to an intelligent discussion, but rather hinders, because it don't account for the exhibition of intelligent action at all; but assuming an incomprehensible faculty shifts upon it, in an effort to avoid an immortal life for the animal, all the phenomena of a complex existence.

The immortal life follows an individual intelligence if there is any immortal life at all.

Man is but a higher animal, and it is rather presumptuous for him to lay claim to a never-ending existence which he would deny to those only a little lower in the scale of intelligence. W.

BOSTON, Aug. 31.—*Editor Forest and Stream:* The very interesting letter of Charles Josiah Adams in your issue of Aug. 24 makes me regret that I have not yet had opportunity to read what evidently has been contributed on this subject to previous numbers of FOREST AND STREAM.

I want especially to see the letter of Ego, whom Mr. Adams quotes as saying that "man has and the dog has not the power of speech." I suspect that I am in accord with Ego on this point, though equally ready to concede every claim made by Mr. Adams as to the power of animals to communicate with each other in a certain way.

I think there can be no dispute as to the fact of such communication. The only difference will be as to our interpretation of it and as to exactly what we mean by the words "ideas," "imagination," "speech," etc.

It is obvious that in a question of this kind we cannot help ourselves at all by a loose and uncritical use of these words.

My own belief, briefly stated, is that such communications as we all know animals are constantly making with one another—for example, the frightened call of the hen to her chickens when the hawk is near, which call the chickens so readily understand and respond to—do not constitute real "speech," *i. e.*, in the highest sense, the one which would indicate the conscious use of symbols to express abstract ideas.

I consider that true speech, in the higher, human sense, and the power to use which would indicate a being that is immortal, consists in just this, the conscious use of symbols to express abstract ideas.

It seems that up to date on this planet man alone, so far as we know, has given evidence of possessing this power, and that it is this which gives him his enormous advantage over the other animals and also his power of indefinite improvement over himself.

He accomplishes this self-improvement by taking advantage of the record of all previous discoveries and improvements, and adding to them his own, transmitting the whole to his successors. If any other animal should show this same power, even in a small degree, we should, I think, at once accord it a human character, no matter whether it walked on two legs or four, or whether it was covered by a naked skin or by fur or feathers.

Moreover, I think it would inevitably follow the possession of this power that it would manifest itself, as it does in the human race, in genuine institutions of a human character and with human purposes beyond those of the merely animal nature. The fact that, so far as I know, these do not appear to have been produced by any animal but man, not even in the marvelous communal life of many of the ants, bees and other insects, not to mention the higher animals, such as the beaver, seems to me to show that man, even in his lowest estate as we know him now, has an endowment different in kind from any possessed by the highest animal.

The animal is conscious. Man—even the lowest man—is self-conscious, and incontestably proves it by the creation of language in the higher sense which I have named. I believe that this power of self-consciousness, if properly and sufficiently interrogated, can be shown to constitute a being which is immortal.

This theory, it will be perceived, would accord immortality to any creature whatever which manifested what I have called genuine self-consciousness. I am well aware that any argument at all adequate to prove that self-consciousness is so important and so transcendently different from mere consciousness would be too long and too different from the purposes of FOREST AND STREAM to find any place in its columns. Perhaps I may, however, be permitted a word on my definition of true speech as different in kind from mere communication. I conceive that the conscious creation and use of a symbol is a transcendency of nature, the introduction into nature of something higher than it—a truly human production made by a spiritual being for the purposes of spirit—and that this is true in the most rudimentary and insignificant case of real symbol making.

It matters not whether the symbol is spoken or written or consists merely in a motion like the affirmative nod or the negative shake of the head. As something not the product of instinct but of thought, as something not natural but conventional, and argued upon between two or more minds (conventional), it becomes speech and is rational communication, and is capable of being preserved as record. The highest symbol is the word, written or spoken. Its labor-saving power is infinite. In a single word we wrap up for use that which takes the place of and fully represents to us an infinite number of individual things or actions. Does any animal but man ever invent such a symbol? Does any animal but man ever even use such a symbol when it has been invented for him by man? It seems to me we must answer that none ever does. The parrot and some other animals—even the dog—as cited by Mr. Adams, may repeat more or less correctly the vocal sounds of a human word, may even learn to repeat them according to acquired habit in expectation of certain rewards; but, however in accordance with intelligence this may seem to be done, I submit that in all cases the intelligence is originally that of the human trainer and not of the animal, and that the animal seems to have no power to "take the cue," so to speak, and apply our method in the making of symbols, much less in transmitting to its offspring any of its painfully acquired habit and advantage.

Whenever we discover in any animal the power of intelligent use of a symbol as the representation of an abstract thought we shall be able to enter into rational communication with him, and shall gladly accord to him human character; and I for one shall as gladly recognize in him the attribute of immortality, which the facts of the case—as I read them—do not at present permit me to do.

I could not in this space relieve my statement of the appearance of dogmatism, but I have stated my belief in the hope that it might suggest rejoinder or comment from some of "the brethren," which would be sure to interest me as Mr. Adams's letter has done.

I too had a dog, the constant companion of my boyhood, separated from me by unavoidable necessity when the pain of parting seemed more than the boy's heart could bear, and which is keen and pathetic in memory after the lapse of more than thirty-five years. Mr. Adams will therefore understand how heartily I accord with him in thinking "days not misspent in regarding our still humbler fellow beings." C. H. AMES.

HAMILTON, Ont.—*Editor Forest and Stream:* The papers on the dog's immortality, which have appeared in FOREST AND STREAM from time to time, are very novel, though they are short of the broad thoroughness which science, in its impartiality, must observe in seeking for truth. Most of them are notably deficient in considering the immortality of the dog in connection with the immortality of man, to the exclusion of all other animals; or at least the lower animals are ignored.

The most eminent physiologists have for a long time agreed that there is nothing whatever as to quality by which the physical and psychical nature of the lower animals can be distinguished from those of man. The difference is in degree, not in kind or quality. Amongst men the psychic nature is not a fixed quantity. It is dependent on the health or changes of the body, and is in sympathetic touch with it at all times. The advantages of man over the lower animals are not so distinct as to establish absolute, distinct superiority. They are comparative only. In their kind, attributes of men and lower animals, they are alike. The claim of absolute superiority is arbitrary and unwarranted. To attribute to instinct such varied action, action so managed and adapted to fit the rapid changes of material circumstance, is to trust to the promptings of vanity instead of reason. On this point an eminent writer remarks, "Instinct is a mere empty word, a mere cloak for our ignorance or intellectual indolence."

Nor are the superior intellectual advantages of mankind entirely due to superiority of intellect in itself. There are matters of physical structure which greatly supplement his intellectual force. His brain is larger, which shows that intellect is not an independent quality, but the product of a strong large brain organ, as force is the product of large strong arm. Or if this simile be objected to then it may be said that there must be a certain size and texture for the proper production of thought, as there must be the same in the material world for the production of strength or force. Man, too, profits greatly by his organs of speech, entirely a physical matter, and also by walking erect and using his arms usefully, and also from their varied prehensile powers.

As more fully presenting the matter of degree, it is conceded that there is an unbroken succession of intelligences from the simplest forms in the lower animals up to the higher and more complex forms shown by man, yet there is a very wide reach from the intelligence of man in his primitive savage state up to the most intelligent civilized people. Neither the chemist nor the microscopist can discover any essential difference between human brains and those of the lower animals. Such differences as there are refer more to shape, etc., than to quality. The question constantly reverts to the degree of difference, not the quality. The attempts to establish an essential difference have all proved failures.

The untaught elements of immortality, as distinct from those which are acquired by experience, are present in the lower animals in a remarkable degree. The attributes of sympathy, love, loyalty, gratitude, friendship, sense of duty, watchfulness, unselfishness and selfishness, perception of right and wrong, pride, shame, jealousy, hatred, fear, deception, treachery, revenge, cunning, foresight, premeditation, grief, pleasure, preparation and provision for future needs, etc., are as apparent in the mental life of the lower animals as the physical sensations of cold, heat, repletion, pain, comfort, etc., are in their material life. The wonderful houses, bridges, tunnels, traps, caves, nests, etc., and the manner of life of the lower animals present a phase again which differs not in quality, but in degree.

Man, in his ambition for supremacy in the world, has ignored the material evidence of intelligent reason and dismissed all the doings of the lower animals with a term which was supposed to cover the most varied and active doings of intelligent effort—that is to say, *instinct*—although he ignored the fact that he himself possessed the recognized instincts in common with all animals. The word instinct explains nothing. It is a convenient term for use in matters which man does not understand. Neither in man nor the lower animals is there an unconscious, dominant force which impels him to meet all the varying and rapid circumstances of life. Each circumstance hardly ever appears in the same combination and new ones are constantly arising, so that, without a comprehension of cause and effect, the animal would be as helpless as a pumpkin on its vine. There is no reason whatever for the assumption of instinct only in the lower animals, aside from the race vanity which prompts mankind to claim exclusive superiority. Were they governed by instinct alone, a brain would be unnecessary. As their brains vary, so do we find a variation in the intelligence of the lower animals, and an adaptation to the ever-changing conditions and circumstances of their daily lives, which, as compared one individual with another, are never alike, and often are distinctly unlike.

That many of the lower animals have a radically distinct manner in applying means to ends from that used by man all have observed. But this difference again resolves into a matter of degree and not of quality. For instance, man as a hunter trusts to the senses of sight and hearing when he is in pursuit of game, while the dog trusts largely to his superior powers of scent. So delicate is his organ of smell that he can follow a trail many hours old if the atmospheric conditions are right. This is said to be his instinctive manner—it would be quite as logical to say that pursuit by eyesight is instinctive with man.

No doubt but what the sense of smell was once quite as keenly developed in man as it is in any of the carnivora. When he traveled on all fours or led a largely arboreal life, his powers of scent were useful to him in his pursuit of prey. When he learned to travel erect, he trusted more to his eyesight in tracking his prey, a manner far superior to scent when after big game, as all who have read of the wonderful powers of the American Indians and trappers in tracking horses, cattle, deer, men, etc., will promptly concede. By disuse the organ of sense grew dull until at the present time it may be considered to be left in a rudimentary form, like the dew-claw of the dog or the vermiform appendix of the man.

It would be indeed too bad if we were forced to believe that the dog was created without a purpose other than for a mere animal existence. It would not be a sufficient explanation that he was made for a companion of man, for such an insufficient reason would not explain such a noble creation. In view of the facts, such explanation is not true, for the dog flourishes in a wild state entirely apart from man's society. If we could imagine the human race entirely removed from the earth, there is no doubt but what the dog would continue to exist independently of man's society. Thus we cannot assume that the purpose of the dog's existence is to furnish companionship to man, who is so fickle in his preferences and so selfish in his companionships. Rather let us give the dog the credit which is his due for his natural loyalty, affection and peculiar disposition, which make him so companionable.

We cannot call the dog specially created for man's benefit, nor can we call the tiger especially created as his enemy.

But, from whichever point of view we investigate the subject, the same phenomena which indicate the immortality of man indicate that of the lower animals also.

TRANSIT.

Montreal Show.

MONTREAL, Sept. 1.—It is the intention of the committee to make this show a model one in every particular, not so much in the matter of numbers as in the general management and accommodation of exhibits. The building, which is capable of holding comfortably some 500 dogs, has been erected under the supervision of the committee, and special attention was paid to comfort, ventilation and sanitary arrangements. We will have a large space fenced off for an exercising ground, and if the weather permits the judging rings will be in the open air.

Dogs from the United States exhibited at Toronto and entered for this show will be received (if so desired) any time after Saturday, 14th inst. This is for the accommodation of exhibitors from abroad.

GEORGE K. LANIGAN.

The Toronto Show Entries.

THE following are the 633 entries for the seventh annual bench show of the Industrial Exhibition Association, to be held at Toronto, Sept. 9 to 13: 23 mastiffs, 52 St. Bernards, 12 bloodhounds, 2 Newfoundlands, 24 great Danes, 5 Russian wolfhounds, 3 deerhounds, 16 foxhounds, 19 greyhounds, 16 pointers, 33 English setters, 22 Irish setters, 19 Gordon setters, 40 collies, 5 bulldogs, 21 bull-terriers, 5 whippets, 24 Irish terriers, 3 Dandy Dinmont terriers, 10 Bedlington terriers, 5 Scotch terriers, 5 skye terriers, 14 black and tan terriers, 2 poodles, 15 field spaniels, 7 Irish water spaniels, 79 cocker spaniels, 2 Clumber spaniels, 9 dachshunds, 22 beagles, 58 smooth fox-terriers, 30 wire fox-terriers, 2 Yorkshire terriers, 4 toy terriers, 10 pugs, 10 toy spaniels, 1 Italian greyhound, 4 miscellaneous class.

Manitoba Trials.

MORRIS, Man., Sept. 10.—Special to FOREST AND STREAM. Manitoba Club amateur stake finished to-day. Dodo first, Bonnie Lib II. second, Columbus third, Harry Noble fourth. Derby had nineteen starters. Weather pleasant.

J. M. Freeman, of Bicknell, Ind., died Sept. 2.

B. WATERS.

THE C. F. T. CLUB'S TRIALS.

THE first annual trials of the Continental Field Trials Club on chickens began at Morris, Man., on Sept. 2. They were a success in every respect save that birds were too scarce and the puppies were not so well broken as could be desired. Financially it was a success.

All prizes were paid with cheerful and agreeable promptness.

Mr. W. B. Wells, of Chatham, Ont., judged alone—an arduous task, truly. He showed his habitual and conscientious care in managing the competition and making decisions. His judgments were well received. Birds were scarce in some sections of the grounds, which added to the difficulties of judging. As the haunts of the birds became better known, the competition was thereby improved.

There was a goodly number of visitors present. Mr. Thomas Johnson, F. W. Scott, C. W. Graham, G. B. Borradaile, Winnipeg; R. Merrill, Milwaukee; Dr. L. C. Bacon, St. Paul; Dr. N. Rowe, Chicago; Maj. J. M. Taylor, Mr. W. E. Warner, New York; W. T. Hunter and W. Qrysh, Wheatland, N. D.; and many of the noted field trial handlers whose namesare mentioned in the report.

On the whole the weather was favorable. The competition passed of pleasantly. One feature, that of the quiet manner in which many of the handlers worked their dogs, is worthy of note and praise. There was less of whistling and shouting than commonly prevails at a field trial.

Mr. Wm. Brailsford was a welcome visitor from England. As measured by years, he was the oldest man present; as measured by vigor and hale and hearty physique, there was none who surpassed him. Few men would have the pluck to cross a wide ocean, the incentive being a true love of sport. Yet that is what Mr. Brailsford has twice done. If he does not care to cross again to compete, the esteem in which he is held by his friends here should be an inducement to venture across a third time.

The Derby.

There were nineteen starters, run in the following order:

W. W. Titus's b., w. and t. setter dog Sam T. (Luke Roy —Bettie B.), Frank Richards, handler, against C. P. Mingst's b. and w. setter dog Rex (Antonio—Columbia), J. Mayfield, handler.

T. G. Davey's b. and w. setter dog Brighton Tom (Brighton Tobe—Lady Brighton), R. Storey, handler, against C. G. Stoddard's liv. and w. pointer dog Coinage (Trinket's Coin—Ightfield Blythe), T. Hallam, handler.

H. T. Schmidt's liv. and w. pointer bitch Lady Rush (Rush of Lad—Pet S.), T. Hallam, handler, against Avent & Thayer Kennels' b., w. and t. bitch Feu Follet (Count Gladstone IV.—Folly), J. M. Avent, handler.

J. W. Gollan's b., w. and t. setter dog Count Vasser (Dash Antonio—Queen Bess II.), J. Spracklin, handler, against P. H. O'Bannon's b., w. and t. setter dog Domino (Antonio—Ruby's Girl), D. E. Rose, handler.

Richard Merrill's liv. and w. pointer dog Stridemore (Strideaway—Hops II.), Tom Richards, handler, against Manchester Kennel Co.'s b., w. and t. setter bitch Gleam's Dart (Count Gladstone IV.—Gleam's Maid), F. Richards, handler.

A. P. Heywood-Lonsdale's liv. and w. pointer dog Ightfield Mentor (Ightfield Loveridge—Ightfield Mara), Wm. Brailsford, handler, against Geo. A. Presley's chest., w. and t. setter dog Trade Mark (Toledo Blade—Luzelle), M. Keliher, handler.

Claremont Kennels' b., w. and t. setter dog Paul Bo, Jr. (Paul Bo—Susie), J. Mayfield, handler, against Frank Althouse's liv. and w. pointer dog Paul Bang (Jap—Frankie Paul), Tom Sheldon, handler.

T. G. Davey's b. and w. setter dog Brighton Dick (Brighton Tobe—Lady Brighton), R. Storey, handler, against Manchester Kennel Co.'s b., w. and t. setter bitch Gleam's Ruth (Count Gladstone IV.—Gleam's Maid), F. Richards, handler.

N. T. De Pauw's liv. and w. pointer bitch Sister Sue (Jingo—Rooney), N. B. Nesbitt, handler, against A. P. Heywood-Lonsdale's liv. and w. pointer dog Bonnie Dan of Colehill (Don of Bolcord—Duchess of Bolcord), A. Cameron, handler.

F. R. Hitchcock's b., w. and t. dog Tory Fashion (Count Gladstone IV.—Fleety Avent), J. M. Avent, handler. A bye.

Second Round.

Ightfield Mentor against Sam. T. Domino against Lady Rush. Feu Follet against Rex, Gleam's Dart—Brighton Dick.

Third Round.

Rex against Tory Fashion. Sister Sue against Brighton Dick.

Final.

Ightfield Mentor against Tory Fashion.

First, Sam T. Second, Ightfield Mentor, Tory Fashion. Third, Brighton Dick, Feu Follet, Sister Sue, Rex. Fourth, Lady Rush, Domino, Gleam's Dart, Gleam's Rush, Stridemore.

First Round.

The work in this stake was meager in quantity, which may be reasonably explained by the scarcity of birds found, and was also inferior in quality, which may in part be attributed to the earliness of the season and the consequent inexperience of the puppies, due to the limited time in which to give them training and experience. Imperfect training in many instances was shown by unsteadiness and awkward work on birds. With the exception of a few of the dogs in this stake, none performed even up to an ordinary standard of what is required in chicken shooting.

Sam T., the winner, is very fast, covers a deal of ground in his range, works with good judgment, and is sharp and true in his point work and in locating. He stays out at his work constantly, has courage and confidence, and works independently. He was far ahead of anything in the stake.

Ightfield Mentor quartered his ground and was unceasingly using his nose for scent of game. He was very accurate in roading and pointing and his precision was surpassed by none. He was the best broken dog in the stake so far as obedience and careful work to the gun are considered. I thought him easily next to the winner for a place, with Brighton Dick third and Tory Fashion fourth. The rest were more or less distinguished by more or less good qualities, but all were more or less green or imperfectly trained.

Ightfield Mentor and Tory Fashion divided second.

Brighton Dick, Feu Follet, Sister Sue and Rex divided third.

Lady Rush, Domino, Gleam's Dart, Gleam's Ruth and Stridemore divided fourth.

As the stake was decided it determined that Sam T. was better than all the others; for the rest it determined little. Twelve out of nineteen were placed. It would have determined more, it so seems to me, to have withheld the prizes if the dogs were on a common plane of inefficiency; or it would have been better to have run them until something more definite could be determined. As it is, save in regard to Sam T., the standing of the others is much alike.

The Derby was for both setters and pointers whelped on or after Jan. 1, 1894. There were four prizes, as follows: To first $125; second $100; third $75; fourth $50; $10 forfeit; $5 additional forfeit and $5 to start.

MONDAY.

The weather was oppressively close and sultry, although a warm, dry wind was blowing steadily from the south. To those who rode, the refreshing effect of the breezes was apparent. Those afoot got less of it, while the dogs —closer to the ground and in the long grass—were practically out of it. Frequent watering of them was necessary. A heavy thunderstorm had been swinging noisily about the horizon all afternoon. Zigzag streams of fiery lightning shot downward from the heavy clouds. A clap of thunder and flash of lightning frightened Mrs. Thomas Sheldon's horse so badly that he bolted, upset the wagon, overturned the driver and dog crate which it contained, kicked himself clear and started to run away, but soon stopped. Fortunately no one was injured.

About 5 o'clock the storm caught the field trial party, stopping work for nearly an hour.

SAM T.—REX.—They started at 8:10, both running fast and beating out their ground well. Sam's work on birds was good. Rex was not independent, he following Sam betimes, and was not careful enough in his work on birds. Sam made two good points, and later was roading some birds when Rex passing by flushed them. Next Sam dropped to a point; Rex backed; nothing found, but it was probably on footscent of birds previously flushed. Rex toward the latter part of the heat worked the more independently. Sam pointed; Rex coming in flushed one of the birds and made a short chase. Some more birds were flushed to the point; Sam slightly unsteady. They ran 34 minutes. Sam was much the better. Rex showed good qualities, but his work on birds was poor.

BRIGHTON TOM—COINAGE.—They began at 8:47. Their speed and range were average. Once in a while each would take a good cast. Both dropped on point; Tom moved and two birds flushed. Sent on, two more birds flushed before Tom. Tom dropped to a flush. Six minutes were consumed in going to new ground. Both soon dropped to point. Tom moved and his bird flushed, and soon he made a second flush. Up at 9:31.

LADY RUSH—FEU FOLLET.—They began at 9:34. Feu had the better speed and range. She pointed a small bevy and was steady. She next flushed twice. Lady once. Lady pointed. Feu refused to back and stole the point. Lady again pointed and Feu again refused to back, and again stole the point; nothing found. Feu next pointed; as Lady drew near the bird flushed; both chased. Up at 10:07. Both pottered at times.

COUNT VASSER—DOMINO.—Domino soon found and pointed well; Count refused to back and stole the point. Domino again pointed a single bird; next he flushed two birds. Both were close rangers and slow. Up at 10:47.

STRIDEMORE—GLEAM'S DART.—They started at 10:48. Dart worked merrily. Both ranged fairly well at a fair pace. Dart made two points, the first of which she marred by moving, and the birds flushed. Stridemore making game stopped to a flush. Next both pointed and nothing was found. Next both pointed; a bird to Stridemore's point, nothing to Dart's. Dart was the better worker. Stridemore showed indecision in his manner. Up at 11:35 and the morning's work ended. The party returned to town to dinner.

IGHTFIELD MENTOR—TRADE MARK.—They were cast off at 2:36. The weather was sultry. Mentor pointed a bevy accurately; Mark at the same time in the rear was working on the trail. Sent on, Mentor pointed; nothing found. Mentor felt the air with his nose as he beat across wind, and was the wider ranger. He was slow to start at times and did not remain out at work so well as could be desired. Mark had a merry action, but his range was close. Up at 3:07.

PAUL BO, JR.—PAUL BANG.—They started at 3:11 and ran 33 minutes, when Mr. Sheldon's horse bolted from fright, and the heat was suspended. Neither showed work above mediocre.

BRIGHTON DICK—GLEAM'S RUTH.—They began at 3:52. Both showed good range, beating out their ground wide and with judgment. Ruth was the more independent and wider ranger of the two, and in a measure cut out the pace. Dick pointed a bevy; Ruth went by, flushed two or three, then dropped on a point on some tail birds. Moved on, Dick flushed a bird and chased it. Up at 4:14. They made a showing of good natural abilities.

SISTER SUE—BONNIE DAN OF COLEHILL.—They began at 4:18. Both made game. Going down wind Sue flushed and chased. Drawing accurately and carefully up wind in short grass, Sue did some creditable work on old wild birds which were running and would not lie to a point. Dan flushed a single. Sue roaded nicely to a point on a single. Dan flushed. Up at 4:49. Sue showed good judgment in point work. She ranged fairly well.

TORY FASHION ran his bye with Trade Mark. Tory crept on the trail of a single bird and pointed it well. Mark was steady to caution when the bird was flushed. Tory made two other points. He flushed once. At 5 o'clock a heavy rain storm delayed further running 45 minutes. They were run 7 minutes longer; nothing found. Tory was much the better of the two.

IGHTFIELD MENTOR—SAM T.—Sam soon roaded sharply and quickly to a point on a bird and was steady to shot and wing. Sent on, he took a long cast and pointed steadily on two old birds. Mentor, coming up, pointed or backed. Mentor roaded a single running bird nicely about 50yds. Sam was much the wider and sharper worker, though Mentor showed good judgment, training and work. They began at 5:59 and ran 15 minutes.

DOMINO—LADY RUSH.—They started at 6:18. Domino pointed a bird and was backed. Lady was lacking in dash and somewhat in industry. Both ranged but moderately, Domino the better. Up at 6:35.

FEU FOLLET—REX.—They started at 6:37 and ran 46 minutes. Feu pointed at the edge of a strip of flax, drew on and a single flushed from the opposite side. On wheat stubble, Rex in the lead, they flushed four or five birds. Up at 7:23.

This ended the day's competition.

TUESDAY.

The heavy clouds of the cool morning were dispelled as the sun rose higher. About the middle of the forenoon the sun shone hot and clear. Birds were found in moderately fair numbers. The work as a whole was indifferently common.

Second Round.

PAUL BO, JR.—PAUL BANG.—They were cast off at 7:58, to have an opportunity on birds. Bang roaded among birds and getting up wind of them lost the trail. The birds were afterward flushed by the wagons. Up at 8:25. Bang's range was narrow and he pottered at times. Paul showed good speed and range.

GLEAM'S DART—BRIGHTON DICK.—They began at 8:27. Dick pointed well a single bird. At the same time Dart pointed and moving on to locate, the bird flushed. Up at 8:42. Dart was the merrier worker and had the greater speed. Both had fairly good range. Dick had but little style.

SISTER SUE—GLEAM'S RUTH.—Off at 8:44. Ruth soon pointed a bevy and Sue backed; Ruth moved carefully and the bird flushed. Ruth was slightly unsteady and flushed the rest of bevy. Sue next began to road and the bird flushed. Ruth flushed a single. Sue pointed; nothing found. Ruth had the better range of speed. The work on birds was very ordinary. Up at 8:54.

REX—TORY FASHION.—Off at 8:58 and ran 17 minutes. Tory pointed and should have held point, but left the birds and followed the trail of a single runner and pointed it across wind. The wagons flushed the birds he left. Tory stopped to a flush on a single bird of a bevy; he remained steady and his handler flushed the remainder. Tory pointed on the trail of two old birds, but was slow, hesitating and indecisive in attempting to locate them. In ranging both ran wide, but ran together and showed no independence. Rex shortened his range toward the last of the heat. Up at 9:15.

SISTER SUE—BRIGHTON DICK were started at 9:21 and ran 14 minutes. Both worked industriously. Their range was fairly good. The work on birds was sloppy. Dick pointed, but failed to locate; Sue roaded twice to a flush.

IGHTFIELD MENTOR—TORY FASHION.—At 9:41 they were cast off. Tory carried a low nose in roading, and was given to pottering. Mentor roaded accurately to a bird up wind—a good piece of work. Tory backed. Mentor quartered his ground well. Tory flushed a bird, pointed one and Mentor made a good point on a single. Tory next made two points and Mentor one. Mentor was greatly superior in locating and beating out the ground with judgment. He used his nose intelligently. His style was inferior. He worked nicely to the gun.

The All-Age Stake.

The All-Age Stake was begun in the afternoon of Tuesday. There were twenty-four starters, which were run in the following order:

F. R. Hitchcock's b., w. and t. setter bitch Tory Dotlet (Count Gladstone IV.—Tory Della), J. M. Avent, handler, against T. G. Davey's l. and w. pointer bitch Faustina (Ridgeview Faust—Peggie), Robt. Storey, handler.

A. P. Heywood-Lonsdale's l. and w. pointer bitch Ightfield Musa (Ightfield Dick—Clio), W. Brailsford, handler, against D. E. Rose's (agt.) b., w. and t. setter bitch Lady Mildred (Antonio—Ruby's Girl), D. E. Rose, handler.

J. C. Phillips's l., w. and t. pointer dog Lonsdale (Coton —Psyche), Thomas Johnson, handler, against Norvin T. Harris's b. and w. setter dog Dixie's Flag (William Lung — ——), J. M. Avent, handler.

Thomas Johnson's b. setter bitch Psyche (Manitoba Toss —Pitti Sing), owner, handler, against A. P. Heywood-Lonsdale's l. and w. bitch Roma (Fred W.—Ightfield Rosa), W. Brailsford, handler.

W. W. Titus's b., w. and t. setter bitch Minnie T. (Dick Bondhu—Bettie B.), F. Richards, handler, against Richard Merrill's l. and w. pointer bitch Lady Peg II. (Rip Rap—Lady Peg), T. Richards, handler.

D. E. Rose's (agt.) l. and w. pointer dog Comns (Clip Graphic—Mack's Juno), D. E. Rose, handler, against Dr. John Daniels's pointer dog Plain Sam (Hal Pointer—Kent's Star), S. Hullam, handler.

C. W. De Pauw's b., w. and t. setter dog Auld Clootie (Dick Bondhu—Shena Van), N. B. Nesbitt, handler, against Norvin T. Harris's b., w. and t. setter dog Tony Boy (Antonio—Laundress), D. E. Rose, handler.

Charlottesville F. T. Kennels' l. and w. pointer bitch Selah (Rip Rap—Dolly D.), C. E. Buckle, handler, against Richard Baughm's b., w. and t. setter dog Dash Antonio (Antonio—Lady Lucifer), J. J. Spracklin, handler.

W. N. Kerr's b. and w. pointer dog Little Ned (Ridgeview Dazzle—Kate Claxton), F. Richards, handler, against N. T. De Pauw's b. and w. dog Jingo (Mainspring—Queen II.), N. B. Nesbitt, handler.

Stoddard & Kidwell's b. and w. pointer dog Tick Boy (King of Kent—Bloom), J. B. Stoddard, handler, against Norvin T. Harris's b., w. and t. setter bitch Cynosure (Roderigo—Norah II.), J. M. Avent, handler.

C. W. Graham's b., w. and t. setter dog Gladiator II. (Gladstone's Boy—Queen Novice), J. B. Stoddard, handler, against Edw. A. Burdett's b. and w. setter bitch Anne of Abbottsford (Gladstone's Boy—Bohemian Girl), F. Richards, handler.

Thos. Johnson's b. b. setter bitch Patti (Duke of Gloster —Flora), owner, handler, against W. T. Hunter's b., w. and t. setter bitch Petrel (Roderigo—Gladstone's Girl), T. Richards, handler.

Second Round.

Minnie T. against Comus.
Tony Boy against Selah.
Dash Antonio against Auld Clootie.
Ightfield Musa against Faustina.
Tory Dotlet against Psyche.
Lonsdale against Roma.
Lady Mildred against Dixie's Flag.
Little Ned against Gladiator II.
Jingo against Tick Boy.
Cynosure, a bye.

Third Round.

Minnie T. against Jingo.

Tony Boy against Tory Dotlet.
Tick Boy against Dixie's Flag.

Final.

Minnie T. against Tony Boy.
First, Minnie J.
Second, Jingo.
Third, Tony Boy.
Fourth, Tick Boy.

This stake was for pointers and setters which had never won first in an all-age stake in any recognized field trial in America. Forfeit $10, $10 additional to fill. First $125, second $100, third $75, fourth $50.

Birds were vary scarce, so much so as to be discouraging to the dogs. Such birds as were found were extremely wild. The cover, too, was thin, which added to the difficulty of point work, as the birds could see the dogs as they approached.

Minnie T. made a most finished competition and displayed great powers as a chicken dog. She ranged wide, chose her ground with judgment, and handled her birds with great skill, both in drawing after running birds and pointing. Her work was finished in detail and skillfully managed. She ranged very wide, but worked nicely to the gun and was sweetly obedient. She was honest in all her work, whether on point or back.

Jingo and Tony Boy ran a very close race, the former having a shade the better. Both were wide rangers, good finders and quite skillful performers in every way. They were lacking in the thorough knowledge and finish of the winner.

Tick Boy ran a good race, ranged wide and to the gun, but his point work was marred by some errors.

This stake was very accurately judged, Mr. Wells selecting the winners to a nicety. It will be noted that the pointers and setters were equally represented in the places, there being two of each.

First Round.

FAUSTINA—TORY DOTLET.—They were cast off at 3:35. Faustina pointed; a lark was flushed close by. Moved on and Faustina again pointed; nothing found. Next she pointed up wind of a bevy, roaded and lost the trail. Dotlet, down wind, got a point on the bevy. She pointed a running bird. She dropped to a point, but failed to locate the bird. Faustina next pointed a bird and Dotlet took a long cast and flushed one. Next she pointed; nothing found. Up at 4:08. Both ranged wide and fast, Faustina the wider at first, Dotlet at the last. Neither made much favorable showing on birds considering the opportunities.

LADY MILDRED—IGHTFIELD MUSA.—They began at 4:12. Musa, going down wind, flushed a single. Lady false pointed. Musa flushed a single again. Both ranged well, Lady the wider toward the latter part of the heat. Down 28 minutes. The work was ordinary.

LONSDALE—DIXIE'S FLAG—They were started at 4:41. Dixie pointed; nothing found. Lonsdale dropped to a flush made excusably across wind. He next made a flush in thin grass. The wind was blowing stiffly and the birds seemed wild. The cover was so light and thin that a bird could see the dogs several yards away as they drew near. Lonsdale roaded a single accurately and carefully, but it flushed before he steadied to a final point. Lonsdale was very skillful and careful in finding and locating his birds, and though he exercised the greatest care and showed full knowledge of how to work on birds, he met with poor success. He was much the more skillful of the two. Birds were very difficult to find. Dixie ranged well and showed good speed, but he met with poor success in finding.

PSYCHE—ROMA.—They started at 5:25. Both made game. Roma took a cast to hit off the trail and coming back flushed two birds. Next Roma was roading a single which flushed wild, and next she made a plump flush, going up wind. Both were industrious and wide rangers. Psyche did not succeed well in finding. Up at 6:07.

MINNIE T.—LADY PEG II.—Cast off at 6:11, Minnie immediately took long, sweeping casts and covered a great deal of ground at great speed. By hard and persevering work she got two good points on single birds. Peg backed. Birds were very scarce on the ground worked during the heat. Up at 6:41. Minnie was by far the better. Her work was clean and she ran without an error in the point work.

COMUS—PLAIN SAM.—Off at 6:44. Soon Sam pointed a single and was steady to shot. Comus pointed, moved on and flushed a single. Sam ranged close and at moderate speed. Comus was much the wider ranger. Sam pointed a single and flushed. Next he found a bevy, flushed a bird, moved on and flushed two or three at a time till the birds were all gone.

WEDNESDAY.

There was a decided change in the temperature, calling for heavier clothing. A rain wind blew from the northwest. Birds were found twice in plentiful numbers in a small area, but the rest of the time but a bird or two were found here and there after diligent search. All the dogs showed good range. Toward noon the temperature was much warmer. The work, owing to the scarcity of birds, was very unsatisfactory as a matter of competition, since there was little data on which to make decisions.

AULD CLOOTIE—TONY BOY.—They were cast off near town at 7:30. Clootie pointed and roaded, but failed to locate. A single bird flushed wild about 60yds. away. Tony pointed a bevy. The birds were followed and he pointed them again. Tony next pointed a single outlying bird. Clootie roaded to a point on a bird. Tony backed. Tony pointed and roaded and the bird flushed wild. The birds ran so much that it was difficult for the dogs to secure a good point. Up at 8:06. Both dogs ranged fairly well and the work on birds was above the average.

SELAH—DASH ANTONIO.—They started at 8:11. Selah pointed and roaded to a flush on a single bird across wind. Next she flushed a single. Up at 8:41. Neither ranged with judgment, though they covered a fair scope of ground. Their work on birds was poor.

LITTLE NED—JINGO.—They were cast off at 8:45. Ned flushed two birds. Jingo pointed and roaded on a running bird. Ned roaded to a point on a single. Up at 9:36. Jingo took very wide casts and covered a deal of ground, which he beat out with judgment. His pace was fast and well maintained throughout. Ned also ranged well and with good judgment, though he did not take such great casts as did Jingo. Both showed skill in their bird work.

TICK BOY—CYNOSURE.—Off at 9:42. Cynosure soon flushed and chased, but stopped to repeated orders and received a severe ear pulling by way of admonition. Next, Cynosure stopped to a flush. Tick pointed—probably on foot-scent, as it was near where birds were flushed. He next took a long cast about a half mile away and birds were seen to flush close by him. The dogs were now widely separated. It was said that Tick Boy made one good bevy point and five clean points on single birds. In the meantime Cynosure pointed on a breaking and the birds, 100yds. away, flushed wild. Cynosure pointed a single. Tick flushed a single on stubble. Up at 10:17. Tick had decidedly the better of the heat in every respect. His range was wide and conducted with judgment.

GLADIATOR II.—ANNE OF ABBOTTSFORD.—They started at 10:23. Gladiator roaded down wind on a single, then across wind to a flush. Anne roaded up wind about 150yds. to a point on a bevy, moved and the bevy flushed, and she was a bit unsteady. Up at 11. Both showed speed and fair range, but dwelt on scent at times.

PATTI—PETREL.—The heat began at 11:02. Patti pointed a bevy and moved, and the bevy flushed. Petrel going up wind, pointed at the same time—foot-scent probably. The birds were followed. Patti flushed a bird, then dropped; she went on, another bird flushed; Patti roaded and came to a point at the same moment the bird flushed. Both dogs took a long cast, and it was said Patti made a point on two birds. Up at 11:20. Both ranged well and showed good speed.

The party then went to town to lunch.

Second Round.

Nineteen were kept in the second round. Longer running in the first round would probably have developed more decisive data in spotting, and thus would have enabled the judge to have greatly reduced the competitors. Birds were found in greater numbers. This undoubtedly was due to changing from the open prairie to a course which skirted the wheat fields or was in their vicinity.

MINNIE T.—MODUS.—They were started at 2:29. Minnie started with dash and soon pointed a bevy. The birds were followed. She pointed another bevy. Modus, on scattered birds, pointed one, and Minnie, coming up, independently pointed the same bird. Both were steady to shot. Sent on, Modus stopped to a point at the same time the bird flushed. Sent on, he flushed scattered birds. Minnie next pointed scattered birds and Modus flushed them. Next he flushed a single. Up at 2:46. Minnie showed excellent capabilities and was the better in every respect. Her judgment and execution on birds were excellent, as also was her range.

TONY BOY—SELAH.—They started at 2:52. Selah made three points in succession, to which nothing was found. Tony took wide casts and was going better than in his previous heats. He pointed a bevy in stubble. The birds were followed, they flying but a short distance. He again pointed them. They were about half-grown and very tame. Up at 3:11. Tony had much the better of the heat.

DASH ANTONIO—AULD CLOOTIE.—They started at 3:15. Soon Auld Clootie took a long cast out of sight, and it was said was found on a point on birds later. Before she was brought back the heat was ended. Dash pointed twice; nothing found. He pointed two birds and flushed a single. To shot he was steady. He pottered some at times. Up at 3:40.

IGHTFIELD MUSA—FAUSTINA.—The heat began at 3:43 and lasted 23 minutes. Musa made one point to which there was nothing, and one doubtful one. Faustina made one good point, one point which she did not hold steadily, but moved on to get a better position and flushed, and two more of the same kind which in a way were partially excusable as the birds were running. Up at 4:06. Both ranged fairly well. Musa was slow on scent. Neither showed high skill in beating out the ground.

TORY DOTLET—PSYCHE.—Down 17 minutes, beginning at 4:09. Tory pointed a single bird in stubble, Psyche refusing to back, stole the point and the bird flushed when she moved on. Psyche roaded a single bird well and Tory crossing ahead flushed it. Tory pointed a single on stubble. Psyche flushed one, Up at 4:26. Range fairly good; Work on birds was inferior.

LONSDALE—ROMA.—They were cast off at 4:31. Both soon pointed. Lonsdale had a single; he roaded, got up wind of it and it flushed wild. He next pointed a bird well and Roma backed. Roma pointed a single bird. Lonsdale flushed a bird. Up at 4:52. Roma stopped often on false scents. Lonsdale was industrious and used his nose carefully, but made errors in his point work.

LADY MILDRED—DIXIE'S FLAG.—They commenced at 4:55. Lady pointed a bird stylishly. Dixie pointed a bird. Both were steady to shot. Lady pointed an outlying single, then pointed the bevy; the find, however, was Dixie's. He was the wider and better ranger. Lady's range was close to medium. The heat ended at 5:30.

LITTLE NED—GLADIATOR.—Ned flushed a bird and chased a while. Gladiator made game on a bird which he flushed. He next flushed again. Next he pointed. Ned refused to back. Both roaded down wind to an excusable flush. Each next made an excusable flush.

JINGO—TICK BOY.—They started at 6:15. Tick made three points to which nothing was found. Jingo took a long cast. Returning he pointed some birds in stubble and was steady to shot. Tick pointed and roaded; nothing found. Moved on. About 80yds. apart on stubble both pointed the same bevy independently. Sent on, Tick pointed some remaining birds. Jingo pointed a jack rabbit; Tick refused to back and stole point. Jingo pointed a bevy at the edge of an oatfield, and held his point steadily. Up at 6:51.

Cynosure had a bye. She was started at 6:56 and made one point on a single bird. Next she pointed and nothing was found.

THURSDAY.

The morning was warm and cloudy. Six dogs were kept in for the third round. The work was quite superior as a whole.

MINNIE T.—JINGO started at 7:47. It was at once apparent that a great brace of chicken dogs were at work. Both ranged wide and fast, Minnie showing the most jugdment in choosing her beat. Both worked well to the gun, notwithstanding their great range. Minnie pointed a lone bird nicely. Next both, about 200yds. apart, pointed birds. Sent on, Minnie roaded carefully quite a distance, and although careful, she misjudged and flushed. Jingo roaded and pointed alternately quite a distance, but failed to locate the bird. Up at 8:30. Speed, range and work excellent.

TONY BOY—TORY DOTLET.—It was evident from the start at 8:32 that Tony had a great advantage in speed and range. Tony took a long cast and pointed a small bevy. Sent on, he took another cast, pointed, drew on and a bird flushed close ahead; he then held his point and Rose flushed the rest of the bevy. Tory made two points on singles. Tony Boy then took long casts, beating out much ground. He was lost for a while; when found he was pointing birds. Up at 9:14.

TICK BOY—DIXIE'S FLAG.—Dixie pointed a bird and was steady to shot. Tick took a long cast and pointed some old birds on flax stubble. About 200yds. further at the end of plowed ground he pointed a single bird. Both ranged well, Tick the better on birds. Down at 9:17. Up at 10:02.

MINNIE T.—TONY BOY.—They began at 10:30. Minnie found and pointed a bevy. Next she pointed a bird which she had marked down accurately, showing great wisdom. In roading and drawing she feathered prettily. Tony took a long cast and pointed some birds; Minnie coming up pointed the same birds. Tony made a flush on a single, and among some scattered birds, where he had a good opportunity, he was awkward and lost chances. Tony pointed a single and Minnie backed honestly. Sent on. In bushes Minnie pointed a single. Tony, a few yards away from bushes, pointed or flushed a single, I could not see which. Up at 10:54, and the club's trials were ended.

The judge announced the winners as follows: First, Minnie T.; second, Jingo; third, Tony Boy; fourth, Tick Boy.

B. WATERS.

United States Field Trials.

THE U. S. F. T. Club's Winter Derby has 59 entries, 30 setters and 29 pointers, all whelped in 1894, no Irish nor Gordon setters in the stake.

SETTERS.

Avent & Thayer Kennels' b., w. and t. dog Touchstone, b., w. and t. dog Patrician, b., w. and t. bitch Feu Follett and l. and w. bitch Fleet's Pet.
W. W. Titus's b., w. and t. dog Sam T.

National Beagle Club of America.

THE field trial committee of the National Beagle Club of America held a meeting on Monday afternoon, Sept. 9, in the rooms of the A. K. C., 55 Liberty street, New York City. The business before the committee was of some length, being the arrangement of the programme for the fifth annual trials of the club, to be held at Hempstead, L. I., on Nov. 11. Among other matters it was decided that entries should close on Oct. 19, the committee meeting again for the purpose of considering such entries on Oct. 22. The programme as agreed upon by the committee will be given to the public in the course of a few days.

POINTS AND FLUSHES.

THE comments of FOREST AND STREAM concerning the holding of a field trial by the Continental Field Trials Club in Canada and the possible embarrassment with the customs in taking dogs across the line from the United States proved to be quite well founded. Many of the handlers were subjected to a great deal of trouble in fulfilling the exactions of the laws. Indeed, at first it was a question whether the club could hold a trial in Canada. That being decided in the affirmative, it was a question whether a dog taken into the Dominion to run in a United States trial was within the requirements of the law which required that to be duty free a dog must be brought in for competitive purposes, or for breeding purposes. It is probable that owing to these obstacles the club will not hold another trial in Canada. It must not be inferred from this that the customs officers were

superofficious. On the contrary, they were disposed to be obliging, but the requirements of the law are such that it is not easy for the United States dog in Canada. An officer of the customs was present at the trials. His instructions were to collect duty on every dog which did not compete. It is probable that the boys will get back without being assessed, but there was a feeling that holding a field trial in Canada made a dog uneasy.

One evening, while the Continental Field Trials Club was holding forth at Morris, Man., a bear, one of three or four killed, was brought into town by some residents. As he lay in the wagon in the solemn majesty of death, he brought to mind the terrible deed of slaughter which his kind had wrought on man. I was glad he was dead, for sometimes men sally forth to kill a bear and come back shorn. The bear is fierce and terrible in his wrath. This bear would weigh about 40lbs. Two or three farmers killed the old bear and three cubs with pitchforks and said ha, ha. Yes, the bear is bad medicine.

At a committee meeting of the Continental Field Trials Club, held at Morris, Man., on Thursday, Sept. 5, it was ruled that the winners of first prizes in the trials on chickens this year were eligible to the club's trials on quails this year, this exception being applicable to this year only. There were many good reasons for this action. By limiting the winners to those of this year, the concession applied to but a few dogs. A win on chickens has very little reference to competition on quails, since a good chicken dog is not necessarily a good quail dog.

Yachting.

THE AMERICA'S CUP RACES.

First Race—Windward and Leeward.

Saturday, Sept. 7.

It depends on the chances of the weather on the day set for the second race, Tuesday, Sept. 10, whether we shall be able to give to our readers the news of more than the first of the series of three to five races. With a punctual start and a good breeze the result should be known in New York by a late hour in the afternoon; in case of a postponed start or a slow race, however, the result will be known too late for this issue.

The first race was sailed on the date originally set last winter, Saturday, Sept. 7, and resulted in a striking victory for Defender. Like nearly all contests for the Cup, it was a light weather race, but under conditions very different from those which have so often maintained. The average conditions, in which most of the Cup races of the past ten years have been sailed and most of the postponements made necessary, are clear, warm weather, a very light southerly or westerly breeze, at times falling to almost and often quite a flat calm, and perfectly smooth water, whether inside on the Bay or outside of the Hook. The conditions on Saturday were quite different; the weather was warm, but the sky was clouded much of the time, and though the sun shone hot and bright at intervals, there were several light showers of rain. The wind was light, far too light for every one, but at no time did it fail entirely. It blew about six miles per hour at the start, an hour later it had increased perhaps a couple of knots in speed, and held to the finish. There was no drifting in smooth water, but at all times both yachts had a light breeze.

The most important difference of conditions, however, was the sea, an ugly roll, caused by the easterly wind offshore, that sent the people below on the steamers, many of those who had paid for $3 worth of fun getting at least $100 worth of misery. Its effect on the two yachts reminded one of the old days before the sloop had disappeared, and when Gracie, Fanny and Vixen were racing against the new cutters Bedouin and Oriva. On such a day the cutters always won, the wide boats being rolled about until they lost what little wind there was, while the narrow and deep craft went along steadily and surely with sails always drawing. This time the wide boat suffered in the same way, while the narrow one kept her sails full and went through the water far easier.

The course as laid out was dead to windward, east by south, but a shift in the wind in the middle of the course made a long and short leg to the outer mark and an easy reach in, there being no spinaker work. In this shift Valkyrie was placed at a slight disadvantage. With a slight lead at the start Valkyrie soon gained a clear position, and though Defender shortly after made up what she lost, the two were very even on the true windward work; when they could nearly lay a course in a slightly stronger wind, Defender went away very easily and made some 3m. in the 7 or 8 miles to the mark; once around and off the wind, with sheet well eased and balloon jiptopsail set, the wind still very light, she made another 5m., finally winning by 8m. 49s. corrected time. No small part of this is due to the easy performance of the hull in the rough water.

The preparations were completed on both sides by Friday night, the last formality being the measurement. On Sunday Defender went into the Erie Basin drydock again and was thoroughly polished, while her topsides, the white paint on which was in a very poor condition, were painted a very decided light blue, a new color in Cup racing. Everything was stripped from below, even to the closets. On Monday she left the Basin for New Rochelle. Valkyrie was docked on Tuesday and the hull thoroughly cleaned of all paint, a gang of men from the yard working all night. She was coated with a black composition below, but the topsides were painted white and the cove and carvings at each end were regilded. The copper on the lead was polished and the hull smoothed off very carefully before painting. On Wednesday some carpenters were set to work under her counter, and the ridge of the horn timber was planed down, to reduce the length of waterline. Though not shown in the various exclusive designs published, the line of the horn timber is not straight, but quite concave, and this planing made it still more hollow. The report at once went out that the yacht was over or dangerously near the 90ft. limit, and that the planing was necessary, but such proved to be very far from the fact. She remained in the dock until early Friday morning, when she was floated and hauled out to make room for a British steamer, being then made fast just outside the dock gate. Here she was boarded by Lord Dunraven with his two daughters, who were joined by Mr. N. G. Herreshoff, and about noon by Mr. John Hyslop, the official measurer.

Before the work of measurement was begun, Defender had come in, accompanied by the steam yacht Neckan, with Mr. and Mrs. Iselin aboard. After a consultation between the principals, the work of measurement was begun with Valkyrie's waterline; her crew, to the number of sixty, including Lord Dunraven, his daughters and Mr. Watson, Mr. Kersey and Mr. Glennie being stationed on deck amidships. After this work was completed by Mr. Hyslop under the eyes of Messrs. Watson and Herreshoff, the same operation was performed on Defender, she having fifty men on board, then the spar measurements of the two yachts were taken, the work being concluded about 4:30 P. M. Prior to the measurement each yacht had shipped about a ton of lead in pigs.

During the whole day the yard was thronged with yachtsmen from New York, Boston, Montreal, Oswego, Toronto and the West, every detail of the measuring being watched with the closest attention. The official figures were reported by Mr. Hyslop to Secretary Oddie and posted in the club house on Friday evening, as follows:

	Valkyrie. Feet.	Defender. Feet.
Length on load waterline	88.85	88.45
Length from after end of main boom to forward point of measurement	186.02	181.79
Length from fore side of mast to forward point of measurement	78.94	73.55
Length of spinaker boom	78.94	73.36

ETHELWYNN.—Defender of the Seawanhaka Cor. Y. C. International Challenge Cup in the 15 t. Half-Rater Class.

From a Photo by B. C. Ball.

Length of gaff	59.00	64.00
Length of topmast	55.98—1·5=44.78	57.42—1·5=45.94
Height from upper side of main boom to topmast head block	129.80	125.48
Square root of sail area as per rule	114.14	112.26
Sail area, square feet	13 027.93	12,602.30
Sailing length, per rule	101.49	100.36

Valkyrie allows Defender 29 1-10 seconds.

The waterline lengths were a surprise, both yachts coming under 89ft. The sail area of Valkyrie is over 400sq. ft. in excess of Defender, the two far outclassing all previous yachts. The time allowance is very little under the half-minute. This time Valkyrie wastes nothing in length of spinaker boom. She has the shorter gaff by 5ft.

The following notice was posted in the New York Y. C. house on Sept. 5:

The America's Cup Committee has arranged that the first race shall be sailed on Saturday, Sept. 7, and that one day (not counting Sunday) shall intervene between each race, unless changed by consent of both the competing yachts. JAMES D. SMITH, Chairman.

This makes the dates Sept. 7, 10, 12 and possibly 14 and 17, making no allowance for postponements.

The general conditions of the races, as agreed upon by Lord Dunraven and the Cup committee, are as follows:

The match shall be decided by the winning of three out of five races.

Courses.—Starting from Sandy Hook Lightship, first race to windward or leeward and return. Second race, equilateral triangle. Third race, to windward or leeward and return. Fourth race, equilateral triangle. Fifth race, to windward or leeward and return, the starting line and compass bearings to be announced as early as practicable. In every case the course from the starting line to be laid to windward if possible from the Sandy Hook Lightship. In case the course as required by these conditions cannot be made out from Sandy Hook Lightship, the regatta committee may provide some other suitable starting point, and, in this case, the preparatory signal will be given about half an hour later than the time named before starting from the lightship.

Length of Courses.—The courses shall be, as nearly as possible, 30 nautical miles in length.

Start.—The starting signal shall be given at 11 A. M., and this time shall not be changed except as follows: First, by the Regatta Committee, as described in the preceding paragraph for changing the starting point; second, by the Regatta Committee, in case of fog; third, in case both yachts consent to a postponement, in which case the Regatta Committee shall determine the time of the start; fourth, in case of accident, as hereinafter provided. The preparatory signal shall be given ten minutes before the starting signal, and, in case of change of time to start, a preliminary signal shall be given fifteen minutes before the preparatory. At the starting signal a yacht may cross the line. The exact time at which a yacht crosses the line during the succeeding two minutes to be taken as her start, and the end of that period as the start of one crossing after its expiration. If a race is not started by 1:30 P. M., the Regatta Committee shall have the right to declare the race postponed for that day, but no race shall be started after 3 P. M.

Time of Making Races.—Any race in which the elapsed time of the yacht finishing first exceeds six hours shall not count, and must be resailed.

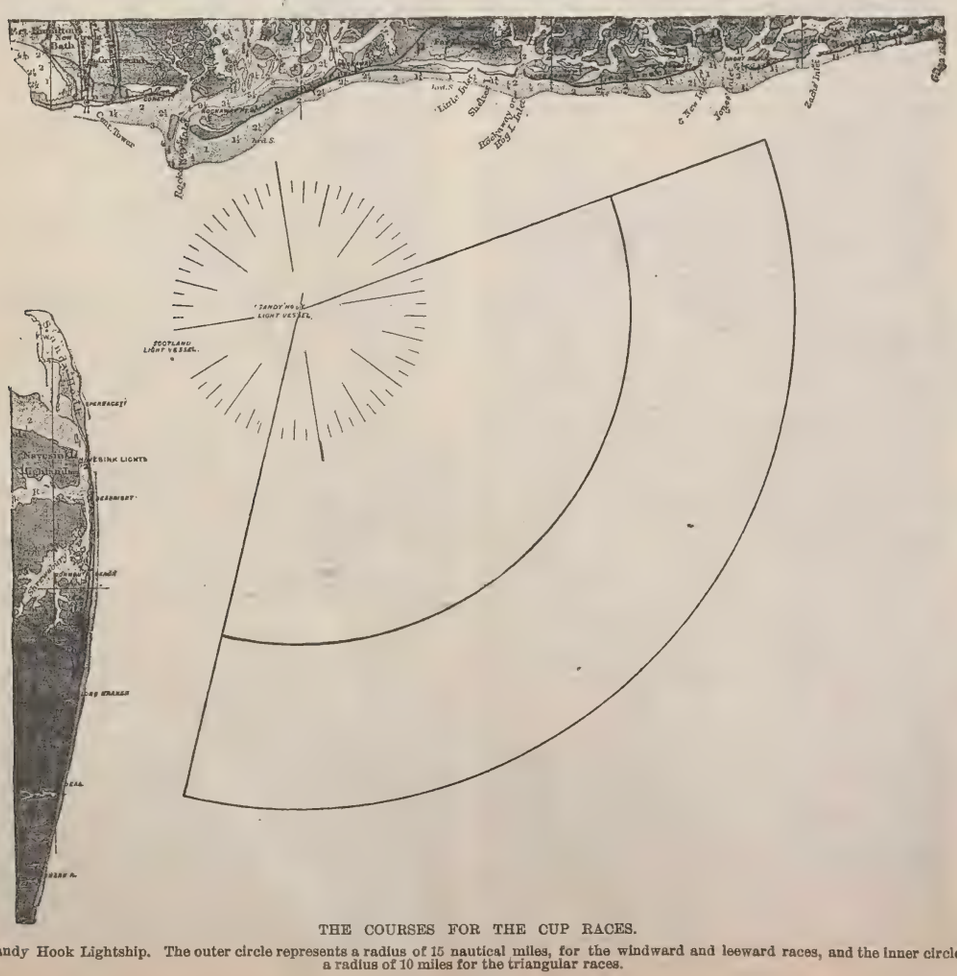
Load Water Line Length.—The challenger having named 89ft. load-waterline length, the condition of 1893, limiting any excess to two per cent. (2 per cent.) thereof, is covered by the condition limiting single-masted vessels to 90ft. load water line, as expressed in the deed of gift.

Time Allowance, Measurement, etc.—The system of measurement and time allowance, embraced in the rules at present in force in the New York Y. C., shall govern the races, except as hereinafter modified, and with the proviso that any excess of loadwaterline length over 89ft. shall be counted double in calculating the racing length for time allowance.

Date of Races.—The first race shall be sailed Sept. 7. One day shall intervene between each racing day, unless changed by agreement. A race of one kind shall be repeated until finished.

Accidents.—In case a serious accident to either vessel occurs prior to the preparatory signal she shall have sufficient time to effect repairs before being required to start, or if such accident occurs during a race, before being required to start in the next race.

Representatives of the New York Y. C.:



The America's Cup Committee name as the representative of the New York Y. C. the yacht Defender.

A referee shall be selected only in case some question demands his services.

Manual Power.—Manual Power only shall be used for working the competing vessels.

Measurements.—The competing yachts shall be measured with all the weights on board, dead or alive, which they intend to carry during a race, but shall not have on board more persons all told during any race than are permitted by New York Y. C. rules. Waste tanks or water tanks, if carried, must be filled with water at the time of measurement, the boat carried to be not less than 12ft. in length. The restriction of the New York Y. C. rules as to floors, bulkheads, doors, water tanks, bar anchor and cable is waived.

Alteration in Measurement.—If either yacht, by alteration of trim or immersion by dead weight, increases her loadwaterline length, or in any way increases her spar measurements as officially taken, she must obtain a remeasurement by special appointment before the next race, or failing in this, must report the alteration to the measurer at the club house at 10 P. M. of the day before the race following such alteration, and must arrange with him for remeasurement, and, if required, be in the Erie Basin by 7 A. M. of the day of said race, and there remain till 8 o'clock P. M., if necessary, for the purpose of remeasurement.

THE COURSES FOR THE CUP RACES.

Sandy Hook Lightship. The outer circle represents a radius of 15 nautical miles, for the windward and leeward races, and the inner circle a radius of 10 miles for the triangular races.

If either yacht decreases her measurements or racing length in any way, in order to profit thereby in time allowance in any race, she must obtain a remeasurement by special appointment before such race, or notify the measurer and be at his disposition as above prescribed. A measurement taken as provided above shall be final, and not subject to protest by either party. In the event of the measurer being unable to obtain a measurement which he considers accurate before a race, a re-measurement shall be taken as soon as possible after the race.

JAMES D. SMITH,
Chairman America's Cup Committee.

The representatives named are Latham A. Fish, to represent Defender on Valkyrie III., and David A. Henderson, to represent Valkyrie III. on Defender.

The immediate conditions of the races, as arranged by the regatta committee, are as follows:

START AND COURSES.

Start.—The start will be made off Sandy Hook Lightship, the preparatory signal being given at 10:50 A. M., and the starting signal at 11.

Courses.—No. 1 (Letter C).—From the starting line, to and around a mark 15 miles to windward or to leeward and return, leaving the mark on the starboard hand.

No. 2 (Letter D).—From the starting line, 10 miles to and around a mark; thence 10 miles to and around a second mark, and thence 10 miles to finish line, turning the marks on the outside of the triangle to port or starboard, according as the yachts are sent around.

Starting and Finish Lines—Will be between a point on the committee boat, indicated by a white flag, and the mainmast of the lightship, or other stakeboat, if the start is made further out to sea. These lines will be at right angles with the outward and home courses, respectively.

Compass Courses—Will be set before the preliminary signal is made. The signals for Course No. 2 must be read beginning forward.

Marks—Will be floats displaying a red flag with white stripes. The position of each float will be indicated by a tug showing a red ball and stationed about 100yds. beyond. Should a float be wrecked, its place will be taken by its marking tug, which will show the club signal in addition to the ball, and in turning the tug the directions for turning the float will govern.

The patrol division will, before the start, form a line back of the starting line. During the race half the division will take position each side of the racers. At the turning marks they will form a circle around the mark. At the finish they will be in two lines parallel with the course on which the yachts will be approaching.

All vessels on patrol duty will fly a large blue flag on which the word "Patrol," in white letters, will appear.

Vessels present can make a perfect success of these arrangements by not passing between the patrol vessels and the racing yachts at any time, and by heeding warnings which may be given from any of the patrol vessels by voice or whistle (four blasts), and by kindly yielding to suggestions which may be made from any patrol vessel as to change of position.

Each captain present at the races, by giving his aid and co-operation, can materially contribute to the maintenance of that absolutely fair field which the contestants are entitled to. Any one captain can, by disregard of the suggestions, spoil the race.

These facts need only to be brought to the attention of captains to be appreciated and acted upon.

JAMES C. BERGEN,
Rear Commodore New York Y. C.,
Commanding Division Patrol Vessels.

The regatta committee has also sent out the following:

To Those in Charge of Vessels Attending the America's Cup Races:

The regatta committee of the New York Y. C. earnestly request those in charge of vessels attending the races for the America's Cup to keep at least half a mile away from the competing yachts, even when to leeward of them, as the wind in this case is seriously banked up.

It is absolutely essential that a clear space of a half mile be maintained all around the starting line, to permit the maneuvering for the start, and that a space of at least a quarter of a mile be maintained at the turning marks.

The courses will be guarded by patrol boats flying white flags with the word "Patrol" in blue letters. Four short blasts of the whistle from any of these boats, or from the committee boat, will mean "You are too near."

The committee ask the hearty co-operation of every one in keeping a clear course, free from interference or crowding, thus insuring a perfectly fair race.

REGATTA COMMITTEE.

Saturday morning was unpleasant and threatening, a light easterly breeze prevailing, with a drizzling rain. The patrol vessels were ordered to their stations at 9:30, and the preparatory signal was given at 10:50. The starting signal was given at 11:00, and the yachts were sent away on a beat to windward. Defender was first over the line, with Valkyrie 1m. 12s. astern. Defender was steering a course about E. by S., and Valkyrie was heading about S.E. by E. Defender was pitching and scending in the sea to about the same extent, but the roll was evidently hurting the wide boat, shaking the wind out of her sails, while the narrower boat went along very steadily and easily, this being especially the case after they came on port tack. Defender gained very perceptibly on this tack, footing faster than Valkyrie.

At 1:12 Defender went on starboard tack again, and to all appearances Valkyrie began to gain. The wind increased a little in force, but was not quite true, beginning to work to the south. They stood on this tack for over half an hour, Defender slowly gaining all that she had lost in the first twenty minutes.

At 1:47 Valkyrie came on port tack with the expectation of crossing Defender's bows, the latter of course having the right of way. As she came up Valkyrie found that she could not cross, and at 1:49 went on starboard tack again. She was then very close under Defender, and the latter came on very fast and went on port tack, giving Valkyrie a buffet from her big mainsail as she did so. They stood off on opposite tacks, both going about at 1:53 and coming together again. This time Defender crossed Valkyrie's bows and tacked on her weather at 1:57. Valkyrie went on starboard tack again, but Defender held on for three minutes before going about. While these maneuvers were going on the steamer Richard Peck ran across the bows of both yachts.

Defender was now well to windward, and the wind had shifted so that they could almost lay their course for the mark, some eight miles away, the wind being a little stronger. They held the starboard tack for nearly an hour and a half, Defender gaining all the while. A light rain fell for a time, and then the sun shone out again. The last tack was made at 3:25, Defender going about first and Valkyrie immediately after. It was plain that Defender had overstood, although the tug and mark were visible from a long distance; with a good full she came down very fast, lowering her jibtopsail at 3:30 and running up her smaller balloon jibtopsail, ready to break as she turned the mark and eased off her boom to starboard at 3:36:29. Valkyrie fetched the mark easily and turned at 3:39:52, making Defender's gain 3m. 27s. in the beat of 15 miles in a wind of 6 to 8 miles per hour. Her elapsed time was 3.15.39.

The wind had been working to the south for over an hour, and there was now no chance of a dead run; on the contrary, there was a free reach all the way home. Defender lowered her jib and staysail, and at once reset the latter. Valkyrie set a large balloon jibtopsail and lowered her working headsails, running for a long time with only the ballooner set, then she set a balloon foresail. Valkyrie's balloon jibtopsail was kept flowing, and apparently was not drawing like that of Defender. The run in was without incident, the two wide apart, and Defender gaining at the rate of a minute every three miles. The finish was timed: Defender, 5:21:14; Valkyrie, 5:29:30. Defender wins by 8m. 49s. corrected time.

The best that can be said about the conduct of the attendant fleet is that it was impartial, the captains of the steamers showed a freedom from all national bias in abusing both yachts equally. At the start Defender was very badly served, later on both yachts were washed and blanketed, and at the end Valkyrie suffered the worse, though not to an extent which seriously affected the race. Among the worst offenders were the Richard Peck, the City of Lowell, the City of Lawrence and the Frances. The patrol yachts did what they could, but they were utterly powerless when the captain of a big boat chose to disregard them.

The weather at the finish of the race was very unpleasant, a light rain falling and a mist coming in from the sea. The two yachts towed up to Bay Ridge and anchored there. Valkyrie was in hard luck; after a day of such work and all the discouragement of losing, her steam tender missed her, going in to the Horseshoe and then out by the Hook to look for her while she was up at Bay Ridge, the crew tired and hungry and with their supper far away on the tender.

Early on Sunday morning both yachts were towed to the Erie Basin and remeasured by Mr. Hyslop, the ends of the waterlines being marked by red paint, these marks to be visible at all times when the yachts are in racing trim in smooth water. Mr. Watson went overboard and painted the marks on Valkyrie's stem and stern. Mr. Herreshoff did the same service for Defender from a rowboat. In the evening the following notice was posted at the New York Y. C. house:

"At the request of the Earl of Dunraven, and with the acquiescence of Mr Iselin, the measurer of the New York Y. C. marked the yachts Valkyrie and Defender at each end of the load waterline. When this was done at the Erie Basin to-day, the measurer, at the request of the America's Cup Committee, verified the measurements taken on Friday last, which were confirmed by the measurements taken to-day.

"A. CASS CANFIELD."

The following has been issued by Rear Com. Bergen:

"NEW YORK, Sept. 8, 1895.—The thanks of the officers commanding the Patrol Division of the New York Y. C. are tendered to the captains of the excursion steamers following the America's Cup race on Saturday for their kind and prompt attention to signals and requests.

"The few exceptions are the commanders of vessels concerning whose movements complaints have been made to the press. These individuals are without excuse for their conduct; they had warnings from the patrol vessels and knowledge of the effect of their actions. It would be unfair to blame the great body of steamer captains present on that occasion for the deliberate selfish misbehavior of the few.

"As there is no power in the New York Y. C. to control such men, the fair-minded public have the obvious corrective in their own hands—it is to permit them to follow the races alone.

"The importance of keeping the turning marks of Tuesday's triangular race clear is so great that attention is again called to the fact that at no point of the race, either at the start nor during the runs from mark to mark, nor at turning marks, nor at the finish, should steamers approach within half a mile of the racing yachts, and to the further fact that on Tuesday there will be patrol vessels stationed both to windward and leeward of each mark, and commanders of all vessels are particularly requested not to pass between such patrol vessels and the marks.

"Rear-Com. N. Y. Y. C., Commanding Patrol Division."

While lying off Bay Ridge on Sunday morning and afternoon the yachts were visited by thousands. On Sunday afternoon both towed down to the Horseshoe.

ETHELWYNN.—Defender of the Seawanhaka Cor. Y. C. International Challenge Cup in the 15ft. Half-Rater Class. From a Photo by B. C. Ball.

Starting Signals.—Preparatory: A gun will be fired, the blue peter set, and a red ball hoisted.

Start.—Ten minutes later a gun will be fired and the ball will drop.

Handicap Time.—Two minutes later a gun will be fired and the blue peter hauled down.

Should a signal gun miss fire, a prolonged blast of the whistle will be given.

Recall Signal.—A yacht crossing the line before the starting signal is made will be recalled by a blast of the whistle and the display of her private signal.

Postponement Signal.—Letter H: Do you assent to postponing start until latter in the day?

Letter G: Do you assent to calling the race off for the day?

If a yacht assent, she will display letter C.

If a yacht dissent, she will display letter D.

Letter L.—Race postponed on account of fog.

Race postponed until later in the day, letter S.

Race postponed until another day, letter Q.

Letter V.—The starting point will be shifted out from the lightship.

In case of serious accident to either yacht, prior to the preparatory signal, she will display the letter M, and shall have sufficient time to repair before being required to start; should such accident occur during a race, she shall have sufficient time to repair before being required to start in the next race.

In case the start is postponed or the starting point is shifted from the lightship, a preliminary signal will be made by firing a gun and displaying the yacht ensign at the fore.

The committee boat will display the club signal at the fore and the committee flag aft.

Should the committee boat fail to reach the finish, her place will be taken by a vessel displaying a red ball.

Note.—A special chart for the America's Cup races, on a working scale, has been published by the New York Y. C. and can be obtained at the clubhouse, 67 Madison avenue.

S. NICHOLSON KANE,
CHESTER GRISWOLD,
IRVING GRINNELL,
Regatta Committee.

The following notice has been issued as part of a scheme to patrol the course and keep off all outside craft:

A clear course and no interference with the racing yachts is absolutely necessary.

Just complaint has heretofore been made that the excursion steamers attending the races interfered with them.

The committee, officers and members of the New York Y. C. are determined that no cause for such complaint shall exist during the coming races, but recognize that, after all, the responsibility rests upon each individual commander of each individual vessel present to avoid the interference. Unless each is willing to do his part, all efforts of others will be unavailing. Any one steamer can spoil the race.

It is with full assurance that the captains of all vessels following the races will appreciate these facts and use their best efforts to avoid interfering with the racers that it has been determined to publish the substance of the suggestions adopted, asking each captain to familiarize himself with them and lend his hearty co-operation.

The following captains of the New York Y. C. have tendered their yachts to act as patrol vessels: Capt. H. M. Flagler, yacht Alicia; Capt. John H. Hyman, yacht Emola; Capt. John Nicholas Brown, yacht Ballymena; Capt. J. H. Hall, yacht Unquowa; Capt. Harrison B. Moore, yacht Marietta; Capt. Frederick G. Bourne, yacht Reverie; Capt. E. R. Ladew, yacht Orienta; Capt. F. G. Hauteville, yacht Zara; Capt. F. H. Benedict, yacht Vision; Capt. John H. Gourlie, yacht Ava; Capt. John P. Duncan, yacht Washita; Capt. E. H. Harriman, yacht Spindrift; and Capt. Henry F. Noyes, yacht Katrina.

The rear-commodore of the club will have command of this patrol division, and will meet the captains named at the club house Friday afternoon to give detailed orders, assign positions and supply the distinguishing "patrol flag," which the patrol ships will fly during the races.

The substance of the orders is that a clear space of half a mile must be maintained around the starting line. A clear space of half a mile must be maintained from the outside of each racing yacht, and no vessel must cross ahead to pass to windward of the racers, and a clear space of a quarter of a mile must be maintained around each turning mark.

air and a cloudy sky, with a prospect of stormy easterly weather. The summer has been remarkably free from the usual West India storms, there having been thus far uniformly fair weather, with occasional light rains, but without the heavy blows so common in August, and that in some recent years have done such damage. There was a chance of a break in the weather for this first race, but the easterly wind and light showers amounted to nothing, the next day being fair and warm, with a west wind. In spite of the prospects, people poured into the city by thousands, in addition to those from a distance who had already arrived, all wending their way to West street, where a fleet of steamers large and small were waiting. How many steamers and people were out it is impossible to say, but the fleet was the largest ever seen save at some of the inside races which were more accessible to very small craft. The smallest that went out on this occasion were some of the smaller tugs and steam yachts and a few sailing yachts, including a catboat or two and a knockabout.

The racing yachts were ready over night in the Horseshoe and towed out to the Sandy Hook Lightship in good time, meeting the tug Walter Luckenback with the Cup and regatta committees aboard. Anchored by the ship was the big steamer of the Postal Telegraph Co., ready to send messages to the city by a special cable. An immense fleet of steam craft was gathered about the line, among them being the British yacht Valhalla, a noble craft with her ship rig, just arrived the night before from England, and the steam yacht Earl King, also a new arrival from the other side. The great steamers City of Lowell, Richard Peck, Yorktown and others, were all crowded.

At 10:30 the wind was just north of east, so that it was not practicable to lay a windward course of 15m. clear of the Long Island shore, and a signal was set on the committee boat notifying the fleet that the start would be changed from the Lightship. The owners of the yachts assented to this and the pair started off southwest after the Luckenback, the latter finally anchoring a couple of miles offshore near Seabright. The course signals were set at 11:50, east by south and another Luckenback tug was sent away to log and mark the course, in charge of Supt. Neils Olsen. The starting line was formed by the committee steamer and a second tug displaying a red ball, anchored some 200yds. north of it. In this way the use of the Lightship was avoided—a very good thing, as one of these great hulls heaving in a sea is about as dangerous as anything that could possibly be devised for marking a starting line. It would be a great improvement if in all races a starting line could be marked by two floats or buoys in the vicinity of the Lightship, but far enough away to avoid danger of collision.

The wind was very light, about six miles per hour, from E. by S., and the sea was heaving in a discomforting roll that turned a man's thoughts inward. The two yachts had topsails, Defender showing a large and very white clubtopsail over a yellow sail of crisscross cut, while Valkyrie had a very large clubtopsail, with three battens in the head, over a very handsome mainsail of the common cut. Her headsails were also very good. While she carried a baby jibtopsail in stops, Defender had up a No. 2, a much larger sail. On board of Defender was Mrs. Iselin, while Lord Dunraven's daughters sailed on Valkyrie

According to the notice, in the event of a postponement of the start a warning signal was fired at 11:55, indicating that the real preparatory signal would be fired in fifteen minutes. The two yachts circled about the line, keeping closer as the time lessened, and with the preparatory gun at 12:10 the racing began. The two were then east of the line and a little distance away, both approaching and Valkyrie keeping to windward. Within the last two minutes they worked about very close to the committee boat, circling completely around it. Valkyrie was very close to the line when the gun fired and went over on the windward end, but Defender was on her weather quarter and timed but 4s. astern; Valkyrie at 12:20:46 and Defender at 12:20:50. Jibtopsails broke out as they went over, both on starboard tack and with sheets hard in. While Valkyrie had the best of the start, she did not succeed in putting Defender in a bad position under her lee. Valkyrie had the advantage of crossing with more way on, and at once began to open out, giving her back wind to Defender until she had run too far ahead. Valkyrie's gain was apparent from the start, and in a little while she was well clear of the blue boat.

They held on the first tack until 12:40, Valkyrie tacking first and Defender immediately after, now being on port tack, heading about S.E. Both were now pitching and scending in the sea to about the same extent, but the roll was evidently hurting the wide boat, shaking the wind out of her sails, while the narrower boat went along very

Valkyrie Wins Second Race under Protest by Defender.

JUST as we go to press Tuesday afternoon comes news of the finish of the second race, Valkyrie winning by 32s. net, Defender having sailed the course under protest. The yachts started, Valkyrie 11:00:13, Defender 11:01:15, on the 10-mile leg to windward, wind 6 to 8 miles an hour. As the yachts were approaching the line (the bulletins report) Valkyrie being between Defender and the judges' boat was forced close to the boat, and in weathering it her gaff or spreaders struck Defender's starboard topmast shrouds and carried them away. Defender at once showed her protest flag, and continued in the race under protest. They finished: Valkyrie, 2:55:40; Defender, 2:57:46.

Beverly Y. C.

226TH RACE, AUG. 17.

THE doubtful prizes have been decided. Kitten wins in knockabout class, Sippican takes third prize in third class cats, and in fifth class sloops Raccoon takes first prize by 16s. on allowance, Laurel second prize.

The 227th race, third sweepstakes, was sailed at Quissett Aug. 24, and was the poorest race ever sailed by the club on the bay.

Wind blew a severe gale from S W. and all the morning there was a dense fog. As most of the racing boats would have a long beat to windward in the fog in order to get to Quissett, almost none were on hand, only seven boats appearing.

Grilse was the only small boat on hand, going down from Cataumet and having no competitor did not start. First and second classes sailed together and short courses were given.

In the heavy wind Salmon was reduced to a four-reefed mainsail only, Ashumet carried storm jib in addition and beat her badly, Falcon found weather to her liking. Courses 8½ and 7 miles.

SPECIAL CLASS.

	Length.	Elapsed.	Corrected.
Ashumet, C. H. Jones, B. Y. C.	34.03	1 23 44	1 20 40
Salmon, W. E. C. Eustis, B. Y. C.	38.06	1 34 19	1 33 33

FIRST AND SECOND CLASSES.

Falcon, slp., J. S. Russell, B. Y. C.	27.06	1 26 08	1 19 06
Flirt, slp., W. L. Shearer, Jr., B. Y. C.	23.04	1 35 00	1 24 30
Kalama, cat, C. H. Brewer, B. Y. C.	26.10	1 44 49	1 37 49
Dorothy, cat, — Crosby, Osterville	....	.. .. ..	.. .. ..

Kalama sailed long course by mistake. Ashumet and Falcon won first prizes, Flirt second prize. Judges—F. E. Cabot, N. H. Emmons.

The 228th regatta, fourth open sweeps, was sailed off the club house Aug. 31 in a strong S.W. breeze. Salmon split her mast and withdrew.

In second class the old boats came to the front, Mist being first on actual time and the old Surprise on corrected time.

In third class Melro had a long lead, but lost mast and boom, throwing race to the new Agnostic, Columbus next on actual time, with Puzzle and Elna very close up, both smaller boats and not yet measured; second and third prizes are withheld till they are measured.

In fourth class cats the new Coquette beat Howard, and in the sloops Grilse, though leading by 2m. 7s., lost to Sylph on allowance, while in the fifth class sloops the Burgess boys seem to have got Laurel going to their satisfaction; having twice cut down her rig, she won easily.

Courses—Largely to windward, 19½ miles for special, 11¼ for first and second, 8 for third, 8½ for fourth, and 5½ for fifth class.

Prize winners: Special class, Ashumet; second class sloops, Little Peter; second class cats, Surprise first, Mist second, Anonyma third; third class cats, Agnostic; fourth class cats, Coquette first, Howard second; fourth class sloops, Sylph; fifth class sloops, Laurel; fifth class cats, Vif.

Judges: F. E. Cabot, A. H. Hardy.

The 229th regatta, second open, was sailed Sept. 2 in the worst weather ever met in the bay. It was a flat calm all morning, and many boats wishing to race failed to arrive or arrived too late.

At 1 o'clock there was no wind and start was delayed till 1:30, when they went off in a very light N.E. air, Isem led off, followed by Ashumet and Salmon, all with spinakers set. Just over line Ashumet overtook and fouled Isem, who protested. Later in race she collided with Salmon.

At the next gun two first class, three second class sloops and seven second class cats started, sailing same course as special, 11¼ miles. Little Peter went wrong side of buoy on starting line and was out of race. Mistral did the same, but came back and crossed properly. Both skippers can learn something.

Off Wing's Neck they ran into a S.W. breeze and held it till they got back to the Neck, when they again met the N.E. breeze.

Kalama was best boat actual time, but came out fourth on allowance. Mr. Codman is doing very well with the old Surprise and again took first.

Seven third class cats and seven cats and six sloops started in fourth class, 8½ miles Coquette again led in the cats, Howard withdrawing.

In the sloops, Turkey and the new Herreshoff Edith had no light sails. The latter, a very pretty boat, was unofficially measured out of the class and protested for sculling with rudder after preparatory gun, Silence is yet to be measured, and many think is too long for the class. This leaves prizes in doubt. Melro is also protested for sculling.

Silence got off on the gun, held the breeze, got a lead of over a mile, got all the changes of wind first and led home by 5m.

Course for fifth class was 5½ miles, a beat to buoy 5 and return, twice over. All fourth and fifth classes were handicapped but Silence, drifting stern first back from the line.

At end of first round in fifth class they were heading S W. for starting line carrying spinakers, while third and fourth classes, abreast of them ¼ mile east, were heading N.E. and carrying spinakers. When they struck the northeast wind they all bunched except the old Elna, who spun out a long lead. Laurel, too, did nobly.

PRIZES.

Special, first class sloops, first prize; third class cats, second and third prizes; fourth class sloops, three prizes, and fifth class sloops, third prize in doubt owing to protests and non-measurements.

Second class sloops, first prize, Flirt; second class cats, Surprise first, Anonyma second, Mist third; third class cats, Elna; fourth class cats, Coquette first, Dawdle second, Squall third; fifth class cats, Clam Shell first, Vif second, Imp third; fifth class sloops, Laurel first, Hilda second.

Valhalla.

A CURIOSITY in the line of private yachts is the ship-rigged Valhalla, owned by Joseph Frederick Laycock, of the Royal Yacht Squadron of England, which is now lying off Staten Island. The Valhalla is the largest vessel of her kind in the world, and even in England, where ship-rigged pleasure craft are more numerous than they are in this country, she attracted a great deal of attention from yachtsmen on account of her large size and handsome appointments. The Valhalla depends almost entirely on her sails as a means of propulsion and her steam equipment is for use only in case she becomes becalmed. In this she differs materially from a majority of American pleasure yachts, for on this side almost absolute dependence is placed on the propellers, and the sails are used rarely except in case of a breakdown in the machinery.

Mr. Laycock, the owner of Valhalla, is an enthusiastic yachtsman and most of his time is spent on board his ship. Before he built the Valhalla he owned the schooner yacht Sibyl. His present vessel was constructed in 1892 and has been in commission almost continuously. She has visited almost every part of the globe, but this is the first time either she, her owner and his guests, or her captain, William Barnard, R. N., have been in New York. They came over to see the yacht races, and, incidentally, to have a look at New York and America.

The Valhalla sailed from Cowes on Aug 20. Mr. Laycock understood that the first Defender-Valkyrie race was to be sailed on Sept. 14. The Valhalla took her time, and touched at San Miguel, Azores. Several days were spent there, and a longer stay would have been made had not a telegram been received on Aug. 28 saying that the first Cup race would be sailed on Saturday. Instead of having nearly three weeks in which to make the 2,500 miles to New York, the Valhalla would be obliged to cross in ten days if her owner was to witness the first race. Capt. Barnard made up his mind that the Valhalla could do the distance in the available time. Early on the morning of the 28th the big pleasure boat started. Favorable winds were encountered, and it was not necessary to use the engines except for short intervals. At 7 o'clock on Saturday morning the anchor was lowered off Sandy Hook. Two circular storms were encountered during the passage, but the Valhalla only got the edge of them. On the whole the trip was a pleasant one.

Mr. Laycock has as his guests Mr. Gordon Wood and Mr. Cecil Slade, two well-known amateur yachtsmen. They witnessed the yacht race and the finish, and were not much surprised at the result.

The Valhalla is a handsome ship, and the lines of her bow are especially graceful. She is steel armored, and is 239.6ft. over all, 37.2ft. beam, and 20.7ft. in depth. She is painted black, with gold trimmings. Her mizenmast is 125ft. long and her mainmast 141ft. She presents a very shipshape appearance as she rides at anchor, gently rising and falling with the swell. Every boatman on Staten Island has taken a look at her, and they can hardly express the extent of their admiration for her. She was built three years ago at a cost of $450,000.

In the interior arrangements of the yacht the promise of the hull is fully carried out. Nothing has been left undone that might add to the enjoyment of a cruise. Aft is the day cabin, occupying the entire width of the ship and extending half way amidships. This is furnished in white and gold woodwork, with maroon and light blue silk draperies. In the cabin is a well-stocked bookcase, an organ, and a grand piano. The furniture consists of a dozen or more chairs and lounges, couches and tables, all artistically disposed around the room.

Below decks are the sleeping cabins. Five are on the port side aft. They are finished in white and gold. Each is about 10 by 20ft. Mr. Laycock's cabin is the largest on the port side, and adjoining it is a commodious private office, finished in red. The walls of this room are decorated with photographs of the Valhalla, taken at Cowes, and oil paintings of twenty or more horses formerly owned by Mr. Laycock.

On the starboard side is the dining saloon. This is finished in red and gold and white. Next aft is the boudoir, with drapings and furniture in light blue figured silk. The ladies' cabins are four in number, each finished in gold and white and with silk drapings. In these cabins the berths are hung so that they swing with the roll of the vessel. There are bathrooms, lockers and servants' quarters. Throughout the after part of the ship Spanish mahogany is used for the doors and wherever it can be introduced harmoniously. The captain's cabin is on the starboard side forward and finished in oak. Teak is used largely in the construction of the craft.

The Valhalla carries a battery consisting of two 3lb. Hotchkiss guns and a Maxim rapid-fire gun, and the crew has regular gun drills. The crew consists of 117 men, and is organized on the plan of a man-of-war as nearly as can be. The Valhalla carries 160 tons of coal, an amount sufficient to last twelve days. Under steam she can make eleven knots an hour. Under sail she has made fourteen knots. —*New York Sun.*

The Right of Way at a Mark.

The Regatta Committee of the New York Y. C. issued the following public statement on Friday night:

"NEW YORK YACHT CLUB, Sept. 6, 1895.

"The attention of the Regatta Committee has been called to a statement which has been published, purporting to be their decision on a hypothetical case under the racing rules, which was submitted to them."

The decision of the committee was as follows, viz.:

NEW YORK YACHT CLUB,
67 MADISON AVENUE, Sept. 5, 1895.

C. Oliver Iselin, Esq.

DEAR SIR: Referring to your inquiry of the 4th inst. addressed to the Cup Committee, asking an opinion upon the following hypothetical case which has been referred to us, viz.:

"First—The two boats in maneuvering for the start both on the same tack, one to windward and one to leeward, and the weather boat being freer than the leeward boat, shapes her course to cross the line, has the leeward boat, being closer hauled, the right to force the weather boat on the wrong side of the mark, it being understood that an overlap has been established?

"Second—When does the judges' boat and the stakeboat at the other end of the starting line become a mark?

"Your decision is also requested on this point in reference to turning a buoy or mark."

We reply as follows:

First—The leeward yacht may force the other on the wrong side of the mark provided she passes on the wrong side herself and provided she does not begin to luff in order to do so after an overlap has been established.

Second—If the leeward boat posses the mark on the required side, she must allow the other room to also pass clear of the mark on the required side, always assuming that an overlap exists between the two boats.

Our answer to number two is that both ends of the line become a mark on making of the preparatory signal.

Our answer to your final inquiry is contained in our first reply.

Respectfully yours, REGATTA COMMITTEE, N. Y. Y. C.

The asking of this question calls attention to this important matter, though Mr. Iselin's question does not cover the whole case. In the original case in point, that of Vigilant and Defender, there is some doubt as to the question of an overlap; the two yachts were in such close proximity as to endanger fouling, and yet as they were coming from different directions, and their courses were at right angles, it cannot be said that either had an overlap such as exists in the case of two yachts coming from the same direction to pass a mark. At the same time it is evident that if the boat which is nearer the mark in the latter case has certain rights, the same should be secured to the inner boat in the former case. It seems to us that the committee's decision does not cover the Vigilant case, as Defender, the inner and nearer boat, could not have an overlap until she was almost touching Vigilant.

This is a point that needs to be cleared up, especially in view of the peculiar wording of the rule in the New York and some other clubs; as we understand the intent of the rule, going back as far as possible and taking the many different wordings to be found, it is intended to secure the right of passage by a mark of a yacht which is in a position to pass the mark on the required side without tacking; and which, at the time she comes into immediate proximity of the mark, is not clear of another yacht. It is not necessary that both should have come from the same direction, or even that an overlap shall exist, the two indispensable conditions being that the yacht claiming the benefit of the rule is able to pass the mark without tacking; and that she is menaced by another yacht of which she is not entirely clear.

In the extreme case of a yacht coming for the line before the wind and at right angles to the line, and meeting a second yacht standing right along the line on the wind and probably on starboard tack, neither yacht is overtaking another, neither has or can establish an overlap; and yet, in our opinion, the yacht which is free is entitled to a clear passage by the mark if she is the nearer (inner) vessel.

We are by no means convinced of the correctness of the committee's decision, that even though a yacht may be on her legitimate course to pass a mark in the required manner, another yacht has a right to luff her on the wrong side of the mark. Outside of a certain distance from the mark this would come under the lufling and bearing away rule; but if the two come together directly at the mark, as sometimes happens, we are of the opinion that the weather vessel has the right of way by the mark. Mr. Iselin's question as to when a vessel or buoy becomes a mark of the course is hardly capable of more than one answer.

There are a number of points in the sailing rules in which it is a serious question, first, what the intent of the rule is, and secondly, what the wording says.

The Burning of the Yankee Doodle.

From the Philadelphia Item, Sept. 2.

THE fast steam yacht Yankee Doodle, owned by the McBride brothers, was almost totally destroyed by fire near the mouth of the Schuylkill River shortly before 3 o'clock yesterday afternoon, and nine persons who were on board narrowly escaped with their lives. Some of them had to save themselves by jumping overboard and swimming to the shore with the aid of life preservers.

Those on board the boat at the time were Captain John McBride, who was in command; William Naulty, the pilot; Thomas McBride, the engineer, and Ebenezer Fisher, assistant engineer, comprising the crew, and G. Martin Brill, president of the J. G. Brill Car Company; Herman Brill, his son; John J. Kelly, chief engineer of the Brill Company; William Graham and Captain Lawrence Naulty.

The party left Bainbridge Street Wharf on the Schuylkill River shortly after 1 o'clock for a trip down the Delaware. Fast time was made down the Schuylkill, and Captain McBride was looking forward to a sharp race with the City of Chester which the Yankee Doodle would have on its way up from Wilmington. Just as it rounded Girard Point and was about emerging in the Delaware River, one of the oil valves blew out and the boat was at once enveloped in flames. Pilot Naulty turned the boat sharply toward the shore, while the rest of the crew and some of the guests hustled buckets of water over the gunwale in a vain attempt to fight the flames. Captain McBride, who led the fire fighters, had the hair singed from his eyebrows.

The fire was confined amidships, however, closing the passageway to those aft. Most of those forward jumped out when the nose of the boat grounded in the mud. Some of those aft seized life-preservers and plunged overboard. William Graham, who was one of these, was almost exhausted when he reached the shore. There was a folding life-boat on board, and this was successfully floated, Capt. Lawrence Naulty, George McBride and Thomas McBride escaping in this way.

A rowboat, with three men, was close by the yacht when the fire occurred. Those on board appealed to the three oarsmen to come to their assistance, but no attention was paid to the cry for help and the three men, inspired by terror apparently, made haste to put as wide a space between themselves and the burning yacht as possible. Mr. Brill and the other passengers complained bitterly last evening of the cowardice of the unknown oarsmen.

After the yacht was bedded on the shore the tug Reese came along and turned a stream of water on the flames. The crew of the yacht also did valiant service with buckets of water, the fire being finally extinguished after a loss of $600 had been sustained. The wreck was towed up the river by the Police boat Samuel G. King and was moored at South Street Wharf, West Philadelphia, about 5 o'clock, where many persons viewed it last evening.

Sailing in Two Classes.

THE following calls attention to a serious breach of racing rules by which injustice was done to several yachts. The rules requiring the filing of the official measurement of a yacht and her final entry in her proper class prior to the starting of a race are so important that no club save the New York Y. C. can afford to violate them. Every owner duly entered is entitled to know before the start of a race the yachts qualified to start in his class; and if a yacht is put up a class according to a very common rule, all in the class should be notified of the change. In the present case, as we have heard from disinterested parties, as well as from the following letter, the yacht mentioned was not entered in her own class, though under the rule she had no right to enter any other class; she did not sail the proper course for her class, and consequently did not win in it. No club which countenances such violation of the rules can look for the support of racing owners.

Editor Forest and Stream:

I wish to call your attention to an occurrence at the regatta of the Huguenot Y. C. on Aug. 17. The club made three classes of cabin catboats, dividing them from 23 to 25ft., 25 to 27ft. and 27 to 30ft. racing length. There is a rule of the club that "a boat of the smaller class has a right to enter the larger class by assuming the smaller length of that class."

Having entered the Mary in the larger class at 28ft. racing length, I inquired of a member of the regatta committee on the morning of the race if the Kittie had entered my class, and was told she had not; I also asked the owner of the Kittie previous to the race what boat he had to sail against, and he told me the Monson. After the race I was told that the Kittie had won in my class. I found that the regatta committee had figured the Kittie at 25ft. racing length in a class that was limited to 27ft. I at once protested, the committee allowing the protest, and declared the Kittie the winner in the smaller class, a class that had sailed a different course.

The Kittie was so placed that after the race was sailed her owner could figure up the time and place her in any of the three different classes. Finding that she was beaten by being put in the larger class, she is taken out of that class and made the winner in the smaller class, which sailed a different course.

WM. ELSWORTH (owner cabin cat Mary).

Sea Cliff Y. C.

Thursday, Sept. 5.

A SPECIAL race for cabin cats was sailed on Sept. 5 by the Sea Cliff Y. C., starting in a light breeze. Molly Bawn had a good lead when near the finish line, but the wind dropped and the others came up on her, the times being:

	Start.	Finish.	Elapsed.	Corrected
Molly Bawn, F. Brown, Pavonia	12 37 30	3 16 12	2 38 52	2 38 52
Nellie, S. Stenson, Sea Cliff	12 39 35	3 20 45	2 51 10	2 47 47
Onaway, S. C. Pirie, Sea Cliff	12 39 38	3 22 32	2 42 54	2 39 12
Oconce, C. T. Pierce, Riverside	12 36 45	3 16 15	2 39 30	2 34 00
Flyaway, W. Vancott, Sea Cliff	12 36 20	3 16 15	2 39 15	Not meas.
Wenonah, W. Porter, Sea Cliff	12 42 52	3 41 55	2 59 03	2 53 03
Kittie, H. Morse, Huguenot	12 36 15	3 17 05	2 40 50	2 34 35

The judges were Le Grand L. Clark and F. W. Benner.

Spruce IV. is Here.

MR. J. ARTHUR BRAND reached New York on the Fulda last Monday, bringing with him the 15-footer Spruce IV., the British competitor for the Seawanhaka Corinthian International Challenge Cup for small yachts.

YACHTING NEWS NOTES.

The little yacht built by Mr. Dwyer, and which we mentioned last week as at first intended for the 15ft. class at Oyster Bay, has been sold to Robert Nunnemacher, of Pine Lake, Wis. She sailed her first races on Aug. 24 in the inter-lake regatta at Oconomowoc, Wis., being second in a fleet of nineteen in the first race and first in a fleet of sixteen in the second. One of the boats defeated by her was built from the lines of the noted Sorceress, and has been very successful. The boat was sailed by her new owners for the first time in these races.

The formal opening of the new club house of the Cleveland Y. C. will take place on Sept. 12.

Larchmont Y. C.

Thursday, Sept. 5.

THE fifth of the series of eight special races to be sailed this year by the 31ft. and 21ft. classes of the Larchmont Y. C. came off on Sept. 5, resulting as follows:

SPECIAL—34FT. CLASS.

	Length.	Elapsed.	Corrected.
Dragoon, F. M. Freeman	34.00	3 26 13	3 26 13
Acushla, Wilmer Hanan	34.00	3 11 01	3 11 01

SPECIAL—21FT. CLASS.

Vaquero, W. Gould Brokaw	21.00	1 10 16	1 10 16

Rifle Range and Gallery.

The Hilton Trophy.

THE past week, that is, from Sept. 3 to 7, has been a busy one among riflemen, the New Jersey Rifle Association's meeting at Sea Girt, N. J., having proved to be one of the most successful ever held. Thursday, Sept. 5, saw the contest for the Hilton trophy. Those eligible to compete were teams of twelve men from the Army and Navy of the United States, the National Guard of the United States, and of England, Ireland and Scotland, the provinces of Great Britain, and all other countries; in fact, it is "open to the world." The trophy, which is valued at $3,000, was presented by the Hon. Henry Hilton. Last year Pennsylvania won it with 1,088 points. This year the District of Columbia team won it by scoring the magnificent total of 1,097, beating by one point the best previous score of 1,096 made by the Massachusetts sharpshooters in 1888. The highest possible is 1,200. Each member of the winning team in each contest receives a medal commemorative of the occasion. The scores were as follows:

HILTON TROPHY.

District of Columbia.	200 yds.	500 yds.	600 yds.
Scott	31	30	32

Revolver Shooting in England.

LONDON, England, Aug. 22.—At the North London Rifle Club the scores given below were made on Aug. 21, Mr. Winans not competing, as he has already a highest possible score in the competition on for the day, the 20yds. disappearing target.

Aug. 21.—Disappearing target, 20yds:

Maj Palmer	777645—36	E Howe	765542—29
Knapp	777644—35	Luff	666540—27
B Comber	777662—35	Diggins	655433—26
Maj H Munday	775555—34	Carter	755333—26
Gould	776544—33	Lattey	764432—26
W Treadwell	776333—29		

At the South London Rifle Club the below scores have been made:

Aug. 15.—Twenty yards:

Lieut J Howard	757777—40	E Howe	776747—38
F Rand	777567—39	C Knapp	476667—36
Capt T W Heath	666677—38	Clementi-Smith	766455—33

50yds.:

Capt T W Heath	556677—36	C Knapp	756375—33
F Rand	757366—34	E How	557474—32
Clementi-Smith	546774—33	Lieut J Howard	737634—30

Scores to date toward Revolver Championship of South London Rifle Club for 1895.

	20yds.:	50yds.:
Walter Winans	42 41 41 40 40	40 39 39—322
Capt T W Heath	39 39 39 39 38	37 37 36—307
Knapp	40 40 38 38 36	38 35 34—299
E Howe	40 39 38 38 37	35 33 32—292
Lieut J Howard	40 40 38 37 36	34 32 31—287
Clementi-Smith	38 36 35 34 33	35 33 27—270

There are only three more days shooting at the above club this season, at intervals of a fortnight, so Mr. Winans is about certain of the Revolver Championship of the Club.

Iroquois Rifle Club.

THE Iroquois Rifle Club, of Pittsburg, Pa., announces that it will hold, at its indoor range, 1717 Jane street, Pittsburg, a prize shoot as an eye-opener for the gallery season. The dates set are Sept. 17 and 18, the tournament taking place each evening. Messrs. A. F. Hofmeister, range officer; William Langhorst, assistant range officer, and A. C. L. Hofmeister, treasurer of the club, have issued the following particular of the "Ticket match, open to all comers:"

"Conditions: Off-hand on the reduced standard American target. Any .22cal. rifle mounted with any sights will be permitted. Entrance fee 35 cents per ticket or three tickets for $1; three shots per target. Re entries unlimited. The best three targets of each shooter to count for prizes, of which only one is obtainable by any shooter. In case of ties the next best single target will count for place. Sighting shots will be permitted. First prize $10, second $7, third $5, fourth $3, fifth $2, sixth $2, seventh $2, eighth $1.50, ninth $1.50, tenth $1.

"Shooting commences at 7 P. M. each evening and concludes at 10:30 P. M. on Wednesday evening, when winners will be selected from all scores made on both nights.

"No efforts will be spared to make this the Iroquois Rifle Club's opening event of the gallery season of 1895-96, a success in every respect, and the participation of all members of the rifle shooting fraternity of Pittsburg and vicinity is requested by the shooting committee."

Petty—Paine Postponed.

THE revolver match between Messrs. Petty and Paine has been indefinitely postponed. Misfortune has followed the various attempts that have been made to bring about this match. Monday last it seemed that the match would certainly come off the following night.

Through the courtesy of Colonel Green and Captain Austin the range of the 71st Regiment armory had been put at the disposal of the contestants. A number of prominent sportsmen, who had expressed a desire to be present, had been notified, and everything was in readiness. At 4 o'clock Monday, however, Mr. Petty, who has recently been promoted to the rank of Acting Sergeant, received imperative orders from his superiors to report for duty the following afternoon, and though greatly disappointed, was obliged to withdraw from the match.

Mr. Paine had important engagements and was unable to wait over in New York longer, but with the sportsmanlike spirit that has characterized his action all along, he at once began trying to arrange a date later in the fall. Both men are anxious to arrange a meeting, and it is to be hoped that the match will yet materialize, as it would be an event of unusual interest in the shooting world.

It will be recollected that the conditions called for 100 shots per man, at a distance of 50yds., each string of six shots to be fired within a time limit of one minute. Colt's .38cal. army revolvers were to be used and service charges were specified.

Lyman Rapid-Fire Target.

THE Lyman rapid fire rifle targets are finding much favor. They are in two sizes, for 25yds. and 50yds. The smaller one sent post-paid for 15 cents a dozen, the larger one for 25 cents a dozen, by the Forest and Stream Publishing Co.

Trap-Shooting.

If you want your shoot to be announced here send in notice like the following:

FIXTURES.

Sept. —.—FREDONIA, N. Y.—Tournament of the Clover Trap and Target Company. $1,000 added money.

Sept. 24-26.—ROCHESTER, N. Y.—Fourth annual tournament of the Rochester Rod and Gun Club; $500 added money; H. M. Stewart, Sec'y.

Sept. 27, 28.—HARRISBURG, Pa.—Fall tournament of the Harrisburg Shooting Association; first day, targets; second day, live birds. H. B. Shoop, Sec'y.

Oct. 3.—RED BANK, N. J.—Ninth tournament of the New Jersey Trap-Shooters' League, under the auspices of the Riverside Gun Club Shooting commences at 10 A. M.; league contest at 2 P. M.

Oct. 8-10.—SHERIDAN, Wyo.—Tournament of the Sheridan Gun Club, under the management of Frank Crabill and Mark R. Perkins.

Oct. 9-11.—NEWBURGH, N. Y.—West Newburgh G. and R. Association tournament. W. C. Gibb, Sec'y.

Oct. 15-17.—ALEDO, Ill.—Annual tournament of the Aledo Gun Club; live birds and targets. J. W. McRoberts, Chairman of programme committee.

Oct. 16-17.—WEIR CITY, Kan.—Live-bird championship of the State under the auspices of the Business Men's Gun Club.

Oct. 15-17.—ELIZABETH, N. J.—Fourth bi-monthly tournament of the Elizabeth Gun Club; first day, targets; second day, live birds.

Oct. 23-25.—ATLANTA, Ga.—Annual tournament of the Clarke Hardware Company; targets; $700 added money.

Oct. 25-26.—SEATTLE, Wash.—First annual tournament of the Washington State Sportsman's Association, under the auspices of the Seattle Gun Club; live birds and targets. C. F. Graff, Sec'y.

Oct. 27-30.—SAN ANTONIO, Texas.—First annual tournament of the San Antonio Gun Club; $1,000 added money. Willard L. Simpson, Sec'y.

Nov. 5-7.—KEWANEE, Ill.—Annual tournament of the Kewanee Gun Club.

1896.

Jan. 4-5—PHŒNIX, Ariz.—Annual tournament of the Arizona State Sportsmen's Association.

Jan. 9-11.—SAN ANTONIO, Texas.—Grand mid-winter tournament, under the management of Texas Field; $2,500 added.

DRIVERS AND TWISTERS.

Club secretaries are invited to send their scores for publication in these columns, also any news notes they may care to have printed. Ties in all events are considered as divided unless otherwise reported. Mail all such matter to Forest and Stream Publishing Company, 318 Broadway, New York.

It seems that even at King's Mills Milt Lindsley has time to read the FOREST AND STREAM, and although "chained to business," can spare a few minutes to look over its columns and see what is going on in the shooting world. And therein Milt shows his good sense. He knows a good thing when he sees it, and he sees it every week—the FOREST AND STREAM. Under date of Sept. 4 he writes: "I see by your paper that the boys are all hammering away, and at times I long to be with them, but I have been so busy and have had so much to occupy my mind that I have not regretted it so much as I otherwise would. We have got the factory now nearly ready to run. We have a very complete plant and are prepared to make what I consider without doubt the best smokeless powder on the market to-day. The grain will be hard and heavier than ever before, and will resemble the grain of black powder very nearly, being made by the same process and with the same machinery." Then Milt goes on with some stale news: "I see that Mrs. Lindsley did you up at the League shoot at Union Hill. You had better get a little gun and go out in the fields and practice a bit, and I think I had better go and keep you company. I cannot shoot a little bit, but I am going to practice up, so as to give you a run when I come to New York in October." There's one thing that has always puzzled me about Milt Lindsley: How is it that so good a powder maker should be so poor a shot?

With the close of the Rochester, N. Y., Gun Club's tournament target shooting in the North will be at a comparative standstill, so far as large tournaments are concerned, until the opening of the season of '96 with the big affair, $2,000 added money, promoted by the American E. C. Powder Company, the dates for which are May 5-8. With such an amount of added money to fight for, Pennsylvania, New Jersey, New York and New England trap-shooters will turn out in force, while from points South and West will come a goodly contingent of others who will help to divide up the pots provided for their delectation. How nice that sounds! Delectation!

One of the handsomest trophies we have ever seen, either in a photo or face to face, is the one donated by the proprietor of the Grand Hotel, at Indianapolis, Ind., Mr. Thomas Taggart, to the Limited Gun Club of that city. The cup is emblematic of the amateur championship at targets of the States of Kentucky, Indiana, Ohio, Michigan and Illinois, and is to be competed for annually on the grounds of the above-named gun club. From a photograph received the other day a good idea of its artistic value could be formed, and upon that we base the above assertion.

The Olyphant, Pa., *Gazette* of Aug. 31 credits Harry Swartz, of Scranton, Pa., with the following performance: "He used a 7½lb. gun, and surprised everybody by his ability in off-hand shooting. He started in at two birds at 30yds. and killed them; then at 40yds. killed two more; repeated the dose at 50yds., and then moving back 15yds. more, making a distance of 65yds., he killed four birds straight, breaking all previous world's records at such a distance. This was really a wonderful performance, and places the little wizard at the head of all marksmen." We make no comment. We can only marvel. That's all.

Another candidate for the Grand American Handicap that slipped our memory last week is the Trenton Interstate Fair Grounds, where Charlie Zwirlein is extremely anxious that the Interstate Association shall hold the great live bird event of the year. If Zwirlein should provide the birds, they'd be all good, because he never traps a poor bird at home, and he guarantees that the birds for the Grand American would be A No. 1. The hotel accommodations in Trenton, N. J., would be all that could be asked.

Lou Erhardt, of Atchison, Kan., has returned to that city after a month's vacation at Salem, N. J., the home of his parents. Lou, as all the boys in the South will well understand, made lots of new friends while up North. His maroon-colored sweater bore on the back a device of Lou's for advertising two specialties of which he thinks a great deal. In the middle of the back there is a design that might be taken for a rough sketch of a swarm of yellow-jackets. The inscription, "Empire target broken with E. C. Powder," explains what the artist was getting at.

On Friday afternoon, Sept. 6, Mr. R. S. Waddell, the Southern agent for Dupont's Smokeless and Hazard's Blue Ribbon, called at this office. Mr. Waddell has been East for the E. T. conclave at Boston, Mass., and was on his way home when he looked in upon FOREST AND STREAM. While speaking of business matters, he told us that since leaving Cincinnati over 1,000,000 shells loaded with Dupont's Smokeless, stored in his warerooms at Cincinnati, have been lost owing to the premises taking fire. Those which the fire left were irreparably damaged by water.

A curious coincidence which occurred in the Ivins-Ballard vs. Hoey-Murphy match at Elkwood Park, N. J., on Aug. 30, was unnoticed by us when writing a description of the shoot. A reference to the score will show that each man scored exactly the same total out of his last 75 birds—69. Ballard's totals for his last three series of 25 were 24, 23 and 22; Ivins's, 22, 24 and 23; Murphy's, 24, 22 and 23; Hoey's, 22, 24 and 23. Those figures also show that out of six possible combinations of three numbers the shooters managed to appropriate three of them.

A very recent number of the San Francisco *Examiner* contains the following in regard to some fine target shooting by a youth named Richards: "At Stockton, Cal., on Aug. 5, Ed Richards, a boy of 17, broke 98 out of 100. He missed his 37th by having an imperfectly loaded shell, and missed his 97th by shooting at a small piece. He used E. C. Smokeless powder. This score without doubt is a record for a boy of his age."

Encouraging reports come from Rochester, N. Y. It looks as if they were going to have an excellent tournament up there. Everything is in their favor. They add good money and add it wisely; they have no opposition, and they are surrounded by a number of gun clubs within easy reach who possess in their ranks several good shots who are not afraid of standing up and taking their medicine.

It is our aim to make our reports of tournaments and club shoots as complete and as attractive as possible. Secretaries of clubs, when sending scores, can aid us greatly in our endeavors by carefully inserting the conditions of each contest, giving date and place, and most of all by mailing them as soon as made. That's what makes news, and news is what we want.

The second annual tournament of the Leavenworth, Kan., Gun Club will be held on Thursday and Friday, Sept. 26-27. The club will add $300 to the purses, $125 being added on the first day, $175 on the second day. Winners of first or second money will be handicapped in the next event by shooting at unknown angles. The management also remarks that "Dropping for place will not be tolerated."—*Bueno.*

On Thursday afternoon, June 5, Neaf Apgar broke his first 55 targets at the Climax Gun Club's shoot. Neaf was shooting a gun that he had never handled before, which makes his record of greater note. Altogether he broke 98 out of 100, making two straight scores of 25, three straight 10s and one 8, all at unknown angles; he then broke five pairs.

A Washington dispatch to the New York *Press* of Sept. 1 says: "Baron Fava, Italian Ambassador, informs the Department of State that a prize shooting contest, in which the Italian Government desires American marksmen to take part, will take place at Rome on Sept. 20, in connection with the festivities commemorating the union of that city with the Kingdom of Italy."

A postal card from H. B. Shoop, secretary of the Harrisburg (Pa.) Shooting Association, tells of a two-days' tournament that is to be held by that association on Sept. 27, 28. The first day will be given up to targets, the second to live birds. As Harrisburg herself possesses a number of good shots who shoot right through a tournament, the above two days ought to be worth remembering.

We have called attention in another note to the coming tournament of the San Antonio, Tex., Gun Club, which is set for Oct. 27-30, but it won't do to overlook the "grand midwinter tournament" at San Antonio, which will be held on Jan. 9-11, under the able management of Texas Field, $2,500 being announced as the amount of money to be added to the purses.

Since we made the note of the proposed tournament at Baltimore, which appears elsewhere in these columns, we have received advice from that city that entries will be received now, accompanied by $10 forfeit, and addressed to the Dupont Smokeless Powder Tournament Committee, 22 South Calvert street, Baltimore, Md.

At the Worcester Sportsmen's Club's shoot on Tuesday afternoon, Sept. 3, John T. Mascroft, "the mayor of Sutton, Mass.," broke the club's record by scoring 47 out of 50, 25 targets being thrown from traps in reversed order, and 25 from traps with known angles in regular order.

In order that the managements of tournaments may not be under any misapprehension, it is just as well to state that Jack Parker, wishing to gracefully return favors done him in the past, gave FOREST AND STREAM a full-page advertisement in his programme free of all cost.

The Elizabeth, N. J., Gun Club has changed the dates for its fourth bi-monthly tournament to Oct. 16, 17. This change was rendered necessary in the opinion of the management by the choice of dates for the big live-bird shoot in Baltimore, Md.

A glance at the list of Fixtures shows plainly enough that the target shooting season is waning. Not a single tournament is announced as scheduled for the coming week.

EDWARD BANKS.

Lynchburg Gun Club.

LYNCHBURG, Va., Sept. 3.—The members of the Lynchburg Gun Club shot the following four 25-target sweeps, unknown angles, this afternoon:

CHOKE BORE.

Pigeon Shooting in England.

NEW YORK, Sept. 2.—Some two years ago the members of the famous Gun Club, of London, which has its grounds at Wormwood Scrubbs, extended a cordial invitation to members of the Carteret Club, of New York, to shoot in all their competitions, an invitation which I believe has not before been given to any of the pigeon shooting clubs of America.

Leaving New York in June, I arrived in time to take part in some of the sweeps which were shot previous to the big international week, commencing on June 24. I found that by the courtesy of the committee of the Hurlingham Club, I and other members of the Carteret Club could also shoot at Hurlingham, a permission I was not slow to avail myself of.

Of my own shooting, the less I say the better, for although able to do something more than hold my own in America, I found the English pigeons altogether too fast for me, though I am not sure that the open hospitality extended to me did not somewhat accelerate their flight in my imagination, if not in reality. Still from inquiries I made on the spot from those best able to give an opinion I am convinced that the bluerocks supplied at both of these famous English clubs, and especially so at Hurlingham, have been faster this season than usual. I was told also on good authority that these very fast birds are bought in Belgium and come from much further south, although they are generally supposed to be English.

If this is indeed the case, as I believe it to be, there can be no reason why these birds should not be imported into the States, and the first man who succeeds in doing this and rearing them in anything like large numbers, under at all the same conditions as obtain with those used in England, will reap a large harvest. The number of pigeons shot from the traps in America at clubs where it is earnestly desired to have fast birds only, and where a good price for good birds would not be grudged, is enormous and increasing rapidly year by year.

Take such clubs as the Carteret, Country Club, Tuxedo, Westminster Kennel Club, Larchmont, New Utrecht, of New York, and the Riverton and Philadelphia clubs, of Philadelphia, to say nothing of the vast number of others at Chicago, San Francisco, etc , and those scattered over the country, and think for the moment what supplying this demand for bluerocks at those clubs means.

The chief points I noticed where any difference exists between the way pigeons are shot in the States and in England, and the surroundings and management, are as follows: First—Every competition, or very nearly so, is miss-and-out, or in other words, the first bird a man misses puts him out of that sweep and he has to stand aside until another one is started before he shoots again. This, however, does not usually mean that he has to wait very long, as the birds being so fast, the sweep is soon concluded and a fresh one commenced. The next point is, I think, the rapidity with which the birds are retrieved, there being no such thing as time allowance and the dog being loosed after each shot as soon as the wounded or dead bird touches the ground.

The apparatus for pulling the traps, as well as the traps themselves, are very similar to those in general use with us, although this year a clock work apparatus has been introduced which, by keeping the cylinder on which the pulling lever acts in constant motion, makes it impossible for any puller or other person to know which trap is coming when the shooter says "Pull."

The arrangements at both the clubs I am speaking of are perfect and everything moves quickly and evenly. There is a tent pitched in which the representatives of the various gun makers who have guns in use by members keep the guns, handing them to their respective owners as they go up to the mark to shoot, and again taking charge of them as each shooter leaves the mark.

The pigeons are brought into the grounds in baskets by the people who supply them, those at the Gun Club being supplied by a Mrs. Offer, and those at Hurlingham by a man named Roberts. With them come the men who trap them and they also bring the dogs for retrieving. Thus the club itself has none of the responsibility or trouble of buying, keeping and trapping their own birds, as is the custom in America, this also being done by persons whose sole business it is to do that particular work, and who will lose the custom of the club if it is not well done. The consequence is, that the birds are always the best that can be procured, and in the highest possible state of fitness, and the trapping and gathering is done far better and more expeditiously than at most pigeon-shooting clubs in the States. The price paid for the birds, though seemingly high, is not really so high when it is borne in mind that it includes the expense of trapping, retrieving, etc., which in America has to be borne by the club. The amount charged for each bird is usually two shillings, equal to 50c. of our money.

With regard to the shooting itself, it is very noticeable that some men who are members of both Hurlingham and the Gun Club shoot very much better at one than at the other. This is explained by the difference in the boundary fence, which is very high at Hurlingham, causing the birds to rise rapidly after leaving the traps, while at the Gun Club, where the boundary fence is further off and not more than half as high, the flight of the birds is lower and more directly away from the shooters, as a rule.

Of the guns used, those made by Purdey, Churchill and Reilly were far in excess of any of the other makers, though I noticed that several members were using Greener guns, which are so well and favorably known in America. On at least one occasion a single-trigger gun manufactured by Chas. Lancaster, of New Bond street, was being used and appeared to be a great success. I afterward visited Mr. Lancaster's shop, and he fully explained the working of this new invention to me. I was very much struck with it, and I firmly believe that a single-trigger gun will be the gun of the future. Mr. Lancaster having been kind enough to send one of these guns to the London Shooting School at Willesden, I gave it a thorough trial and found it to work most admirably, without the slightest hitch occurring, the pull-off being light and without any drag, and there not being the least symptom of both barrels going off simultaneously, which has been the rock on which single-trigger guns have hitherto been wrecked. As no movement of the hand takes place between the two shots, Mr. Lancaster rather recommends them not to use the pistol grip, which so many Americans are fond of, but which is rarely seen in England.

Speaking of the London Shooting School makes me wish that we had a similar institution in New York, and I shall be surprised if some enterprising individual does not start one soon. Though an old and experienced shot myself, I learned something from my visit to that place, and was sorry that I had no time to repeat it. Every shooter from America who was elsewhere else should make a point of going there to see what he can do with his gun, how it shoots, or to learn, first, whether his gun suits him as to bend, cast off, pull off, length of stock, etc.; second, whether he can do better with a gun in which any of these are different; and, thirdly, having got a gun to suit him, he should see whether Mr. Watts, the gentlemanly manager of the ground, cannot teach him some wrinkles which will improve his shooting 50 per cent. Here you find clever contrivances for testing or improving your powers of shooting at every possible variety of flight which a bird on the wing may take—straightaways, incomers, rocketers, right-quarterers, left-quarterers; birds flying at every imaginable angle, slow, fast or medium.

Much of the shooting done in England is at grouse or partridge driven over the heads of the shooters who have previously been placed behind a bank or hedge. These birds usually fly in flocks, and it is the height of the shooter's ambition to take his first two birds at the right distance in front of him as they approach, and then snatching his second gun, held in readiness by a man who loads for him as required, to turn round and if possible get two more out of the same flock or covey as they speed away behind his back.

In order that a man may have an opportunity of practicing this particular form of shooting a number of clay pigeon traps are mounted on a wall. The shooters being placed in front and at a proper distance, a continuous or intermittent flight of these clay pigeons is sent skimming over his head, sometimes eight or ten together, sometimes singly, and in their flight they do very closely resemble the flight of driven game.

I cannot go into the details of the many ways in which a man can here discover his weak point and be taught how to correct it, but I must mention the long whitewashed target, across which dark objects fly from right to left or left to right, and on firing at which, the impact of the shot being clearly shown each time on the target, you can see for yourself whether you have shot high, low, behind or in front. I forgot to ask the enterprising proprietor how long his school had been established, but from the piles of used shells which meet the eye the attendance of pupils must be very large and it would be surprising if it were not so.

The school is now situated at Willesden Junction, just outside London, can easily be reached by train or cab, but Mr. Watts told me he had secured a much larger and more suitable site at Hendon, close to the well-known Welsh Harp hotel and pigeon-shooting grounds, and intended moving there at once, reproducing all he has at his present establishment on a much larger scale and with many new additions.

I forgot to say that those who want instructions in rifle shooting can also be accommodated. To sum up I would say to any American who thinks of accepting the hospitality of the great pigeon-shooting clubs of England next summer, that they will have to use a straight, muzzle-light gun, with a light, easy pull-off, or they will keep shooting behind and under the rapid, quick-rising pigeons they will constantly meet with. The fact that they cannot make long runs as in America, that misses come often and that each miss means being out of that sweep, must not discourage or make them nervous. They may absolutely depend upon having the fullest fair play and being received with open-handed hospitality, to the full as much as would be accorded to any members of those English clubs who might wish to join in some of our shoots on this side, and I am sure we all wish they would come over. BLUE ROCK.

LONDON, England, Aug. 15.—There are four important pigeon-shooting clubs in London—the Hurlingham, with grounds in Fulham; the Gun at Notting Hill, the National and the Gun and Polo at the Welsh Harp, Hendon. The two first-named are the most important. No one is allowed to participate at their meetings except their own members, invited friends and the members of other clubs which are recognized by them. To gain recognition a club must apply, and if its standing is shown to be satisfactory it enters into a reciprocal agreement by which both consent to extend to the members of the other the privilege of contesting at their meetings. There are two organizations in the United States which enjoy this recognition, a New York club being one, a Philadelphia club the other. The shoots at Welsh Harp are generally open to the world. The annual "International" week shoot at Hurlingham and the Gun Club occurs in June. During this week shooting takes place at their respective grounds on alternate days. The name "International" week should be understood in a restricted sense, because it is international only so far as the exclusive rules before mentioned permit. For instance, the United States cannot be represented at present except by members of the two clubs recognized. Americans desiring to shoot while abroad would do well to remember this point. Although this rule seems severe, it is only fair to state that it is done to save the sport from the influences of professionalism, and not to keep out the best shots in the world. Every sport in England save the rowing races at Henley and the shooting at these clubs has suffered from professionalism. Lovers of shooting in the United States, should profit by their experience.

The firing takes place in what is known as an incloure, which is a high board fence within the club grounds. The shooting progresses without confusion—every detail being perfectly arranged. The scores are kept upon a blackboard in public view in order to reduce all chance of error. The rules which govern the contest and which are known in America as the "Hurlingham" rules are too familiar to trap shots to need explanation. There are, however, certain points which are of importance to us.

In the first place the English "bluerock" pigeon is superior to the bird trapped in the United States. It is much smaller and is usually quick, strong and tenacious of life. It flies as if it appreciated that the shooter was bent upon its destruction. This bird being better than those used in America, and should profit by their experience.

satisfied only with the best, the question arises, "How can we improve our stock?" The "bluerock" trapped in Europe is not caught in a wild state. It is bred and raised by pigeon merchants. The price for the best birds (trapped) is 62½ cents each. As they are very prolific the business is a paying one to the breeder. These facts being true why not interest some of our American farmers, who are trying to raise wheat at 50 cents a bushel, in this occupation. The genuine bird can be easily imported from England for breeding purposes. If this could be accomplished so that a sufficient supply could be annually raised it would help the sport greatly.

Secondly.—The method of pulling trap is superior to that in America. At Hurlingham and Welsh Harp I observed a contrivance by which the decision as to which trap is to be pulled is left to chance, as I will attempt to explain. Behind the shooter is placed a box, 3ft. by 1ft., which contains certain machinery. A separate wire runs from the machinery to each of the five traps, passing inside metal rods from the box about half way. Through the other end of the box a single rope connects the machinery with the puller's hands. When the shooter comes to the score, the trap puller gives the rope a jerk which causes a bell on top of the box to ring—proving that the wheel inside is revolving. The principle on which this wheel works is the same as that of the roulette or wheel of fortune. If a notch in the wheel stops in one portion of the circle, it connects with trap No. 1, if in another with trap No. 2, and so on. After the bell has ceased ringing the trap can be sprung by the same rope. At the Gun Club a similar principle is in vogue, but the machine is of a different manufacture. The object of all this is obviously to lessen the chance of collusion between the trap puller, the bird handler and some shooter. These machines do not obviate the difficulty, however, to the full satisfaction of the shooting public, although it is conceded that they greatly lessen the danger of fraud. The criticism against the machines is that the trap puller can, in time, become so expert as to be able to cause the wheel to connect with any trap he desires. In the United States the gates are wide open, generally, for unfair practices and a pigeon shoot is seldom held where charges of favoritism are not heard. If we cannot succeed in removing the possibility of unfairness, the sport must lose its popularity. The fact, too, that with us many of our best shots are dependent upon their success for a living makes the temptation greater to commit fraud and the defeated or suspicious more ready to suspect. It is for us to invent means whereby pigeon shooting will be put on an absolutely fair basis.

Thirdly.—The gun used. The leading manufacturers are now constructing a "pigeon" gun. It is in many ways so different from a "game" gun that the latter is seldom used by the shooter at the trap, nor the former by the hunter in the field. The best "pigeon" guns are expensive, being high class in both materials and workmanship. They are hand-made throughout, and are heavier and stronger than a "game" gun in order to stand the largest loads. The barrels are generally made of Whitworth's or Siemens's steel and are usually both full choked. The most expert shots use the closest possible bores. They also seldom made ejectors for the reason that a gentlemen is always attended in shooting by a servant who takes entire charge of the gun, relieving his master from all work or effort except such as is required in the mere act of discharging it, and further because very rapid firing is never necessary. Another peculiarity of the gun is its high rib, by which it is made to throw the center of the charge above the target fired at. The object of this is to prevent the shot going under a fast rising bird. The stock is made as straight as possible and few pistol grips or recoil pads are used.

The method of fitting a man properly with a gun is well worked out It is done by the use of a "try" gun. This implement has a stock which can be altered by screws. By manipulating this and by shooting it repeatedly in different positions it is finally adjusted so perfectly that when it is brought to the shoulder it covers the target at which the shooter is looking without an effort to aim.

A person's measure being ascertained in this practical way a gun is made for him accordingly. Few men possess a gun exactly suited to them. Difficulties in such a case must be overcome by the shooter fitting himself to the gun. This is always attended by impairing his skill. In the shops of the leading manufacturers in London can be seen guns made to obviate all sorts of physical defects in the shooter. For example, a gun made to fit a man who had lost his right eye, but desired to shoot from his right shoulder. Such a person can be fitted so that he can attain the highest possible results.

Persons having stronger vision in one eye than in the other are so carefully measured that they suffer no disadvantage when competing with men having perfect vision.

The question of ammunition is a most important one. The proper load for a man depends largely upon his build and the weight of the gun. It is customary to use all the ammunition the rules will permit, if the shooter can stand the recoil, but a man should determine by experiment the load that best suits him. Nitro powders are generally preferred to black, and soft shot to chilled. It is amazing how many fine guns are manufactured in England which are seldom, if ever, heard from in the United States. The latest invention brought out here in this line is the one-trigger double-barreled gun. As yet it is not in general use.

The deeper one studies the subject the more he finds to learn. The British Museum contains a small library on the art of shooting, and among its volumes the most experienced might find useful hints. We should not allow foreigners to become more proficient than ourselves, as international matches may be in store for us in the near future. The expert trap-shots in the United States are men who have worked out by themselves the important points necessary to success. Their knowledge has been obtained at great cost of time and labor, and they are naturally slow to impart the secrets of their skill to their less thoughtful and energetic companions. We should all remember that trap-shooting is an art which requires study as well as natural qualifications in order to produce the highest and most lasting success.

LONDON, Aug. 15. A. S. W.

The Union Defeats the Endeavor.

JERSEY CITY, N. J., Sept. 7.—To-day the Endeavor Gun Club journeyed to Enoch Miller's to have a friendly match with the Unions. The day was hazy and once in a while a spurt of rain fell. At Mr. Miller's suggestion, a very nice trip was made of it by taking the P. R. R. as far as Newark, and thence by trolley to Irvington and there taking a stage to the shooting grounds. The ride on the stage being the best sort of the trip, as it took us through a delightful country and along the bicycle path from Irvington to Melburn, where, in spite of the weather, many bicyclists were passed in all kinds of the latest costumes. The country being fresh from the rain was a pretty green, while the Orange Heights in the distance loomed up in the mist

On arriving at the grounds we found the Union team waiting for us. After a cordial greeting by Mr. Miller all took part in a sweepstake to warm them up. The Endavors were received in a very hospitable manner and the vote was unanimous that it was one of most pleasant days we ever spent. For this we have to thank the Union Gun Club and hope to give them as good a time when they come to see us.

In the record which follows some excellent scores will be found when one considers the conditions shot in. There was a fine mist over the grounds while we were shooting. However, nothing could keep Enoch from making a clean score, hitting every target in the eye. Others made good scores also, as follows:

Union.

R. H. STRADER.

Climax Club Shoot.

PLAINFIELD, N. J., Sept. 5.—The Climax Gun Club, of this place, held its regular monthly shoot at Benner's Fanwood Road House grounds this afternoon, fifteen members putting in an appearance. Lou Erhardt, of Atchison, Kansas, was a guest of the club, and made his presence felt when it came to breaking targets. J. "Grier," a Dunellen shooter whose handicap was reduced from 10 to 8, found no trouble in breaking 30 out of his 35, and D. Darby succeeded in scoring 28 out of 30. Neaf Apgar and Tom Brantingham, whom it was a pleasure to see once more shooting in his old style, both broke 25 straight in the club shoot; Keller and "Dutchy," both scratch men also, each scored 23. J. Swody, with a handicap allowance of six extra targets, scored 23 also. Manning and Williams, 22 each, and Stephenson 20, were the only other shooters to add points to their scores already recorded. Erhardt shot along in the club shoot for the optional sweep which was gotten up in connection therewith; he scored 23 out of his 25. The table of scores made in the sweeps shot during the afternoon shows that the boys were in good shape. Apgar, Keller and "Dutchy" being especially to the fore, their scores in No. 5, five pairs, being worth looking at. Scores of the club shoot:

Club shoot, 25 targets, allowance of extra targets, unknown angles:

J "Grier" (8)	1110111111111111111111111011111011—30

C. MATTHAI, Scorer.

West Newburgh G. and R. Association.

NEWBURGH, N. Y., Sept. 5.—Nine of the members of the West Newburgh Gun and Rifle Association took part in the club prize contest this afternoon. This contest is at 25 targets, each man shooting at 10 targets, known angles, 3 pairs and 9 targets, unknown angles. Chadwick, with a handicap allowance of 10 misses as breaks, won a heat for first prize, Lenone with a handicap of 2 winning a heat for second prize. The following were the scores made at targets:

Chadwick	0111000101	11 10 01	110010101	—10—24
Lenone	0111111111	10 10 10	111111101	— 2—22

DAVID BROWN, Pres.

More Kind Words.

WILLIAMSPORT, Pa., Sept. 3.—*Editor Forest and Stream:* I am highly pleased with your report of our recent State shoot. It certainly is a pleasure to glance over such a complete and well-arranged report. I am sure it will be highly appreciated by the sportsmen not alone in our State, but everywhere. N. A. HUGHES,

Ex-Pres. Pennsylvania State Sportsmen's Association.

The Frederick Tournament.

FREDERICK, Md., Aug. 29.—The two days' Interstate shooting tournament held under the auspices of the Frederick, Md., Gun Club, was successfully brought to a close to-day. The weather was very warm, in fact, the boys said it was hot, spelled with an H. This being our maiden effort, we think we have cause for congratulation, as everybody seemed to have had a good time. The event of the meeting was the five-men team race at 20 targets per man. This was shot on the first day and was won by the No. 1 team of the Standard Gun Club, of Baltimore, with a score of 80 out of 100. Below are scores showing the totals made in all the events, together with detailed scores of the team race above mentioned, and the 50-target race shot on the second day. The latter race was won by Bond, who scored 47 breaks.

First Day.

On the first day all events were at known traps, unknown angles, except event No. 8, team shoot, which was known traps and angles:

W. H. KEEFER, Cor. Sec'y.

New Jersey Trap-Shooters' League.

THE SOUTH SIDE TOURNAMENT.

THE South Side Gun Club, of Newark, N. J., had originally intended holding a two-days' shoot on Monday and Tuesday of last week, Sept. 2, 3. As soon, however, as the club found that the Endeavor Gun Club, of Jersey City, had a claim to the date of Sept. 2, which dated back for four years, it withdrew from its position and announced a one-day tournament for Sept. 3. This graceful act on the part of the South Side will be remembered by the "Endeavorers" and their friends.

In conjunction with the all-day shoot of Sept. 3, the South Side Club announced that the eighth contest of the New Jersey Trap-Shooters' League for 1895 would take place at 2 P. M. These contests have probably done more for trap-shooting in New Jersey than anything of a similar nature. They have admirably succeeded in bringing together a large number of shooters who would otherwise have remained in ignorance of one another's existence; they have created an *esprit de corps* among the clubs comprising the league which it would be difficult, if not impossible, to excite in any other way; they have also aided in bringing out young shots who are, by means of these contests, able to measure their strength against that of more mature trap-shooters. They are an excellent institution.

The South Side Gun Club boasts a record hard to be beaten. During its nearly sixteen years of existence there has not been a single Saturday afternoon when the club house has not been open and everything ready for shooting. Strangers are welcome; for their benefit we will state that to reach the grounds they should take one of the P. R. R. trains which stop at Emmett street, Newark, or else take an electric car from the Market street depot, Newark (any police officer or conductor of trolley car will tell which car); either of these ways to reach the grounds will bring you within three minutes' walk of the club house. Remember the South Siders receive every Saturday afternoon.

A recent addition has been made to the property of the club in the shape of a shed-roof over the score. This is not an unmixed blessing, although it will be a great comfort in rainy weather. The trouble seems to be that the roof acts as a sounding board, making the crack of the guns trying to people with delicate tympanums (or tympani). A little cotton in the ears remedies all the trouble, and as soon as the boys catch on they will approve of the new building.

The attendance was not so large as usual, only six clubs being represented in the team race Maplewood was an absentee, probably due to the fact that that club felt perfectly secure of its position as first in the race. The other two delinquents (that sounds a hard name, but it does not mean so much as it appears to do) were the Riverside, of Red Bank, N. J., and the Union Hill, of Hoboken, N. J. The clubs entering teams were: Union, of Springfield; Climax, of Plainfield; South Side, of Newark; Elizabeth Gun Club; Boiling Springs, of Rutherford, and Endeavor, of Jersey City. The scores, which are given below, show that in this race the teams finished in the above order, the Union team making the good score of 111 out of 125 at unknown angles.

Among the shooters, besides the men on the above teams, were: F. Van Dyke and Warren Smith, two of Maplewood's cracks; Lou Erhardt, of Atchison, Kansas, was also present and willing to shoot any event going; there was also Capt. A. W. Money, of the American E. C. Powder Company. The above four did not like to sit still and let everybody else do the shooting, especially as an optional sweep had been gotten up on the 25 targets shot at in the the team race. After raking around a squad, entitled the "Imbeciles," was made up with Edwards as fifth man. This squad shot last and didn't do a thing but break 115 out of 125, beating the Union's score by four targets. Warren Smith was particularly unfortunate in not being able to have his score counted for the averages, as he made the only 25 straight score during the contest. Van Dyke, who has five scores to his credit that are hard to beat—25, 24, 24, 24 and 23—would not have improved his average, having already a 23 to his credit. Warren Smith's percentage would be 88, tieing for ninth place with Hebbard and Collins.

The scores in the League team race above mentioned were as follows:

Teams of five men from one club, 25 targets per man, unknown angles:

Union.

Edwards	11101011110111111111111111—22—115

*Ingram, a member of the Endeavor Gun Club, who had arrived too late to shoot on his club's team, shot along with the "Imbeciles" to fill out the squad. He scored 23, missing his 8th and 12th targets, making the average for the whole squad the same that it was for the team—92 per cent.

The final results of these team contests are based on "the five best scores to count," each team therefore tries to improve some previous poor score. Several improvements are noted as the consequence of this shoot, the South Side, Union, Boiling Springs, Climax and Elizabeth all swelling their percentages. The following shows how the clubs stand, figuring upon the above basis:

	Shot at.	Broke.	Per cent.		Shot at.	Broke.	Per cent.
Maplewood	625	539	86.2	Elizabeth	625	513	82
South Side	625	523	83.6	Endeavor	625	478	76.4
Union	625	532	85.6	Riverside	375	254	67.7
Boiling Spr'gs	625	514	82.2	Union Hill	625	340	54.4
Climax	625	513	82				

There are twenty-seven individuals who shot in three or more of the team races. To qualify for prizes the shooter must have taken part in at least five of such contests, the basis on which the prizes are awarded being the same as in the case of the teams. Following are the records of the twenty-seven in order of merit:

	Shot at.	Broke.	Per cent.		Shot at.	Broke.	Per cent.
Van Dyke	125	120	96	"Williams"	125	108	86.4
Drake	125	115	92	Yeomans (4)	100	86	86
A Sickley	125	115	92	Breintnall	125	107	85.6
McAlpin	125	114	91.2	Geoffroy	125	107	85.6
Apgar	125	113	90.4	Thomas	125	107	85.6
Sigler	125	113	90.4	E Sickley	125	106	84.8
Irvins (3)	75	67	89.3	Parker	125	105	84
Miller	125	111	88.8	Woodruff	125	105	84
Collins	125	110	88	Huck	125	104	83.2
Hebbard	125	110	88	Keller	125	104	83.2
N E Money	125	109	87.2	W Smith	125	103	82.4
Whitehead	125	109	87.2	Krebs (4)	100	82	82
Hoffman	125	108	86.4	Greiff	125	101	80.8
C Smith	125	108	86.4				

Besides the above, sixty-three other shooters have taken part in one or more of the team races.

Owing probably to the shoot at Marion on the previous day (Labor Day), shooters were somewhat slack in putting in an appearance, but when they did get to the grounds W. R. Hobart, the secretary of the club, kept things hustling in the old South Side style. The table given below shows that the boys were not slow when once they got before the traps:

Events.	1	2	3	4	5	6	7	8	9	10	11	12	13

R. H. MCHIE, Sec'y.

An All-Day Shoot at Kewanee.

KEWANEE, Ill., Aug. 29.—The Kewanee Gun Club held a one-day amateur tournament to-day, but owing to a very hard rain that set in last night, and which continued until 10 o'clock this A. M., the attendance was small. All that were there enjoyed themselves until it was too dark to shoot any more. Among the visitors were L. C. Miller, McQuaid, Thompson, Howat and O'Neil, from Canton, Ill.; Gemmett ("Keeder"), from Ft. Madison, Iowa; Day, Oneida, Ill.; Alexander and Stapleton, from Sheffield, Ill.; Bacon, of Chicago; Kemerling, Holdridge, Grier, Cady and Ole, of Annawan, Ill.; Snow, Studley, E. H. Miller, Norton, Robinson and Lyle, of Neponset, Ill. The scores were as follows:

Special team match, two men to team, 25 singles each, entrance $5:

Robinson	11111111101111111110111—23
Lyle	10111010111111111111111111—22—45
Alexander	11111110111011111111111000—20
Day	11101111110110111011111101—20—40
Studley	01101011011111101011011101—18
Snow	11101110111111111111111101—22—40
Baker	11111111101111101111111111—23
Huckins	11111111111111101111111111—24—47
L C Miller	10101111011111111111111111—21
Thompson	11101011111011111111111111—22—43

The following table shows the number shot at and broken by each contestant, together with each individual's percentage:

	Shot at.	Broke.	Per cent.		Shot at.	Broke.	Per cent.
Baker	232	194	83.6	Williams	95	68	71.6

L. C. HUCKINS.

Trap Notes from Milwaukee.

DEITER DEFEATS SMITH.

MILWAUKEE, Wis., Aug. 29.—George Deiter, of this city, and J. J. Smith, of Evanston, Ill., shot a match to-day on the grounds of the National Gun Club, of Milwaukee. The conditions were: 100 live birds per man, $100 a side, the contest being governed by Illinois State rules.

At the end of the first 25 Smith led by two birds, having scored 23 to Deiter's 21. Both killed 23 in the next round, so that positions were unchanged at the end of the 50th round, the score standing: Smith 46, Deiter 44. Out of their next 25 each scored only 20, so that no change of position was chronicled when each man had shot at 75 birds, the score standing then: Smith 66, Deiter 64. Smith then lost his 77th dead out of bounds, reducing his lead to one. Both men missed their 89th birds, but Smith losing his 90th the score was a tie, with only 10 birds to shoot at. The 93d and 93th rounds were fatal to Smith's chances, as he let both his birds get away. Deiter killing his last 10 straight won the match by two birds, having shot an up-hill race from the start. The full score was: Deiter 88, Smith 86. The detailed score, showing the flight of each bird, follows:

THEO. A. THOMAS.

Grand Rapids Won Easily.

GRAND RAPIDS, Mich., Aug. 24.—Our shoot this week, combining the regular weekly club shoot and the State team championship race between the Valley City Gun Club and the Zeeland Rod and Gun Club, has created a great deal of interest. The Zeeland team came with a large company, including a number of their fair friends. The local club turned out in force. The avowed determination of the visitors to do up the champions, and their high reputation as field shots, had made the contest a universal topic of conversation for some weeks, and a close race was expected. The local papers gave the event considerable prominence, the Grand Rapids *Herald* publishing portraits of both teams.

The result was a surprise to all, for while the home team were sanguine of winning, in their practice shoots there usually has been an off day for some member to pull down the others, but to-day every man was in great form, and the score is the highest yet made among the State teams. Some of the scores made by the visitors in the sweeps following the main event show that when some of the younger members will have more confidence in their ability to shoot in public later on. Scores of sweeps:

Events:	1	2	3	4	5	6

O. F. ROOD, Secretary.

The Proposed Shoot At Baltimore.

ALTHOUGH no programme for the proposed big live-bird tournament to be held at Baltimore, Md., from Oct. 22-26, has been gotten out as yet, we are in a position to give briefly what is practically a synopsis of the programme that will appear shortly. The $1,000 guaranteed purse in the DuPont Smokeless Powder handicap referred to below will, we understand, be guaranteed by the E. I. DuPont de Nemours & Co., familiarly known as the DuPont Powder Company. Following are the particulars mentioned:

"Commencing Tuesday, Oct. 22, in the city of Baltimore, Md., and continuing throughout the week, will be given by Messrs. E. I. DuPont de Nemours & Co., of Wilmington, Del., manufacturers of the DuPont Smokeless Powder, what is intended to be the most stupendous live-bird shooting tourney ever held in America. There will be five days of shooting, consisting of three days of set programme events. On the third day the DuPont Smokeless Powder grand annual championship handicap, for a championship trophy, will be begun and continued until finished. The prize in this event will be a $1,000 guaranteed purse to which will be added all surplus money.

"Besides the money prize there will be a championship trophy of the value of $500 to be held in trust. The possession of this trophy will be a matter of competition by challenge, but the management of the tournament will redeem it annually for $100, so that it may be used in the annual tournaments to follow as the emblem of championship. Conditions of the race are set forth below:

"Programme of tournament to be as follows: Tuesday, Oct. 22, first day.—First event, 5 birds, $5 entrance; second event, 7 birds, $7 entrance; third, 10 birds, $10 entrance; fourth, Baltimore handicap, 15 birds, $15 entrance; fifth, miss-and-out, $5 entrance. Wednesday, Oct. 23, second day.—First event, 5 birds, $5 entrance; second, 7 birds, $7 entrance; third, 10 birds, $10 entrance; fourth, Monumental City handicap, 20 birds, $20 entrance; fifth, miss-and-out, $5 entrance. Thursday, Oct. 24, third day —Grand DuPont Smokeless Powder championship handicap, 25 birds, $25 entrance, $1,000 guaranteed, divided 40, 30, 20 and 10 per cent., high guns to take the money and champion to hold the trophy in trust from year to year subject to redemption for $100 cash at each annual tournament.

"The winner of this trophy is to be open to challenge from any person in America, a member in good standing of any organized gun club, for $50 a side. The forfeit for a match to be $25, to be deposited either with the *American Field*, of Chicago, FOREST AND STREAM or *Shooting and Fishing*, of New York. The Messrs. DuPont are to be notified of challenge, they to have the appointing of referee. The holder of trophy will have the privilege of naming time, place and number of birds (if more than 25) to be shot at. Both contestants to stand at 30yds. mark, regardless of handicap in grand event.

"For the handicaps the classification committee will consist of nine experts, one from each of the following places: New York, New Jersey, San Francisco, Chicago, Charlotte, N. C., New Orleans, Boston, Knoxville and Memphis, Tenn. Each shooter will be handicapped according to his record.

"The forfeit money in the Grand Handicap will be $10, which the treasurer or the tournament will be in a position to receive shortly. When the forfeit is paid the entry will receive his handicap and a distinctive button to wear. This will entitle him to shoot in the Grand Handicap by paying the balance of $15. The entry list will be held open until 9 o'clock the morning of the event, Thursday, Oct 24."

The San Antonio Gun Club's Tournament.

THE San Antonio (Texas) Gun Club, as announced in "Drivers and Twisters" of our last issue, will add $1,000 to the purses at its tournament on Oct. 27-30. The club has the indorsement of the Business Men's Club, of San Antonio, as will be seen from the following letter:

"SAN ANTONIO, July 10.—W. L. Simpson, secretary of San Antonio Gun Club.—Dear Sir: At a meeting of the board of directors of the Business Men's Club held yesterday the following resolution was unanimously adopted:

"Be it resolved, that in view of the fact that the San Antonio Gun Club, a chartered organization of this city, have announced their determination to hold a grand State shooting tournament in this city this fall, and having in mind the prominence this will give our city and the advertising advantages to be derived from the same, the Business Men's Club, of San Antonio, do indorse this tournament and commend the enterprise of the San Antonio Gun Club. With best wishes that the coming State tournament will prove a pleasant occasion and a great success, I am yours truly, H. L. BENSON, Sec'y."

Bronx River Gun Club.

NEW YORK, Aug. 31.—The Bronx River Gun Club held its monthly shoot this afternoon on its grounds at West Farms, N. Y. The medal shoot is at 25 targets, and this afternoon three members, Zorn, Pringle and Loomis, tied for the gold medal in Class A with 21 breaks each. They shot off the tie at 10 targets, Zorn winning by scoring 9 to 7 each made by his opponents. Herrington won the medal in Class B.

All future shoots of this club will be held on the new shooting grounds at Baychester, N. Y., instead of on the above grounds. The Baychester grounds, which will be ready for use on Oct. 26, will be under the management of Messrs. E. P. Miller and C. Zorn.

The scores in to-day's shoot were as follows:

B G Loomis.....1111101111111111001101111—21
M Herrington.....1100011011101111111101010—17

JOHN T. MURPHY, Sec'y.

The Morgan's Grove Shoot.

SHEPHERDSTOWN, W. Va., Sept. 5.—The two days' tournament given annually by the Morgan's Grove Agricultural, Mechanical and Live Stock Exhibition Association was managed this year by Elmer Shaner, on behalf of the Interstate Association. It was brought to a close after a capital two days' sport, the result of Mr. Shaner's excellent management. The number of shooters present was somewhat disappointing, but the second day had a larger list of entries than the first. Among those present were: "U. M. C." Thomas, of Bridgeport, Conn.; Porterfield, representing DuPont's Smokeless; Bond, Claridge, Hawkins, Waters, and L. D. Thomas, all of Baltimore, Mr. Thomas representing Laflin & Rand's Troisdorf; Dr. "Brown," of Ellicott City, Md.; the Haddox brothers, Winchester, Va.; Smith, of Frederick, Md., with a lot of local lights who helped to swell the list of entries with considerable spirit.

On the first day the majority of those shooting fired no less than 215 shots, the programme containing ten 15-target races and the Morgan's Grove trophy contest at 50 targets per man. In addition to the above an extra at 15 targets was also shot. The chief event was, of course, the Morgan's Grove contest. This year the prize was an L. C. Smith hammerless gun, the conditions being 50 targets, unknown angles, entrance, price of targets. The winner was B W. Claridge, of Baltimore, who broke 46. Bond was second with 44, and Hawkins third with 43. Dr. "Brown" and Hood tied for fourth place with 41 each.

The shooting of the two days passed off very smoothly, not a kick being heard, and not over a dozen or so of the targets being broken in the traps. Too much cannot be said in praise of Mr. Shaner's management. Dr. "Brown," who scored the high averages on the first day, shot a Winchester repeater and DuPont powder. The scores, as a whole, are a good average, as the targets were thrown far and fast. Scores made in the Morgan's Grove trophy contest are as follows:

Claridge.....1111111110011101111111111111111111111011111111—46
Bond.....1101111111111111111111111111111111100010111111111—44

Pence.....0000010101000101009010000— 6

The table below gives the scores made in each of the programme events, exclusive of the two special races the scores of which are given in detail above. From this table it will be seen that U. M. C., Porterfield, Claridge and Hawkins shot in all the events on both days. The averages made by the leading men were:

	First Day.			*Second Day.*			*General Average.*		
	Shot at.	Broke.	Av.	Shot at.	Broke.	Av.	Shot at.	Broke.	Av.
U. M. C.	150	114	76	150	123	81.3	300	236	78.6
Porterfield	150	127	84.6	150	119	79.3	300	246	82.
Claridge	150	116	84	150	125	83.3	300	251	83.6
Hawkins	150	127	84.6	150	133	88.6	300	260	86.6
Hood	150	127	84.6	135	105	77.7	285	232	81.4
Brown	150	130	86.6						
Bond	135	116	85.9						

From these figures it will be noted that Brown led on the first day with 86.6, being closely followed by Bond with 85 9; Porterfield, Hawkins and Hood tied for third place with an average of 84.6, Claridge being fourth with 84. On the second day neither Brown nor Bond were in evidence, but Hawkins shot a good gait, breaking 88.6 per cent. in the programme events. Claridge was second with 83 3, U. M. C. taking third place with 81.3. The general averages show Hawkins firs: with 86.6 per cent., with Claridge, Porterfield, Hood and U. M. C. following him in the order named.

An extra event, 15 targets, unknown angles, $1, was also shot on the first day with the following result: Hood and Claridge 14, U. M. C. and Brown 13, Hawkins and J. P. 12, Porterfield, Smith and Bond 11, G. W. Haddox 10.

The table referred to above is as follows:

U M C	12	11	15	9	12	12	10	11	13	9	12	15	13	13	8	13	13	12	13	10

Grantham	..	..	..	..	..	..	..	..	..	..	7	..	3	..	..	..	..	8	..	..
Crittenden	..	..	..	..	..	..	..	..	..	..	..	..	2	..	..	..	..	..	..	..

The entrance moneys in the above events were what may be termed "popular prices." Each event was at 15 targets, the entrance money in each of the odd events being $1; in the even numbered events it was $1 50. Nos. 1 to 10 were shot on the first day, Nos. 11 to 20 on the second day. SAM'L J. FORT, M.D.

Trap at Michigan City.

MICHIGAN CITY, Miss., Aug. 29.—The regular weekly shoot of the Michigan City Gun Club took place to-day, a number of enthusiasts taking part. The failure of the day was the four-men team race between the Michigan City and the Grand Junction Gun Clubs, the rainy weather keeping several of the best shots of both clubs from shooting. This fact, together with the darkness of the day and the acute angles at which the targets were thrown, will account for the poor scores made. Tway, as usual, was top of the list with an average of 88 per cent., while last week his average at Grand Junction was 90 per cent. Another team race between these two clubs will be shot in the near future. Scores of to-day's shoot were as follows:

Team race, 25 targets per man:

Grand Junction.	
Tway	1111111101011111111111119—22
T Prewitt	0110011101111101001011110—16
J Prewitt	1101101000011011000010—12
Smith	0001000000011101010000001— 8—58
Michigan City.	
Hardaway	1111111001011011101010010—17
Mitchell	1100010101101010101010000—12
Graham	0001000010011011000010—10
Aldrich	1110010100001000011000110— 9—48

Other scores were:

No. 1, 10 targets, unknown angles: Tway 9, Aldrich and Hardaway 8, Mitchell 7, Graham, T. Prewitt and J. H. Prewitt 5, Smith 1.

No. 2, 15 targets, unknown angles: Tway 13, Hardaway 12, T. Prewitt 7, Graham, Mitchell and J. Prewitt 6, Smith 5, Aldrich 4.

SECRETARY.

Binghamton Gun Club.

BINGHAMTON, N. Y., Sept 5.—The following 10-target sweeps, $1.50 entrance, were shot by the members of the Binghamton Gun Club at the regular weekly shoot held to-day:

H. W. B.

Trap around Altoona.

ALTOONA, Pa., Sept. 7.—Several interesting live-bird sweeps were shot this forenoon by members of the Altoona Gun Club. Buffalo Bill's Wild West show was here to-day and it was the intention of the club management to have Miss Annie Oakley participate in such a series of races as might please her.

The fates were against this, however, for many little mishaps baffled the shrewd management of the wiley Bill, and they did not arrive from their engagement in the "Flood City" until a late hour. As a result Miss Oakley had no time to spare, much to her chagrin, for when Bill Clark and I called on her at their tent later in the day both she and Mr. Butler expressed themselves as being very much disappointed at not being able to enjoy themselves for a while outside the show life.

They made immediate inquiry about the welfare of friends they had met during their visit here in March, 1893. They wanted to know, too, when we had last heard from Ed Banks, whom FOREST AND STREAM captured from our midst just about a year ago.

That visit to Altoona Miss Oakley will probably never forget. She arrived here, if I remember correctly, on a Friday evening, having stopped off while on her journey at the home of her childhood, Woodland, O. The weather was delightful, the winter's snow having gone, and promises of spring visible on all sides. The gun club had made every arrangement to have an enjoyable day's outing at its Wopsononock grounds. Live and inanimate targets had been provided in numbers to satisfy everybody. By Saturday morning, however, a raging storm had set in, such as Wopsononock Mountain visitors are so familiar with, and at 9 o'clock the falling snow was drifting into thousands of different shapes and forms. A few faced the storm, but Miss Oakley remained in her hotel. Some inanimates were broken during the early part of the day, but the elements finally prevailed, and the occasion ended in disappointment. But this was not the saddest part of Miss Oakley's experience. During this cold snap she lost by death her very valuable St. Bernard dog, the one for which she had refused so much money, and to which she had been so much attached. To that loss she referred to-day, and says it is her only sad thought in connection with her vi it to Pennsylvania. She is looking natural, but quite fatigued from the continuous labors of engagements that have given her no rest for a period of over eighteen months.

In the sweeps above referred to the stakes were divided into two moneys except the miss-and-out, which was divided among the high guns on account of the birds running out. The referee's work was a good lot. Tom House officiated in the capacity of referee.

The scores in detail follow:

The miss-and-out resulted as follows: Clark, Sands and Bell 3, Clover 1, House 0.

Following the live bird events these inanimate sweeps were shot off, the stakes going to the high gun and ties shot off in next event. Known traps and unknown angles. Ten targets in each event.

Events:	1	2	3	4	Events:	1	2	3	4
Sanders	9	7	5	7	Clover	5	7	9	7
Bell	10	7	10	8	House	9	7	7	..

A live bird race, 50 birds each, for $50 a side, has been arranged between William Sands, of Altoona, and E. J. Adams, of Mifflin, Pa., as an outcome of the recent races at Mifflin. The money has been deposited with Bill Clark, who will act as referee. The event will take place at Mifflin, probably, on next Friday afternoon, Sept. 13. Much speculation is being indulged in on the outcome. Both are experienced shots and the race will be a good one.

The Altoona Gun Club will give an afternoon's shoot at inanimates on next Saturday in honor of the Huntingdon (Pa.) Gun Club Several team races will be shot and the remainder of the afternoon devoted to sweeps. GRANT.

Dunellen vs. Plainfield.

DUNELLEN, N. J., Aug. 24.—To-day a team race, twelve men a side, was shot on the grounds of the Dunellen Gun Club, between the home club and a team of Plainfield men, the majority of whom were members of the Climax Gun Club. As will be seen, Dunellen came out ahead by 33 targets, breaking 204 to 171 by their opponents. Score:

Dunellen.

A ten-target race, entrance 50cts., was also shot, there being four merchandise prizes put up for competition. George Robertson with 8 won first prize. Taylor and Bill Jones tied for second prize with 7 each and shot off at five targets, Taylor winning by 5 to 4. Erhardt, Cochrane, Craft and Ingram tied for third prize with 6 each, the decision of this tie being left until our next shoot. Beadles scored 4 and won fourth prize. T. J. MOORE, Sec'y.

Elkwood Park Shooting Grounds.

THESE grounds are now open every day for both live bird and inanimate target shooting. A good stock of pigeons always on hand. The nearest station is Branchport, N. J., one mile distant. Hacks meet every train. Parties desiring to secure the grounds for either practice shooting or for matches should address Phil Daly, Jr., Long Branch, N. J.—*Adv.*

ANSWERS TO CORRESPONDENTS.

G. S., Allegheny, Pa.—Which gun will give the best penetration at 60yds., a 16ga., 12ga, or 10 a , each gun to be loaded with its best load? Ans. There is no great difference in the penetration between the guns named, but as a general thing the 12ga. will give a greater penetration at 60yds. than the 16ga., and the 10ga. greater than either 12 or 16ga.

It will give us great pleasure to forward a copy of our catalogue to any one who "goes a-fishing." Some people charge for their catalogues, some charge for the postage, some charge for both. We are more than willing to give away our catalogues and prepay postage on them. No angler, after looking at the catalogue, can resist buying from us or from our trade-customers all the fishing-tackle he can afford to pay for. That is where WE get back a good deal more than cost of catalogue and postage.

ABBEY & IMBRIE,

18 VESEY STREET, NEW YORK CITY

MARSTERS HAS WORMS.

Sand Worms, 12c. per dozen. White or Blood Worms, 25c. per dozen.

I am with you again with lower prices for Fishing Tackle. I find by experience that putting down the prices and increasing the quality, increases my business every year.

FOREST AND STREAM'S OUTDOOR SCENES.

FROM ORIGINALS IN WATER COLORS AND OIL, PAINTED EXPRESSLY FOR THE FOREST AND STREAM.

HE'S GOT THEM.

AS PREMIUMS.

We have prepared as premiums a set of four beautiful and artistic reproductions of original paintings of realistic outdoor scenes. The art work is the best obtainable in New York; the pictures are rich in effect and are intended for framing. They are done in 12 colors. The yacht race is from an oil painting; the others from water colors. The scenes are shown in the small cuts herewith. The plates are 14¾ x 19in. The pictures are sent both to **new** subscribers and to **old** subscribers upon renewal, on the following terms:

Forest and Stream *one year and the four pictures*, **$5.**
Forest and Stream *6 months and any two pictures*, **$3.**

If subscribing for 6 mos. designate by title the two pictures desired. Single pictures will be sold separately, price $1.50 each, or the set, $5. Remit by express or postal money order, payable to Forest and Stream Publishing Co., 318 Broadway, New York.

The pictures are sent by mail, postpaid, wrapped in tube.

Copies of them may be seen at this office, and inspection is invited.

BASS FISHING AT BLOCK ISLAND.

JACKSNIPE COMING IN.

VIGILANT AND VALKYRIE.

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2. | NEW YORK, SATURDAY, SEPTEMBER 21, 1895. | VOL. XLV.—No. 12. No. 318 BROADWAY NEW YORK.

For Prospectus and Advertising Rates see Page iii.

The FOREST AND STREAM is put to press on Tuesdays. Correspondence intended for publication should reach us by Mondays and as much earlier as may be practicable.

Forest and Stream Water Colors

We have prepared as premiums a series of four artistic and beautiful reproductions of original water colors, painted expressly for the FOREST AND STREAM. The subjects are outdoor scenes:

Jacksnipe Coming In. "He's Got Them" (Quail Shooting). Vigilant and Valkyrie. Bass Fishing at Block Island.

SEE REDUCED HALF-TONES IN OUR ADVT. COLUMNS.

The plates are for frames 14 x 19 in. They are done in twelve colors, and are rich in effect. They are furnished to old or new subscribers on the following terms:

Forest and Stream *one year and the set of four pictures*, $5.
Forest and Stream *6 months and any two of the pictures*, $3.
Price of the pictures alone, $1.50 each; $5 for the set.

Remit by express money order or postal money order. Make orders payable to

FOREST AND STREAM PUB. CO., New York.

WOLVES IN THE ADIRONDACKS.

DR. W. SEWARD WEBB confirms the report of the killing of a gray wolf in Nehasane Park, and informs us that it was captured by George Muir at Gull Lake the first week in June of the present year. This is, in our opinion, the most interesting piece of information with regard to the Adirondacks that has come to light for many a day. It has generally been conceded for a number of years past that wolves were extinct in this region, and our account of the wolf killed at Brandreth Lake two years ago was a source of surprise to many. In commenting upon this wolf we said, "This country in the vicinity of Brandreth Lake is one of the last strongholds of the wolf in the Eastern States, certainly the last in New York State, and it is interesting to note that probably a small remnant of the once proud race still lingers in this locality." Gull Lake is only ten miles in an air line from Brandreth Lake, and Dr. Webb informs us that there is at least one more wolf in that neighborhood, while reports from other sources would indicate that there are several others within a radius of twenty miles.

The subject is one of extreme interest from more than one standpoint, and it is not at all impossible that we may see a return of wolves to the Adirondacks under the changed conditions which obtain there at present, though of course it is not likely that they will ever increase to any great extent.

Judging from the data which we possess it seems reasonably certain that the main cause for the wolves leaving the Adirondacks was the scarcity of the food supply. We have seen the same thing in Maine and other wild countries. The wolves prey upon deer principally, and with such relentless ferocity that large areas are depopulated so that scarcely a deer remains. The early settlers of the Adirondacks were in their hunting instincts scarcely less humane than the wolves, and before the period of strict game laws and game law enforcement the deer led an unenviable existence. They were between the devil and the deep sea; the wolves in the wilderness drove them out to the settlements, and the hunters there slaughtered them in the deep snows when utterly helpless. Under such conditions it was only a question of time till the deer should be annihilated. They had no refuge or asylum, and both wolves and hunters killed when they had the opportunity without restraint and left to rot what they could not use.

In Vermont this thing actually happened, and they had to import deer from a distance when they wished to restock their woods. In Maine and the Adirondacks there were great sections of wild country where never a deer was seen, and where in winter one could travel for days without crossing a deer's trail. Here and there, however, a few deer had escaped, and these are the seed from which the present stock has sprung.

When the wolves found that the deer were gone there was but one course open to them, and they migrated. The bounty records of the Adirondacks show conclusively that their disappearance was not caused by any killing by the settlers. They simply were starved out. This is the history of the wolves everywhere where man has taken a hand and aided them in the slaughter of the game. Soon the supply is exhausted, and the wolves have to look out for other fields.

Of recent years a great change has taken place in the Adirondacks. Large sections of the country are now controlled by clubs and speculators who hold their land for clubs, and closed to general hunting as much as in the days when all was wilderness, untrodden by the foot of civilized man. There are thousands of acres where no hunting at all is permitted, and thousands more where the hunting is so limited as to have little or no effect upon the deer supply. Add to this the fact that the deer everywhere are carefully protected by the game laws and that crusting is a thing of the past, and it is not surprising to learn that the deer everywhere, except around the outskirts and the few places where promiscuous hunting is allowed, have multiplied tenfold. We do not believe it an exaggeration to say that there are at present more deer in the Adirondacks than there ever were. The same thing is true of Maine and other game sections in the East. Nor is it difficult to account for the increase, as it is a direct result of the disappearance of market-hunting, crust-hunting and the wolves.

As things are at present, the Adirondacks would be a paradise for wolves—not an army of wolves perhaps, but a few well-drilled and shrewd bands, hunting by twos and threes and giving a wide berth to man. There is room enough for them and an inexhaustible supply of food, and the danger is not so great as it was a few years ago. Not only are there large areas that no hunters invade, but there are also considerable sections where no trapping is allowed. The old generation of hunters has passed away, tracking on the snow is no longer legal, and there are few men in the woods to-day who would recognize a wolf's trail if they saw it.

Under such conditions it is not impossible that the howl of the old freebooters may once again become common in the more remote parts of the Adirondacks.

THE EARL AND THE CUP.

WE would be glad to think that we had been mistaken in the estimate which we some time since made of the Earl of Dunraven as a sportsman, but the events of the past week have confirmed only too fully our opinion of his lack of true sportsmanlike principle and the selfishness of his motives.

At the time some seven or eight years ago when Lord Dunraven abandoned a not very successful political career and first took up yachting, a very serious dispute was on between the New York Yacht Club and British yachtsmen. The charges were made against the club, as we still believe correctly, that in assuming the ownership of the America's Cup and making new conditions to govern the contests for it, the club had acted illegally and unfairly, having no right to establish any conditions of its own and having gone further in establishing very unfair ones. So serious was the dispute that the Royal Yacht Squadron had declined to race again for the trophy, and international racing was at a standstill.

The whole future of international racing was, and still is, in our opinion, centered in the question whether the America's Cup as a perpetual challenge trophy for international competition is the common property of all existing yacht clubs, to be raced for on fair and equal terms, or whether it is in effect the private property of the New York Y. C.; the privilege of competing for it being accorded to foreign clubs as a favor and not as a right. Lord Dunraven's advent as a racing yachtsman came when this controversy was at its height, and he first achieved more than a local reputation by sending a challenge in 1889 in the name of the first Valkyrie. How his negotiations with the club failed is still fresh in the memory of American yachtsmen, as is his declaration, oft repeated during the long correspondence, that he did not care for the trophy, but only wished to meet the fastest American yacht. At this time the 70ft. class, with Titania, Katrina and Shamrock, was at its prime. Lord Dunraven's first Valkyrie was of 70ft. waterline, and Gen. Paine had offered a valuable cup for an international race in the class. Had Lord Dunraven come out here with Valkyrie I. and sailed for the Paine cup and other prizes, he would have strengthened the growing opposition to the new deed, have shown himself a bold and disinterested yachtsman and made many friends here. As soon, however, as it was clear that no match could be made for the America's Cup, his ardor cooled, and nothing more was heard of his desire to meet the American yachts.

Another three years with no signs of a challenge brought matters to a pass where, with a change of administrations, the New York Y. C. was on the very eve of making some alteration in the fixed and immutable conditions of the new deed, no more than absolutely necessary, but enough to induce a challenge from a British club. Just at this juncture Lord Dunraven again appeared with a proposal to waive all questions of fairness and legality, provided that he was granted a match with a series of five races and certain other minor conditions. How the match was arranged and finally sailed, by dint of many letters and telegrams and on terms mutually misunderstood and differently interpreted by both parties, is too recent to need repetition here. Lord Dunraven succeeded, by much letter writing and confused correspondence, in involving the Royal Yacht Squadron in a match, in defiance of its previous repudiation of the new deed.

The recent negotiations which have resulted in such a lamentable fiasco were but a repetition in a measure of those of 1892–3, but this time the Squadron had at last reached a better understanding of the true position of affairs; and it was only through the strongest personal efforts of Lord Dunraven that it was finally induced to waive all questions of principle and accept in return certain conditions which Lord Dunraven considered were favorable to him.

The agreement between the New York Yacht Club and Lord Dunraven, consummated last January, was a simple one. The club was to give him perfectly fair conditions to govern the immediate races, conditions which it had denied to such bold yachtsmen as Sir Richard Sutton and Lieut. Henn, and he in return was to secure from the Royal Yacht Squadron a recognition of the right of the New York Y. C. to lay down permanent conditions on which it should hold the America's Cup, and an indorsement of the terms of the new deed of gift as legal, fair and equitable. It must be said that the New York Y. C. has lived up fairly and generously to the letter and spirit of this bargain; it has given to Lord Dunraven terms which are perfectly fair and sportsmanlike, and it has adhered to these terms throughout the series of races. It did refuse the one unreasonable request that, for no valid reason, it should abandon its home waters and sail the races at Newport or Marblehead, but in every other particular the slightest wish of the challenger has been carried out. Considering the treatment he has received from the club, a courtesy and consideration accorded to no previous challenger, the very least that Lord Dunraven could have done on Thursday would have been to restrain his pique and vexation and to sail out the third race. In withdrawing as he did, for mere frivolous reasons, he has shown himself not as a bold and spirited yachtsman who would sail a losing race to a finish, but only as an unsuccessful and disappointed aspirant for the honors of international racing. His yachting career in America is ended, and he has already disappeared from international racing.

It is a remarkable fact that the first challenger who has been allowed to race on perfectly fair and even conditions should be the one to withdraw before the series of races was finished. Had Sir Richard Sutton or Lieut. Henn or Mr. James Bell hauled down his flag and declined to continue a race when hemmed in on every side in the narrow passage that guards the entrance to Upper New York Bay, or in the narrow and tortuous channels about the southwest Spit, no one could have blamed them. They had started on this unfair inside course under protest, and with no chance of winning, but they sailed the races out like men, and when defeated went home without a murmur.

In place of the series of three races—which was all that the previous challengers could obtain, and one of these inside of New York Bay—the last challenger had been granted a series of five races and far outside of Sandy Hook, under special conditions laid down by himself. Unlike the other challengers, he had been here before and knew exactly what he must expect from the attendant fleet, over which the committee can have no control whatever. With such fair opportunities and such full knowledge, there is no justification whatever for the insult which he has offered to the New York Yacht Club and to the people who have twice treated him with exceptional courtesy and hospitality

The Sportsman Tourist.

AN OUTING IN THE SIERRAS.—II.

BOCA, Truckee River.—Leaving Webber Lake at about 2 P. M. on July 29, after a hot and dusty, not particularly interesting drive of twenty-eight miles, Judge Hunt and I reached Boca at about 6 P. M.

Boca is on the line of the C. P. and U. P. R. R., most of its few houses standing on the north side of the railroad and of the Truckee River. It consists principally of the Boca Ice Co., which owns the hotel, the store, immense ice houses in which over thirty thousand tons are stored every winter, and cottages occupied by employees of the company and of the railroad; there is of course a post office, railroad ticket and freight office and a Wells Fargo office, a school and some saloons.

The ice company is a branch of a syndicate which, utilizing here, and at several other locations in the mountains, certain small lakes, furnish to the fruit growing counties ice to preserve the fruit transported East. As the altitude of Boca is about 7,000ft. they are tolerably sure of plenty of freezing weather.

Boca is nine miles east of Truckee, and is considered the best place from which to fish the Truckee River. The hotel is well kept and very comfortable, with prices moderate. At its table we were again impressed, as we were at Webber Lake, with the delicious quality of the milk, cream, butter and beef. A stranger after driving over the dry and burned, apparently barren, or rather pine barren country, is not apt to suspect that anywhere in the vicinity there are pastures which will produce such results, and as in a day's drive he has probably skirted or crossed a number of dried-up watercourses, he wonders what the grass does for water. But he has undoubtedly seen a few bunches of fat young cattle down in some of the valleys; and the juicy steak served to him convinces him.

The Truckee River is full of trout. Like all other trout, though, they have their times for feasting and for fasting, as we found out. A very large proportion are rainbows, and I recognize in the small ones the trout of which I wrote and described in one of my letters from Sitka in 1880, as banded with iridescent hues and caught only for a few days each spring in a small lake which I christened Piseco, just back of the town. There are some "silver trout" and I was told of another variety, which I did not see, the "black trout."

Fishing in the Truckee is about the same as that in any other wide creek or narrow river; at times and places easy, and at others very hard work. It has however two specialties. One it shares in common with all others of the Sierra streams and lakes, a wonderful clearness of the water that makes finest of tackles, smallest of flies and skill in making long casts very necessary, for the trout are shy and wild. The other specialty is its own. From 100 to 200 or 300ft. above it the C. P. Railroad extends. The bank is in most places very steep and in many, where the roadbed has been through rock, consists of the sharp-edged boulders blasted out and reaching well into the stream; and in some places they or great crags jut out, necessitating either a swim or a trip inland and up, which is very trying to comfort and more so to wading boots; mine became sieves on my second day's work.

On our arrival Judge Hunt was not only willing but anxious to begin business at once, and postpone supper; but I was not. The unaccustomed tramping and driving of the last few days had induced in me a disposition to follow Nessmuk's favorite amusement, and "hold down a log"—in my case, though, a comfortable chair on a pleasant piazza, from which a superb mountain view was obtainable. The fact is that, although in all and every other respect an ideal fishing companion, in one the Judge was not fitted to be my "running mate," as I will show by the "rule of three;" for figures which won't lie will be necessary to convince anyone who knows him that in any respect the Judge is lacking. Here are the figures: As 70in. (his height), 63in. (mine), 147lbs. (his weight), mine, which should work out 132; and that is a liberal calculation. If the problem be solved more accurately by Euclid's rule,

Similar parallelopipedons are to each other in the triplicate ratio of their homologous sides.

My weight, if I have correctly multiplied and divided, should be—to correspond with his—about 100lbs. Were that so, I should not be handicapped, but unfortunately I tip the beam at 167lbs.

I admit, though, that it is hardly fair to the Judge (even to make a strong point) to claim that we are "similar parallelopipedons" having homologous sides. Certain curves in my structure are decidedly convex, which in his, except perhaps immediately after dinner, are concave.

But brushing figures aside, facts remain, and for a long climb up a steep hill 7,000ft. in the air on a hot day, the man who carries extra weight, especially if gifted with short legs, is badly handicapped.

All of which is to clear myself of possible charge of undue laziness.

The Judge, who off the bench—perhaps then I was never before him—is one of the most amiable of men, always willing to give the other fellow the first chance at the best pool, yielded to my mood and had his reward, for on the off side of the piazza he discovered a very good shuffle-board. He is an expert at the game and fond of it; I am not; and he got even.

We waited until the train bound West should come, that we might "see off" Mr. and Mrs. Burnham, who had been with us at Webber, then turned in at 10 P. M. to "sleep and dream," and in those dreams to picture—not the fish of to-morrow—but seeing from our windows the headlights and listening to the apparently constantly moving, whistling cars; our fish were monsters with headlights, and not like the "mute little fish that can't spake their wish," as explained to the Widow McAvee, but more like the *Echiostoma barbatum* or *Lynophryne lucifer*, as described and illustrated by Mr. Hudson in the *Cosmopolitan* for September.

The next morning at a comfortable hour—not at sunrise—we cast our lines into the pleasant places of the Truckee.

Sam, with a good team, drove us two or three miles down the river, crossing it twice on good bridges, and after passing through the abandoned hamlet of a dozen cottages, where not even a dog barked at us, left us at Bookhalter's abandoned saw mill, and we cast into the great pool below it. Not instantly, but after quite an interval we decided that we might as well go on. Not a rise, and during that hot forenoon the experiment was often repeated with slight returns.

After lunch though prospects improved, and when Sam came for us we had some forty odd trout ranging from ½ to ¾lbs. Judge Hunt fished altogether with flies, finding the Caddis black ant and gnat the most killing. I used a small Emerich spinner and a grizzly king for deep fly, and both did very well, the spinner the best.

Our arrangements were simple. My maximum cast is not over 30ft., the Judge's 70ft. I fished ahead and took all I could from the pools and holes on our side—scaring many over to the other side—from which the Judge would bring them to basket.

The next day we went over the same ground, but further we tried every device and we caught just nine trout, none of admirable size. The fish would not rise.

The next day we concluded to try nearer home. So tramping down the railroad till we struck a trail down the bank, we in two hours of forenoon took seventeen, and after returning to the hotel, enjoying our dinner and resting off until 4 P. M. we went over the same ground again and took twenty more, all good ones, as were those of the morning.

The next day, Saturday, August 30, was a scorcher; the mercury climbed up into the 90s, and it was with reluctance that we essayed. One single hour without a rise satisfied us and we packed for home, and I gave up for good. Not so the Judge; toward evening he ventured and, to my chagrin, came back with a very handsome lot, among which was our largest—something over 1lb. weight.

And thus ended our Truckee experience. We were—everybody said—too early; the stream was not yet low enough; September is the best time to come, etc. But we were satisfied; we had had fair luck and a pleasant time, and our reminiscences of Boca and the Truckee will be such that we will both be glad of a chance to repeat.

At 9 P. M. we took the train bound West—Judge Hunt for San Francisco, I for Truckee, where I was to sleep and take early stage for Tabor on Sunday morning.

I will next week tell you of the Tabor part of my trip.

PISECO.

IN CAMP WITH A MASCOT.

Editor Forest and Stream:

There is a growing tendency these times to take the women along on your hunting and camping trips, and I have just read the descriptions of two outings wherein it is elaborately described how "She goes along," one by a Michigan and the other a Nebraska correspondent of "our own" paper. It has called to mind a trip which my friend Fred S. and myself took a few years ago, and when Fred took "her"—his wife—along.

Did you ever take a trip into the primeval woods, over sixteen miles of blazed trail, in the month of November and with a woman? If you have not you don't want to. One fall Fred kept teasing me to go with him on a deer hunt. He had found a place, he said, away back among the hills where mast was plenty and deer sign were as the traditional sheep tracks. It was in the month of September and too early for successful still-hunting. I argued we had better wait until later. But Fred would not take no as an answer and finally I had to surrender and was not very sorry to do so either, as any hunter who has been in the same place will know.

We started, equipped for a week in the woods, our duffle contained in knapsacks which were not very heavy, as we are both firm disciples of the illustrious Nessmuk. Fred carried a .38-40 Winchester, I a .38-55 Marlin. Do I need to describe the glories of those autumn days, the bright, crisp and cool mornings of the last week in September, and the leaves just beginning to array themselves in their carnival colors in expectancy of the merry dance they would soon lead with the chilly November winds? It would be quite needless, for he who has not seen and enjoyed them does not deserve to be told about them.

We stayed in camp a week and hunted faithfully, but never did a venison steak grace our table. Deer were plenty all around us, but they were the "skulking" kind, as Fred said. Quite often one of us would come upon a fresh bed among the evergreen thickets, so fresh in fact as to be yet warm from the heat of the animal's body, but the wily deer had stolen away without sound or sign. As the woods were quite noisy, there was little chance of tracking them, and our main reliance was the "science of sitting on a log," which science, however, availed us very little. Our provisions had been arranged with the expectation of fresh meat, and fresh venison at that, in camp, and our non-success compelled us to find a substitute. As I did not want any unnecessary shooting I suggested to Fred the unsportsmanlike idea of building a few snares for partridges or rabbits. But to his credit be it said, Fred would not listen to such a proposition. He would rather live on fish three times a day than stoop to such means. So every day one of us would descend down to the little river, where in usually about half an hour we would catch enough trout on a tamarack pole and a "grub" or a piece of pork for bait to feed us for a day. They were excellent fried in pork and it was fun catching them despite the primitive method.

At the end of the week we returned to our homes. Neither of us had even seen a deer nor had either fired one shot out of his rifle during the whole week. Yet we had had a glorious time, the beauties of the weather more than compensating us for our ill luck at deer. I shall never forget that week, and I still insist that in many ways it was the most enjoyable I have ever spent in the woods. It is not all of hunting to hunt, no more than it is all of fishing to fish.

Fred was not quite satisfied, however. He proposed and agreed to another trip to the same locality in November. The deer were there we both agreed, and with the help of the early snows we hoped for success. I was informed that Mrs. S. evinced an eager desire to join us on our trip, and on a later occasion Fred confided to me that his unmarried sister had caught the fever and wanted to go along too. This latter plan I most emphatically "sat down upon," and successfully. Finally it was agreed upon that Mrs. S. should accompany us as a "mascot," as her fond husband expressed it. Well, imagine the result! Where a few weeks previous two of us had tramped into the woods with light knapsacks and lighter hearts, it now required a heavy back-load of dry goods for each of us two; and a couple of guides carried bundles each bigger than himself. Fred had bought about every little camping knick-knack to be had on the market for the comfort of his lady, and insisted on taking the whole load into the woods with him. As to the weights of our hearts I know at least one that did not feel quite so light as it had on going over the same trail a few weeks previous; and the further along we got the more did I realize the enormity of the undertaking. Ladies are real nice and charming enough around a tent spread on a lawn near some miniature pond or at an A. C. A. camp, or—well, anywhere but in a simple lean-to in the heart of the wilderness.

Our progress was slow, very slow; there were bog holes and fallen trees, and brooks without bridges, and what nots to interfere with pleasant promenading, and each obstruction called forth a series of little feminine shrieks and "Oh mys" and "Why Fred's," and such other little phrases which ladies are in the habit of using and which are not found in Webster's Unabridged.

At night the ordeal was over with. The guides soon had the camp in ship shape and supper ready, which consisted of pork fritters and toasted bread, with coffee without milk. I noticed how Mrs. S. asked for "some more of those fritters, please," and I remembered how a day or two ago she had insisted that pork be left out of our woodland bill of fare because she "just abhorred pork and would not eat it anyhow."

Then there was the usual hour of talking, smoking and story-telling, all of which was nice enough, but when everything was ready to turn in there came another rub. Just after rolling into our blankets there was a protest entered from somewhere the other side of the camp about "something sticking into my ribs; oh, this is horrid; why Fred, dear, could not you pick out a smoother place to lie on?" in plaintive tones from Mrs. S. Forthwith the whole camp had to turn out with hatchets in hands to ferret out the offending sticks, stubs, etc., while Fred kept piling dry brushwood on the fire that we might have light to aid us in our microscopic search. Finally everything was pronounced all right by our mascot and everybody relapsed into well-deserved deep slumber, not to awaken again until morning; everybody except the guides, who got up once or twice to feed the fire.

Morning dawned bright and cool. After an early breakfast and unpacking our household goods the guides left us, instructed to return in a week's time. We were left alone, and at once fell to putting the camp into "condition," as Fred called the process of putting each and every one of the "light and portable" inventions into some nook or corner. After it was all done and I viewed the gorgeous array, I modestly suggested that the state of affairs be called a household and not a camp in the woods.

But enough of this. We went to hunting and found the deer quite as shy as on our previous visit. Three days we hunted and had no success, and each night prayed that the morning might bring forth—snow. On the fourth day the weather was cloudy and we expectantly scanned the sky. I had been off alone two or three miles from camp, and in the middle of the afternoon decided to hunt toward home. As I was leisurely walking along, not attempting any silence, a deer jumped within 20yds. of me and "lit out." The trusty Marlin sent three leaden messengers after him, and I had the satisfaction of seeing a large trail of blood on the dead leaves. About fifty rods from where I had jumped him I found him dead. He proved to be a spike buck. The bullet had entered the haunch, torn lengthways clean through his body, through the lungs, and had come out at the right shoulder, leaving a hole large enough to put my fist into it. I have great respect now for the penetration of a .38-55 bullet.

I shouldered him and started for camp. That was a triumphant march into camp! Fred smacked his lips when he saw me coming. Fred likes venison as Horace Kephart loves persimmons. I think Fred and Horace would make great friends. Mrs. S. was at first very anxious to see a "real wild deer," but later on expressed her opinion that it was "just horrid for men to kill such lovely animals. It's too bad," she said, with a tear in her eye. Too true, Mrs. S.; but remember, please, that by law of nature the stronger will prey upon the weaker, from man, as the strongest, down the scale to, say, the 3in. brook trout, who is a terror to the baby minnows in his native pool. Did we have venison steak for supper that night? Ask Fred and Mrs. S., and ask where the half of that saddle disappeared to at one meal!

After supper I took a quiet stroll into the woods partly to digest my supper and partly because it had been my habit to do so since Mrs. S. was a member of the party; and undoubtedly they too would not miss my company. In fact Fred used to see all sorts of things in the daytime which he would relate for my benefit at supper. He wanted me to watch for a bear one night, a wild-cat another and so on, and I—well, I went and watched. I would go down to the brook, build me a little fire to keep warm and watch for bears and panthers and other birds until I got drowsy and thought it was time for Fred and his spouse to end their little tête-à-tête and turn in. In fact I suspect Fred never did go very far from camp even during the daytime. On account of my feelings for Fred I did not want to verify my suspicions. If he was content to let me do the hunting and he the eating, why that was all right and satisfied me. And I had quite as much enjoyment at my own little camp-fires as did he. While waiting for the bears to turn up I would have pleasant visions of a happy time to come when FOREST AND STREAM will open a marriage bureau and we confirmed woods-loafers may find mates there who will be the Ideals, the Perfection, of the aforesaid loafer's dreams. They won't read novels, won't wear bloomers and won't be "new" women. A just plain "old" woman is good enough for anybody, and so long as she can cook flapjacks and venison steaks the fellows who sit around the camp-fires evenings will be her friends and—hm—let's see, it's time to go up to camp and hustle "those two" off to roost.

Next day it snowed hard all day. Mrs. S. was afraid of being snowed in and so the command went forth to evacuate camp next morning. We did so, going out "light" and sent the guides in after the duffle.

Altogether it was an enjoyable trip, but whenever I go off hunting or camping now the mention of "woman" has a harsh, grating sound to my ears. MATTERHORN.

BARTON, Vt.

AN OUTING AT CAMP ANANIAS.

"FOR goodness sake! what are you getting all that old rubbish out for?" Thus said my wife to me one day as I was emptying an old gunny box of its contents in the middle of the floor. There were rods, rubber boots, landing net, reels, bait box, creel, fly book, old hats, etc. Yes, it was "rubbish," that's a fact; but each and every one of these dear old things had entwined about it a memory of green woods and gurgling brooks. I didn't answer, but just went ahead and sorted them out. I was going camping. I had made out my list, arranged my business and was packing up preparatory to the start. My companion, whom I shall call "Uncle Mul.," and myself had met occasionally to talk over the trip, and I assure you we, like those who really love the woods, found anticipation a large half of the fun.

On Aug. —, '95, the time for departure came. It was an extremely warm night, but pleasant acquaintances on the cars tended to make the evening short and interesting. Early the next morning I was turned out of my sleeping car into the chilly air at the small wayside mountain station. No one was up yet, not even the station agent; my welcome being confined to a little yellow dog whose empty stomach no doubt prompted his friendliness. From the station platform Crescent Lake presented a magnificent view, just as the golden streaks of sunshine were lighting up the eastern sky, and dispelling so quietly the heavy mist which enveloped that part of the lake.

At 6 o'clock Uncle Mul. made his appearance downstairs, and the handshake he gave me left no doubt in my mind that he was glad to know we were really on our long talked of outing.

He had a tale of woe to pour into my ear, so gently leading me down among the hemlocks on the lake shore he there informed me that the evening before the stupid porter of his parlor car had dropped both him and his luggage off at a shed in the forest honored by a name in the time table, whose tenants were only black flies, mosquitoes and a broken telephone. After his train had disappeared northward, and he had time to look around, he felt as if he were indeed alone in the world. Fortunately, before the shades of night fell, the boss of a passing section car, seeing his plight, agreed to carry him to his destination for the sum of $10, where he arrived after dark, filled with indignation, experience and hunger. Thus goes the world.

It was a glorious sunrise we had that morning, giving promise of a fine day to travel and make camp. After a hearty breakfast at our little mountain hotel, we two, with our guides, Gilbert and Ira, baggage, camp outfit, canvas, etc., started off in a northerly direction.

"There's Long Lake," said Ira, after a hot two hours' tramp through the woods, and we saw a sheet of silvery water among the tree trunks off to our left. In a short time we had toted all our duffle off to the lake shore, loaded the canoes and embarked on one of the many pretty and shaded bays of beautiful Long Lake, known as the inlet.

The charm of that morning's boat ride in that lovely lonely wilderness is beyond my doing it justice; to say it was a grand change from brick buildings and paved streets is only the truth.

It is really surprising to see what enormous loads these frail canoes will carry both safe and dry.

A row of half a mile brought us to a carry which connects Long Lake with its lonely companion, Silver Lake. Midway on this carry we made our camp, Camp Ananias we called it. We selected the crest of a hardwood knoll which would shed rain in all directions. I could stand in front of our tent and throw a stone in either lake, so near were they.

After unloading the canoes, next thing was the fireplace and wood. These our guides attended to very promptly, for they were quite as hungry as ourselves. Meanwhile Uncle Mul. and I opened sundry boxes, bags, papers and pack baskets.

In just twenty-five minutes after landing in this wilderness we were seated on the soft moss, each with a platter on his knees containing a plentiful supply of bacon and eggs and hot buttered toast, and a cup of golden coffee, giving off such a delicious, appetizing odor. Say, boys, I've got to stop right here.

After breakfast we framed up our tent, which was one of very light weight duck, 7ft. high, 10ft. wide, 9ft. deep, and shaped like an Adirondack hemlock bark lean-to. It has a canvas fly to keep off rain, also a curtain which hooks along the front, making it tight and warm at night after the camp-fire burns low. By the thermometer the temperature inside each morning was just 12° warmer than the outside air. Now, whether this is the result of eight hours' continuous snoring on the air in our tent (viz., friction produces heat) or the advantage of the curtain we have discussed many mornings, always finally giving the curtain the benefit of the doubt.

It is amusing what small things are of immense interest to one while in camp; for instance, have you ever sat on a log and watched an expert axman fell a tree? No! Well, I wouldn't miss it for a great deal. Every blow falls exactly where he wants it and each cut tells. He will say just where it will fall, as he can chop so as to "cant" it in three directions. After it has fallen with a mighty crash, tearing off all limbs of neighboring trees and crushing those in its downward path, he proceeds to cut it in lengths for the outdoor range. Now this latter was made in such a simple and practical manner that I will describe it. First a crotched post 5ft. high was sunk in the ground to the height of the fireplace, next a straight post of equal height was set equidistant on the left. A long pole or crane, 2in. in diameter and of sufficient length to reach from the crotch and lean against the straight post, was cut. A thinner crotched pole, 7ft. long, braced the crane against the straight post. We cut four stakes. Each was 2 to 3ft. long, having a portion of one limb remaining on it to hook over the crane pole, while in the smaller end we drove a nail to hang the kettles on. These hooks looked like a great angular S.

To operate, if the fire was low, we moved the foot of the crotched stake out, and the crane, with all the kettles hanging on it, slid down the post, and *vice versa* if the fire was high. It was very complete and worked like a charm.

During the afternoon our guides felled a healthy-looking balsam fir, and we all helped gather enough of its boughs to make us a soft, comfortable and delightfully fragrant bed 18in. deep. Over these balsam tips we spread our rubber and woollen blankets, and I assure my readers that after the first night, which is partly spent in forming a hollow in the boughs which exactly fits one's back, you would not exchange this couch of the wilderness for one of the best civilized beds ever made.

Each night we wore a thin silk traveling cap without a vizor to sleep in. This protected us from catching cold. On some nights the mercury dropped as low as 47°, and this was August, too.

We fished each day, but it was hard work to keep the table supplied. The lake was "working," making the water look roily, as if it had small particles of flour stirred into it. This state of the water causes the fish to be "off their feed" and not bite.

I confess the schemes we used to inveigle the innocent fish to our hooks make me blush now. In this case my past experience in fishing served me well, as I had to fall back on some old, reliable ways to tempt the gamy speckled trout. Yet I didn't always succeed. No truthful fisherman ever does; that is, if such a human curiosity ever existed. Uncle Mul. says, "Once a fisherman, always a liar;" and he knows. We had to fall back on frogs' legs and "catties" sometimes, but even these are delicious when fresh.

We, like all campers, craved variety, consequently on the fourth day we invited to visit us "Old Airbrake," a trusted engineer on the New York Central Railroad, who was stopping at the hotel at Cresent Lake. He arrived just before supper and with him came lots of fun, too. "He had never camped out before in his life," he said, "and wasn't much of a sport," but before he left us two days later he proved he was a very successful hunter indeed.

The camp-fire was an innovation in his treadmill life. His greatest joy was tossing logs on the camp-fire and chasing hop toads at night around our tent, much to the disgust of the guide Ira, who slept next to him.

Occasionally we would be awakened by hearing a smothered bang! then by the flickering glow of the embers see "Old Airbrake" on his knees, striking at something with his pillow. "What's the trouble, old man?" would be asked. "Another durned toad," he would reply. It's my opinion that the absence of his good wife and the loneliness of the night worked on his imagination.

Nevertheless we are all glad he came; to have added two days' joy to his life was indeed a pleasure. He is very proud of his record while in camp, having caught three large meals a day and never a miss.

Well, I don't blame him either, for one of our guides was certainly a backwoods *chef*, whose biscuits, flapjacks and raspberry shortcake were simply perfection. How these fellows can cook before an open fire simply appalls a city man.

Wild raspberries grew in abundance on all clearings and around the old lumber camps, often we could see where the bears had torn the bushes down in getting the juicy berries.

I must not forget about our camp bean hole. This was one of our many camp pleasures, watching Ira prepare a kettle of beans as the lumbermen do. First he dug a hole in the ground 2ft. deep and 2ft. wide, then during the evening he built a roaring fire of hemlock bark in this hole; this was continued until it was solid full of red-hot coals. Next he removed these latter, and a kettle of beans with a tight cover, previously parboiled and seasoned, was lowered into it and the coals tumbled back around the kettle. All was covered over with the moist dirt and packed down tight. Next morning he organized a mining company (limited) and proceeded downward until he struck iron; this was lifted from the ground, carefully brushed off and we all regaled ourselves on most deliciously browned beans, smoking hot and done to a turn.

Next time you camp out try this. It's a grand success.

Close by our camp was a bubbling spring brook, which gurgled merrily and wound its crooked way into the head of Silver Lake. Its temperature was 49°, just cold enough to be refreshing. In one of its numerous turns under an overhanging alder, we scooped out a basin in its pebbly bed. This was our refrigerator—and how nicely it did keep things too. Our fish in a tin dish would keep sweet for days, and the bottle of ale after standing in it for a day was simply perfection. This is only another of nature's great blessings.

I took note of the great scarcity of birds in the woods this summer. I saw and heard only a few jays and my favorite little songster the Phœbe bird. There is no song bird, to my notion, like this little feathered wanderer of the woods. May their numbers never grow less.

Up in the Adirondacks the thunder showers form very quickly and are usually very violent. One afternoon while we were rowing on Silver Lake one burst upon us and we had to hurry for the nearest shore. Here we landed and hurriedly turned the canoe upside down over two logs and crawled under it. My! but how it did rain and lighten for awhile. One blinding flash struck the trees 'way up on old Mount Arab, across the lake. In a few minutes we could see a thin veil of smoke slowly ascend toward the clouds. The woods had taken fire! This is a very serious thing, as a forest fire means not only a great loss to the lumbermen, but the utter banishment of game in that section. Fortunately in this case the rain had extinguished it before we left for camp.

It was a source of great delight for us to see the twilight grow on Long Lake. After supper we would stroll down to the shore and there watch the deep shadows of the forest creep slowly toward the center of the lake, melt into a purplish golden haze which gradually faded into a bluish silver only to sink into fading darkness; the frogs on the lilypads croaking a sad requiem to the day which had passed away forever. "It was beautiful, just beautiful!"

Slowly we would saunter back to camp and start the evening fire. Altogether we had a good time and jolly party. We returned home refreshed, resolved to try it again another year. We got two deer and what fish we could use. Our outing was a grand success in every way and I am joined by Uncle Mul. in stating that dear old "Camp Ananias" will be a green spot in our memory for many months to come. "Do thou likewise."

SEDGE GRASS.

SEPT. 9.

The FOREST AND STREAM *is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday, and as much earlier as practicable.*

ON THE SLOPES OF OLD BALDY.

MR. FRISBIE'S series of sketches descriptive of travel and hunting in the Pacific Northwest includes a narrative of his rather unsuccessful hunt on the mountain locally known as Old Baldy, lying northeast from Spokane, Wash.; and the reading of his quite interesting account recalled to mind a hunting trip of my own on the foothills of the same mountain in the old territorial days, a record of which may be of passing interest to the great family of American sportsmen.

It was in the early winter of the year 1882, nearly thirteen years since, that I, a tenderfoot of about a year's residence in the Territory, planned a trip of a week or less among the hills on the southwest slope of the big mountain, which was reputed to be good hunting ground. My two oldest sons, still too young to hunt in the strange mountain land so entirely different from their former prairie home in Nebraska, united in persistent entreaty to be allowed to go along and keep camp for me; and as their willing hands and eager hearts gave promise of necessary help in the care of the camp and the horses, their wish was gratified and they were jubilant.

When nearly ready for the expedition, a man with whom I had become slightly acquainted—Jesse H.—requested permission to go along; and as the tent was big enough to accommodate all, and he would add but little to the load for the horses, it was granted.

The sleighing was fine, and the drive of twenty odd miles was made with abundant time still remaining before dark in which to fix a comfortable camp for ourselves and the horses, and the first evening around the camp-fire in the big woods was passed in bright anticipations of to-morrow's sport.

The coming of the morning light found two moccasined hunters ready and eager for adventure, and giving my companion the choice of direction, and only pausing to add a final word of caution to the two young camp helpers concerning the care of the camp-fire and of the horses, I turned away into the big woods with a Marlin .45-70 on my shoulder in search of the makers of the little sharp-toed tracks which, strung upon a line of shallow, hoof-scratched furrows on the surface of the foot-deep carpet of snow covering all the hills, were scattered irregularly here and there like the cast-off necklace of a school girl.

Had there only been half as many trails to confuse the tenderfoot hunter, he might have scored a success; but after weary hours spent in vain attempts to untangle the perplexing skeins of tracks which seemed to lead to nowhere in particular, and getting but one long shot in the whole day and scoring a clean miss in that, the coming on of the evening darkness warned me back to camp with no message of success to cheer the eager lads who awaited my coming with the most confident anticipations.

After many years of experience in deer hunting in the prairie country far to the eastward, I now found myself confronted by entirely new conditions, and utterly at fault regarding the whereabouts of the deer during the daytime. I had been hunting on a mountain plateau, wide and undulating, covered with timber and brush in patches, which seemed to be perfect cover for the cunning creatures of which I was in search; yet, though I had tried to follow a dozen or more fresh trails during the day until the very abundance of tracks resulted only in confusion worse confounded, only once had I caught sight of deer. The plateau was bordered by the steeply rising side of the mountain, up which I had noticed an occasional fresh trail leading to the more difficult ground far above, yet I had invariably turned away from following them when I had found them turning up the steep hillside, content to hunt the easier plateau ground below.

My new acquaintance returning to camp reported having killed a big doe, plump and fat, and after listening to a detailed account of my day's adventures with evident gratification began immediately to assume a very patronizing air, and to descant volubly upon his own great ability as a hunter. It is doubtless very silly in any man of judgment to permit so small a breeze to ruffle his equanimity, yet—I may as well confess—there is really a whole lot of very human nature in my own make-up; and, while I have not the slightest objection to the superior skill of a brother hunter, I really didn't fancy his counting his chickens before they were hatched, for I knew that one swallow does not make a summer, and I didn't believe his name was Kit Carson, after all his vaporing.

Once before in my life had I met a man of that type who had proved fully as objectionable as this new found champion. This had been on the buffalo range in the old days, and he had given the other members of the buffalo hunting party ostentatious notice that he himself and his son would be obliged to do the hunting for the whole camp. But, needless to remark, he didn't do it. Still there was nothing now to be done but patiently to listen, and hopefully to look forward to to-morrow. The next day's record was an almost exact repetition of the first, differing only in the fact that, while my new comrade had again hung up a fine trophy of his deer-hunting skill, the unlucky tenderfoot had not seen a single deer.

The situation around the camp-fire that evening must be left to the imagination of my readers, for I could not do it justice should I try. The dejection written upon the faces of the dissapointed boys was hard for me to bear. Their faith had been so implicit in my own old-time skill, and now it had failed so lamentably. It had been agreed from the first that each hunter was to have only what venison he himself should kill, and now, when it became painfully apparent that a certain somebody was in imminent danger of returning home empty handed, no suggestion of an offer to divide came from the jubilant victor, who sat by the camp-fire and literally spread his triumph on thick.

Finally it began to dawn upon me that this new partner of mine, who had had experience in mountain hunting, must have some little game or manner of procedure with which I was not familiar; and when I recollected that he had on both days silently disappeared in the morning, returning only with nightfall, and the crack of his rifle had sounded very far off, and that when I on several occasions had tried to learn from him the reason of my own failure to locate the deer he had answered evasively, before I lay down to sleep that night I resolved to take his trail in the morning, and, if possible, to learn his secret. When ready to start in the morning he looked both surprised and disappointed when I announced my intention of leaving the plateau I had vainly hunted for

two days, and of seeking new ground in the direction of his own previous efforts.

A long tramp up the little mountain stream on which we camped showed me that after he had gained distance enough from camp he had turned straight up the mountain. I saw into his little game immediately. He knew what I had been so slow to learn, that the deer lay far up the hillsides during the day, coming down to the plateau only in the night. Many times before had I thought of climbing higher, yet the possession of a leg rather too weak for a mountain climber (which had been broken twice in days long gone) had deterred me from the attempt; yet as the two previous days' work had hardened my muscles considerably, and as I had now grown very grimly in earnest, I faced resolutely up the mountain side like the Chinese Excelsior chap in the parody,

Man, man, one galo talkee he,
What for you go topside? look, see!

Like the woodchuck youth, I was now after meat, regardless of the question of legs.

A toilsome climb up a mountain spur showed a changed condition of affairs, and as the sign thickened fast and I noted with delight that a strong and steady breeze, cold as an iceberg, had now sprung up squarely in the face of my proposed route, it grew very evident that all things were now turned in my direction.

Never in all my mountain hunting have all conditions accessory to the sport of deer hunting so conspired in my favor as they did on that day. A perfect tracking snow, a steady breeze in my face to drown the noise of my advance, and with deer sign everywhere.

Soon a fine young buck came into view across the head of a ravine, brush-filled and dense with cover, out of which he sprang, and gaining a position on the open hillside stared back into the ravine with every appearance of terror.

What had frightened him I know not. Down he went at the crack of my rifle, and hurriedly dressing him I hung him up in the top of a young pine, bent over for the occasion, and on gaining the top of the ridge beyond I jumped another out of a fallen treetop not 75yds. from me.

As he dashed down a ravine I took a flying shot at him, and a little cloud of hair flew from his shoulders; but with unabated speed he ran on down the mountain for about 200yds., when his curiosity got the better of his fears and he stopped to look at the enemy that had so rudely disturbed his siesta. A very careful shot dropped him instantly, and an examination showed that the first bullet had shaved diagonally across his shoulders, plowing a deep furrow in his winter overcoat, but without breaking the skin. This, now, was grand for a beginning; and a further advance along the ridge of half a mile resulted in a successful shot at a doe half hidden in a dense thicket. Success was coming my way now with both arms loaded!

I grew strangely eager with accumulating good fortune, and as I now heard shot after shot from my new partner far up the stream, a fierce sort of pot-hunting resolve took possession of me to get ahead of him if possible.

There was not a fear of the possible wasting of a pound of all the meat I could kill. Of that I was absolutely sure; and as I knew that my time was short, from the fact that we had learned only after our arrival in camp that the mess chest which he had brought from home contained scarcely material for his first day's food, I sprang in search of fresh sign, resolved to stay for nothing but the coming of night.

I had a lunch in my pocket, but it was not eaten. My ice-cold pipe bowl nestled in my pocket unwarmed by fire that day. I was, for the time being, a pot-hunter filled with a fierce eagerness for a record; and when my last shot had felled a magnificent doe just as the shades of evening gathered too thick for another shot at the fawn which ran from the fallen mother and stopped in the thicket beyond, I found that I had jumped nine deer during the day, and that six of them had fallen before my rifle—the biggest record I have ever made.

Night had fallen among the hills, and I was miles from camp. Soon as the stimulus of excitement was removed my game leg protested warningly. Of the wearisome exhausting tramp back to camp in the gathering gloom, of the stumbling falls over snow-buried logs, brush and snags, I will not tire the reader with the recital. One thing still upheld me. I had heard Jesse's gun a dozen times during the day and the anxiety as to his day's success caused me to give slight heed to the almost total exhaustion which possessed me as I greeted the welcome blaze of the camp-fire.

Tired as I was, I could not hide all my exultation. It most have shone from my eyes as my partner greeted me as I sank among the blankets with—"Well, you got one, did you?" "Yes," I replied; and immediately evading the subject I began slyly pumping him.

It was easy to start him talking of himself, and my secret delight may be imagined when I found that he had killed only one deer during the day.

For an hour or more I fought shy of the questioning of the excited boys, and listened with malicious pleasure to the anticipated account to be given of his triumph upon returning to town. I enjoyed it thoroughly; indeed I should have kept him at it much longer, but the questions of the boys finally became so insistent that the truth had to come out.

Poor Jesse! One glance at him was enough to make me ashamed of my triumph. His face turned perfectly blank and lengthened visibly. Of course there was nothing now for me but to praise his skill, and insist upon nothing myself. Vexed as I had been over the silly affair, I could not help feeling sorry for him.

That day was spent in hauling in the dead deer, and on the following morning the sled was packed for the return to town. In adjusting the load a queer fancy took possession of us to display our game in unique style. Piled among the dunnage of the camp were the nine deer in such a manner that each one of the thirty-six tan-colored legs stuck up from the surface until the sleigh looked like a corpulent "thousand-legged worm" turned feet uppermost. It really looked bewildering and suggested almost any possibility.

"How many have you got, Jess?" yelled the first man we met as we glided swiftly by.

"Only eighteen!" shouted Jess. ORIN BELKNAP.

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday, and as much earlier as practicable.

WOODLAND NOTES.

THE observant visitor to the woods will find many convincing indications that autumn, a season ever glorious, is surely and truly with us. Already many significant changes are observable. The autumnal insect chorus, ever mournful, yet soothing to the tired sportsman, is heard in never-ending billows of sound throughout the night. There is a strange, weird undertone to the music furnished by this woodland orchestra, broken only by the sharp strident voice of the katydid, that is irresistibly fascinating to the wanderer afield after nightfall. This sleep-inviting monotone of tiny voices, this thrumming and tuning, fiddling and fluting, these trombone solos in minor key, are marvels of tireless musical energy. Beneath it all there is a lesson freighted with messages of moment to mankind, if mankind will only incline its ear and pause.

Then the birds. How shy and retiring is the robin. No longer does he pose as the gay and exuberant Beau Brummel of the garden walk, essaying a cheery snatch of song at the magic hour of sunrise.

He is big and fat and a bit riotous in behavior, given to thrashing about among the catbriars with his fellows and then flitting away to the sequestered retreats of a near-by tree at one's approach, as though he felt a trifle ashamed of himself. The woodthrush is silent. Occasionally the catbird shrieks in surly alto. The cuckoo, always a bird of charmingly easy flight, daily increases the length of his aerial voyages. The oriole, ardent wooer when the year was young and tricked out in its attire of elegant green, has made his final staggering flight and disappeared. In glen and dale and on carpeted hillside the feathered battalions revel in general training days preparatory to the approaching southward journey. No longer pastmasters in the art of song and of love-making, they have become the silent, retiring occupants of the woodland intent only on looking after the more serious interests of life. Unmistakably the bird life of the woods bespeaks the fainter pulse beats of the season.

Then, too, there is an autumnal glamour in the woods and a touch of faded green on the trees.

The green, robust aspect of the woods is no longer apparent. No new growth of wood is visible. The ironwood tree flaunts leaves of the primrose hue. Patches of umber glint among the chestnut trees, while traces of radiant lake colors, from deep to light, linger along the outermost branches of the sturdy oak. Gorgeous color effects, sure to be intensified a few weeks later, illuminate the deep recesses of the woodlands. Adown shady lanes and into dark, cool byways the sun pierces with daily lengthening gleams. Soon he will hurl his shafts of warmth into the deepest and gloomiest copse. The sumacs are aflame and the hickories are resplendent in the first rare garniture of autumn. Ripe and fast ripening seeds confront one on every hand. The stock paths are no longer fresh trodden and sparkling with generous splashes of vivid green. They are hard and dusty and travel-stained. Into the tangled thickets they plunge, flecked with berry stains and little burrows of dust, where perchance the wood dove, in his Quaker outfit, has taken his dirt bath. The little streams that wind and twist and writhe about, noisy and ceaselessly scolding in early summer, have dwindled to faintly murmuring ribbons of water. The clematis, twirling around the gracefully swaying elm, is fading into a sad reminder of its once lovely self. A prophecy of "sere and yellow leaf," of golden maturity, burdens the air. The luxurious verdure of midsummer has given way to the September witchery of the woods.

To the sportsman who invades the mellow, gold-tinged retreats of the woodlands in search of the gray knight of the treetop performing his feats of daring on the far-reaching branch of a towering hemlock, or in quest of the noble grouse or the swift-speeding hare, these suggestive forebodings of the season's decline convey a lesson of the "eternal fitness of things," to which the most stoical will find himself impelled to respond. M. CHILL.

ITHACA, N. Y.

THE OUTING OF SIX.—IV.

The Desert and the Timber Reserve.

PASSING through the Kanab field, where the farmers were busy with their hay, we reached the edge of the desert. Mr. Stewart had not yet left town, so we drove slowly, collecting as we went. Four miles from Kanab we crossed a little ridge—the boundary line between Utah and Arizona. Before us was a solitary butte where the gray of the shinarump conglomerate capped the rich maroon of the peruvian; and beyond that an oasis in the sand and sagebrush, the little settlement of Fredonia. After a traveler comes to know this country a barometer is unnecessary in determining relative altitude. Geological formations and changes in timber are the best guides for elevation.

At Fredonia we watered our horses and put a keg of water on each buckboard. We had at least 25 miles to travel before reaching the next spring. Soon our guide caught us and until 3 o'clock we journeyed in a general southerly direction. The journey would have been monotonous were it not for the views of distant mountains and for variations in the flora. The prevailing gray of the white sage is relieved by the fragrant *Cowania mexicana*, by cactus orchards in full bloom and by scores of more humble plants that in another two weeks will be as dry and dead as the sand that supports them.

In the middle of the afternoon the low line of cedars that we have seen before us for hours is reached and at "Cedar Knoll" we make a dry lunch camp. After we had disposed of our canned salmon, bread and (somewhat stale) water, I climbed the knoll and viewed the magnificent panorama to the north. Far to the west was Mt. Trumbull and beyond and above it the faint outlines of what I supposed to be the Pine Valley range. On the east the view was bounded by the white cretaceous walls of the Paria. In front and opposite extended the famous Pipe Springs promontory, and back of that to the very crest of the lofty plateaus extended in their characteristic colors each geological period and group from Permian base to Upper Cocene, each well defined except the Cretaceous, which was hidden in a mass of tolus and somber pines. From Cedar Knoll our course lay westward rather than south, as we paralleled and approached the Little Buckskin range. Here Mr. Stewart and I left the rest of the party and plunged into a little cañon, reaching one of his sheep cabins about dark and rejoining the outfit at Warm Springs about 11 o'clock. The cañon was so black and the trail so washed out that we had almost to feel our way. At Warm Springs the water was poor, but it was so good by contrast with that which we afterward drank that it now leaves a pleasant taste. In the troughs for watering the cattle, Andrew, Perry, Collie and Ted took a midnight bath. I was too tired to indulge and Doc was sick. The sudden change of water and altitude produced serious results and before we returned to Kanab all but Andrew were victims to the malady, and of course our journey was not nearly as enjoyable as it had been heretofore.

Thursday morning we rode up Warm Springs Cañon to Rigg's cabin. Our way was through the carboniferous platform, the main Buckskin range being on our left, the Little Buckskins on the right and the faulting more apparent than we had seen it before. The eastern side showed the gray of the Upper Aubrey, the hard, cross-bedded sandstones and the brilliant-ribboned red of Lower Aubrey. It was a rare day for the collecting of typical fossils. In elevation we climbed from 6,200ft. to 7,400ft., and the junipers and mountain mahoganies were succeeded by long-leaved pines and a few spruces. About 10 o'clock we passed Naegle's ranch, where a spring bursting from the hillside makes possible the cultivation of about twenty acres. But from Warm Springs until we reached Point Sublime the country was absolutely "sheeped" out. It was more barren than the desert itself, and where Capt. Dutton describes the parks as rich with knee-deep grasses each wind now blows the barren sand. It seems a shame that in that grand and picturesque Timber Reserve sheep and cattle should entirely destroy grass and undergrowth. Already the effect is noticeable in deficient rainfall, and unless Uncle Sam interferes the results will be serious to both Utah and Arizona. Only in cañon cliffs and beneath the densest timber of the higher ridges could we botanize with any degree of satisfaction. On this particular morning we found as characteristics of the rocky ledge flora the willow ash (*Fraxinus anomala*, Torr.) and the mission berry (*Berberis fremontii*, Torr.). The local name "mission berry" was given by the early Mormon missionaries whom its fruit is said to have saved from starvation.

At Rigg's cabin we gathered several species of *mammillaria*, *echinocactus*, *cereus* and *opuntia*, and the pines seemed to be the favorite haunts of wrens and nuthatches. Here, too, were great ground squirrels and a few porcupines. In the afternoon we left the beaten trail, and chopping trees and driving over fallen timber, we crossed several of the highest ridges of the Little Buckskin at an elevation of 8,200ft., and under the firs and spruces we found many botanical rarities. Most of these I have not had time to classify, but that rare orchid *Corallorhiza macraei*, Gray, was identified as soon as found. That night we camped with Uncle John's sheep herd at Bee Springs, and as he intended moving camp, Andrew and I walked on Friday to Pareahshewaupats (Elk-spring-in-the-midst-of-the-woods). Collie was quite sick and I felt under the weather, but believed that I could walk off the malady. None of us were feeling in first-rate condition. Even the horses were getting thin on a sheep camp diet.

Andrew and I learned by our morning walk how easy it is to get lost in the Buckskins. There are no landmarks but a succession of similar pine-clad hills and open glades. Wherever the sheep had not been there were plenty of deer signs and once we got within 10yds. of a sleeping doe. When we reached Pareahshewaupats the sheep and camp were already there. We were within two miles of the "Breaks," where we had every reason to believe deer were to be found and so an early hunt was on the docket for next morning. Saturday was my miserable day; headache and cramps and a touch of mountain fever. There was no hunting for me, but Ted and Andrew were off before daylight and returned at 7 o'clock with a fine buck. Again Andrew was the lucky one. They had seen many more, but wanted only enough meat for camp. They had been to the brink of the cañon and had seen the grandest of sunrises. Their glowing tales made such an impression that after breakfast Doc, Perry and Collie each mounted a horse, took a rifle and started for deer. We thought they would return in about two hours, so we packed the buckboards, changed the papers on our plants and waited. Noontide came and 1 o'clock, but no boys. We unpacked and got dinner, still no signs of Doc. It was almost 4 o'clock when they did reach camp and then they came by the direction opposite to the one whence they set out. They had another deer. Doc had frightened it and Perry killed it. We had no time to skin it, so it was strapped with the other carcass on a buckboard and we set out for Dry Park through the blazed timber. We saw where the boys had lost themselves in the morning and had it not been for Perry's knowledge of woodcraft they might yet be searching for Pareahshewaupats.

Our route lay through the highest part of the Little Mountain and it was dark when we made camp. I had to get into the blankets before supper was ready, but Andrew and Doc spent the night in jerking the venison and when morning came there was a gunny-sack of meat that lasted until our return home. The water at Dry Park was horrible and we were glad to get away from the spot.

Early Sunday morning we were packed and away. I felt much better and really enjoyed the scenery and the mountain air. We drove two miles eastward and then turned abruptly to the south. In a hundred yards every able-bodied man was handling an axe, and before we had gone a quarter of a mile the trail was found to be absolutely impassable. The buckboards were lifted around and we headed back for the camp of the previous night. Under a spruce tree we halted, while our guide went off to find a trail over which he had traveled some eight years before. It was 1 o'clock before our final start was made, and then for four hours we had an up-hill climb, chopping our way and lifting logs, going up, with snow-banks on either hand, until at 5 o'clock we were on the summit of the Buckskin Mountains, more than 9,000ft. above the sea level.

From this point it was but a short distance to De Motte Park, through which we rapidly drove. Before this park was eaten off, with its broad meadowland and noble surrounding of firs and spruces, it must have been one of the most beautiful natural parks in the world. Now the hundreds of cattle had destroyed the grass to the very roots, but in many places the soil was covered with acres of moss pinks (phlox) that filled the air with their perfume. Passing to the south end of Little De Motte Park

we turned suddenly to the west and re-entered the silent forest. For the first time since leaving Kanab we seemed to be in the virgin woods. In all their beauty the wild flowers covered the ground, and from the thickest of the foliage came the evening songs of warbler and of hermit thrush. As we drove near the edge of the timber we could see far to the southeast and south the San Francisco and Bill Williams mountains, the former still heavily covered with snow. Occasionally, too, some amphitheater would jut in from the main cañon almost to our very feet, or we would look far down some stately transept to the gloom that was fast settling over the mighty chasm in Kaibab. The sun went down and the shade of twilight gathers thick and fast, but not until we see below us a beautiful glade, carpeted with rich grass, aglow with blossoms, and better than all a silvery stream that betokened a long-hoped-for drink from a spring of crystal water. Down hill we plunge, and when the shades of night almost hide our faces from each other we make Camp Ultima Thule at Milk Spring, at nearly 9,000ft. altitude and 390 miles from our starting point.

The country through which we had traveled since leaving Warm Springs is known as the Timber Reserve. Naturally it is the best game preserve in the United States. In no place can deer be found more abundantly. On the Western Desert and running up to the Little Buckskins are antelope, while on Mt. Trumbull and on the heights of the Toroweap mountain sheep yet exist. I know of two that were killed during June—by Indians, however. The Indians do a great deal toward the extermination of the deer by firing the forests and driving the deer on to the long points that project into the cañon, from which escape is impossible. Every fall the stores of southern Utah barter for bales of buckskin, the sole result of the ruthless destruction. But the destruction of feed on the Timber Reserve is doing more for the extermination of game than all the Indians of Arizona can accomplish. The region should be made more than a timber reserve. It should be created a national park, guarded and policed at least as efficiently as is the one in Wyoming. Such a course would soon restore the verdure to the barren parks, the rains to the thirsty fields, and the game to their native haunts. A few stockmen might complain, but in the amount of water for irrigating purposes Utah and Arizona would be gainers by hundreds of thousands of dollars; and when that little strip of Coconino county lying north of the Rio Colorado is annexed to Utah, where it rightly belongs and where all its interests are, the Garden State of the Great Basin can offer to tourist, sportsman and health seeker an attraction in comparison with which Yellowstone and Yosemite will sink into insignificance—the National Park of the Grand Cañon. SHOSHONE.

Natural History.

ENGLISH SPARROW ALBINOS.

BROOKLYN, N. Y., Sept. 7.—*Editor Forest and Stream:* The English sparrow (*Passer domesticus*) has so firmly taken root in this country that no person from the old country can any longer feel a stranger, once he has put his foot in the streets of New York or Brooklyn. Whether the bird has accomplished the object for which he was introduced or whether he has not is not to the point just now.

My object in writing is to find out whether anybody can give me a satisfactory or probable reason for the large number of what may be termed "sports" among the sparrows in our cities. "Pied," that is, partly albino sparrows, are so numerous on our streets that a specimen has long since ceased to be an object of wonder to me. Two prominent cases are always catching my eyes. The first is a sparrow of this year's brood, but full grown, that is generally to be found about 9 A. M. somewhere in the neighborhood of DeKalb avenue and South Portland avenue. I have seen it there several times lately, always in company with several others. Its head is nearly white, while a pretty nuchal band of white feathers is strung out, thicker on the right side of its neck than at the back of the head. A still prettier and a more remarkable "sport" is one that I have seen many times this summer, though not of late, feeding on that strip of grass at the corner of City Hall square that abuts on Broadway and Chambers street. This bird is a curiosity. It is an old hen without question, as I have seen her ministering to the wants of her lately fledged brood, stuffing all sorts of insects and other trash down their little throats. Her head, neck and almost the whole of her upper wing coverts are of a dull French gray. The rest of her plumage is made up of just the somber, though pretty, russet tints that make the plumage of a female sparrow of no account in the eyes of those who prefer the bright colors of the parrots that hail from the forests of the Amazon. I could name several other sparrows, in and around these two cities of New York and Brooklyn, as well as one or two other cities in the United States, which have similar though less marked peculiarities in regard to their plumage, but do not think it necessary to go any further.

Now, I am an Englishman, who as a boy captured, by means of nets, thousands of sparrows in my time, rudely awakening them at night while roosting in the warm little holes that they had dug for themselves in the large hay ricks of England, or in the ivy that covered the walls of some old country house, or from under the thatched eaves of some laborer's cottage, or while sleeping under the overhanging roof of a farmer's barn. Yet out of all the number that has met its fate at my hands, in conjunction with others, I fail to recall more than one instance of anything approaching albinoism. I do remember "laying for" and ultimately securing, with the aid of an old single-barreled muzzleloader of Purdey's, a "pied" sparrow that had been noticed around one of the farmyards belonging to a tenant of my father's. That is the only instance, so far as my recollection goes, and I did not leave the old country until I was fully fledged, if not more so, as I was about thirty years of age at that time.

Will some one please give me the benefit of his experience and observation on this point that interests me and perplexes me? Is it possible that change of habitat is producing, or will produce ultimately, a change of dress? I notice that such change has altered neither their manners nor their customs. As some one once said about somebody, it doesn't matter who just now; in fact, I can't emember—"Their manners are none, and their customs are beastly." That just about fits the sparrow to a T.

Still, he is not without good points. Take his courage. Although an Englishman, he has adopted a very strong American trait, one that should be highly commended—he won't take any back talk and stands up for his rights, as many indigenous birds will bear me out. I claim they are *his* rights, because he was introduced into this country, where he was supposed to be on an equality with other birds. His pluck cannot be gainsaid. He has also strong home ties, and believes there is no place like home. Hunger and cold cannot drive him away in winter. He stays by us and his home, and takes his hot and cold lunches with the rest of us. Altogether, though he may at times be somewhat of a scalawag, the little house sparrow is not quite so black as he is painted.

The above plea for the sparrow may be a little out of place, but I have heard him so roundly abused by people who had never thoughtfully considered his case that I couldn't resist the opportunity to blow myself, and say a few words for a fellow countryman who can neither read, write nor talk, and who didn't come here of his own free will. ANGLO-AMERICAN (like the sparrow).

POCKETS.

THE great English dyspeptic called the pocket the true pineal gland of the soul, and he was doubtless right, in spite of the disrespectful phrase. The instinct of property is one of the first evidences that the mind has passed from the stage of pure objectivity and begins to see things in their relation to self. An angel could have no possible use for pockets, because the pure altruism of his existence could not make the distinction between mine and thine.

The subjectivity which is so important an element in human thinking must have been very early to evolve, for the spiny sea urchin has pockets for its eggs, and the sea horses wriggle through the pages of popular illustrated science with breast pockets overflowing with miniature hippocampuses rampant. Yet when we come to man, as usual, he seems to have it all to learn over again, and a whole South Sea archipelago of marsupials did not instruct him in pocket using until long after the fig leaf episode had been forgotten. It would be an entertaining volume which should describe the struggle of untutored man in his efforts to evolve pockets. Behold the naked native in the diamond mines of South Africa, who yet is able to secrete a gem worth a prince's ransom under his eyelid or the distended lobe of his ear. His more civilized neighbor of the Soudan carries the necessities of life easily in the scanty breech clout, while his Arab over-lord could stock a bazaar with that which reposes within the folds of his snowy turban.

Toss a trinket to the red brave in the midst of his frenzied dance and see how deftly he twists it into his scalp lock. Perhaps you have wasted a little pity on yonder gamin whose rags are obviously incapable of supporting such a luxury as a pocket. But you are all wrong. See here, as I unroll the much turned-up sleeves, here is a crust of a baker's loaf, a jack-knife with half a blade, a broken corkscrew, some colored crayons, a lace handkerchief with monogram, a quarter of an orange, a brass door key, a handful of peanuts, three bolts without their nuts, a stock of a No. 32 revolver with the hammer broken, a circus handbill done into a wad and a story paper containing "Dirk the Duffer's Last Lunge, complete in one number." No, I will not turn down the other sleeve, it would be much the same.

That affairs of society are in the line of retrograde evolution you may know by the lost feeling a man has when he hunts for his pocket. Yes, confound it, the street car check is there, in your single hip pocket, and on top of it is the latch key and the key to the store, carried for convenience in case of fire, and the second handkerchief, and your wife's card case, and a dozen other things. And when the conductor watches you squirm and smilingly repeats "fare please" you wish his face would stiffen perpetually into the smile. Then you dodge down a back street munching a handful of peanuts by way of equilibration. "Surely that is Mrs. Lyons's turnout," and the sack pops into your hat while you assume proper dignity. It is not ten minutes later that you encounter Mrs. Highton and the girls under the full gas glory of the Odeon and your jaunty bow is somewhat neutralized by the accompanying shower of peanut shells. Decidedly a silk hat is a poor substitute for pockets.

These reflections were called out by the strange things encountered here upon the plains.

In my room at the present writing is a prisoner who illustrates what nature can do in this line. He is a dusky quadruped decidedly rat-like in appearance, with small bead-like eyes, circular ear conchs below the soft, silky fur. The short, almost naked tail and square muzzle belie the rat analogy and the great-clawed scraper feet tell of burrowing habits. In fact, it is a New Mexican pouched gopher. It is curious that all the native mice and rats of the Rio Grande valley seem to adhere so closely to one color pattern, from the decidedly mus-like, long-eared fellows that hobnob in the barns with imported pests to the subterranean vermin we have captured, they are all more or less gray above with washes of tawny or orange upon the sides in strong contrast to under parts. It seems probable that common elements in the environment operate as causes. Nevertheless, from the standpoint of natural selection, the problem is a simple one. It is a question of point of view. An enemy like a hawk watching from above finds the colors identical with those of the sand. From a lateral position the colors assimilate well with those of the sear and scanty herbage, and everybody knows that white or bluish white is the color which nature selects for parts which are to be seen projected against the sky.

But our pocket gopher has little need of such color protection, and it is but imperfectly developed, as almost his entire life is spent beneath the soil where his endless burrows and frequent hillocks try the soul of the ranchero. A family of these pests will invade a potato field and follow it row by row until harvesting by the owner is a sinecure. In such forays as these the pockets are called into requisition. These are inward folds of skin arising wholly outside the mouth and extending beyond the shoulder. They will admit nearly the whole of two fingers. The first published figure of a pocket gopher, drawn as usual from a stuffed specimen, had the pockets wrong side out, dangling in a troublesome fashion between his feet, and popular natural histories in Europe may, for aught I know, still continue to copy this figure from Carver's "Travels." The specimen in question looked as though he had been "held up" and forced to stand and deliver. Nature provides against such an accident by developing a strong skin muscle, called technically *retractor bursæ*, the evolution of which when written will form an interesting chapter. Some evidences of such a change in the ordinary skin-twitching muscles of the shoulder and face may be seen in those rodents which have only rudimentary pouches. The other muscle, *constrictor bursæ*, or shir-string of the pocket (as also in the case of the writer), is poorly developed and things keep getting out of our pockets. This is perhaps partly because both gophers (the writer was born in Minnesota) are too greedy. This is certainly the case with *Geomys*. I tested the matter yesterday. Provided with a handful of potato slices I chirruped to Geomys and he raced from his burrow to the front. I handed him a slice, which he promptly made away with at a queer hobbling canter, and after burying it in the earth was back for more. The process was repeated until the supply was exhausted. Hungry as he was he would touch nothing until repeated trials satisfied him that there was no more to be had. Then slyly recovering a piece of his booty he gathered himself up in a corner, washed hands and face and combed up a bit and then fell to with great gusto. This shows the correctness of our thesis correlating pockets with forethought and a proper appreciation of self.

The gopher is a cleanly animal, as subterranean creatures must be. The story that he uses his pockets as wheelbarrows to convey earth is a myth. When at work on his burrow he arches his back, and using his tail as a third support has both forefeet free for the most vigorous scratching and digging, not disdaining to use his teeth when an unusually hard clod is encountered. Then suddenly the hindfeet are brought into play and the loosened earth is heaped up behind. In a trice the gopher then wheels about and placing his forefeet close together so that the scraper-like callosities of the palms meet, starts briskly off pushing himself and the collected earth out of the hole, resembling nothing so much as an animated steam shovel.

Geomys knows better than to carry all his eggs in one basket and has numerous storehouses adapted to the exigencies of the season. In the far north he even contrives them so that the decay of collected leaves causes the germination of the much-relished clover stolons. The gopher cannot be said to have a good temper. Last night I placed a newly trapped specimen in the same box with Geo. But, alas, this morning "the mangled corpse strews the plain," which was splattered with gore and torn up by the struggle, while the victor was complacently nursing sundry honorable wounds.

But nearly every mouse or rat we catch in this land of the cactus has pockets. Here, for example, is a curious fellow like a yellow rat on stilts. His hindlegs are fully twice as long as those of any American rat we ever saw, and the tail is longer than the body and bears a terminal pencil of long hairs like a squirrel. The colors are warm and delicate, with a white spot over the large squirrel-like eye and a stripe across his thighs. In fact, he is an American jerboa. It is strange how a saltatorial habit tends to reduce the number of toes and causes the bones of the legs to unite. It would be possible to make up a complete series from the original five-toed type to cases where only one functional toe is left. But our stilt rat is a sort of parvenu—a new accession to the stilt-walkers—and has all five toes intact, and curious indeed they seem at the end of a slender stalk-like tarsus an inch long. The pouches are external, and the grooved incisors and strangely swollen ear bones produce a puzzle for the systematist.

The most attractive of our bursiferæ is a pigmy half the size of the house mouse, with warm colors and great ears. Scores of them were encountered on the meadows, where we surprised them gathering and neatly extracting the kernels of cockle burs which so completely "stand off" all other foes and secure the unwilling coöperation of all animals in disseminating the vulgar but ubiquitous weeds. Let those who rashly conclude that any plant is useless in nature's economy inspect the cheek pouches of our mouselet packed to bursting with these oily, nutritious seeds, and confess that there may be good under the most unprepossessing skin. C. L. HERRICK.

NEW MEXICO.

"THE BULLY" AND "THE UNKNOWN."

Editor Forest and Stream:

The citizens of Havre de Grace have had the pleasure of witnessing one of the most remarkable prize fights that I suppose ever took place in this country. Mr. Editor, I am well aware that FOREST AND STREAM don't take much stock in prize fights; but I thought perhaps that as this fight was such a novelty it might be a little interesting to your many readers to give them a short sketch of how it was brought about and how it ended.

It appears that one of our citizens while on a visit to West Virginia some time ago received a present of a large rattlesnake that had the reputation of being a great fighter, as he had licked everything of his size and weight in his native State.

A few days after this great fighter arrived in Havre de Grace, his owner threw out a challenge that his "West Virginia Bully" would fight any living creature that could be found in Maryland that didn't weigh over 3lbs. One of our Havre de Grace fishermen concluded that he would have some fun and accepted the challenge; but would not give the name of his fighter, but gave a guarantee that he would not weigh over 1½lbs. The owner of the West Virginia Bully said, "Bring on your fighter," as he didn't give an ehue what family he came out of or what his name was.

The owner of this rattler then put him in training. With one exception he made short work of every living creature that was put in the cage with him, but to the utter astonishment of every one that witnessed it, when two land terrapins were put in the cage with the West Virginia Bully he never offered to show fight and the terrapins would crawl all around him. This was the first time that I ever knew that snakes were afraid of land terrapins.

Well, at the appointed time our fisherman arrived with a little basket, inside of which was what we call a channel crab, a large fellow, nicely packed in grass. When the snake saw the crab crawling around his cage, he eyed him very closely, as he was satisfied that in all his travels through the mountains of Virginia he had met nothing

that looked like Mr. Crab. Finally the crab came into contact with the snake's tail, when it raised its tail and sprung its rattle. Then the crab reached out one of its long arms and grabbed the snake by the tail. The snake then made a pass with its mouth at the crab, when the crab grabbed the snake around the neck with its other claw. The crab held the head with one claw and the tail with the other. The snake made some awful flounces, but the crab never loosened its hold until the owner of the snake took a club and killed the crab to save the snake's life, but not until the snake lost two of its rattles.

I have now come to the conclusion that a crab can whip any living thing of its size and weight that can be found on the land or in the water. It certainly is very astonishing where they get the power that they have in their claws. I once knew a large crab to bite a man's finger off. CAPT. E. B. GALLUP.

GARS AND TURTLES.

"If you want to show a man that he is wrong, do right."—THOREAU.

THE question asked at me (and others) by our esteemed fellow-sportsman, Horace Kephart, seems at the outset a rather hard one, but "honor bright," as he says, I will do my best to answer it, as all true men at times must mentally do, or remain false to the teachings of their better selves.

It goes without saying that there is no wrong in the taking of life for legitimate purposes. (Some fellow, steeped perhaps in the philosophy of the Brahmins, rises to protest against this assumption, and while his lips are parting for the exordium you hear from the region of his cerebellum the sound of the whack that crushed a hapless mosquito.)

Taking up the question where Horace dropped it in its special relation to gars and turtles, I perhaps am not in position to pronounce judgment, inasmuch as I have no quarrel with these creatures; yet am aware that there may be good foundation for his plaint. In Central Lake I should shoot neither gar nor turtle, for here they do no harm—in fact, are seldom seen; but if, on the contrary, the gars persisted in snipping off my minnows and the turtles in seizing my frogs, I should regard them as a nuisance to be abated by any legitimate means.

The English sparrow is such, and ought to be killed; and if done with a rifle, so that he be *dead* killed, where is the harm in getting a little sport out of the operation? It seems to me not less creditable than any system of wholesale poisoning.

Hence I think that if Kephart was engaged in a sport which promised aid toward the abatement of an established nuisance, I should let him shoot. If, on the contrary, he was taking life for fun—killing where it availed not—it would surely seem that he might have been engaged in better business.

For the rest I can assure him that the otter preys upon the gar, and if I am not mistaken the bones of the turtle have been found in or near the nests of carnivorous birds.

I like Horace, especially as he believes in fairies, and think he and I would get on well together in camp. I often meet fairies in my travels—saw some the other evening—watched their pranks and listened to them with much pleasure. The uninitiated might have mistaken them for dragon-flies and pine squirrels. KELPIE.

Hawk and Dove.

RETURNING home the other night I saw a medium sized specimen of the hawk family make an unsuccessful effort to capture a pigeon.

A flock of these marvelously quick-winged birds, favored tenants of a neighboring farm barn, were circling over a wheat stubble preparing to alight. High aloft, the hawk gracefully, and well nigh motionless, rode the haze crested billows of air, with eye alert and aggressive mien, and as the critical moment seemed to have arrived he suddenly shot downward. I involuntarily held my breath expecting to see one of the slate and white birds succumb to the terrific onslaught.

But the birds, watchful ever, note the downward flight of the common enemy, and with lightning-like dives into space the members of the little group evaded the hawk, seemingly by a hair's breadth. Then ensued a race for life. Rising, falling, twisting, writhing, pursued and pursuer "rough rode" the field to the music of fiercely beating pinions. Then the hawk, baffled and beaten at every turn of the heart-breaking attack, sullenly floated high into mid air and after hovering over the scene of his fruitless adventure for a moment sailed swiftly away, like some ill-used child of fortune. M. CHILL.

ITHACA, N. Y.

A Large Gavial.

FRED SAUTER, the taxidermist, recently received for mounting the skin of a large gavial. Judging from the great development of the nasal sacks at the tip of the snout it is evidently an old male. The teeth are still in good condition, one of the end tusks only being broken, but the toes in nearly every instance are broken or deformed. It is a hideous looking creature and one of unusual size, measuring 16ft. despite the fact that it has lost a piece of its tail, variously estimated at from six inches to a foot in length.

The gavial is distinguished from other crocodiles chiefly by the narrowness of its snout.

In this specimen the snout is only four inches in width, though the mouth behind could easily take in a man's head. The body is well rounded out and of ample capacity, and the legs are longer than one who has preconceived ideas on crocodiles would expect, and provided with scaly appendages on the rear resembling flippers.

The peculiar swelling at the end of the snout is said to be a distinctive feature of the males of this species and to be of benefit in enabling them to remain below the surface for long periods. B.

Small Birds and Insects.

PETTY, Tex., Sept. 3.—I have noted with much interest the articles in recent issues in regard to the scarcity of "small birds" and the abundance of insect life in the North, and particularly the articles by Von W. and B. C. M. This reminds me of the scarcity of insects and the plenty of small birds in our village.

It is a common thing in this country, when sitting by a lamp at night, to be tormented with bugs, gnats and other small insects to such an extent that one can hardly refrain from words not adapted to the presence of the ladies; but this year I have noticed a marked decrease of such pests, and I agree with B. C. M. and Von W. that it is attributable to the large number of small birds. I have never seen so many small birds or so many varieties as this year, and not being an ornithologist I can not give their names or the species to which they belong, but it is very interesting to see so much bird life.

A short time ago I noticed a small bunch of this year's brood of English sparrows, and on investigation I located a nest under the eave of a barn and another in the cornice of one of the storehouses. I am convinced that they have come to stay with us. The first one I saw here was on Feb. 13, 1894, when I noticed a couple on an inspecting tour around our building. They disappeared however in a few days, and I did not see any more of them until about the same time this year, when the same pair (or another pair just like them), came back and this year have raised a couple of broods, as I see now there are ten in all. PROVO.

Game Bag and Gun.

A CAMP ON ROARING RIVER.

"I cannot tell how the truth may be;
I say the tale as 'twas said to me."

Preface.

WHAT a consolation it is to many of us fellows that the readers of old FOREST AND STREAM are, as a rule, patient and forbearing.

How nice it is to be patiently endured when we are stupid and uninteresting; how gratifying that most of our yarns go without salt, and how encouraging the fact that the bump of faith is well developed on the cranium of the true sportsman. Faith is said to be the assent of the mind to the truth of what is declared by another, resting on his authority and veracity, without other evidence. Faith is a higher faculty than reason, and the true sportsman is blessed with that faculty to a remarkable degree. He listens attentively and never doubts, only requiring a like considerate and respectful treatment when he tells a yarn himself. There is a real pleasure in listening to the rankest kind of stuff when even bare possibility of truth flavors it. And you know that most of the old hands at the business really believe their own yarns, which adds an earnestness and candor that is pleasing. Surprised so often that others believe them they cease to be surprised themselves and:

"Their own dreams at length deceive 'em,
And oft repeating, they believe 'em."

Old as I am at the business I dearly love to sit down and listen to these old timers even when I know that—well, being something of a prevaricator myself, I can, probably, the better appreciate genius.

There's Billy Newman's story of the little jackass loaded with pans and provender that, in a flight of righteous indignation, chased the cougar all over the Blue Mountains. I believe it. And that other one of how they lived for weeks on rattlesnakes and lizards when lost down in Death Valley. I believe that one too. At least I would not wish to be the first to express a doubt in Billy's presence.

Then there's my friend O. O. Smith's story of how he got the cougar skin down on the Pilchuk. My faith still supports me. That story was undoubtedly true, although faith doesn't seem to sustain some of the boys in their reflections. But I'll not particularize further. I implicitly believe all their stories, and when some blunt, cold-blooded, practical cuss, without the spirit of the true sportsman in his heart, pretends to prick a bubble and let all the good things out I feel indignant and take it as a personal insult. But if perchance he succeeds—then I sigh and feel:

"Oh, that a dream so sweet, so long enjoyed,
Should be so sadly, cruelly destroyed."

Yes, I do feel a sort of personal responsibility resting upon me to sustain all the original allegations. Demurs are all overruled and motions to strike out don't go in these matters. See?

To avoid misapprehensions let it be understood that there's nothing original herein—not even the poetical effusions. Doubtless the readers of FOREST AND STREAM need not be admonished of that fact, and the writer might never be accused of any such flagrant breach of established custom as originality; but he desires to forestall criticism, maintain his dignity, and keep himself square with his few friends. While the conclusions herein arrived at and the statements herein made may not be exact in the smaller details the writer has the satisfaction of feeling that he has been candid and impartial, and has done moderate justice to all parties concerned. The true historian "says nothing but saws wood" until prepared to submit his conclusions to the custody of cold type. By an exact and scrupulous diligence and observation, listening to the discussions of the participants *en masse*, and then to the *ex parte* statements of the individual members (not always easily harmonized), he gathers his material and records his conclusions. Patience and perseverance conquer and truth prevails.

I.

"Wonst the red Injuns thar took their delights,
Fisht, fit and bled;
Now the inhabitants is mostly whites,
With nary red."

"A camp on Roaring River!" Isn't that suggestive? If you knew the crowd as well as I do you'd think so. J. Roberts Mead, Fred T. Swift, Dr. Edwin P. Bradbury, Sidney Smyth, One Lung and three or four pack mules constituted the *personnel* of this remarkable outfit that went away to the wilds of Roaring River.

Mead and Swift are young business men of Portland with plenty of money and some experience, each striving in a friendly sort of way to secure the reputation of being the recognized leader in sports afield in the Northwest. They dress like cowboys, very particular as to the conventional broad-brimmed white hat, are fine fishermen and fair shots, and splendid fellows in camp in general. With a little more experience they will be all right, you bet. The Doctor is a retired army surgeon, witty, bright, something of a philosopher and one of the most genial, whole-souled fellows you ever met. Smyth is a hardy young Scotchman, a surveyor by profession, a lighthouse builder by occupation, a thorough mountaineer and not at all disposed to put up with any nonsense. Not that he is crabbed or mean, but he is very practical. Both the Doctor and Smyth are fine shots with the rifle and think they are fishermen from away back. One Lung was the Chinese cook of the outfit, and a very important factor thereof, but mortally afraid of "Injun."

Roaring River is a tributary of the Clackamas, but so far back in the Cascade Range that only a very few of the more hardy and enterprising sportsmen have ever ventured in. It is said to be a wonderful game and fish country, but it is a good two days' trip to reach it from Portland, and fifteen or twenty miles of it must be made on foot with packs. So naturally it is not a country much sought by the "genteel" class of sportsmen. I for one find more enjoyment in listening to the accounts of others than in making the trip myself. It is so much nicer to pack over a ten or twenty mile stretch of rough mountain country in one's mind than on foot. An easy chair and a fresh cigar relieves one of much of the monotony and perspiration incident to such stretches.

The boys left Portland Friday morning, Aug. 9, and arrived at their destination on Roaring River late the following Sunday afternoon.

They went well equipped with all the modern implements and appliances for the destruction of game and fish. The Doctor and Smyth stuck to their light .38-55 Marlins and jack-knives, but Mead and Swift and One Lung knew a thing or two and knowingly put their index fingers alongside their noses and winked one eye when the other fellows' backs were turned. They knew better than to go into the land of the silver-tip, cinnamon and mealy-faced bear, cougar, black wolf, lynx, mountain devil and wild cat with any such boy outfit. I rise to explain, however, that One Lung's anxiety was all about the dreaded "Injun." Mead's and Swift's armory has been the envy of all us fellows' for years, but they discarded the whole business, and I am credibly informed that they each secured 12lb. .50-110-300 repeating Winchesters, a 12in. bowie knife, two .44 Colt's and some 40lbs. of suitable ammunition, all of which they heroically, uncomplainingly carried over the mountains and that hot August trail to the far-away wilds of Roaring River.

A Chinaman always buys the biggest pair of boots in the case, for he gets more for his money. And, too, they always buy the biggest guns and pistols, for they look more terrible and give him a more formidable appearance, and the Chinaman is a great bluffer. I am told that One Lung took but one weapon (and that as a protection against "Injun"), a Nordenfelt repeater, carrying a ½lb. solid, conical steel ball, brass jacketed, with 2oz. of powder and with a capacity of 300 to the minute. Probably most of the readers of FOREST AND STREAM are not aware that a Chinaman mortally fears "Injuns." It's a fact. And an Indian regards a Chinaman with much the same sentiment that the devil regards holy water. Possibly the characteristic cussedness of both is better understood by each than by us. At any rate an Indian has no earthly use for a Chinaman except to scalp him, and a Chinaman's nightmares are all about "Injuns." People not familiar with the Chinese and Indians of this west coast can have no conception of the intense hatred entertained by the Indian for the Chinese, nor of the mortal dread the Chinaman has for the Indian. They are much alike in many respects, and it is my belief that the North American Indian is a lineal descendant from hardy, venturesome Chinese that some time crossed the narrow Behring Strait. Observe a gang of Chinamen on the street, they always walk single file "alle same Injun." Then, too, their features and countenances are very similar and all are cold-blooded and stolid as frogs.

I can pick out a dozen Chinamen right here in Portland, cut off their queues, dress them with breech-clouts, set them down among the Diggers or Apaches, and I'll defy you to tell which from 'tother. But don't forget that a Chinaman is mortally afraid of "Injuns."

II.

"Till then, my noble friend, chew upon this."

Aside from the armament and munitions of war referred to the commissary department had been supplied with all the necessaries and as many of the luxuries as the outfit could possibly carry. There was bacon, beans, coffee, tea and rice for One Lung; butter, sugar, condensed milk, lemons, flavoring extracts, ham, potatoes, sardines, pigs' feet, candy, figs, apples, dried prunes and peaches, wines, liquors and cigars, in such quantities that poor One Lung, overloaded, fell by the wayside and had a severe spell of vomiting (whether from the load or his everlasting fear of Indians is not known), and the boys were on the point of leaving him to his fate. But he pleaded so pathetically in his simple way not to be left to undergo torture at the hands of the redskins that one of the boys relieved him of his Nordenfelt while another shouldered part of his remaining burden and he successfully made the trip. How glad they all were to reach their destination! And how hungry they all were. They set about preparing supper at once when lo! they discovered that there wasn't a pound of flour in the whole outfit. Not a loaf of bread; not a cracker; not even a dog biscuit.

Mead thought it was Swift's fault, Swift thought it was Mead's, while Smyth expressed his opinion of both in terms more forcible than elegant.

Nothing had been expected of the Doctor, for he was an invited guest, but he tried his best in that genial, pleasant way of his, to mollify the feeling that had been engendered by the sad occurrence and finally, as a last resort, suggested that all hands compromise and lay it on the Chinaman; which suggestion of course met with general approval.

The Doctor is quite a philosopher in his way. Then a council of war was held and One Lung was detailed to go and get the flour. But One Lung protested and spoke feelingly about "Injuns" and bears. Then it occurred to the crowd that if One Lung went he might never return.

So they drew cuts. It fell upon Swift, but he "didn't know the road."

I don't blame him. Flour they must have and so Smyth with a few characteristic remarks cut the whole business short by striking out at once with a pack mule for the nearest settlement. For two days the other boys lived on canned goods and salt meat straight. Of course there were plenty of berries, but you know berries fill about the same place in human diet that hay does in a horse's. They are wonderfully fillin' but they don't stick to the ribs like flour. Hunting and fishing were out of the question with the boys during Smyth's absence, for he alone had any knowledge of the country. A little rest after their hard tramp was quite welcome, and besides One Lung was afraid to be left in camp alone for fear the Indians might sneak in upon him before he could get his Nordenfelt in operation. The solicitude and concern manifested by the boys in One Lung's behalf might be almost pathetic were it not that they cared more for their own comfort than they did for his welfare.

Their feet were a little bit tender and their shoulders somewhat sore from carrying the .50-110-300 Winchesters. Some old Greek philosopher wrote that a fellow feeling makes us wondrous kind; or, as translated into plain English, misery loves company. At any rate the boys stayed close to camp until Smyth returned with the flour.

III.

"I would give all my fame for a pot of ale, and safety."

Two days and nights in the wilderness, without flour and surrounded by ravenous, carnivorous wild beasts, is certainly not a desirable state, even for those blessed with the spirit of fortitude and bravery.

Naturally there was much grumbling and uneasiness in that camp on Roaring River during Smyth's absence, for various and obvious reasons.

The boys had been used to better treatment, and they in their hearts longed for the fleshpots of Portland; but their reputations as sportsmen depended somewhat on the results of this trip, and so their pride sustained them in adversity and kept the camp from going to pieces altogether. But the boys wanted flour badly, and One Lung wanted to keep his scalp worse. He even refused absolutely to start a fire for fear that the smoke might lead the redskins to their retreat.

But then it was warm anyway, and there wasn't much to cook particularly until Smyth returned with the flour; so the boys took One Lung's discretion all in good part. However, when night came on the boys wanted to see the cheery blaze of a camp-fire, and so built one themselves.

Swift thought that there was method in the Chinaman's madness, but Mead and the Doctor both held to the opinion that One Lung was practically scared to death; and so the poor heathen got the benefit of the majority vote and had an easy time of it. There were four tents. Mead and Swift were to occupy one, Smyth and the Doctor another, One Lung another, while the fourth and largest was a general storehouse, and which, in case of rain, could be used as a kitchen and dining hall.

All that the boys needed to make them perfectly happy and contented was Smyth and flour. All that One Lung needed to make him happy was his opium outfit and immunity from "Injuns." Under the existing circumstances there was but one thing to do—make the best of it. Making the best of it under such conditions ordinarily means to sleep most of the day and then sit around the camp-fire at night, smoking and telling yarns. And just here was where the fun commenced. Mead and Swift saw in One Lung's fear of Indians an opportunity to have a whole bushel of fun telling blood-curdling Indian stories, and, notwithstanding the Doctor's admonition to "beware, the worm will turn," they proceeded to seize the opportunity. What lots of fun they did have. One Lung understood most of what they said and imagined the balance, and so the poor simple-minded heathen was driven almost to distraction, and oh, how the boys did enjoy themselves. A Chinaman is the most superstitious mortal that ever drew the breath of life, and by bedtime the first night he was ready for the lunacy commission. Quaking with fear, starting at every sound, afraid to look behind him, he stealthily sought his lonely bed neither to sleep nor dream, but to shiver and listen. Of course, Mead and Swift felt very well satisfied with their first evening's entertainment notwithstanding the Doctor's reproaches, and so all hands went to bed. The boys had just nicely got to sleep when with a wild shriek of terror, followed by agonizing cries of despair, One Lung burst into their tent, jammed himself in between Mead and Swift and covered his head with the blankets. He had heard something—a something, too, which, to One Lung, could be nothing in the wide world but "Injun." The boys tried to soothe him, but he wouldn't soothe. Then they tried reason and argument, but One Lung evidently regarded the arguments as closed. He wouldn't budge. He had come there to stay, and stay he did.

Did you ever smell a Chinaman? If you have never been through "Chinatown" of any of our coast cities nor smelled a Chinaman, and have any desire for knowledge in this direction, I would advise you to read Dr. Smollett's description of the smell that arose from an assemblage of lord and lady Yahoos at Bath. What I am trying to get at (in a delicate way) is the fact that there is about all Chinamen a peculiar odor that "smells to high heaven." It never leaves them. You can give a Chinaman a hundred hot baths; yes, you may boil him for a week and then hang him out in the wind and sun for a month, that same peculiar, indefinable smell is still there.

The boys' prayers availed little; their threats and entreaties less; and poor, gentle, trusting, much-abused One Lung and his smell continued to occupy that bed for two nights, while Mead and Swift sat on a log, gazed into the fire and reflected of nights, and slept in the Doctor's bed during the day. S. H. GREENE.

PORTLAND, Oregon.

Death of George Fulton.

SAN ANTONIO, Texas, Sept. 14.—The community is in mourning for the death of George Fulton, one of our prominent business men and most respected citizens of San Antonio. "George," as he was familiarly called, was the friend of every man who carried a gun for the love of the sport. He was more than kind. He anticipated the wants of people who were nothing to him, and supplied them. He could not see anything suffer. He was the friend of the poor, the sick, the high and low born. Humanity was his religion. To do noble deeds his main object in life.

On one occasion a party of hunters passed his ranch en route to the beach at Copano Bay and George noticed that they were rather "light rigged." That night a frightful northern storm shook the earth and in the dead of night, facing the bitter storm, Geo. Fulton, unable to sleep while he knew a human being was suffering within his reach, had an ambulance hitched up, laden with warming things, and together with his men they found the hunting party aforesaid nearly dead with cold. With the hand of an angel Geo. Fulton saved their lives. It is such deeds that have caused all people to love him. It was his absolute unselfishness that enthroned him in the hearts of the people as the Prince of the Southwest.—*Texas Field.*

CHICAGO AND THE WEST.

Word from the Chicken Country.

ST. PAUL, Minn., Sept. 13.—This city, St. Paul, was once the center of the prairie chicken country of the world and it remains so now geographically speaking, but hardly in any other sense. To-day I saw a man standing in a doorway on the street, accompanied by a setter which looked as if it had not seen much use. I asked him about the chicken country and he said he came from Iowa and was on his way to Dakota for a chicken hunt.

Everybody has been going to Dakota, but reports do not warrant the belief that the birds are very plentiful out there, unless one goes very far to the west and north. Messrs. F. F. and R. Merrill, of Milwaukee, with a good string of dogs, are out in the Turtle Mountain country for a four weeks' hunt, and they will certainly get good sharp-tail shooting at least.

A gentleman back from Dakota says that they have found the chickens in the low bottom grounds and not on the stubbles or prairies where they expected to meet them.

Mr. Ed. Bird, of Fairmont, Minn., where the field trials were once held on chickens, says that the birds are very scarce in that region now. The shooter who puts up three or four coveys in the afternoon is lucky.

Mr. S. A. Tucker, just in from Omaha, says there is good shooting about half way between St. Paul and Omaha on the Omaha road.

Mr. H. B. Jewell, of Wabasha, Minn., which is near the foot of Lake Pepin, says they do not think of going after chickens there any more, though there may be a few left.

Mr. Fred Gilbert, of Spirit Lake, Iowa, says they once had fine shooting there, but that the birds are scarce now.

Mr. Tom Paine, of Glencoe, McLeod county, Minn., says they get no shooting of account at chickens this year.

Mr. H. M. Jones, of Atwater, Minn., says there are a few birds around that way, if one is willing to hunt hard and be satisfied with a smallish bag.

Mr. Clint Smith, of Fargo, N. D., says the crop of chickens around there is not very good.

Mr. W. P. Shattuck, who is just back from a wagon trip of 150 miles, coming to St. Paul from the North, says his party found no vast number of birds, but got all they cared for; a couple of dozen or so to three guns daily.

Mr. Staunton, of Crookston, Minn., says that when the season opened he and his friends could not find any birds, but he thinks they had not come on the stubbles. A day or so ago they went over the same country and bagged forty-three birds.

There seems a general belief that part of the scarcity of the birds may be traced to natural causes. The past spring was dry, and the birds are thought to have nested in the bottom lands. Then the weather came on wet and drowned out the nests. Reports of small coveys, six to eight birds only, are numerous. This may be due to second nesting, or more likely yet to "sooners" having shot out the coveys before the law opened.

It seems almost certain that the great chicken days in Minnesota are over, and that they will soon be over in both Dakotas also. Minnesota is now very little better chicken ground than Illinois, perhaps not so good. For Dakota the same rule must hold: The thoughtless destruction will go on until the greedy guns leave for a more productive country, if they can find it. Then better protection will ensue, and slowly the birds will grow a little more plentiful, though of course they can never again reach their former numbers.

The story of the destruction of American game is a sad and shameful one. E. HOUGH.

909 SECURITY BUILDING, Chicago.

NITROS AGAIN.

THE personal experience of sportsmen who have used nitro powders to some extent would certainly be interesting if told through FOREST AND STREAM. The modesty of the manufacturers of the various brands of nitro is only equaled by that of the gunmakers. One and all claim to make the very best powder or gun in the market. While all are good to a certain extent, some are better.

Your correspondent, W. E. W., certainly had courage to keep on with his nitro cartridges after his experience with the first few loads I have used considerable nitro. Some years since, when devoted to trap-shooting, the American wood powder was the only powder of the kind, I think, made in this country. I was very successful with it, while some of my friends who tried it were not at all satisfied. I found the great point was to know how to load it. I had a gun made especially to order by an English gunmaker. The gun in question was a 7½lb. hammerless with laminated steel barrels, costing with two sets of barrels $300. This without exception was the very best shooting gun I ever owned. I spent a number of days targeting the gun with cartridges loaded in various ways before finding what was the best load for it, and after so finding I think I proved it was a good one. I kept a record of the cartridges I loaded, the greater part of which were shot in this gun, and the record shows 17,800. I used a pretty heavy load (bulk measure) of wood powder and never had anything in shape of accident happen. The gun stood it well, but like most things became somewhat worn by constant use, no doubt somewhat sooner than if black powder had been used. Had a few of my cartridges acted in the manner described by W. E. W., I should have quit using such powder, and I am not easily scared.

I have been recently experimenting with a new gun and loads of black and nitro powders. This gun is of medium grade, well balanced and put together, and looks as though it would stand well. It is a 7lb. hammerless made for game shooting.

In testing I used 3drs. of two brands of black powder and 2¾drs. of a nitro claimed to be equal to any. The targets were 30 circles. Shooting at center of such target (not taking selected group) at 40yds. the nitro made the most regular patterns. The highest pattern was made with black powder and also the lowest. At 55yds. I tested both pattern and penetration and at this distance the nitro beat the black every time on both pattern and penetration, the pattern being from 50 to 100% better.

While there is no doubt that machine loaded cartridges are well loaded and shoot well I prefer to do my own loading, and always have, both for my hunting rifle and shotguns. I do not think I have shot 1,000 cartridges other than of my own loading. I have taken great pains and my loading suits me and I know what I am shooting Now I cannot help thinking there is a tendency to keep accidents that happen (unless of very serious nature) with nitros out of the papers. I never saw myself but one accident where the gun was wrecked, although several times I have known cases of excessive recoil. I have reason to think, however, that a number of guns have been damaged more or less during the past year by the use of nitro. A leading gun manufacturer wrote me that it was possible to wreck any gun with nitro if improperly or carelessly loaded, and for this reason gunmakers did not care to guarantee their guns when using it. There is no question of the superiority of nitro over black powder in some points, but I think it would be well for sportsmen to give accounts of their experience. C. M. STARK.

DUNBARTON, N. H.

AURORA, Mo., Sept. 8.—*Editor Forest and Stream:* After reading W. E. W.'s experience with nitros, I cannot think what make of guns or nitro he has been using. For the last two or three years I have been using a 12-gauge gun of 7¾lbs. in weight. I have the first time to have an accident; have never had a shell burst or head pull off, and always use 3¼drs. of nitro. A. E. GIBSON.

WATER SHOTS AND GROUND SHOTS.

TOPEKA, Kan., Sept. 7.—*Editor Forest and Stream:* Answering your editorial query appearing in the current issue of FOREST AND STREAM as to the "difference between potting a bunch of birds on the water and potting a bunch of birds on land," I would submit that to my mind there is a very great difference both in the results following such shots, also a vast ethical difference between the two acts.

In shooting any land game bird, "pot shooting" has long been justly condemned—the principal reasons being that such methods are too deadly, and tend toward the extermination of the species; that no skill is required, either in approaching a covey of quail or chicken, or in making the shot, and that therefore the act is not sportsmanlike. There can be no question but that the shooting into a huddled mass of quail, closely packed together under a bush or hedge, where a single discharge may and often does wipe out the entire covey, is a most reprehensible act. If given a chance for their lives, and allowed to fly, one or more can certainly be killed by skillful work, and with the aid of a good dog the birds may be followed, found and flushed repeatedly, affording many shots. Two or three coveys in fair cover will furnish good sport for an entire day, all in a radius of a single square mile. The season begins with the first browning of the leaves in autumn, and ends only with the final melting of the snows in spring. A man may go hunting a score of times and yet not go out oftener than once a week.

How much of this is true of waterfowl? Very little indeed. Wariest of the wary, to approach within gunshot of a flock of ducks, or worse still a watchful old gander, often requires all the skill, patience and hard labor of deer stalking, and when after infinite toil a position is gained from which a killing shot may be made, the game is not found bunched in a circle with heads together inviting wholesale destruction. Quite the contrary: your gunner will be fortunate if he can find three or even two birds close enough together to warrant a reasonable hope of getting all three or both at one shot, and with the discharge of the first barrel the whole flock rises, giving a possibility only of getting one more bird with the second, and the hunter is fortunate indeed if he ever again gets another shot at that particular bunch of ducks. From forty to sixty days out of the entire year will in most localities cover the waterfowl season, for no gunner who desires to retain his own self-respect, and the regard of FOREST AND STREAM, will shoot migratory game in the spring. Fully one-half of this short time the weather will be unfavorable for shooting and nothing can be done.

So long as one may with the expenditure of equal energy and skill bring ten head of land game to bag, to one of waterfowl, it will be difficult to convince the average sportsman that "potting a bunch of birds on land" is anything but detestable murder, or that "potting a bunch of birds on the water" is not justified by the necessities of the case. And therein lies the difference between the two acts. A. J. HAWKER.

SISTERSVILLE, W. Va.—*Editor Forest and Stream:* If there is any difference it is in the favor of the one who pots birds on the land. In many cases, on land, there is only a few yards before a bird can get into dense brush, or perhaps you can see it through some opening in the woods, where a slight movement will place it entirely out of sight, and one can be excused for potting under such circumstances. I have in all cases let a quail get on the wing entirely, although I would not have one chance in ten of getting it. An old grouse, if I have not got a good chance, I believe in potting, but I never potted a half a dozen in my life.

On the water, if you are near enough to pot the game, you have a good chance on the wing, unless you are in high rushes. I should say a better chance on account of the more exposed vital parts. In fact, I should call one who would shoot any bird sitting, whether on land or water, where there was the slightest chance of getting it on the wing, a pot hunter.

My experience only covers the lakes of Central New York, especially Keuka, and the Ohio and Alleghany rivers. In all of this territory I can find no more excuse for potting a bunch of birds on the water, nor so much as I can for potting birds on land. JIM.

Deer Skins from Colorado.

MUSCATINE, Ia., Sept. 2.—*Editor Forest and Stream:* I inclose to you a clipping from the Muscatine *Journal:*

"After a week's hunt in Colorado, Chris. Aldinger, Owen Baxter and I. B. Wilson, of What Cheer, are in the city on their way home, visiting friends and exhibiting several deer skins, the result of their frontier investigations."

I haven't the pleasure of an acquaintance with Chris., Owen and I. B., but they evidently have been doing something they should not have done, and of which they should feel ashamed. T. T.

The FOREST AND STREAM *is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday, and as much earlier as practicable.*

A PIGEON DAY PRANK.

LINCOLN, Neb., Sept. 4.—In FOREST AND STREAM of Aug. 17 I read Everett's experience in killing wild pigeons, which took me back to fifty years ago, when I was a mere lad just starting to learn to shoot. I was living on a farm and we had an old single-barrel gun with a homemade beach stock full length of barrel, and fastened together with brass bands. I had been forbidden to use the gun, as they thought I was too young to shoot, but I had been taking notes of how it was done. One day I saw a large flock of pigeons trying to light on a shock of wheat. I made for the house, got the gun and crept along an old rail fence until I got within about 30yds. of them. The shock was literally blue with them, and others were trying to light on top of them. I poked the old gun through the rails and turned her loose, then I dropped the gun and got over the fence some way, but I do not know how. My first impulse was to gather the wounded, as I thought the dead could take care of themselves. When I got through gathering them up I had twenty-four dead pigeons; and had to call for help to carry them, as they were more than I could manage at once. That was the third shot I had ever fired out of a gun. I came to the conclusion that I was the champion shot of America.

I can remember away back in the 40s when Burlington Heights, near the city of Hamilton, Ont., in the morning was more like a a battlefield than anything else. The heights are several hundred feet above the bay; the pigeons used to follow the bay and rise over the heights, which were at that time covered with low scrubby oak. Sometimes five or six shots would be fired into one flock and then there would be a scramble for the birds; and many a fight occurred over gathering them. A good retriever could get more birds than a man with a gun.

I recall rather an amusing incident that happened away back in the 40s. At that time in Canada the law was that every able-bodied man had to train or drill in the militia once a year. Each township would meet at a place appointed to train; and it was in the spring, about the time the pigeons were flying. A farmer by the name of Jake Upthegrove lived in the pines on the bank of the Humber. On the morning of training day Jake thought that he would take his old musket, as he might get a shot at some pigeons along the road, as he was going or coming back from training. So he got on one of his horses, put the musket over his shoulder and started for the training ground, four or five miles from his farm, at a place near Montgomery Tavern on the Dundass Pike. When he got there he rode up to the tavern and told one of the bartenders to take care of his gun until after training was over. When he got through he mounted his horse and rode up to the tavern and told them he would take his gun. During his absence they had withdrawn the load, taken the powder out of the pan and filled up the old musket with a load of powder and a wad of dry punk until they had her full to the muzzle. Before giving him the gun they lit the top wad of punk. He shouldered his musket and started for home. He had not gone far when bang went the gun. That frightened his horse and while he was trying to hold the horse and hang on to the gun, bang she went again. That made the horse worse. His hat flew off, and while trying to get in shape, bang she went again. That was too much for him, so he let the gun drop over behind on to the pike, and putting both hands to his horse so he could get him, he faced round at a respectable distance from the gun. After it had fired a few more shots he said the devil was in the gun and whirled round and put for home, leaving the gun laying on the pike, firing every few seconds. In the meantime the crowd had gathered round the gun at a respectable distance. No one dare go near it until it had shot itself out and was lying quiet when some one older than the rest ventured and picked it up. The whole crowd wanted to examine it, they could not make out how a single-barrel gun could fire thirty or forty shots with no one near it. If those parties could have kept a secret it might never have been known, but it spoiled Jake's pigeon shooting for that day. W. H.

RANGE FOR GAME SHOOTING.

Editor Forest and Stream:

If another Dick may join in this good-natured discussion of the proper shooting range for game, I would like to say a few words.

Tiam will probably ask me, as he did Dick of Connecticut, whether I ever shot a moose; let me anticipate the question by replying that I never shot a moose; I never saw a wild moose. I make no claim of having done so, and my notion is that in his catechism of Dick of Connecticut on this personal point Tiam has imported into the discussion matter which is irrelevant, incompetent and immaterial.

The question at issue is whether shooting at long ranges, where the result was almost sure to be a maimed or cruelly wounded animal, and the loss thereby of much valuable food, was sportsmanlike or justifiable. D. of C.'s skill as a shot or mine, or whether I have killed a moose or not, is of no importance in this connection. Still, to pacify Tiam's curiosity, I will say that I have shed much gore, and instead of being the beginner which he more than hints I am, and which I heartily wish I were, I have passed the stage of inexperience by many years.

But I would ask to call his attention to the fact that there are certain general principles of sportsmanship which are recognized as good regardless of the kind of game shot. It is not necessary to murder a man before one knows that murder is wrong, nor is it necessary to slaughter a moose to learn what constitutes humane principles and public rights. Moreover, there are certain standards set up by public opinion and common usage which are something of a guide, and are considered as paramount to the aggressive selfishness of the individual who endeavors to get more than his share, or who wantonly wastes and destroys.

Tiam pleads that in firing at the fleeing moose 200yds. away in bushes, he was firing with a reasonable certainty, as he had diligently practiced that kind of shooting; yet the fact is only the better demonstrated that the range was uncertain, since with all his skill the moose was wounded and lost. Mortally wounded, the noble animal struggled into the forest and perished, and why? Because Tiam had a desire to kill something. In this connection he says: "Again, is the aim of the sportsman in this part of the country to shoot game for food? In this part of the country it is the lumbermen and market-hunters who shoot their game for food purposes. Whenever Nova Scotia sportsmen go hunting they take sufficient food from home," etc.

Tiam clearly implies that the sportsman sallies forth to kill moose for the mere gratification of killing. That is not sportsmanship; it is slaughter. If it is sportsmanship, then the tiger and wolf have true sporting instincts.

Tiam recounts that men have spent season after season and year after year trying for moose, and then he asks, "Must they for the sake of being humane and sportsmanlike refrain from shooting unless they are absolutely sure of their shot?" Here Tiam works in a bit of fallacy. There is no such thing as absolute sureness, but there is a wide difference between a reasonable certainty and a wild chance which may result many more times in wounding and loss than in success. A sportsman is a sportsman or he is not. There are certain limits and boundaries to all extremes, and it is not necessary to drag extremes in to prove a simple question.

I think that Tiam makes the grave error of setting up the individual likes and dislikes, etc., of the man as the true doctrine. If a man were to seek for moose year after year for a hundred years, if he is a sportsman he should not violate the precepts of sportsmanship whether he saw one moose in that time or a million.

There are some important considerations in this matter which Tiam has not considered at all. All animals, *feræ naturæ*, are the property of the people. While each individual has the privilege of taking these animals, there is a prevailing, unwritten, universal law which rules that he should not take more than his share. The odium cast on the market-hunter and pot-hunter is not that they kill the birds for market or for the pot, but that they take more than they are individually entitled to, and take what belongs to others; for the wild game is the property of the people and not of the individual.

So universally has this unwritten law been accepted that it has been made more specific by statutory acts; thus in many States a shooter is restricted to a certain number of chickens or grouse in a day, or a certain number of elk, moose, deer, etc., in a season, or fish of not less than certain lengths, etc., and some States prohibit killing entirely, all of which goes to show the property interest of the game is in the people. No man has a right to wantonly kill game. He must have an ulterior purpose to use the game usefully for food. The pot-hunter takes his game regardless of manner. He will kill a bevy on the ground at one shot. He will murder a deer with a club when the snow aids his purpose. The true sportsman should have the pot in mind, but the manner is what makes the sportsman. He shoots his birds on the wing; he shoots his moose under proper conditions; he regards the property rights of others in the wild animals and does not wantonly shoot animals to rot. To shoot a moose for the sake of a head only may or may not be sportsmanlike. After all, it is largely a matter of convention.

Tiam, with great candor, says he did not confess, he stated facts. A true confession is made up of facts. It might be a fact that he shot and wounded a moose out of fair range, and at the same time it might be a confession of unsportsmanlike conduct. ANOTHER DICK.

MORE TESTIMONY ABOUT THOSE ALASKA DUCK EGGS.

SALT LAKE CITY, Utah, Sept. 9.—*Editor Forest and Stream:* I am a regular reader of your publication. I do not think that age, profession or condition should deprive any American of an interest in the fish of the American seas, lakes, river or brooks, or the game of the American forests. I lack but a year and a half of being ninety years old, having been born March 1, 1807, and I can read with or without glasses. I am at my office and desk (after riding three miles) soon after 9 o'clock, and remain there until 4 or 5 o'clock in the afternoon. I still write my own daily journal and do most of my correspondence, and I receive a very large bundle of daily and weekly papers, though many of these I do not have time to read. But the FOREST AND STREAM never remains unread, even if I have to sit up nights to read it, which I frequently do.

My object in writing this communication is to tell you of my late trip to the great Alaska country, and also to say a few words upon the great birds' egg trade, upon which there is so much written in the FOREST AND STREAM. I was accompanied on my trip by Messrs. George Q. Cannon, Joseph F. Smith and Ovando Beebe, and with our families we made a party of sixteen. We sailed on the Willapah with Captain Roberts, who was exceedingly kind and accommodating to us. We were fourteen days on board, and we visited all the glaciers and settlements which are generally visited upon these voyages, including also a visit to the greatest stamp mill in the West for crushing gold ore, running 240 stamps at the same time, using a low grade ore. The ore is blasted out of a mountain or ledge of earth near the mill, with giant powder, the explosions occurring every few moments. A person might as well try to talk in the midst of 240 claps of thunder as to talk by the side of that stamp mill, the noise being so very great.

The glaciers were very interesting, the towers of ice rising perpendicularly out of the water some 200ft., and being 800ft. under the water. Great blocks weighing hundreds of tons fall from these glaciers every few moments, making a noise like thunder. These blocks form the icebergs found in the Atlantic Ocean. We visited the various settlements and conversed with the white men who were acquainted with the business of the country, and the country itself as far north as the great Yukon River, the third largest river in the world, which abounds with a variety of fish, fur and fowl. The borders of the river contain the great breeding fields of a large variety of waterfowl. In all our inquiry concerning the variety of freight shipped from here, we found it to consist mostly of fish, fur and lumber, and we did not hear of any instance where eggs of fowl were sent abroad as freight. We did not get a particle of evidence concerning this.

We gathered some items of interest concerning the fur trade. The fur seal, a great variety of foxes, and the bears are very valuable, but the sea otter are the most valuable of any furs taken in Alaska. These are also the most difficult to obtain. The sea otter is twice or three times as large as the land otter, and the fur merchants have to pay the natives there from $100 to $400 each for these furs. These men said that one skin was sold in Russia for $1,000. There is quite a variety of bears in Alaska. One man who professed to be acquainted with the customs of the bears in that country said that where there were any fresh-water streams running from the hills into the sea, that were not too steep for the salmon to go up, the fish would fill the stream full in a short time, and then the bears would go to the stream and throw the salmon out with their paws on to the dry land, then drag them away from the water and sit down and eat them. The bears live in this manner until they get fat; and they are easy to kill while engaged in eating the fish.

The Alaska waters abound with salmon, trout, tomcod and other fish. They are very cheap. We saw fishermen sell fresh salmon, weighing from 10 to 20lbs., to the purchasers on the steamers for from five to eight cents each. W. WOODRUFF.

Even a Girl can Kill a Trapped Bear.

THE Elizabethtown (N. Y.) *Post* prints the story from a Brainard's Forge, Adirondacks, correspondent: "Sunday night I told my wife I wanted to get up at 2 o'clock, Monday morning, to go up toward Jay to take an old horse that I was going to kill for bear bait. My girl wanted to know if I was going to any bear traps; she said if I was, she was going with me. I told her it was a long ways and over a rough road, and that she had better wait until I thought I would have a bear.

"I was up at half-past 2 in the morning, got my horses, ate breakfast, found the girl up and bound to go. We started off at 4 o'clock in the morning; and went to Spruce Mill Brook about 7 or 8 o'clock. I left her with the horses and went off toward Jay to find a place to put my bear bait. I couldn't find a good place to put the bear bait, came back and found girl and horses all right, then we started off south, but a short distance from where I had two bear traps set. I went on above from the place where I had two bear traps and told the girl to stay there until I came back. It was bad traveling and I was gone longer than I expected to be, as I wanted to find a place to kill the horse. I left my gun with her, and told her if a bear came along to kill him. I did not suppose there was a bear within five miles of us. I traveled around, but did not get more than forty rods away from her when I heard a gun go off. I had a white dog with me; he started toward the place where I heard the gun; then I heard him yelp, and the girl yelled, "The bear is killing the dog." I went "hell-a-to-larup" through the brush, then I heard another report from a gun. When I got to where she was, she was sitting on a log and close by lay a bear deader than a nit. She said she was looking for some gum, when she heard a noise, which she thought sounded like a chain rattling, she turned and walked along and there she saw a bear trying to bite the jaws off the trap. The bear had gotten into my trap the night before. I didn't think there would be anything in the trap, as I was there a few days before.

"My oldest daughter went with me to a trap last fall and I found a bear in the trap. She saw the bear first and wanted to kill it; but the foot was nearly off, so I shot it myself. The girl shot this bear through the shoulders the first time; she said he dropped down, but got up pretty quick; the next time she shot him through the ear, after that, she said, he did not move a muscle. The next time I want a bear I am going to take my wife along with me and see if she can kill one. ELIJAH SIMONDS."

Cutting off a Partridge's Head with a Bullet

Editor Forest and Stream:

Dick of Connecticut seems to think that cutting the head of a partridge with a rifle bullet is one of the things talked about and not done. If Dick had been much in the backwoods of Maine or the Provinces, he would hardly ask such a question. About all the partridges killed by the Maine guides when back in the woods are shot with a rifle, and cutting off the head or neck is the usual way. I never saw a guide do it, for this reason, that I never saw a guide shoot anything. A good deal of my hunting for deer and caribou has been done without a guide, and when I did employ one he never carried a shotgun or rifle. If there was to be any shooting I would do it.

I have seen a good many partridges which were evidently killed in the above manner. Their heads were gone or hanging by a piece of skin, and as there was no other mark on them of either bullet or shot it was pretty safe to say their heads had been cut off with a bullet. As for seeing it done I have done it myself a good many times. I am quite sure I have killed over fifty in such a manner. On one of my last trips after caribou to Township No. 7 in Aroostook, I had several days when it was of no use to try still-hunting on account of noisy crusty snow. I would cruise up and down the old Aroostook road looking for partridges. I shot twelve, shooting fifteen shots to get them, and every one had its head or neck cut off with a bullet. I found four in a birch and shot the heads off three in as many shots. As my rifle was a .45-90 loaded with 100grs. powder there was no use shooting at a partridge's body if I wished to save it. Of course the partridges I found in the backwoods were very tame and I could usually get within 7 to 15yds. of them, and certainly it is not very difficult to hit one in the head or neck with a bullet at that distance when the bird is sitting still. C. M. STARK.

DUNBARTON, N. H.

Michigan Prairie Chickens and Pigeons.

LANSING, Mich., Sept. 14.—Jay Skinner, J. E. Nichols, Launt Thompson and Howard Sweet shot nine prairie chickens on Monday south of Pine Lake. The chicken is quite a rare bird for this section.

C. J. Davis secured an albino meadow lark one day last week, and he has mounted it for his collection.

Wild pigeons are in small flocks near Pine Lake. Twenty were shot there last Sunday.

Several parties are being organized here to go North after deer in November. The $25 license required of non-residents will be a great help toward protecting deer. JULIAN.

Adirondack Deer.

NORTH HUDSON, N. Y., Sept. 10.—L. A. Chafey, proprietor of Pine Ridge Cottage here, killed a very nice deer, the first one of the season. The party killed two deer and one bear the same day. E. E. W.

Central New York.

ITHACA, N. Y., Sept. 15.—The advance of the shooting season has disclosed the fact that ruffed grouse are unusually plentiful. Recently the writer got up thirty birds in a two hours' walk within three miles of the city. The birds, however, are small yet, scarcely two-thirds grown. To make such scores as George P. Finnigan is credited with in the last issue of FOREST AND STREAM is a comparatively easy matter when contrasted with the work of making them when the birds get full grown, provided the grouse in Chenango county are no nearer maturity than they are in Tompkins, Cortland, Tioga and Seneca counties. The opening of the grouse season should be hereafter deferred several weeks, say to Sept. 15.

Woodcock are not reported as being more than moderately numerous. A more definite report can be made concerning Madam Longbill later on.

Gray and black squirrels are plenty in some sections. Rabbits are scarce compared to what they would have been had the law-breaker with his toothpick snouted rodent in his inside pocket been effectually suppressed. Unless this particular form of game law violation is clearly beheaded bunny's days are numbered so far as this section is concerned. We shall watch the efforts of the newly-appointed protectors in reference to this matter with vigilant interest. M. CHILL.

Long Island Shore Birds.

LINDENHURST, L. I., Sept. 11.—Yellow-leg snipe and plover shooting is very good now, better than has been in years. C. ROBINSON.

Sea and River Fishing.

TROUT IN THE BLACK HILLS.

OMAHA, Neb., Sept. 9.—When the Black Hills of South Dakota are mentioned the only association they have in the minds of most people is in connection with the mining interests; and to the great majority of Easterners even that idea is somewhat vague. To many they are but a spot on the map—an offshoot of the Rocky Mountain system—and to be told that the "Hills," taking a section 100 miles square, are probably the richest mineral-producing section in the world is apt to cause a smile of incredulity, and yet it is a fact. Deadwood, Custer, Crook City and other old-time camps—if they were ever heard of at all—are considered as typical frontier mining camps, in which the lawless border ruffian reigns supreme, where the traditional "man for breakfast" is an almost daily occurrence, and the six-shooter the only law in the land. Such was once the case and in the minds of many people it is still so, and yet Deadwood, the metropolis of the Hills, and all the other towns as well, are as orderly and law-abiding as any New England city, if not more so. The people are full of "get up and git," with a refreshing Western flavor. The old reckless element has long since disappeared to be seen no more, and has given place to the most whole-souled, hospitable lot of men and women to be met with under the sun, full of hustle and business, but never too busy to show an amount of courtesy to visiting strangers seldom met with elsewhere.

Apart from the mining interests, the Black Hills offer an attraction in the way of scenery that, were it more generally known, would fill the Hills with summer tourists, who now take their outings in other directions. The Wind Cave near Hot Springs is alone well worth a long journey. It has been explored for a distance of ninety-eight miles, and they haven't found the end yet, and every foot of it contains something of beauty and interest. Then all through the northern Hills are cañons that rival anything in Colorado. Chief is Spearfish Cañon, through which a railroad has recently been built.

Thither not long ago a jolly party of friends wended their way on pleasure bent. There was the Professor, who whistled an air from "Trovatore" on the summit of Terry's Peak, and subscribed his name to a string of poetry in the register on White Rocks; the Contralto, who graciously gave a free concert with the Grand Cañon as an auditorium; the lieutenant's wife, the Artiste; the Fat Man, who couldn't climb the peak, and the Scribe.

All over the Hills they journeyed together, climbing mountains and exploring cañons, riding on ore trains and groping their way through mines. From Deadwood to Spearfish they traveled in the way car of a freight and ore train, every curve of the serpentine route bringing fresh marvels of scenery to delighted eyes. Up and up the train crept until reaching the summit of the pass it plunged down again over the steepest grade in the United States into Spearfish Cañon. Through the cañon and beside the track dashes one of the most beautiful mountain streams in the country, clear and sparkling and cold as ice, with a melodious voice that said trout in every ripple and cascade. Strange to say, however, neither Spearfish Creek nor any other Black Hills stream contained trout until recently, when quite a number were planted from the United States fish car. Some day it will be a model trout stream, but just at present the supply is somewhat small both in number and size.

From Deadwood friends we had learned of this planting and thither we traveled loaded down with rods, tackle and a large determination to catch them all. We reached Spearfish village in time for a late supper, having the pleasure of witnessing the sunset effects on the rugged walls of the cañon. In the hotel office we found several trout swimming in the fountain and our hearts rejoiced, for well we argued that if a country landlord could catch a few, we of course, being experts, would surely catch a great many—we forgot the story about the bare-legged country boy and the willow pole. Comforted with this pleasing delusion we early sought our couches.

At 4:30 A. M. came the stentorian voice of mine host, who informed us that if we expected to keep our engagement with our speckled friends, it was time we were moving. Old Morpheus seemed to have a firm hold on several of the party and only the Contralto, the Fat Man and the Scribe answered at roll call. Our superior officer, the lieutenant's wife, flatly refused to get up; and the Professor in classic language requested us to go chase ourselves. Sadly reduced in numbers, but not in enthusiasm, we sallied forth. We tackled that stream at the nearest point and whipped it, thrashed it and pounded it with our flies for 3 or 4 miles, and that's all the good it did us. The Contralto broke the tip of her rod, the Fat Man left his leader and flies on a tree (he is a fish commissioner, too), and the Scribe fell into the creek and got the crease all taken out of his trousers. But what cared we? We came out for sport and we were having lots of it, fresh and invigorating ozone in large chunks, scenery of the most beautiful kind *ad lib.*, a glorious sunrise that kindled the rocky walls of the cañon with resplendancy of color, and last, and I sadly add least, fish. Along about 9 o'clock we all walked into town, the Contralto staggering under the weight of our combined catch, one poor pitiful 6in. trout, a victim of man's, or rather woman's, wiles.

Many residents of the town have spring-fed ponds in their door yards that are full of trout, and I very much fear that some of Uncle Sam's hand-raised beauties got into the wrong pew by mistake. There were not many in the creek, or we would have caught them of course. This being a truthful fish story I give the facts.

Back through the hills again we wandered, everywhere meeting with courtesies that came as unexpectedly as they were pleasant. Stopping at many points of interest we finally reached Hot Springs again, where our party disbanded, to go by different routes to our widely separated homes, all to meet again, I trust, some day, and renew acquaintances so pleasantly formed.

W. R. HALL.

BLACK BASS IN MAINE.

I HAVE recently visited Waterford, Me., forty-five miles from Portland, reached by the Grand Trunk Railway to Norway, then stage ten miles to Waterford, or by Portland & Ogdensburg R. R. to Bridgton and stage nine miles, or to Sebago Lake and steamer to Harrison and stage five miles to Waterford. It is one of the neatest and pleasantest of Maine's attractive villages, the home of the late Artemus Ward. Its attractions to the summer vacationist are well proven by many from Brooklyn, New York, Philadelphia, Boston, Portland, etc., who have been there for many years in succession, drawn by its beautiful location and the many opportunities for sport.

Keoka Lake, near the village, containing 484 acres, affords fine black bass, pickerel and perch fishing, and bids fair to add fine landlocked salmon, having had 10,000 fry planted four years ago. One was caught this season of 2¾lbs.; and 10,000 or more will be added this fall. There are also white perch. The catch of black bass the past summer has been all that one could wish, many of 3 and a few of 4lbs. Rev. Dr. Gibbins, of Philadelphia, and Dr. Gordon, of Brooklyn, are high liners.

Bear Pond, one mile south, near South Waterford village, and of about 280 acres, affords the same fish, but the landlocked salmon are natives, and larger and more plentiful, the pond being connected with Long Lake, Bridgton and so on to Sebago Lake.

There are Long Pond (325 acres), Moose Pond (200 acres), and Pappoose Pond (200 acres), with good fishing for pickerel, perch and catfish, and many brooks that afford fair brook trout early in the spring.

For those who want recreation, good fishing and all that makes a pleasant hour in the country, there is no more attractive place. A first-class hotel is under charge of Mr. Dudley and wife (accommodating forty or more, was obliged to turn away many this season), and a dozen boarding houses, were all full.

As to game, in season there are many partridges, woodcock, squirrels, rabbits, etc., and some deer. Three were seen feeding in a cornfield on Sept. 4. Last November a big moose was seen within a mile of the village; it swam across the lake and took to the woods.

The drives, walks and boating facilities are not surpassed.

Mr. Dudley has entered into the fish question with a vim, and is a protectionist from the word go. He realizes that fish do draw. While fishing through the ice for pickerel last winter he caught a trout (*fontinalis*), estimated weight 4 or 5lbs., and returned him to the lake saying: "I will practice what I advocate." How many would have done it? He says and realizes that the more fish they can get in the lakes the more boarders he and others will get. Fifteen years ago, when there was nothing but pickerel and perch to catch, a boat was a hard thing to find; to-day there are twenty fine Rangeley and St. Lawrence boats there. The introduction of black bass has been the main cause of it.

There are many fine bass lakes from near by, reached from Norway, Bridgton and Sweden, all adjoining towns, and within pleasant driving distances. For the reasonable, quiet and true angler there isn't a pleasanter place in the world to go to, easily reached. P.

SOME MORE SHAKING.

Editor Forest and Stream:

Why does a dog shake his head when he finds he has a bee in his mouth instead of a fly? This is not a very hard thing to answer, for every one will say he tries to shake the bee out of his mouth.

For the same reason we say that a bass shakes his head when he finds he is brought up with a hook. He shakes to get the thing loose. As evidence of this I would state that several weeks ago I was fishing on the long pier at Grand Haven, Mich.; this pier by the way is the same one where Brother Starbuck fell into the lake and then continued his fishing in nature's garb and an umbrella for his outfit while his clothes were drying. As I was saying, I was fishing in the clear waters of the big lake when I hooked a small sized large-mouth bass. At the depth of 4 or 5ft. every movement could be distinctly seen. The fish would run one way until he felt the pressure of the line, when he would shake himself exactly as a dog shakes his head to get the bee out of his mouth. The bass would then turn, run in the other direction until he felt pressure of the line, when he would repeat the performance in his efforts to escape. By pulling him with the rod he made a run for the surface, came above the water and shook himself the same as he did while in the water. And his mouth was open too, just like the dog's. It was a clear case of intelligence, and every action the fish made was for the purpose of getting the hook out of his mouth. The fish showed just as much intelligence as Dr. Ellzey would in trying to scratch his back when he had a tremendous flea bite; if he could not reach it with his hand he would back up against a post.

By the way, I have my doubts about the existence of such a person as Dr. Ellzey. His communications are too much like those manufactured in newspaper offices for the purpose of starting controversies. I have done something in that line myself.

In a recent issue of FOREST AND STREAM I noticed some references to the shape of a white bass, one correspondent saying it resembled that of a black bass, while another contradicted the statement. Both are correct. The white bass of Lake Michigan are as near the shape and size of the small-mouth black bass as can be, and if they were of the same color no one could tell the difference. The so-called white bass of the rivers or the striped bass are fish of another kind, differing in form and coloring to the bass of the big lakes. In arguing it is always well to be sure of one's premises.

Some time ago I had the pleasure of writing to FOREST AND STREAM about a proposed spear which a St. Louis genius was inventing, which would cover a space of about 30in. in diameter. The invention is not yet completed. There always seems to be some little point which prevents success. Just as soon as the thing is done I intend to send one to Von W. and one to El Comancho. These two correspondents seem to appreciate the new invention.

One thing more and I will close. In common, no doubt, with many other readers, I would like to know whether Mr. Hough bought that aluminum frying pan or whether it was presented to him by some enterprising manufacturer. ABERDEEN.

ST. LOUIS, MO.

SOME WISCONSIN RESORTS.

TROUT LAKE, Oneida County, Wis., Aug. 31.—*Editor Forest and Stream:* If you will take the Forestry Bulletin, published by the United States Government, in which is shown the timbered section of the different States of the Union, you will find in the one showing the forests of Wisconsin that the northern portion of the State—that is to say, about two-sevenths of the northern portion of the State—is covered with a dense growth of pine. A large section of this portion of the State is still in its virgin condition. The hand of man has not yet invaded this section of natural forest. Here, nestled among the hills, is this beautiful lake on which I find myself on this summer's day. In the city the temperature is away up in the 90s, whereas here we revel in wraps and overcoats along in the evening, and during the middle of the day a suit of heavy underwear and flannel shirt is just about comfortable clothing. This lake is nestled among the hills of northern Wisconsin. From it may be reached a large number of lakes, all of which contain nature's store of food and game fishes. This lake is fourteen miles from the railroad and "all the way through the woods." The genial landlord of this frontier home is Mr. John B. Mann, a great big, jolly fellow, and was well calculated to do what he did—along in April, 1888, at which time he cut a road through the timber from Monocqua to this pine home, and showed his wisdom in selecting a place on which to build the present structure, which he has named Manitowish House. It is located on a bluff some 35ft. above the level of the lake, on a peninsula which juts out into this body of water.

From this place, as an outfitting point, anglers and sportsmen are enabled to reach a number of lakes where they may pursue their sport to their hearts' content. This is a veritable home for the "lordly mascalonge" (the unspotted variety), that abound so in the waters of northern Wisconsin. In their season bass, pike, perch, salmon-trout and the "speckled beauties" may also be secured in places that are reached by trail and boat from this point. On the shores of many of these lakes are established camps which have been erected by Mr. Mann for the accommodation of his guests. John is only too willing and too ready to at any and all times fit out parties of campers, provide a boat and make it comfortable for either a long or a short trip. After the fish, fur and feathered game are in their season, guides may be obtained here, and every one of them are experienced woodsmen and thoroughly well acquainted with the country. Some of them have lived in this immediate vicinity from seven to seventeen years, and are all trustworthy, accommodating, pleasant, and only too willing, many of them, to do extraordinary favors for those with whom they go out. And talk about cooking. Well, some of them can just "beat the Dutch."

The fame of this locality has spread apparently more in the Southern portion of the country, as the register of the hotel gives evidence. People from St. Louis, Chicago, New Albany and Minneapolis are more frequently there than from other sections of the State. I find on looking over the record of the "catch," which, by the way, John endeavors to keep a record of like all other landlords, he gets the big ones and lets the little fellows go. I find the records read something like this: "In 1889, May 10, a party consisting of J. Frank Lawrence, E. M. Ehrlich, O. W. Nixon, H. H. Kohlstaat, W. A. Taylor, J. H. Ballard and N. J. Irvin, all of the Chicago *Inter-Ocean*, came up here and their first catch consisted of 53 salmon-trout and 37 bass." The record fails to give the weight of these fish, but John says they were big fellows, all of them. It is a fair inference that they were, because at that season of the year most of the fish taken *are* large. But in 1892, May 9 to 13, a party of gentlemen from Minneapolis, Minnesota, were there and they *did* make a record. They took 167 of these salmon-trout, averaging 3lbs. The largest was 15lbs. and was taken by Mr. George B. Eustis, and the largest wall-eyed pike 13½lbs., taken by Mr. W. L. Bigelow. On the 25th of May, 1894, a party of three gentlemen from Chicago in a day and a half's fishing caught 53 mascalonge in the Manitowish River, which is the outlet of Trout Lake. These fish ran from 6 to 24lbs. each. Mr. Mann has a specimen of mascalonge in his office over his desk which is a beauty. Its weight is 26lbs. I know of no place so accessible to the wearied citizen of Chicago and other large cities in the West where they can go and find such excellent accommodation and such excellent fishing and hunting as in these northern fastnesses of Wisconsin. The waters are cold, clear and deep, and they are filled with game fish above alluded to.

One great drawback to going into the wooded wilderness is the lack of boats or canoes, but that matter is carefully looked after and accommodations in that respect are always obtainable from this place. The proper time to get the best and largest fish is about in October, at which time the disciples of Nimrod Walton can obtain all the sport in the way of shooting and fishing that the most ardent and enthusiastic hunter and angler could desire.

W. P. ANDRUS.

September Fishing in Maine.

BOSTON, Sept. 14.—It is a curious fact that September angling for trout in Maine is slowly growing popular. Only a few years ago the veteran anglers made two trips annually to the Rangeleys and to the Moosehead waters. Now very few anglers seem to care for fishing in September in that State. Indeed the drift has been homeward of late, though the papers and correspondents devoted to booming the angling resorts have lately made a desperate effort to keep up the supply of trout stories. I have lately taken pains to make inquiries of a number of Boston anglers who formerly made fall trips to the Maine trout waters, and I have not found a case where a fall trip is to be made with trout fishing in view. In several instances I have been answered: "Oh, I don't care for fall fishing. The trout are full of spawn, and not good for anything. I like to fish in the spring as well as any one, but fall fishing has cloyed with me." A verdict of this kind is the rule this season. It is true that some of the camp owners at the Rangeleys and at other points will remain through September, but it is more with shooting in view than for trout fishing. The salmon anglers are all at home, and the season has been a delightful one. SPECIAL.

Coming out of camp on Kennebago, it was a delight to meet Mr. Dutton, of Houghton, Dutton & Co., Boston. Mr. Dutton is an enthusiastic sportsman and has a beautiful camp on Cupsuptic, one of the Rangeleys. Leaving his camp the evening before at 5 o'clock he fished for less than an hour and caught thirty-one trout, which his guide weighed, and the entire catch weighed over 50lbs. There were four doubles. J. T. B.

Game and Fish Protection.

Pennsylvania Fish Protective Association.

PHILADELPHIA, Sept 14.—A well-attended meeting of the Pennsylvania Fish Protective Association was held on Tuesday evening, Sept. 10, at the rooms, 1020 Arch street, Philadelphia. Resolutions of regret were presented and adopted on the death of Col. Marshall McDonald, United States Commissioner of Fish and Fisheries.

The Legislative Committee submitted a lengthy report and announced the following bills as having been approved by the Governor of the State:

"Bill No. 218, Section I.—That no person shall, at any time, place in any waters of Pennsylvania any torpedo, giant powder, nitro-glycerine, dynamite, lime, electricity or any other poisonous or explosive substance for the purpose of catching or taking fish.

"Section II.—Any person or persons offending against any of the provisions of this act shall be guilty of a misdemeanor, and on conviction thereof shall be fined $50 for each offense, and undergo an imprisonment of not less than thirty days, or more than one year.

"Bill No. 201, Section I.—That from and after the passage of this act it shall be lawful to use in the waters of this Commonwealth, other than trout streams, eel-pots made of wicker work or netting, the said eel-pots to be of a length not exceeding 5ft., with an entrance to the same not exceeding 2½in."

The Act of Assembly approved May 22, 1889, was so amended that penalties are made mandatory, and prohibits the taking of b lack bass under 9in. in length in the Delaware River.

The Act of May 23, 1887, making a close season for German carp, was repealed.

A resolution indorsing the action of the officials of the New Jersey Fish Commission in seizing the Menhaden fishing steamer Rawson for violating the fishing laws, was adopted and a copy forwarded to Commissioner Howard P. Frothingham.

Numerous communications were read requesting information regarding the use of eel-pots, this act being in some instances misinterpreted as restoring eel-weirs and fish-baskets. The Association authorized the printing of a considerable quantity of circulars and posters containing new laws and those amended, for distribution throughout the State.

The following preamble and resolution were unanimously adopted:

"*Whereas*, The death of the Hon. Marshall McDonald has made vacant the office of United States Commissioner of Fisheries, and

"*Whereas*, We are informed that the name of the Hon. Henry C. Ford, of Philadelphia, is about to be presented to the President of the United States for appointment to fill such vacancy,

"*Resolved*, That we unqualifiedly indorse the application of Mr. Ford for appointment to such position for the following reasons, to wit: His service for nearly ten years as a member and president of Pennsylvania Fish Commission; the great success of his administration in that position, his executive ability and his thorough knowledge of fishculture have attested to his efficiency, and render him eminently qualified to fill the office made vacant by the death of Hon. Marshall McDonald. M. G. SELLERS, Sec'y.

(Attest) "H. O. WILBUR, Pres."

M. G. SELLERS, Sec'y.

The Kennel.

The Beagle Trials.

LINDEN, Mass., Sept. 6.—*Editor Forest and Stream:* Entry blanks for the third annual trials of the New England Beagle Club are now ready, and will be mailed to all beagle owners, but should any be overlooked please drop me a line and I will forward blanks at once. The trials this year will be more interesting than ever before, and without doubt better dogs will be seen, and from present appearances competition will be very keen in the various classes. A long list of special prizes have been donated and will be announced later on. The judges are men of long experience, and have been indorsed by the leading beagle breeders of the country. The trials will be held as last year, at Oxford, Mass., and the club headquarters will be at Bacon's Hotel, where the low price of $1.25 per day is made to all attending the trials. Landord Bacon, as all well know who have attended former trials, does everything possible to please all, and the best of food is served, and plenty of it. The grounds are about fifteen minutes' ride from the hotel, and good comfortable quarters are provided for the dogs within easy walking distance of the hotel.

The trials begin Tuesday morning, Nov. 5, and continue every day after till finished. Any information in regard to reaching grounds or anything regarding the trials will be cheerfully given. Entries close Oct. 1.

W. S. CLARK, Sec'y-Treas.

MANITOBA FIELD TRIAL CLUB'S TRIALS

GOOD weather favored the running from start to finish. The competition was excellent as a whole. Birds were not plentiful, but still they were not so scarce as to injure the work.

Mr. W. S. Bell, of Pittsburg, judged the stakes, excepting the amateur, and decided skillfully and well. Mrs. Bell did the driving for Mr. Bell, so that he could devote all his attention to his duties. There was no more skillful driver on the grounds.

The list of visitors was unusually large. There were present Mr. and Mrs. Ewing, New Islip, N. Y.; R. Merrill, Milwaukee; C. P. Mingst, Wm. M. Holm and C. Harb; J. H. Woodward and wife, Miss Woodward and A. H. Woodward, G. Morrow and wife, Birmingham, Ala.; C. C. Chipman, Thos. Johnson, G. B. Borradaile, C. A. Boxer, T. C. Peters, C. W. Graham, D. M. Telford, Winnipeg; E. E Ellis, Tacoma, Wash.; W. E. Warner, New York; Mr. Murray, Supt. Branch C. P. R. R., and many others.

The decisions were well received, as they deserved to be.

There were some misunderstandings concerning the entries of Mr. Titus and Mr. Wells, but they were all settled at a club meeting and their entries were accepted.

The Amateur Stake.

The opening of the competition began on Monday, Sept. 9, with this stake. There was quite a commendable interest manifested in it. The competition was diligently followed by a fair field of spectators.

Mr. Thomas Johnson, of Winnipeg, judged it. The quality of the work was barely average, with the exception of a few good performances.

There were six entries, all setters, run as follows:

C. W. Graham's b. w. and t. dog Gladiator II. (Gladstone's Boy—Queen Novice), owner handler, with Chimo Kennels' chestnut and w. dog Larry Noble (Ezra Noble—Cornelia G.), G. B. Borradaile, handler.

Chimo Kennels' b. w. and t. dog Ortolon (Orlando—Atalanta), G. B. Borradaile, handler, with J. Wootton's b. and w. bitch Bonnie Lit (Orlando—Lady Lit), owner handler.

Chimo Kennels' b. w. and t. bitch Dodo III. (Orlando—St. Atalanta), G. B. Borradaile, handler, with N. F. Ellis's b. and w. dog Columbus (Duke of Manitoba—Hickory Link).

Second Round.

Larry Noble with Gladiator II.
Ortolon with Bonnie Lit.
Dodo III. with Columbus.

Third Round.

Larry Noble with Bonnie Lit.
Dodo III. with Bonnie Lit.
Columbus with Larry Noble.

First, Dodo III.; second, Bonnie Lit; third, Columbus; fourth, Larry Noble.

Dogs owned by members a month before the club's trials were eligible. The dogs' competition was restricted to members who were amateurs.

The prizes were: To first, silver cup, presented by the club's patron, Mr. C. C. Chipman; second, third and fouth, 50, 30 and 20 per cent. of entrance and running fees.

Dodo III. was easily the best dog in the stake in every detail of the work. Her locating and pointing were specially superior to that of the others and would rate very well with the good work done in the open competition.

As for Bonnie Lit, Columbus and Larry Noble their work was lacking in finish and at best was about ordinary.

This stake undoubtedly will accomplish much good, as it will divert some interest from the strictly professional competition to that of membership and amateur competition. An amateur cup, however, would retain more interest if the ownership were contingent on two or three wins instead of one. It would be more eagerly competed for and more valued when won.

MONDAY.

As there were so few entries the start was delayed till afternoon. The weather was cool, a stiff breeze blowing steadily. Birds were not found plentiful and the work on birds was meager in quantity.

First Round.

GLADIATOR II.—LARRY NOBLE.—They were cast off at 3:05. Larry took a long cast, pointed, lost scent probably, for he left the point and moved on and the bird flushed afterward. Up at 3:35. Larry was the wider ranger. Gladiator took long casts betimes, but his range was not uniform.

ORTOLON—BONNIE LIT.—They began at 3:41. On stubble Lit flushed twice and next she pointed a single, more from the preceding flushes than from scent. Ortolon flushed some birds which were scattered about, apparently feeding. The birds were followed and he afterward pointed one; following on, Ortolon flushed twice. Next each at the same time pointed birds and was steady to shot. Lit next roaded and pointed a single and left it. On some scattered birds both worked inaccurately. Considering the opportunities on birds the work was sloppy. Up at 4:10. Lit was the faster and wider ranger and did the better work on birds.

DODO III.—COLUMBUS.—They were cast off at 4:16 and ran about 30 minutes. Columbus flushed some birds. Both ranged fairly well. There was no point work.

Second Round.

As nearly all the running was done in the afternoon, Mr. Johnson decided to make the heats short so that the conditions respecting time of day and temperature would be equalized. It was at that juncture becoming cooler, and the dogs were run in the same order again.

LARRY NOBLE—GLADIATOR II. were cast off at 4:53. The dogs were now going much better, owing to the cooler temperature. Larry took a cast and pointed the birds well; Gladiator backed. Both steady. Up at 5:19. Larry was the wider and faster ranger. Gladiator sometimes followed Larry, thus not ranging independently.

ORTOLON—BONNIE LIT.—They started at 5:25. Lit flushed two birds and pointed the flush. At the same time Ortolon pointed and roaded; nothing found. Lit next made a flush. On stubble she next roaded to a flush on a bird and pointed, and several remaining birds were flushed to the point. Ortolon coming up pointed o backed. Lit was the wider ranger. Her point work was ragged. Up at 5:50.

DODO III.—COLUMBUS were started at 5:53. Dodo pointed to a flush. Next on wheat stubble Columbus made a good point on a single and Dodo backed. Dodo broke shot and chased a short distance. It was not a bad one, and not sufficient to cut down her superiority over many of the others. Columbus flushed and pointed a bird on stubble; the flush or point were so nearly simultaneous that it was difficult to determine it. Dodo took a long cast, pointed, beat to and fro on scent and located and pointed the bevy, doing a good piece of work, the best of the afternoon. At the same time Columbus pointed; nothing found. Columbus flushed a single. Up at 6:25. Dodo seemed to be improving in range and point work as she got further into the competition. She had decidedly the better of the heat.

LARRY NOBLE—BONNIE LIT were started at 6:30. Lit flushed a single; at the same time Larry pointed. Moved on. Up at 6:55. Larry was much the wider and faster, though he did not keep the course so well as could be desired. Lit had narrowed her range a great deal toward the last of the heat.

This ended the day's work.

Third Round.

Four dogs were kept in the third round.

TUESDAY.

A late start was made. The sky was overcast. A stiff, cool wind blew steadily. Gradually the sky cleared and the temperature at noon was comfortably warm. The afternoon was windy and cool, with some rain.

DODO III.—BONNIE LIT.—They were cast off at 8:14. Dodo showed decided superiority from start to finish. While making a cast she caught scent, followed it accurately with nose high in air, and pointed the bevy staunchly and well. Lit running close up, failed to recognize the scent. Down 8 minutes.

COLUMBUS—LARRY NOBLE were started at 8:26. Down 17 minutes. Columbus flushed a bird. About 300yds. away both dogs were seen on a point, and the birds flushed wild. Moved on, Larry pointed and Columbus backed and broke back. Nothing found. Larry flushed a bevy, and both pointed the footscent of it. Both took wide casts, but lacked judgment in beating out their ground. This heat ended the stake.

The Derby.

There were 19 starters in the Derby. Following is the order of running:

T. G. Davey's b. b. setter bitch Brighton Maud (Brighton Tobe—Lady Brighton), R. Storey, handler, with W. F. Ellis's b., w. and t. setter dog Jekyl (Columbus—Manitou), handler, owner.

C. P. Mingst's b. and w. setter dog Rex (Antonio—Columbia), J. Mayfield, handler, with Charlottesville F. T. Kennels' b. and w. pointer dog Nabob (Rip Rap—Dolly D.), C. E. Buckle, handler.

A. P. Heywood-Lonsdale's liv. and w. pointer dog Ightfield Mentor (Ightfield Doveridge—Ightfield Musa), W. Brailsford, handler, with N. T. DePauw's liv. and w. pointer bitch Sister Sue (Jingo—Rooney Croxteth), N. B. Nesbitt, handler.

Blue Ridge Kennels' b., w. and t. setter dog Brighton Dick (Antonio—Ruby's Girl), D. E. Rose, handler, with T. G. Davey's b. b. setter dog Brighton Dick (Brighton Tobe—Lady Brighton), R. Storey, handler.

A. P. Heywood-Lonsdale's liv. and white pointer dog Bonny Dan of Colehill (Don of Bolcord—Duchess of Bolcord), A. Cameron, handler, with Avent & Thayer's b., w. and t. setter bitch Feu Follett (Count Glandstone IV.—Folly), J. M. Avent, handler.

W. W. Titus's b. w. and t., setter dog Sam T. (Luke Roy—Betty B.), F. Richards, handler, with F. R. Hitchcock's lem. and w. setter dog Tory Fashion (Count Gladstone IV.—Fleety Avent), J. M. Avent, handler.

Charlottesville F. T. Kennels' o. and w. pointer bitch India (Rip Rap—Dolly D.), C. E. Buckle, handler, with W. B. Wells's b., w. and t. setter dog Selkirk B. (Whyte B.—Dido III.), J. J. Spracklin, handler.

J. Simoneau's b., w. and t. setter bitch Bessie S. (Columbus—Maud à Rose), owner, handler, with W. F. Ellis's b., w. and t. setter dog India (Columbus—Maud à Rose), owner, handler

Manchester Kennel Co.'s b., w. and t. setter bitch Gleam's Ruth (Count Gladstone IV.—Gleam's Maid), F. Richards, handler, with John Wootton's b., w. and t. setter dog St. Peter (Duke of Manitoba—Hickory Link), owner, handler.

Manchester Kennel Co.'s b., w. and t. setter bitch Gleam's Dart (Count Gladstone IV.—Gleam's Maid), F. Richards, handler.

Second Round.

Sam T. with Sister Sue.
Domino with Tory Fashion.
India with Bessie S.
Gleam's Ruth with Feu Follet.
Gleam's Dart with Brighton Dick.
Nabob with Brighton Maud.

Third Round.

Tory Fashion with Sister Sue.
India with Gleam's Ruth.
Sam T. with Brighton Dick.

First, Sam T.; second, Sister Sue; third, Brighton Dick; fourth, Tory Fashion.

First, $250; second, $75; third, $50; fourth, $25. $5 forfeit; $10 to start. For setters and pointers whelped on or after Jan. 1, 1894.

Sam T. showed a superiority in well sustained range and speed, judgment in beating out his ground, and the class of his work.

Second was very closely contested by Brighton Dick and Sister Sue, the latter the better in style and sharpness of her bird work, while the former was good at finding and very sure at pointing accurately. Either one could have been placed second or third with reason.

Fourth place was won by Tory Fashion, though closely pressed by Gleam's Ruth. The latter was decidedly superior in every respect save her over-eagerness to flush or get near the birds when drawing. Tory required a deal of coaching, pottered on footscent and was awkward in her point work. In beating out her ground she was about ordinary, being erratic in ranging and without systematic effort.

BRIGHTON MAUD—JEKYL were started at 8:49 and ran

24 minutes. Maud was much the better. She took a cast and pointed a bevy, doing a good piece of work. Jekyl, on a breaking, flushed and chased twice. Maud dropped to a point on a bevy and Jekyl stole the point; a single bird flushed; Jekyl then moved on and the rest of the birds flushed. Maud next dropped to a point or flush. She had a fairly good range, judgment and worked industriously. Jekyl showed inexperience.

REX—NABOB were started at 9:16. Nabob flushed a bird; moving on, both in a few yards carelessly flushed the rest of the bevy. Sent on. Rex next dropped to a flush on some birds near the edge of a wheat field. Both showed good speed. Nabob romped and showed puppy traits. Rex ranged fairly well. The point work was poor. Up at 10:04.

IGHTFIELD MENTOR—SISTER SUE were cast off at 10:11. The dogs started off well. Taking opposite casts, Sue nicely pointed a bevy; at the same time Mentor pointed and nothing was found. After ranging a short time Sue again pointed a bevy well; Mentor at the same time caught the scent about 80yds. up wind of the bevy and drew up wind on the back track and pointed; nothing found to the point. Sent on. Soon Mentor pointed and Sue backed; nothing to the point. Sent on. Next Sue pointed and cast about on the scent, working industriously to locate. The wagons coming on flushed the birds about 100yds. from her. Up at 10:39. Mentor recognized false scents and dwelt on them more than he should, and in trailing he was slow and indecisive. Mr. Brailsford at length withdrew him, at the same time explaining that the dog was not well.

DOMINO—BRIGHTON DICK began at 10:40. Domino flushed a bird. Next, Domino found and pointed and Dick backed; the dogs moved on a short distance and each pointed, each having birds; the find was Domino's. Sent on, Domino next pointed, moved on and flushed on stubble. Dick pointed and waded on stubble; no bird. Dick next accurately pointed a single and Domino refused to back and stole the point. After ranging awhile both crossed a hollow and were seen next some distance away on point, Domino in the lead pointing the bevy. One of the spectators who saw the work said that Dick first secured the point and Domino coming in saw Dick pointing and stole the point. Up at 11:22. Dick showed the better work on birds, and was the better in range also. The party then returned to town.

BONNY DAN OF COLEHILL—FEU FOLLET were cast off at 2:36, after lunch. Feu pointed two birds and was steady. Up at 3:31. The heat was a poor one in every respect.

SAM T.—TORY FASHION began their competition at 3:25. The ranging was wide. Each took long casts and covered a deal of ground, at times going too wide; yet neither abandoned work to the gun. Much ground was beaten out before a find was made. Sam pointed a single and Tory backed; this work of both dogs was quite correct. Sent on, Sam again pointed a single, and Tory crossing 50yds. ahead pointed the same bird and it flushed wild. Each took casts in opposite directions. Sam pointed a single. Tory roaded on scent slowly and with indecision, and at length made a poor point on two birds which flushed wild many yards ahead. Next Tory pointed some birds. Tory showed a disposition to potter on scent, and when near birds showed indecision. Though ranging wide, she did not equal Sam in judgment in working the ground. Up at 4:03.

INDIA—SELKIRK BELINDA.—Off at 4:06. Belinda misbehaved so much by lawless work that she was ordered up and out at 4:21. India was led into bad ways several times by bad example, but behaved better when worked later alone. India first had the misfortune to be shadowed by a hawk which came temptingly close and swooped down on her many times. India had an idea that she could jump high enough to catch the hawk, and in the interchanges she was led about three-quarters of a mile away. India made a couple of points before Belinda was ordered up and one chase from bad example. Afterward she did much better and showed excellent capabilities. She pointed a single bird steadily and well, showed good nose and self-confidence, and worked diligently and with judgment, though showing some puppyish traits. Belinda was industrious and kept out well at work and was speedy, but lawless. Up at 4:31.

BESSIE S.—INDIAN ran 34 minutes, beginning at 4:33. Both were puppyish in ways and work, though they made a very creditable showing. Bessie pointed up wind of a single, which her handler flushed. Indian made a point on several birds on stubble, doing thus good work. At the same time Bessie pointed up wind of several birds, which were flushed by her handler after she moved on. Bess pointed footscent and was well backed by Indian. She next pointed some birds, took a short cast to locate better; Indian went in ahead and pointed the birds; Bessie was slightly unsteady to flush. Up at 5:07. They made a good exhibition; their range was fairly good.

GLEAM'S RUTH—ST. PETER began at 5:09. Both pointed up wind of a single which flushed wild. Ruth flushed a single. Ruth was much the wider ranger and showed fair judgment. Peter loafed during most of the heat. Ruth pointed to a flush, held point and a single bird was flushed to it. Next she pointed a single and next a bevy. Her performance was quite good. Up at 5:52.

GLEAM'S DART ran alone, she having the bye. She started at 5:57. She made two flushes, one down wind, after which she found and flushed four birds. Next, down wind she roaded to a flush. She ranged nicely and her speed was fast and well sustained. Up at 6:29.

Second Round.

SAM T.—SISTER SUE began the second round at 6:30. Sue going down wind flushed some birds in stubble. She pointed a single bird accurately and nicely; Sam backed; good work. Both worked diligently, beating out a lot of ground, and sustained their pace and range well. Sam had the better style. Sue showed excellent capabilities and ran Sam a good race, but the general character of his competition classed higher than Sue's. Up at 6:56 and the day's work ended.

WEDNESDAY.

The weather in the morning was clear and cool, warming toward noon, but still remaining cool enough for good work. The dogs were run till nearly 12 M., when the Derby was finished. Birds were found in sufficient numbers for good work.

DOMINO—TORY FASHION were started at 7:22. Both dogs pointed; nothing was found. Domino struck the trail of a bevy up wind, and roaded down wind to an excusable flush. He was a bit unsteady. Tory pointed a bevy in stubble and was steady to shot. Domino was ranging and going better than in previous heats. Tory's range was without judgment, and she required and received much whistling and assisting when on game or beating out her ground.

INDIA—BESSIE S. were the next brace. After a short wait, Bessie S. being absent when called, the judge decided to run the next brace, after which, she still being absent, she was declared out.

GLEAM'S RUTH—FEU FOLLET were cast off at 8:03. On stubble Ruth flushed a single. Feu pointed a single well. Ruth flushed a single excusably across wind and next flushed one up wind. Next she pointed some birds and was steady to shot; Feu backed. Ruth next pointed two tail birds. Sent on, she soon pointed and a single flushed wild; she held her point and Richards flushed the rest of the bevy; good work. Next Ruth roaded to a point on a single; next she flushed twice. She showed excellent capabilities, but marred her work by flushing sometimes willfully, sometimes carelessly. Feu's work was ordinary. Up at 8:32.

INDIA was called to run alone at 8:37, Bessie S. being absent. India worked diligently, but showed puppyish ways. She flushed a bird and Buckle dropped her, then went ahead and flushed two birds. Up at 9:13.

GLEAM'S DART—BRIGHTON DICK commenced at 9:19. Dick beat out his ground with judgment. He dropped to a point on a bevy and had it accurately. Dart flushed a a single. Dick pointed a bevy in grass; at the same time Dart crossed closer to it without recognizing the scent. Dart had a cut on her arm near the shoulder, caused by a wire, which undoubtedly shortened her speed and range. Up at 9:52. Dick's bird work was clean, his nose good and his judgment excellent, but his style was slouchy.

NABOB—BRIGHTON MAUD were started at 9:54. Nabob made a good point on some birds. Maud was roading about trying to locate. One of the wagons flushed a bevy about 75yds. from her. Nabob made a sloppy point on a marked single. Next Nabob pointed; Maud backed; nothing found. Up at 10:27. The heat was a poor one. Range middling.

Third Round.

Six dogs were kept in the third round besides Feu Follet and Nabob, which were held in reserve in case they were needed.

TORY FASHION—SISTER SUE began at 10:36. Tory pointed, moved one and pottered slowly to a single which she pointed indifferently. At the same time Sue took a long cast and pointed a bevy and held the point steadily some time till her handler went up On scattered birds both pointed the same birds. Tory flushed a single. Sue roaded down wind accurately and the birds flushed wild. Next, Sue pointed a bird, at the same time Tory pointed in an irresolute way on a bevy. Next Tory flushed two birds. Sue was the better in every way. Up at 10:58.

INDIA—RUTH began at 11. After flushing a single Ruth pointed one and India backed. Next Ruth made a good find and pointed a small bevy. India next pointed a single bird well. She tired toward the latter part of the heat and had narrowed her range. Ruth was going merrily and industriously.

SAM T.—BRIGHTON DICK began what proved to be the final. Off at 11:24. Sam made a cast and pointed two birds steadily; good work. A bevy, flushed by a hawk, was marked down and the dogs were worked up wind on it. Dick pointed the birds and Sam going across wind flushed one. Dick made two or three points on some tail birds. Sam was the better ranger and had more dash and style, and his point work was sharper. Dick was very accurate and reliable on birds.

This ended the stake. The party then returned to town.

The All-Age Stake.

Quite a number of the dogs which had competed in previous stakes of the past week were again entered to try conclusions. This stake had sixteen starters. They ran in the following order:

W. W. Titus's b., w. and t. setter bitch Minnie T. (Dick Bondhu—Betty B.), F. Richards, handler, with Hobart Ames's Lady Mildred (Antonio—Ruby Girl), D. E. Rose, handler.

Kidwell & Stoddard's b. and w. pointer dog Tick Boy (King of Kent—Bloom), J. B. Stoddard, handler, with A. P. Heywood-Lonsdale's lem. and w. setter bitch Roma (Fred W.—Ightfield Rosa), W. Brailsford, handler.

J. Phillips's liv. and w. pointer dog Lonsdale (Coton—Psyche), A. Cameron, handler, with A. P. Heywood-Lonsdale's liv. and w. pointer dog Deemster (Ightfield Dick—Ightfield Perdita), W. Brailsford, handler.

Dr. G. Chisholm's liv. and w. pointer dog Comus (Chip Graphic—Mack's Juno), D. E. Rose, handler, with P. M. Essig's b., w. and t. setter dog Rod's Tip (Roderigo—Topsy Avent), J. M. Avent, handler.

John Wootton's b., w. and t. setter bitch Bonnie Lit (Orlando—Lady Lit), owner, handler, with W. F. Ellis's b., w. and t. setter dog Columbus (Duke of Manitoba—Hickory Link), owner, handler.

N. T. DePauw's liv. and w. pointer dog Jingo (Mainspring—Queen II.), N. B. Nesbitt, handler, with N. T. Harris's b., w. and t. setter bitch Cynosure (Roderigo—Norah II.), J. M. Avent, handler.

Manchester Kennel Co.'s b., w. and t. setter bitch Gleam's Ruth (Count Gladstone IV.—Gleam's Maid), F. Richards, handler, with F. R. Hitchcock's b., w. and t. setter dog Tony Dotlet (Count Gladstone IV.—Tony Della), J. M. Avent, handler.

N. T. Harris's b., w. and t. setter dog Tony Boy (Antonio—Laundress), D. E. Rose, handler, with N. T. Harris's b., w. and t. setter dog Dixie's Flag (Wun Lung—White Wings), J. M. Avent, handler.

Second Round.

Minnie T. with Jingo.
Tick Boy with Lady Mildred.
Tony Boy with Cynosure.

First, Minnie T.; second, Jingo; third, Tick Boy, Tony Boy, Cynosure.

Minnie T. made an almost perfect competition. Her work was maintained as high class from start to finish. She worked entirely on her own judgment, and seemed to have a thorough comprehension of work on chickens and work to the gun. Her point work was accurate, prompt and graceful; her range was wide, her speed high and her work to the gun all that could be desired. There may have been better chicken dogs, but I never saw them. She is a smart bitch in her work, amiable and honest.

Jingo showed great ability, but his work was lacking in the extraordinary finish of the winner. His range was wide, his speed fast, and his pointing and finding were far above the average. He was easily second.

Tick Boy, Tony Boy and Cynosure all did good work and were rightly placed.

This stake was for setters and pointers which had never won first place at any recognized field trials in any previous year. Purse, $250, $125, $75 and $50, first, second and third.

The competition was quite skillfully managed and Mr. Bell is deserving of much praise for his industry and skill in judging this and the other stakes.

First Round.

MINNIE T.—LADY MILDRED began the competition at 2:33. Minnie cast wide and soon pointed a single bird, lost scent and drew about trying to find it again, and the bird flushed wild. Lady pointed two birds and Minnie backed; both steady to shot. Minnie next found and pointed a bevy, and Lady as she came up to back pointed too. A tail bird was pointed by Lady after the bevy was flushed. Up at 3:33. Minnie had a decided superiority in the details and class of the work.

TICK BOY—ROMA began at 3:36. The work on birds was good and bad. Tick pointed a single and Roma, going up to back, caught scent and pointed the same bird. After this it was point or flush as it happened. Tick flushed a bird across wind, and next flushed a single which he should have pointed. Sent on, Roma made a flush excusably, the grass having been mowed where the birds were. Tick next did an excellent piece of short accurate roading on a single bird. Next he flushed one. Roma flushed a single carelessly and Tick pointed a bevy. Sent on. In a short time Tick wheeled to a point on a bevy on stubble, and held his point till his handler, who was quite a distance away, walked up. Sent on he flushed some remaining birds, pointed to the flush and two more birds were flushed to the point. Up at 4:12. Roma's range was close. Tick was much wider in range.

LONSDALE—DEEMSTER.—Off at 4:16; down 30 minutes. Deemster started his work by soon wheeling prettily on a point to a bevy in stubble. Next he made two flushes, after which he made a good point on a single bird. Lonsdale flushed and next pointed some birds. Lonsdale pointed; nothing found. Deemster was just steadying himself to point on a single bird when it flushed wild. Lonsdale flushed a single. Lonsdale's range was the better and his judgment far superior.

COMUS—ROD'S TOP were started at 4:48. Comus had much the better of the heat in every respect. He pointed at the same time the bird flushed, and next he pointed well on two birds. Rod pointed and a single flushed about 80yds. ahead. Sent on, Comus soon pointed a bevy, and Top backed to caution. Comus pointed a bird nicely. Rod roaded up wind to a good point on one. Down 37 minutes.

BONNIE LIT—COLUMBUS were cast off at 5:50. Lit pointed a bevy and Columbus backed. Each flushed some birds on the stubble. Lit flushed a single. Next she pointed and roaded, went by the birds and her handler flushed them as he walked up. Down 33 minutes. The heat was ordinary in range and well done.

JINGO—CYNOSURE were cast off at 6:10. The dogs were taken to better ground, about a half mile away. An extraordinary heat was then begun. The dogs took casts in opposite directions and pointed about the same time, nearly a mile apart. Jingo had an odd bird which he roaded and pointed nicely. Cynosure had two birds to her point. The heat went on and the handlers were wide apart, each dog working in different territory till near the end of the heat. Each dog worked out of bounds and heeded the gun but little. Whistles had little or no effect. Cynosure pointed; nothing found. Jingo pointed a single well. Most of the work was viewed at long range, a half mile, more or less. Jingo roaded an old bird about 300yds. to a point. Cynosure took a cast out of sight, and when next found was near some wagons a half mile or so away from the handlers. Up at 6:47. The heat was most unsatisfactory as an exhibition of work to the gun, though for wide scampering it was excellent. It had the one redeeming feature that when the dogs did point they pointed reliably and stanchly.

THURSDAY.

The morning was cool and clear. A gentle wind prevailed. Birds were found in fair abundance, particularly when certain dogs were running.

GLEAM'S RUTH—TONY DOTLET started at 7:42. Ruth flushed a single. Tony half-pointed up wind of two birds; Ruth at the same time pointed a few yards further up wind; nothing found. Ruth pointed and roaded up wind of the bevy. Sent on, Ruth soon made a good point on a bevy; at the same time Tony made a good point on two birds. Ruth was much the better in every respect. Up at 8:11.

TONY BOY—DIXIE'S FLAG started at 8:22. Tony pointed a bevy; Flag backed; good work. Sent on, Tony flushed a tail bird excusably. Sent on, he flushed an outlying bird, then pointed the bevy. Next he made a flush and a point on singles. Flag took a long cast and pointed a single. Flag refused to back Tony on a point on a breaking, and next Tony made two points and a flush on singles. Tony had the better of the heat in every respect. Up at 9:15.

Second Round.

Six dogs were kept in, undoubtedly the last dogs in the stake.

MINNIE T—JINGO were started at 9:29. They ran a great heat. Jingo pointed, roaded on and the bird flushed wild; at the same time Minnie took a cast across a stubble field and pointed in grass. At the same time Jingo pointed a bevy and was steady to shot. In the meantime, Minnie had moved on to locate better; Nesbitt sent Jingo in and he pointed the bird; Minnie backed. This was an error, as Minnie had a right to the benefits of her own find; however, it in no way affected the result. Sent on, both dogs were casting wide and well. Minnie found and pointed a bevy, and Jingo at the same time roaded to a flush on a single. Sent on, he made a similar error. Next, Minnie pointed two birds and was steady to shot, and next she pointed a bird which flushed wild. 9:50. The heat was an excellent one in every respect, though in accuracy and finish in every detail Minnie excelled.

TICK BOY—LADY MILDRED were started at 9:54. Tick pointed two birds nicely. Lady pointed; nothing found. Tick took a cast and pointed a bevy; Stoddard flushed an

outlying bird, and supposing it was all he sent Tick on and he flushed the bevy excusably. Lady pointed and roaded to a point on a bevy on stubble. The range was middling as compared to Minnie's and Jingo's, though it was fairly good. 10:30.

TONY BOY—CYNOSURE were cast off at 10:32. Cynosure made a point on two birds; next she pointed and nothing found. Tony took a long cast and in some grass in brush pointed a single. Cynosure pointed; nothing found. Tony flushed a bird up wind. Cynosure pointed a bird in thicket; Tony backed. Cynosure pointed a single bird while Rose was watering his dog. Next Cynosure roaded and pointed, passed by bevy, and the wagons flushed it. Tony next flushed a single and then stopped to a point on the bevy; the work was sloppy. In a thicket on a bevy, Cynosure pointed and Tony refused to back. Each made a flush. Cynosure pointed; nothing found. Up at 11:37. Tony maintained the better range; Cynosure showed the better work on birds. There was a lack of nice finish throughout the heat.

This ended the stake.

The Champion Stake.

THE Northwestern Field Trials Club's Champion Stake began on Friday morning. There were eight starters, all well-known dogs. Following is the order of running:

Charlottesville Field Trials Kennels' liv. and w. pointer dog Delhi, C. E. Buckle, handler, with DePauw's liv. and w. pointer dog Jingo, N. B. Nesbitt, handler.

N. T. Harris's b., w. and t. setter dog Tony Boy, D. E. Rose, handler, with A. P. Heywood-Lonsdale's pointer dog Bonnie Dan of Colehill, A. Cameron, handler.

W. W. Titus's b., w. and t. setter bitch Minnie T., F. Richards, handler, with A. P. Heywood-Lonsdale's pointer dog Ightfield Mentor, W. Brailsford, handler.

A. P. Heywood-Lonsdale's pointer bitch Ightfield Musa, W. Brailsford, handler, with Thos. Johnson's chestnut and w. setter bitch Pitti Sing, A. Cameron, handler.

Second Round.

Jingo with Minnie T.
Ightfield Mentor with Tony Boy.
Delhi with Pitti Sing.

There were some little hitches in the preliminaries in respect to the entries.

The debarment of Mr. J. M. Avent by the Northwestern Field Trials Club was removed, but as Topsy's Rod was not entered before the entries closed, the entry of Topsy was refused. Out of sympathy for Mr. Avent, Mr. Wootton refused to enter his dog, unwisely many thought, since it was the affair of another. Mr. Avent also declined to enter Mr. Harris's dogs under the circumstances, although he could have done so. Otherwise the stake passed off very pleasantly. Mr. W. S. Bell judged alone. Each heat was one hour in the first series.

First Round.

DELHI—JINGO started at 7:45. Both dogs ranged wide and fast, Jingo the better on birds. Jingo soon made a point on a bevy, then a single, then a flush. Delhi pointed twice on singles, next he flushed one. Jingo roaded down wind and the bird flushed wild. Delhi pointed a bird and made a flush on two; at the same time Jingo roaded to a point on the same birds. Each about a half mile apart pointed a bevy. Next, Jingo made two good points and Delhi backed. Each pointed and roaded; nothing found. One hour. Delhi showed range and speed, but lacked experience. Jingo ran a good heat, up to his good form.

TONY BOY—BONNIE DAN OF COLEHILL started at 8:49. The work of both dogs was inferior, Tony ranging most of the time out of bounds and Dan ranging too close, pottered betimes and was slow in locating. Each made a point on a single. Tony flushed one. Each backed well. Little bird work done in the heat. Tony was much the better.

MINNIE T.—IGHTFIELD MENTOR started at 9:52. Mentor soon crossed up wind of a single and flushed it. Minnie drew prettily to a point on two birds and Mentor backed. Minnie found twice in quick succession, one bird the first time and three the second. Both made some points and roaded; nothing found. Minnie pointed a small bevy. Up at 10:54. The wind was now dry and the weather warm.

IGHTFIELD MUSA—PITTI SING were started at 10:58. Musa made three flushes; Pitti one flush and a point on a single. Musa's work was ordinary. Pitti ran well, showing good range and speed, but tired toward last of heat.

Second Round.

Six were kept in the second round: Jingo, Minnie T., I. Mentor, Tony Boy, Delhi, Pitti Sing.

The winners were: First, Jingo: second, Minnie T.; third, divided by Tony Boy and Delhi.

Field Trial Champion Association.

Editor Forest and Stream:

It is proposed to form an association for the purpose of holding each year a meeting at a field trial for setters and pointers, any dog being eligible without regard to previous winnings. The object is to give a chance to many fine dogs which have never had an opportunity to show their merits in a field trial, incidentally helping the sale of the best type of sporting dogs, as well as continuing dogs in field trial competition where they have been fortunate enough to have become barred by early successes.

It is proposed to extend the length of heats to such a duration that dogs must show plenty of stamina to win, the successful dog to have the title of "field trial champion" in addition to such stakes as may be offered.

Such trials would bring many of the very first class who are now barred by their previous successes into field trial competition again, and would enable breeders and others seeking for the best field dogs in the country to have absolute knowledge on the subject.

Although the purpose has been answered from time to time by stakes under the titles of "champion four-hour race" and "subscription stakes," there can be no certainty of such stakes being offered in future unless by an association for this express purpose to the exclusion of all others.

It is proposed to make the stakes moderate and keep down expenses to a low figure, as the honor of a champion win or a champion cup at a field trial instituted on the line mentioned would be more regarded than a larger money prize.

It is not proposed to interfere with the action of other clubs in any degree, but to co-operate with one and all in the furtherance of an object which all have at heart—the improvement of the pointer and setter. There are in operation sufficient field trial clubs to look after and propagate all that is essentially of a field trial character in our pointers and setters, but the club proposed wishes to open a field of competition wherein the field dog can compete on equal footing with the so-called "field trial" dog.

From suggestions of rules on file I will give a brief outline, which is only an outline, as nothing can be definitely settled until a meeting is held and the club properly organized.

It is suggested that the heats in the first series be of at least two hours' duration, and no shorter than one hour in the second series, and as much longer as the judges think best, but all heats in each series must be of the same length.

The judging to be done by the spotting system, and no dogs to be considered out of the race until winners are announced.

Full power will be accorded to the judges to run dogs singly or otherwise, or in any way they think best after the first series.

A running the byes shall be done in presence of all the judges, and it shall be allowed for an outside dog to be run in the competition.

It is the intention to hamper the judges with as few rules as possible and to secure competent men, whose experience will qualify them to judge without any interpretation of what constitutes a point or a flush.

The attractive feature of a champion cup will probably be added to the money prizes, the conditions of winning to be that the cup shall remain the property of the association until won twice by the same dog and then to become the property of the owner of the dog at the time of the last winning.

As it has been an unsettled question with the members of the old Handlers' Association what disposition to make of the money remaining in the treasury of the club, I would like to offer a suggestion how to dispose of it. I would suggest that it be used in purchasing a cup to be put up for the handlers to compete for under the auspices of the proposed club, the cup to be awarded to the handler handling the winning dog, but the cup must be won twice before it becomes his personal property. The names of the winners to be suitably engraved upon it, and the handler winning it to have control and keep it until it is won from him, or he wins it the second time, making it his property. An entry fee of two dollars could be charged each handler wishing to compete for it who was not a member of the association donating the cup, and for the first season one dollar could be charged them, but the second season all to pay alike, one dollar to enter for the cup competition. The money thus collected to be placed in the hands of the secretary of the Field Trial Champion Association, to be used in buying a new cup to replace original one when won. The title of "Champion Field Trial Handler" should go with the cup. This would be the most agreeable way of disposing of the money that I can think of, and those of the same opinion can express themselves.

I wish to call attention of the public again to that part of the competition which invites entries from the owners of good dogs who never had an opportunity to show their merits in field trials.

It is the object of the new club to hew to the line and bring out and place as winners the best dogs, irrespective of ownership, strain, or most popular sporting breeds.

The club wishes to arrange the competition so that the great quality of stamina shall be apparent to all spectators as one of the good qualities the winner must possess.

EDWARD DEXTER (Sponsor),
W. W. TITUS, Tem.-Sec'y.

Brunswick Fur Trials.

MAGNOLIA St., ROXBURY, Mass., Sept. 13, 1895.—*Editor Forest and Stream:* The seventh annual foxhound field trials of the Brunswick Fur Club will be held at Barre, Mass., during the week of Oct. 28. The headquarters of the club will be at Hotel Barre, a large and well-appointed house situated in an excellent hunting country. A special rate of $1.50 per day will be made to sportsmen attending the trials.

Mr. R. D. Perry, M. F. H., has presented to the club a handsome silver cup to be awarded annually to the winner of the Derby. This trophy will remain the property of the club, but will be held by the winner of the Derby for one year.

The hound making the highest general average in the various classes of the All-Age stake will hold the American Field Cup for one year and will receive a silver medal from the club. The winner in the Hunting class will receive a silver medal presented by President Heffenger. Mr. O. F. Joslin offers a silver medal for the winner of the Speed class, and Mr. H. A. P. Smith gives a silver medal to the winner of the Tonguing class. In addition to these cups and medals the usual money prizes will be awarded to the winners in the various classes.

Entries for the Derby will close at Hotel Barre at 10 P. M., Oct. 28; for the All-Age at the same time and place Oct. 29.

The secretary will be glad to give further particulars to anyone desiring them. All lovers of hounds and hunting are cordially invited to attend the trials. The shooting of foxes will not be permitted during the meet.

BRADFORD S. TURPIN, Secretary.

Tompkins County Bench Show.

ITHACA, N. Y., Sept. 14.—An entertaining little Bench Show was held in connection with the Tompkins County Fair last week in this city. The entries included 1 St. Bernard, 1 Newfoundland, 2 greyhounds, 2 water spaniels, 2 pointers, 3 foxhounds, 1 Gordon setter, 2 Irish setters, 8 beagles, 2 collies, 1 bull-terrier, 4 pugs, 2 fox-terriers and 3 or 4 black and tan terriers. There were several really good specimens shown. Walt. Fowler superintended and Henry Hutchens judged. Some of the awards were of a nature to make just men grieve. In beagles, first went to a rat-tailed specimen with a field mouse coat and the muzzle of a Dachshund, while a litter of half-blood foxhound puppies carried off first money as the best litter of foxhound puppies. If this were intended for FOREST AND STREAM'S funny column, other telling illustrations might be cited. The building in which the show was held was scarcely half large enough; it was badly lighted and the ventilation was vile. Indeed, to confine a dog in such distressingly offensive quarters for any considerable length of time is a punishment of unusual severity. The Tompkins County Agricultural Society should see to it that a suitable building is provided for this attractive feature of its annual exhibitions. Then let the show details be attended to by competent parties—men conversant with the essential requirements of a bench show—and very shortly Ithaca will be the scene of a dog show that will delight and please the admirers of "man's best friend." M. CHILL.

Dixie Red Fox Club Meet.

TOWN CREEK, Ala., Sept. 11. — A postponement of the Dixie Red Fox Club meet is necessitated. The date now set is Oct. 21, on which day we will have our first hunt. Visitors are requested to be on hand not later than the 19th proximo.

They had best get off at Athens, Ala., Rowland being only a small station. At Athens they will have no trouble in procuring a conveyance to Capt. Hartsell's, who lives five miles south, and who has kindly consented to offer the comforts of his capacious home to us during our meet. The Louisville and Nashville Railroad will return all who came over their road at one-third fare. The Memphis and Charleston Railroad will also give us reduced rates to Decatur, Ala.

An investigation of our hunting grounds reveals the encouraging fact that foxes are plentiful. The date set seems to suit the majority of our members. There will be no other postponement. JOHN H. WALLACE, JR.,
Sec. Dixie Red Fox Club.

The A. K. C. Quarterly Meeting.

NEW YORK, Sept. 12.—A special meeting of the American Kennel Club was held this afternoon at its club rooms, 55 Liberty street. There was only a small attendance. In the absence of August Belmont, the president, and of James H. Terry, vice-president of the club, Dr. H. T. Foote occupied the chair. A. P. Vredenburg acted as secretary.

Among the delegates present were: J. H. Piper and James Watson, Southern California Kennel Club; E. M. Oldham, Spaniel Club; E. H. Morris, Newark Kennel League; James Blossom, Gordon Setter Club; George Jarvis, Pointer Club of America; Clifford Wood, Great Dane Club; H. F. Schellass, National Beagle Club, and Fred. Webster, English Setter Club.

The subject for discussion was the custom of cropping the ears of dogs of certain breeds. After a lively debate, in which H. F. Schellas and Fred. Webster spoke in favor of the abolishing of the practice, while Clifford Wood, of the Great Dane Club, advocated the continuance of the practice, the matter was carried over until the December meeting.

At the regular quarterly meeting which followed on the adjournment of the above, the Bull Terrier Club of America was elected a member of the A. K. C.

POINTS AND FLUSHES.

Mr. Thos. Johnson has given the dip for mange, commonly known as Andy Gleason's mange cure, a thorough trial, and praises it for its curative properties and also for its properties as a disinfectant. All the handlers who have used it also commend its effectiveness. It is, moreover, cheaply and easily prepared and prompt in its action. It is prepared as follows: Take a box of 100 per cent. lye (Mr. D. E. Rose recommends Lewis's lye), the box being about the size of an ordinary tumbler, and mix it with a half pint of rain water in an earthen vessel, taking care that none of the lye gets on the hands or clothing. After it is thoroughly mixed, add slowly four pounds of flower of sulphur. This, if done with proper thoroughness, will require two hours' time. After it is thoroughly mixed, it is poured into a pail of boiling water and mixed. Then the whole is poured into a coal oil barrel which is half filled with soft water, rain water preferred. It is then ready for use. The dog is put in bodily up to his ears. Two to three applications are sufficient.

During the running of the Continental Club's trials at Morris recently, the judge, Mr. W. B. Wells, had a kind of experience. He was riding in a carriage over the prairie, judging man's best friend, the dog. Dark clouds overcast the sky and some rain fell. It was decided to drive to a house a mile away for shelter. Just as he was crossing the railroad at a farm road crossing ahead of the procession, he saw two skunks in the road a few yards ahead. He told his driver, a young Englishman, to stop. The driver merely steadied his horse as he started down the incline from the railroad, remarking "O! see the pretty kittens!" "Stop! stop!" said Mr. Wells, as he hurriedly tried to get out, then higher into the carriage. It was too late. One skunk was upset by the wheels. Talk of the Spice Islands! Araby, the blest; the Chicago River. Every one kept to windward of the judge during the remainder of the day. Whew!

"Hunting and Fishing along the Northwestern Line"

is the title of a booklet recently issued by the Chicago & Northwestern Railway. It is profusely illustrated, and gives information in detail concerning the best hunting and fishing grounds in the West and Northwest. Copies will be mailed free to any address upon application to W. B. Kniskern, General Passenger and Ticket Agent, Chicago & Northwestern Railway, Chicago, Ill.—*Adv.*

Sound Line Service.

THE double service of the Fall River Line was discontinued on Saturday, 14th inst. The Priscilla and Puritan remain in commission, leaving New York from Pier 18, North River, foot of Murray street, week days and Sundays, at 5:30 P. M. Each boat carries a fine orchestra.—*Adv.*

Canoeing.

Ianthe C. C. Regatta.

THE most successful regatta of the Ianthe C. C. in several years was held on the Passaic River at Newark on Labor Day. It reminded one of the time several years ago when canoeing had such a boom to see the large entries in the races, while the boathouse was filled with

pretty girls and well-known canoeists, and the river fairly swarmed with canoes and rowboats filled with spectators.

Additional interest was lent through the entries from the Passaic and Atalanta Boat Club, and in several of the races the oarsmen made the canoeists hustle.

The races were as follows:—

Event I. Sailing Senior.—First, George P. Douglas, Ianthe C.C.; L. B. Palmer (did not finish); George Manley (did not finish).

II. Sailing Junior.—Not called.

III. Paddling Open Canoe, Single Blade.—First, George P. Douglas, Ianthe C. C.; second, F. L. Newell, Pequonnock; third, Mark Freeman, Ianthe; ourth, Fred Cummings, Ianthe; fifth, George W. Petty, Rutherford.

IV. Paddling any Canoe.—First, Frank McLees, Rutherford; second, C. V. Schuyler, Arlington; third, James Duguid, Jr., Ianthe; fourth, H. S. Allen, unattached.

(Race for the "Commodore's Cup.")

V. Senior Paddling.—First, Mark Freeman, Ianthe; second, George P. Douglas, Ianthe.

VI. Class 2, Paddling.—First, Harry S. Farmer, Ianthe; second, E. P. Payne, Atlantic B. C.

VII. Junior Paddling.—First, Louis LeRoy, Ianthe; second, J. Hamilton Braine, Ianthe.

VIII. Tandem Paddling, Open Canoes.—First, Douglas and Duguid, Ianthe; second, Pell and Jenkinson, Passaic B. C.; third, McLees and Petty, Rutherford.

IX. Tandem Paddling, Decked Canoes.—First, Freeman and LeRoy, Ianthe; second, McLees and Petty.

X. Club Fours.—First, Braine, Hobart, Kniep and McLees, Ianthe; second, Duguid, Farmer, Freeman and Douglas, Ianthe; third, Gott, Gilmore, Jenkinson and Pell, Passaic B. C.

XI. Upset Paddling.—First, R. Kniep, Ianthe; second, George P. Douglas, Ianthe.

Mr. James K. Hand acted as judge and starter.

The guests of the club were most hospitably entertained during the regatta and through the evening.

A Meet on the Passaic.

THE annual meet of the Associated Canoe Clubs of the Passaic River will be held on Friday, Saturday and Sunday, Sept. 20, 21 and 22, at Bend View, on the Passaic River, to which all canoeists are cordially invited.

The races will be called Saturday afternoon at 3 o'clock, and the regatta committee has arranged the following programme of races: Event 1. Sailing. 2. Sailing and paddling combined. 3. Paddling. (These three races are for the Record trophy.) 4. Paddling, open canoes, single blade. 5. Paddling, tandem, open canoes, single blades. 6. Paddling, tandem, decked sailing canoes. 7. Paddling, club fours, open canoes, single blades.

The camp site selected is one of the prettiest parts of the river, and very accessible to out-of-town canoeists. The Newark branch of the Erie Railroad to Avondale or the Boonton branch of the D. L. & W. R. R. to Lyndhurst land within half a mile of the camp. There is a hotel directly across the river, where meals and accommodations may be secured by those who do not wish to do their own cooking or camping.

The racing promises to be unusually interesting. In addition to the well-known paddlers of the Ianthe, Rutherford and other Passaic River canoe clubs, a number of outsiders are expected. Messrs. Mowbray and Plummer, of the New York C. C., as well as a single and tandem crew from the Red Dragon Club, of Philadelphia, are expected; while the Passaic Boat Club, of Newark, are going to send their tandem and club four crew that gave the Ianthes such a close rub on Labor Day.

Mr. F. H. Wickware, Jr., of Rutherford, is chairman of the Association, and Mr. H. S. Farmer, of the Ianthe Club, secretary-treasurer.

Shenandoah River.

CAMP GROVE HILL, Va., Sept. 1.—Com. F. R. Webb, George N. Beall, Dr. E. Lacy Gibson and J. Baldwin Ranson, of the Shenandoah C. C., Staunton, Va., are enjoying their annual canoe cruise on the Shenandoah River. The weather is good, the water at a fine cruising stage and beautifully clear and the fishing excellent. The party will cruise to Harper's Ferry and will remain out about three weeks.

Yachting.

THE great international race having passed, to the disappointment of thousands, a smaller but very interesting one begins on Saturday of this week. After all that has happened of late, it should not be necessary to speak further on the importance of giving a perfectly fair and unimpeded course to the two representative mosquito craft that are to meet off Oyster Bay.

On the occasion of the recent trial races there, a few of the steam and sailing yachts bound through the Sound or into the harbor displayed an utter disregard of the small craft engaged in the race, washing and blanketing them in the most reckless manner. After the lesson of the late races we hope that neither through ignorance nor selfishness will there be any interference on the part of the attendant fleet.

THE past week has produced two instances in international sport which must be viewed with regret by all true sportsmen, of whatever nationality. If British yachtsmen have nothing to be proud of in the action of their representative, Wyndham Thomas Wyndham Quin, Earl of Dunraven, in hauling down his fighting flag in the face of an honorable opponent and a fair course, Americans have equal cause of shame in the conduct of the National Government toward the British yachtsman who seeks international honors in a smaller class. In spite of established precedent in similar cases, and of correspondence between Mr. Brand and the Customs some time since, the owner of Spruce IV. has been put to needless trouble and delay by the Customs authorities in New York, and has been able to redeem his boat only on the payment of a duty of 25 per cent., which will not be refunded to him when he takes her home in a few weeks. When Mr. Brand and his little boat arrived on the Fulda every effort was made by the race committee of the Seawanhaka Corinthian Yacht Club to have the boat passed at once by the Customs authorities and shipped to Oyster Bay, there being little time before the international races. No one for a moment supposed that a yacht brought into the country for a few match races would be made subject to duty, but such proved to be the case; apart from the loss of time, annoyance and fees, the British challenger was requested to pay a duty of $50 for the blessed privilege of sailing in American waters. The boat was landed on the pier at Hoboken on Monday night, Mr. Brand not being allowed to take away even a pair of boots or a couple of small bags of loose duffle; but boat gear and clothes were retained on the pier until Friday, subject to the handling and meddling of the curious. The duty was finally paid by the Seawanhaka Cor. Y. C., Mr. Brand being the guest of the club.

It would be hard to estimate the benefit which the United States as a nation derives from its yachting, from the interest of thousands in nautical matters, from the naval reserve, the technical work of yacht designers, and the direct employment of thousands of seamen and mechanics. The present year has witnessed an expenditure of over $200,000 in this country in connection with the sailing of three international races. It would seem only just that yachtsmen should, while not asking for boun ties, subsidies and similar Government aid, at least be left alone as much as possible; and yet this is but one instance of the apparent hostility of the Government toward the noblest of sports.

In the present case the figures are comparatively small, but they are convincing. The bringing of Spruce IV. to this country has established a new class of racing craft, hitherto unknown here, and has attracted very great interest throughout the country. Six boats have been built to meet the challenger, at an averaze cost of at least $700 each, to which the club adds $500 for the cup. The expense of alterations to the boats, steamers for the races, etc., will bring the total outlay among American mechanics and tradespeople to some $7,000 to $8,000; and the races are likely to lead to the construction of many more boats this winter.

In 1886 two British canoes visited this country for similar international competition, the result being that canoeing received the strongest possible stimulus, to the benefit of all concerned in canoe building. With all this there has never been a British canoe imported into this country since 1886. Even in the event of a victory for Spruce IV., there is no danger of any importation of British half-raters. Apart from the duty, these boats cost fully as much in England as here; and they are not so well adapted for American conditions. So far as American yacht and boat builders are concerned, they could well afford to pay for the occasional importation of such a racing craft as Madge or Spruce IV. merely for the sake of the great stimulus to racing and building. A wise and foresighted national policy would encourage such international competition instead of placing such heavy and useless penalties on sport.

ON Sept. 11 the death of Mr. J. L. Ashbury was announced in London, and though no particulars are known, it is understood that he died on Sept. 3 from an overdose of some narcotic. No yachtsman has been more thoroughly disliked and execrated by Americans than the first challenger for the America's Cup, the man who first rescued it from oblivion by racing for it in 1870 and again in 1871. Looking back for a quarter of a century, and contrasting the treatment of the last challenger with that accorded to the first, it must be admitted that Mr. Ashbury had much right on his side, and was very badly treated by the holder of the Cup. His first overtures were fairly made, and in a spirit of sport, but they were met by a positive refusal to enter into that mutual agreement distinctly specified by the true deed of gift, and he was allowed but a single race, and that against a fleet of twenty-three schooners, all starting inside the Narrows.

It was on the occasion of his second challenge next season that he made the claim that has been so generally condemned, that he should be allowed to sail twelve races, having challenges in the names of twelve clubs, he to take the Cup in the event of winning one race. Although the odds here were but twelve to one against the New York Y. C., while the club had taken an advantage of twenty-three to one in the previous year, it is needless to say that no such terms were granted. The races were finally sailed with the stipulation that the home club should have four yachts of various types in readiness, selecting whichever it chose on the morning of a race, against the one seagoing ship of the British challenger. Out of the series of seven races agreed to the defender won five and the challenger one. In the course of the long and bitter controversy for what are now considered as the absolute rights of a challenger, Mr. Ashbury did and said many things which greatly angered his opponents; but it must be said on his side that he was opposed by men who were determined to keep the America's Cup in New York, and to give to a challenger nothing which could be withheld from him. The fight of Mr. Ashbury made him many enemies, but rendered an important service to the cause of fair sport in international yachting.

THE *Yachtsman*, in reviewing the history of the America's Cup and the three deeds of gift, falls into some very ridiculous blunders. It not only describes the Cup as given by the Queen, but Titania as a 100 ton cutter.

Then it speaks of the New York Y. C. as "the owners of the Cup," apparently ignoring the terms of the original deed by which the Cup was given in trust to the New York Y. C. to be held only until won by a foreign club. As the trustee, the New York Y. C. had no sole right of ownership, and once won from it, the Cup could be no more its property. Speaking of the second deed of 1882, the *Yachtsman* states that the conditions were then amended so that: "Henceforward both challenger and defender were allowed to make what arrangements they liked by mutual consent."

This is about as far wide of the facts as could well be. The original deed of gift expressly stipulated as the basis for a match a mutual agreement between the two parties; failing which, and not before, the challenger could claim one race with six months' notice, etc. In the first races for the Cup, with Mr. Ashbury, the New York Y. C. positively refused to enter into any mutual agreement, and denied the right of the challenger to demand such agreement, limiting him to the ultimate provisions of one race over the club course with six months' notice; and further compelling him to sail against the whole fleet. Though more liberal terms were obtained by hard fighting in the three following races, the right of the challenger to a mutual agreement was denied up to 1887.

When the second deed was made in 1882, the mutual agreement clause was taken from its prominent position in the original deed and made secondary and subordinate to certain other conditions; and when the third deed was made in 1887 the mutual agreement clause was pushed into still deeper obscurity, the opening clauses calling for a complete surrender of the challenger to the holder by the disclosure of the dimensions. One looks for such blunders as these in the daily papers, but hardly in a yachting journal with reliable sources of reference at hand.

We note that in answer to a query the New York *Sun* states that the America's Cup is owned by the New York Y. C.; this is not the case. As already stated, the Cup is only held in trust by the club.

AMONG the many different craft seen outside the Hook last week there was nothing more antique and odd-looking than an American sloop which was about the line on one day. What she was we do not know, but everything about her, with one exception, carried us back to the time of the Mischief-Atalanta races, when cutters were almost unknown and such craft were still common. She had a low black hull, with a knee under the bowsprit and a sawed-off stern, a high mast and short topmast and gaff; and a bowsprit painted black. In spite of the big trunk cabin and other evidences of her American origin, she was not quite free from British contamination, having a jib and forestaysail in place of a single big jib; but in all other respects she was a typical example of an obsolete type. It was hard to realize that barely a dozen years separated her from the great blue-sided cutter which was sailing in defense of the America's Cup.

THERE is one class of people at least who should appreciate the action of Lord Dunraven in failing to give timely notice of his intention not to start on Thursday; though the fleet was by no means as large as on Saturday, the steamboat owners reaped a harvest of probably $50,000 on Thursday, all of which would have been lost to them had Lord Dunraven made a positive statement to the committee on Wednesday evening that he would not sail next day.

"Sailing in Two Classes."

NEW ROCHELLE, N. Y., Sept. 16.—*Editor Forest and Stream:* If you are a believer in fair play you will publish the "other side" of the question *re* Mr. Elsworth's letter regarding the Huguenot Y. C. race published last Saturday in your paper, as his remarks, while partly correct, are misleading. "I entered the Kittie in the second class for the Huguenot Y. C. race, expecting to meet the Ethel, but found only one boat, the Monsoon. I asked the regatta committee about forty minutes before the preparatory signal to be allowed to go up a class, not remembering or knowing the rule, that as my class had filled I could not go up; here I was in error, as was the committee. The course and start for the first and second class catboats was the same, only the first class boats sailed twice around and the second class once. After the race Mr. Elsworth very properly protested and was given the race in the first class, which was right and satisfactory to me. The committee awarded me the prize for the second class, but I declined same, writing Mr. C. M. Connolly at the time that as I had sailed (wrongly) against the Mary and won, but was justly disqualified, I did not consider it right to take the prize in the second class."

I am not desirous of any cups not won fairly, and as the Kittie has won thirty-one first prizes in two years I do not need them.

HAZEN MORSE.

Cleveland Y. C.

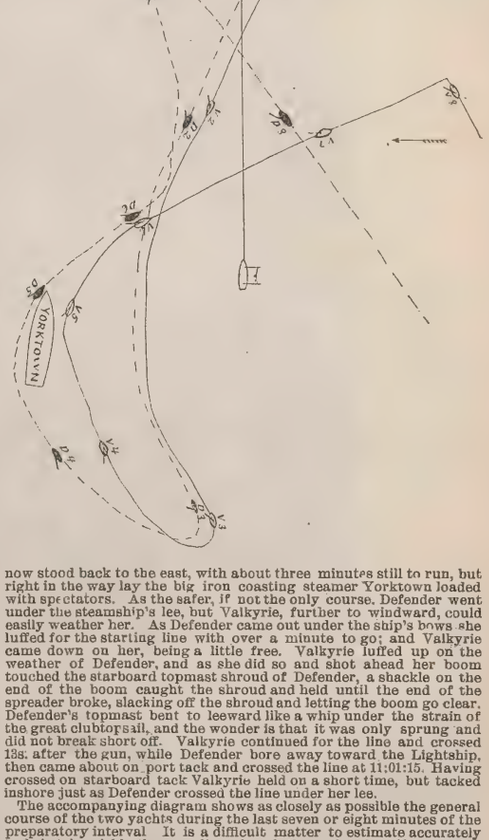
CLEVELAND—LAKE ERIE.

Monday, Sept. 2.

THE fall regatta of the Cleveland Y. C. was sailed on Sept. 2 over a course of 7 miles to leeward and return. The times were:

	Start.	Turn.	Finish.	Elapsed.
Com. Gardner	11 07 07	12 31 56	2 49 57	3 42 50
Anona	11 07 10	12 34 17	3 13 37	4 06 27
Alert	11 08 47	12 30 47	2 57 31	3 48 44
Clipper	11 09 12	12 51 42	Did not finish.	
Gypsy	11 10 19	12 41 35	4 12 05	5 01 10
Corsair	11 10 52	12 43 38	3 24 37	4 13 45
Ida K	11 12 24	12 44 08	3 33 52	4 21 28
Petrel	11 12 35	12 44 44	3 52 39	4 46 04

Com. Gardner won in first and Ida K. in second class.



THE AMERICA'S CUP RACES.

Second Race—Triangular Course.

Tuesday, Sept. 11.

AFTER remeasurement and thorough preparation for the second race, Defender and Valkyrie lay off Bay Ridge on Monday, being under way in the afternoon and lying at anchor off the Atlantic Y. C. station all night. Early Tuesday morning they towed down to the Lightship, and were ready long before the committee and the spectators arrived.

The day promised little, a brisk S. W. wind in the night had disappeared, and a light southerly breeze was blowing, with a smooth sea. The sky was cloudy and overcast for a time, and the air was warm. When the attendant fleet reached the Lightship just before 11 o'clock, there were many vessels, but fewer than on Saturday. As in the first race, they crowded close to the yachts, several newspaper tugs were close on the line, and the big iron steamer Yorktown lay just north of it, not far from the committee tug which formed the western or inshore mark. Being the second race, the course was triangular, and the course signals set were: S.; N E. by E.; and N. W. by W. 1½ W.; 10 nautical miles to each leg. While the fleet was in the Bay the skies had cleared, and when the preparatory gun was fired at 10:50 the sun was shining with a midsummer fervor, the sea was smooth and free from fog and haze, and there was a moderate breeze from the south, more than enough to insure a race within the time limit if it held. The two yachts were under clubtopsails with baby jibtopsails aloft. With the gun they started to work for position in the ten minutes yet to run, both coming from the wrong side of the line, Valkyrie to windward and both on starboard tack, crossing the line and standing on to the westward and then jibing, Defender leading in this maneuver and Valkyrie immediately following and coming on the other's weather. They

now stood back to the east, with about three minutes still to run, but right in the way lay the big iron coasting steamer Yorktown loaded with spectators. As the safer, if not the only course, Defender went under the steamship's lee, but Valkyrie, further to windward, could easily weather her. As Defender came out under the ship's bows she luffed for the starting line with over a minute to go; and Valkyrie came down on her, being a little free. Valkyrie luffed up on the weather of Defender, and as she did so and shot ahead her boom touched the starboard topmast shroud of Defender, a shackle on the end of the boom caught the shroud and held until the end of the spreader broke, slacking off the shroud and letting the boom go clear. Defender's topmast bent to leeward like a whip under the strain of the great clubtopsail, and the wonder is that it was only sprung and did not break short off. Valkyrie continued for the line and crossed 13s. after the gun, while Defender bore away toward the Lightship, then came about on port tack and crossed the line at 11:01:15. Having crossed on starboard tack Valkyrie held on a short time, but tacked inshore just as Defender crossed the line under her lee.

The accompanying diagram shows as closely as possible the general course of the two yachts during the last seven or eight minutes of the preparatory interval. It is a difficult matter to estimate accurately and sketch quickly the complicated evolutions of such swiftly moving craft, and the exact relative positions of the two yachts, the Yorktown and the committee tug (in particular the space between Valkyrie and the tug) are disputed by both parties, but the diagram is sufficiently correct to give an idea of the situation. Comparatively few persons in the fleet saw the collision, most of the vessels being on the wrong side of Defender, and very little was known as to the exact occurrences save that Defender displayed a protest flag, to which the committee responded with an answering pennant.

In time and position Defender lost nothing; she was already in a bad place under Valkyrie's lee, and she gained instead of losing by availing herself of the privilege specially secured to her by the two-minute interval, of going back and crossing alone later on if she chanced to be out-maneuvered by Valkyrie in the struggle for weather berth; in fact, she would have done better in Saturday's race if, instead of following Valkyrie over the line and taking her back wind, she had, after failing to blanket Valkyrie, worn about and started well to windward in the Im. 10s. then left her. In the present case she

was under Valkyrie's lee, it is true, but with 1m. 2s. of time saved; while had she started as they stood to had no foul occurred, she would have been timed with the other boat and yet directly under her lee.

Though she came out of the brush much better than was to be expected, she was still crippled, her topmast being sprung to an unknown extent, as it proved, very badly, and her starboard spreader broken at the end. When on the port tack she was all right, and she held this tack while several men went aloft and replaced the shroud over the end of the spreader and lashed it as securely as possible. Valkyrie had broken out her baby jibtopsail on crossing the line, but Defender had not attempted to set hers, though it was ready aloft in stops.

They stood in together under the Jersey beach, Valkyrie slowly gaining, the wind held light and Defender had no trouble in carrying her clubtopsail, but her jib was sitting badly. She was sailing well, pointing as high as the other boat and heeling no more. She went on starboard tack at 11:25, Valkyrie at once coming about, and after a short hitch of five minutes both came about again. The baby jibtopsail was sent up, but immediately taken in. Valkyrie carried a baby of good size, but had it lifting all the time on the windward work. At 11:54 Defender went on starboard tack, Valkyrie following, being now a long distance to windward. This was a short tack, Defender leading in the tacking inshore at 12:09. The last tack was made at 12:19, Valkyrie coming about for the mark and Defender following. The last leg was a long one, the mark being turned:

Valkyrie.....12 57 43 Defender.....1 01 35

In the beat to windward, in smooth water and a light breeze, Valkyrie had beaten Defender 2m. 50s.

On rounding the mark Valkyrie eased sheets to port and lowered baby and forestaysail, setting her balloon jibtopsail and balloon forestaysail for the reach of 10 miles. Defender sent up only her baby jibtopsail, this being her weak tack. She set a larger forestaysail, but it did not compare with the balloon forestaysail on Valkyrie—a sail that on this point of sailing is used by English yachtsmen to the greatest advantage, but which has never come into favor in this country. The work over this leg was very pretty, Defender holding her own in a wonderful way; in fact, the times showed that she gained 17s. Valkyrie took in her balloon some distance short of the second mark, and apparently traveled no slower; in fact, it is doubtful whether this great sail—used as it is on her—did as much good as it was credited with; she would probably have gone faster with her No. 1 jibtopsail, jib and balloon forestaysail.

This is contrary to accepted ideas, but the work on Saturday's run home showed that Valkyrie did not profit as she should from her balloon jibtopsail, and in previous Cup races it has been the rule that the American yacht has always made far better use of her "balloon jibtopsail" than the British yacht has of her "bowsprit spinaker." While Defender had far too little headsail, and while a part of her gain was due to her clean way through the water compared with the wave which Valkyrie carries on a reach and to her steering a straighter course, it is quite possible that Valkyrie would have gone faster without the big balloon sail which made such a striking contrast with Defender's baby. The times at the second mark were: Valkyrie 1:58:10, Defender 2:01:45. The wind had freshened on this leg and was blowing at least a dozen miles an hour; as they jibed, each sent up a second jibtopsail, while Valkyrie kept her balloon foresail still on. Lord Dunraven has complained that the second mark was from one to two points out, but in view of the special care taken by Lieut. Winslow, U. S. A., in charge of the tug, in adjusting her compasses before the first race and working as accurately as possible, this is probably a mistake on Lord Dunraven's part.

The surrounding vessels had kept clear on the first leg, but crowded in about the second mark, and now began to bother both yachts. The big Sound steamer City of Lowell set a striking example by disregarding the patrol yachts and running far inside of them, her great size not only backing the wind up on the racers, to say nothing of the disturbance of the water, but from her position she shut out the view of smaller craft which respected the rights of the racers. As Valkyrie came for the finish she was preceded by five tugs, led by the New York *Herald* tug, all throwing their wash back at her. Defender fared no better, and while there was no more direct interference, such as at the start, both yachts were hurt by the breaking of the wind and the disturbance of the water. The full times of the race were:

	Start.	1st Turn.	2d Turn.	Finish.
Valkyrie	11 00 13	12 57 43	1 58 10	2 55 22
Defender	11 01 15	1 01 35	2 01 45	2 57 40

	Elapsed.	Corrected.
Valkyrie	3 55 09	3 55 09
Defender	3 56 25	3 55 56

Valkyrie wins by 47s.

After the race every one hastened to the city, the New York Y. C. house being the center of excitement. The regatta committee repaired to the Knickerbocker Club for dinner and a meeting, a written protest having been filed by Mr. C. Oliver Iselin. At 10 o'clock the following notice was posted on the bulletin board at the club house:

"The Defender protests the Valkyrie on the ground that she bore down on her just before reaching the starting line, thereby causing a foul which resulted in the carrying away of her spreader and the springing of her topmast. REGATTA COMMITTEE."

That evening and all next day the regatta committee, aided by the Cup committee, was busy in the matter; in addition to hearing evidence from those on each yacht, including Mr. David Henderson, who sailed on Defender as Valkyrie's representative, and Mr. J. H. Busk, who sailed on Valkyrie as the representative of Defender, and of Capt. Sycamore, who had the tiller of Valkyrie, the two committees used every effort to induce Mr. Iselin to withdraw his protest and Lord Dunraven to consent to a resail of the race. With the best possible intentions the regatta committee went beyond its official functions in endeavoring to induce both parties to compromise in this way, but Mr. Iselin insisted on a judgment on his protest and Lord Dunraven also declined to call the race off, being confident that the protest would not be sustained. After spending nearly the whole day, the regatta committee posted the following letter at the club house on Wednesday afternoon:

"*C. Oliver Iselin, Esq.*

"DEAR SIR: We beg to acknowledge the receipt of your letter of yesterday protesting the Valkyrie. We have given the matter our careful consideration, and we believe that the foul occurred through a miscalculation of the distance between the two yachts at a critical moment.

"From our own observation, confirmed by that of others who were in a good position to see all that occurred, we find that the Valkyrie III., in contravention of section eleven of racing rule sixteen, bore down upon the Defender and fouled her by the swing of her main boom when luffing to straighten her course. We also consider that the Defender left the Valkyrie sufficient room to windward to pass clear of the committee boat.

"Your protest is therefore sustained. "S. NICHOLSON KANE,
"IRVING GRINNELL,
"CHESTER GRISWOLD,
"Committee."

The section of Rule 16 referred to reads: "Bearing Away.—A yacht shall not bear away out of her course so as to hinder another in going to leeward."

A little later the following was also posted:

"*To the members of the New York Y. C.:*

"Your committee beg to state that before arriving at a decision on Defender protest, they endeavored to bring about a mutual agreement between the respective yachts to resail Tuesday's race, but each preferred that the committee should pass judgment on the protest.

"REGATTA COMMITTEE, New York Y. C."

The following letter was written on Tuesday evening and was sent to the Cup committee, not to be opened until after a decision was made on the protest. Lord Dunraven has stated that he believed that the Cup and not the regatta committee was debating the protest question.

"GENTLEMEN: It is with great reluctance that I write to inform you that I decline to sail the Valkyrie any more under the circumstances that have prevailed in the last two races, and for the following reasons:

"First—To attempt to start two such large vessels in such confined space and among moving steamboats and tugboats is, in my opinion, exceedingly dangerous, and I will no further risk the lives of my men or the ship.

"Second—At the start of the race the crowding was so great that we could not see the mark boat, and could not tell when we were near the line; and we were much hampered by steamboats, especially on the race home.

"To-day on the reach home eight or nine steamboats were to the windward of me, and, what was worse, a block of steamboats were steaming level with me and close under my lee. I sailed nearly the whole distance in tumbling, broken water, in the heavy wash of these steamboats.

"To race under these conditions is, in my opinion, absurd, and I decline to submit myself to them again.

"I would remind your committee that, foreseeing the trouble that might occur, I urged upon them the desirability of sailing off Marblehead or some locality other than New York Bay, and they refused to do so. At the same time I would testify to my full belief that your committee have done everything in their power to prevent overcrowding.

"The fact is that when a contest between the representatives of two yacht clubs excites so much popular interest and attracts such crowds of people, if the races are sailed in the immediate neighborhood of a great city and the dates of the races and times of starting are known and advertised, it is impossible to keep a course free from causes of exceptional danger and clear enough to assure the probability that the result of a match will be decided according to the relative merits of the competing vessels.

"I have the honor to remain your obedient servant. DUNRAVEN.

"The America's Cup Committee."

This letter was not read by the Cup committee until late on Wednesday afternoon. No written reply was made to it, but Messrs. Canfield and Busk of the Cup committee went in search of the Earl and finally had a short conference with him at the Waldorf. The following statement, made later to the reporters by Mr. Smith, the chairman of the committee, may properly be quoted here as covering this point.

When questioned by the reporters, Mr. Smith said:

"Well, to tell the truth, I don't care to talk very much, because I feel very strongly about the whole business. It was very unfortunate. Lord Dunraven's demands were absurd, unbusinesslike and utterly impossible to comply with.

"Now, supposing Valkyrie had been a mile and a half ahead and we declared the race off because some boat interfered with the Defender, what would people say? Why, the country would be too hot to hold us. Lord Dunraven makes a point of it that the committee did not answer his letter. How could we? We did not receive it until 8 o'clock Thursday morning.

"In the first place, no one knew where to find Lord Dunraven. On Wednesday afternoon the Cup committee held a special meeting here to act on his request about keeping the course clear, and a sub-committee of two started out to find him. They first tried the Horseshoe, then the City of Bridgeport, Bay Ridge, Mr. Kersey's office, Mr. Kersey's apartments on Fifth avenue, and then the Waldorf. When the committee finally found Lord Dunraven they explained to him verbally

Patrol Yacht. N. Y. Y. C. Steamer. City of Lowell. Mount Hope.

Valkyrie. Defender.

JUST AFTER THE START——SECOND RACE.

that they would do their best to have a clear course, but that they could not postpone the race at such short notice.

"They also agreed not to start the boats until they had a clear field to maneuver in, which was all we could do under the circumstances. When they left him Wednesday night he said that he would start the Valkyrie. In his second letter, which was received on the morning of the race, he left it in doubt whether he would cover the course or not. It was then too late for us to do anything. As you know, we postponed the start until every excursion boat was out of the way, which was all we could do, and you know what happened afterward."

The above statement is, we believe, entirely correct; the letter alluded to as not being received until Thursday morning is as follows, being written after an understanding had been reached that the race would be sailed as announced:

"429 FIFTH AVENUE, Sept. 11, 1895.

"DEAR MR. CANFIELD: I have just received your letter. I regret to the committee ample time to consider my former letter, and I am sorry my letter was not delivered to you sooner.

"As I explained to you, I was under the impression that the Cup committee heard the protest; and pending a decision, I did not think it right to place the letter in their hands.

"When I heard this morning that the Cup committee had nothing to do with the protest I requested Mr. Kersey, to whom I had intrusted the letter, to hand it to you.

"In case you do not receive this to-night I shall take Valkyrie to Sandy Hook Lightship to-morrow morning, and will cross the line to give Defender a start.

"I inclose copy of a letter I have written to Mr. Iselin and addressed to the New York Y. C. Yours very truly, DUNRAVEN"

The letter to Mr. Iselin has not been made public, but it is known that after the decision of the regatta committee was announced in his

"However, as their reply would have been the same as that conveyed verbally last night, the fact of no answer having been made is unimportant.

"Signed for the committee:

"JAS. D. SMITH, Chairman,
"A. CASS CANFIELD, Secretary."

While the committee was discussing the protest on Wednesday, the two yachts were docked again at the Erie Basin and scrubbed down as the water fell, Valkyrie being painted below. A topmast belonging to Colonia was brought to the Basin and under the direction of Mr. Herreshoff it was dressed up to fit the masthead of Defender. It was an inch smaller in diameter, but otherwise a good stick, and being dry it weighed 400lbs. less than the old. It was ready by afternoon, and a new spreader was in place at the masthead. During the morning a quantity of lead was unshipped from Valkyrie and an effort was made

VALKYRIE AT THE FINISH.

have been engaged at the time you and Mr. Busk were kind enough to call at the Waldorf. I could not then give a decided answer to the proposition made in our short conversation.

"I have since considered the matter carefully. Your proposal to postpone the start until we have sufficient room meets only one out of more serious difficulties mentioned in my letter of the 10th, and if no solution can be found to those difficulties I must adhere to my decision as expressed in that letter.

"I am fully convinced that the committee have done, and would do to-morrow, all in their power to keep a clear course; but, under existing circumstances, they are powerless. As I told you, I would sail if the committee would take it upon themselves to declare the race to-morrow void if, in their judgment, either vessel were interfered with by steamers and tugboats.

"I regret that you are unable to agree to that. I regret also that the race fixed for to-morrow could not be postponed in order to give favor, Mr. Iselin made an offer to Lord Dunraven to call the race off entirely and resail it. After the return on Thursday evening the following was posted with the letter:

"All the propositions of the above letter were discussed between Lord Dunraven and the members of the Cup committee at 9 o'clock last Wednesday evening. The answer given to these conditions was as follows:

"First.—That it was impossible at so short a notice to postpone the race fixed for to-day, Sept. 12.

"Second.—That the race would not be started until a clear space for maneuvering was secured.

"Third.—That the committee could not assume the responsibility of agreeing to declare the race void if either vessel suffered from the accompanying steamers.

"The committee regret that they were unable to send an answer this morning.

to have her remeasured—Mr. Hyslop being detained at the Basin all the afternoon and evening—but it was nearly 10 o'clock before the yacht was floated, and the attempt to measure her by lamplight and in disturbed water had to be abandoned.

Thursday was a typical Cup race day, with a clear sky and hot summer sun, a smooth sea and a light breeze, more than a drift at all times, but still quite light—just such weather as Valkyrie was presumably built for. When the fleet reached the Lightship both yachts were under way, but while Defender under clubtopsail worked about the line, the committee boat being anchored to the westward of the Lightship, Valkyrie stood away far to the south under mainsail and jib only, but with her racing flag showing out plainly above her bare topmast. It was apparent from the start that something was wrong, but what no one could tell. This time the steamers were far enough away, only a few small vessels being anywhere near the line, and the patrol yachts were driving them still further away. The wind was

DEFENDER AT THE FINISH.

west by north, making it necessary to start to leeward, and the signal for the course was set on the committee boat long before 11 o'clock.

The hour for the preparatory signal, 10:50, passed, but as it appeared the committee had decided to postpone the start until the course was perfectly clear. At 10:55 the yacht ensign was set, indicating that, the start having been postponed from the set time, the preparatory gun would be fired in 15m. At 11:10 the preparatory gun was fired and the first red ball set, but, strange to say, in place of the blue peter, there flew out from the staff the code letter J. That this was an error on the part of the signal man was apparent when the signal was hauled down and replaced by the blue peter, but it was none the less odd that the letter J stands in the yacht code for "Leave of absence granted."

With 10m. to go, the two yachts approached the line, Defender with her spinaker boom lowered to starboard, and Valkyrie slowly coming up and setting her staysail. That she had no intention of racing was very evident, but beyond this all was mystery, no one outside of those on the committee boat having heard of the last letter. Defender crossed at 11:20:24 and set her spinaker promptly. Valkyrie was timed so as to cross just ahead of the 2m. handicap gun, once over the line she went about, a hand went aloft and took down her racing flag, and the burgee of the New York Yacht Club was run up in its place as she headed in for Sandy Hook. Soon she took a line from her tug and was towed up to Bay Ridge. Once over the line Defender sailed away in the light air with the fleet well clear of her, though as she was really not racing some curious craft ran up to have a nearer look. After a time the wind shifted to the south and the spinaker came in, she made the outer mark at 1:26:58 and started home on a reach, the wind heading and finally making a beat in. Her finish was the signal for the usual barbarous din of guns and whistles, while the attendant steam yachts dressed ship. She crossed the line at 4:04:36, her elapsed time being 4:43:11, and stood up for the Hook, setting a new yacht ensign at her truck and another at each of her spreaders. When the fleet passed in Valkyrie was found at anchor off Bay Ridge, apparently deserted by all her crew.

On Friday the two committees and the officers of the New York Y. C., with Mr. Iselin, were in conference through the day and evening, Mr. Iselin first proposing to call off the two races of Sept. 10 and 12 and to resail both, and, on this proposition being rejected, proposing to call off all three races and begin the contest for the Cup anew. This also was rejected by the two committees as beyond their powers without a meeting of the club.

The following letter was sent to the Cup committee on Saturday, and was also, with Mr. Iselin's and Lord Dunraven's reply, and the letter of Mr. Canfield on Sept. 12, cabled by Lord Dunraven to Sec'y Grant, of the R. Y. S.

"439 FIFTH AVENUE, Sept. 13.—Gentlemen: I have the honor to acknowledge the receipt of your letter of the 12th inst. You say my letter of Wednesday night to Mr. Canfield was not handed in the New York Y. C. until 1 A. M. on Thursday and was not in your hands until 8 A. M. of the same morning. There must, I think, be some mistake. I received Mr. Canfield's letter at 10:30 P. M. Wednesday, and my reply was delivered by my own servant at the New York Club at 12:15 A. M. to the club clerk. The steward or clerk in charge was called on the telephone at 12:30 and was requested to find if Mr. Canfield was at the Knickerbocker Club, and, if so, to deliver the letter at once. The reply was that he would endeavor to find Mr. Canfield; that he had a short time before left the New York Knickerbocker Club and had left word that he would call at 8 A. M. to see if there was any message for him.

"The request that Mr. Canfield should not open my letter of the 10th until the protest was decided was unnecessary, as the Cup committee was not hearing the protest, but whether my letter of Wednesday night was delivered at the New York Y. C. at 12:15 or 1 A. M., whether it was in the hands of the committee at 7 or 8, and whether my letter of the 10th was read at 12:30 or 2:30 P. M. appears to me to be a matter of minor importance.

"What is of importance to me is to allay the unjustifiable opinion implied in your letter of the 12th, that in coming to the decision conveyed to you in my letter of the 10th I went back on the agreement signed by Mr. Smith and myself. You say:

"We can only regret that the conditions that you named therein—that is, in your letter of the 10th—as absolutely necessary, should not have been so presented when the agreement of terms was formulated.

"Permit me to observe that I named no particular conditions as indispensable, as you will perceive on referring to my letter. I hold that in any match a fair field and no favor is a condition precedent to any agreement as to terms, and that failing, that any party has a perfect right to withdraw absolutely or conditionally. Articles of agreement cannot and are not intended to lay down fixed rules to meet every imaginable contingency. Certain contingencies have arisen, as you are aware.

"Confining myself to the subject of my letter, the overcrowding, as far back as last October I wrote concerning the difficulty of insuring a clear course, but did not insist upon my views, because I thought the persons responsible should be free to take what steps they thought best. In view of the failure in that respect it might have been better if, in my letter of the 10th, I had absolutely withdrawn, but my desire to sail off the races was great, and I withdrew conditionally, and suggested steps which I thought would remove the difficulty.

"These steps were not taken and I held to my determination to sail no more, and in so acting I emphatically deny that I went back in any way on the agreement as to terms. I did not know whether Messrs. Canfield and Busk were officially representing the committee when they came to see me at the Waldorf.

"I judged by their conversation that they were not, and I understood from them that the committee had not come to definite conclusions upon my letter.

"I now conclude from your communication that they were officially representing the committee. In that case the proposal made to me by the committee was that I should withdraw from my determination expressed in my letter of the 10th, and should sail the third, possibly the final, race on condition that sufficient room was secured at the start, and that in any further races my suggestion that the dates of the races and the times of starting should not be made public should be carried out.

"That proposition did not commend itself to me. Nobody has denied the overcrowding, of course, but in any case either my complaint was, in the opinion of the committee, unjustifiable, in which case I could not have agreed with them and should have withdrawn, being fully convinced of the necessity, and prepared to take the full responsibility for doing so; or it was justifiable, in which latter case the committee was, I think, bound to give redress before the next race was sailed.

"I so far withdrew my letter of the 10th as to say I would sail the third race if the committee would undertake to declare the race void if in their judgment either vessel was interfered with by steamers, the committee putting anybody they liked on board the yachts. I was willing to leave the matter in their hands, stipulating only that they put experienced and practical yachtsmen on Valkyrie III.

"As far as I am concerned I have no wish to continue the discussion, which you accurately describe as superfluous, and will conclude by expressing regret that if any desire to resail Tuesday's race was known to exist the regatta committee did not order it resailed under Article 10 of the New York Y. C. regulations, in which case, whatever my opinion as to the cause of the foul may be, I should have been at the disposal of the committee, and that the Cup committee could not see its way to adopting what appears to us the simpler course of hoisting the letter 'G' yesterday, and postponing the race to such time as they had arrived at a definite conclusion upon my letter of the 10th inst.

"I have the honor to remain, very respectfully, DUNRAVEN."

On Saturday Lord Dunraven and Mr. Kersey went to New London by rail and there joined Mr. F. W. Vanderbilt's steam yacht Conqueror, going to Newport, where they were the guests of Mr. Vanderbilt. Messrs. Canfield and Busk were on the same train, going by rail to Newport. All of the Cup committee left town on Saturday. The following notice was posted at the club house on Saturday morning:

"To the New York Y. C.:

"Having filed with the America's Cup committee our report on the international races, we take this opportunity to state in case of inquiry why the last two races were not ordered to be resailed.

"Your committee, before taking evidence on the protest, made an unsuccessful endeavor to bring about a settlement by mutual agreement; but each contestant preferred that the protest should take its course. The protest filed and insisted upon must be adjudged, and a decision once rendered the contest is closed.

"As regards the resailing of the third race the regatta committee had no latitude, since the new conditions demanded by Lord Dunraven had been decided by the Cup committee, and therefore the race had to be sailed under the original terms.

"Respectfully THE REGATTA COMMITTEE."

Defender was towed to New Rochelle on Friday, gaily decorated with bunting and saluted by every passing vessel. Her sails were unbent and her boom unshipped. Valkyrie was towed to the Erie Basin, her spars unshipped and the work of shipping her sea rig was pushed as rapidly as possible on Friday and Saturday, the intention being to sail about Sept. 23 for Southampton. On Sunday her crew went up the Sound as far as Oyster Bay on the City of Bridgeport.

Returning now to the race of Tuesday, the contributory cause was the ignorance of those in charge of the steamship Yorktown in not allowing room for the necessary maneuvering at the line. This, in the first place, compelled Defender to go to leeward, while Valkyrie was able to hold her course to windward of the offending vessel. Being on a vessel which was handled by yachtsmen with a due regard for the rights of racing yachts, we were not in a position to see the collision, being to leeward of both yachts, consequently on the wrong side; nor could we judge of the distance between Valkyrie and the committee boat—a very important matter. It would be both unfair and foolish to pass upon the decision of the committee without knowledge of the evidence before them on which they acted, and we hope that such evidence will be made public in the report of the club. From all that we have been able to learn, however, the fault lay with Valkyrie. There can be no question that the fouling was unintentional on the part of Captain Sycamore, who held the stick. Either he miscalculated the distance by a few inches or the main sheet was not hauled in quite rapidly enough; but the facts seem incontestable that while the leeward vessel was closehauled, the weather one was partly free and bearing down on her; and also that the weather one had room to windward to clear the mark boat. The members of the two committees, some ten or a dozen experienced yachtsmen, were on the mark boat and with a clear view of the entire maneuver; and in a most favorable position to judge of the space between Valkyrie and the mark boat. Their personal observation was supplemented by the testimony of the principals on both yachts.

No doubt, the collision having occurred, each party honestly believed that he was in the right, and Mr. Iselin was fully justified in at once setting a protest flag. Why Lord Dunraven did not also set one does not appear, as it was the proper thing for him to do if he believed that Valkyrie had been fouled by Defender.

The race having been finished, Mr. Iselin was perfectly justified in demanding a judgment on his protest, as was Lord Dunraven; the good intentions of the regatta committee are plainly evident, but, under that strict construction of the rules which is the soul of match sailing, they had no course open to them but to decide Mr. Iselin's protest immediately on the evidence obtainable. This they did, and as we believe justly, and with every wish to give a favorable decision to Valkyrie if such could be justified in any way. Following the decision which exonerated him from even a technical charge of unfair sailing, Mr. Iselin very generously offered to call the race off and resail it in place of going on with the third race of the series; but this offer was declined by Lord Dunraven.

The race decision has been a godsend to the writers of doggerel poetry, fool letters and partisan comments, and much that has appeared on both sides, especially in some of the British papers, is based on a profound ignorance of yachting rules and racing usages, the few and simple technical points of the case being beyond the knowledge of the various writers. A collision having occurred, as all concede, there could hardly be a question that one or the other yacht was to blame; a protest from one or both was perfectly proper, and one or both protesting the issue could only be decided by the regatta committee. All talk about Valkyrie having acted wrongly in crossing the line and continuing the race after Defender was disabled, or of Defender having protested after Valkyrie won, is at the best but sentimental bosh and not worthy of notice.

The following from two London papers are samples of a certain class of comment which show the ignorance of the average sporting writer in yachting matters:

"The committee has not only taken Tuesday's supposed victory from the British yacht, but has given it to the American. This seems to be rather sharp practice. It may be the rigor of racing law, but it is hardly sport. If the umpire had done his duty he would have recalled the yachts and had a fresh start. The committee's severe award makes poor reciprocity for the generous treatment of the Cornell crew at Henley."

"We confess we see no reason in the decision of the committee awarding the race to Defender. The foul occurred before the starting gun was fired and before the line was crossed. Defender might have backed out, but she elected to race. Had Valkyrie willfully fouled Defender during the race the penalty could not have been greater. The committee's explanation does not improve matters. We should not be surprised if Lord Dunraven declares the rest of the races off and refuses to compete again; but if he consents to continue, as we hope he will, Thursday's race will probably settle the matter, as there is not much doubt now that Defender is the faster yacht."

Most of the commentators assume that as the yachts had not crossed the starting line, the race had not yet begun.

The episode of the foul and protest may be considered closed with Lord Dunraven's statement that he would abide by the decision of the committee, whether favorable or adverse, and by his declination, after the decision was made, of Mr. Iselin's offer to resail the race.

The final act of the farce begins with Lord Dunraven's first letter, which was written to the Cup committee, but sent with the proviso that it was not to be opened until the protest had been decided, Lord Dunraven, in spite of his experience as yachtsman, not knowing that a protest must be made to a regatta committee and no other, and decided by the same committee. The delay with this letter—for which he alone was responsible—amounted to nothing, as he was in personal communication with the Cup committee as late as Wednesday evening. The gentlemen of the two committees, who have of necessity neglected their private affairs entirely for the past two weeks, were engaged all of Tuesday evening and until late at night in the discussion of the foul and protest, all of Wednesday and late into Wednesday night; their main efforts being devoted to an amicable agreement by which the race could be sailed off and resailed. When two members of the committee—one, by the way, an Englishman—finally found his Lordship late on Wednesday evening, he was, by his own admission, too much engaged to give attention to the very important business brought up by his own letter. If, as it now appears, he had already made up his mind not to sail again off New York in default of pledges he knew no power on earth could give, it was his duty to have notified the committee at once, while in conference with them, in order that all the arrangements for the morrow's race might be cancelled. Instead of this, an hour later, just before midnight on the eve of the third race, he wrote his second letter, which reached the club at 12:15 on Thursday morning, but was not read by the committee until 8 A. M.

The sailing of these matches is no child's play for those concerned. The Cup and regatta committees and the officers of the club are all in attendance, no matter what other interests must be neglected; the expenses of mark boats, three big and fast tugs, with attendants and incidentals, cover about $1,000 per race, and the arrangements for the club steamer call for much work on the part of officers and committees. There have been in town since the first race thousands of spectators, among them yachtsmen from distant points, all eager to witness the races. A few words from Lord Dunraven when the representatives of the committee called on him at 9 P. M., a positive statement that he had no intention of starting next morning, though they would have disappointed thousands, would have saved endless expense and annoyance to the club which has treated him so hospitably and to many who have sympathized with his ill-luck even though they did not wish him to win the Cup.

There was no necessity whatever for sailing a third race after the challenger had withdrawn from the contest for the Cup. The New York Y. C. already holds the trophy and must do so until it is won by a challenging club; whether Defender sailed one or three races could make no possible difference provided that Valkyrie did not win three races. There is something intensely Hibernian in Lord Dunraven's statements that he considered it particularly civil, courageous and sportsmanlike to make fools of the club, the defending yacht and the spectators, by taking them out to Sandy Hook to witness such a disgusting exhibition of British pluck; a racing yacht in perfect trim, with flag aloft, a keen skipper at her helm and a ready crew on deck, a clear course ahead of her and a worthy opponent beside her, and then to see her turn tail and sail away. Even though his grievance had been a just one and his reasons good, no man with the instincts of a true yachtsman would abandon such a course and such an opponent, with the very conditions of smooth water and light winds for which his own yacht was built. Had there been any semblance of crowding at the line, or had Valkyrie started and been in any way interfered with, there would have been some excuse for abandoning the race; but under existing circumstances there was none whatever. The Royal Yacht Squadron may thank Lord Dunraven for one thing, that when he hauled down his private signal on the line he set the burgee of the New York Y. C. instead of that of the Squadron.

No possible excuse can be made for the conduct of the attendant vessels. It was bad throughout, from the Yorktown down to the many tugs, such as the "Official Photographers" and some of the newspaper boats; but in this respect Defender suffered quite as badly as Valkyrie. The evil is a serious one, and impossible of remedy, but nothing new; Lord Dunraven was perfectly familiar with it in 1893, when it was worse, if possible, than this year, as every effort has been made in the present case to exercise some control. So much was said, however, over Tuesday's race, and the vessels were so far from the line on Thursday, that there is every probability that there would have been no interference whatever had Valkyrie started.

So far as appears from the two letters, Lord Dunraven's demands were in the first place a transferral of the races to some other place, preferably Marblehead; and secondly, a guarantee from the committee that the race should be called off should either vessel be interfered with. The second proposal is hardly worthy of serious consideration; no committee would accept such a responsibility; as, after a race had been fairly won by one vessel, it might be compelled to declare it off on account of some immaterial interference with the other. The proposal is only on a par with others made by Lord Dunraven at various times since 1889.

After agreeing long ago to the refusal of the Cup committee to remove the races from New York and coming here to sail, the insistence on Marblehead is in rather questionable taste; but, apart from that, the question is important enough to discuss on its merits, as it has engaged the attention of the British papers. For the benefit of those who are as unfamiliar with the geography of the Atlantic coast as Lord Dunraven appears to be, we would state in the first place that the Cup races of 1895, like those of 1893, have not been sailed on New York Bay, as is intimated in Lord Dunraven's first letter, but on the broad Atlantic, starting from a point seven miles offshore and in deep water, the course itself being unexceptionable. The distance from New York city is twenty-two nautical miles, and as the tides are strong in the channels about the Hook, and there are no available harbors near, very few small yachts venture outside of Sandy Hook. With all the immense fleet of vessels there were but one or two as small as 30ft. and none smaller. The yachts were described by some papers as sailing in the second race through an immense fleet of catboats, but they were only some fishing skiffs anchored off Galilee, too few to interfere with the racing.

The much-vaunted Marblehead course is a very fine one, on Massachusetts Bay, practically the open sea—as a sailing ground neither better nor worse than off the Hook. The starting point of the Eastern Y. C. course, Half-Way Rock, is within twenty-one nautical miles of the city of Boston; not so large a town as New York, it is true, but still quite a place, and with several railways joining it to other parts of the country. The yachtsman from Chicago, Minneapolis, Buffalo, Cleveland, Toronto or Montreal who starts to see the Cup races can reach Boston as quickly and as cheaply as New York, and when he arrives there will find some of the same steamers awaiting him, three or five dollars, with many of the Eastern coasting and local passenger fleet. If international races are sailed, Americans are going to see them, whatever the cost; and where passengers are to be had at good prices there will the steamers be, whether at Marblehead, Newport or New York.

The steamer and tug evil would be quite as bad at Marblehead as at New York, but it would be nothing to another disadvantage which does not exist at the latter port. Massachusetts Bay is the center of the largest fleet of small yachts in American waters. The combined fleets of the Hudson River, New York Bay and the Sound cannot compare in numbers, in the sizes below 30ft., with the many clubs between Provincetown and Gloucester, Marblehead is the favorite rendezvous of this multitude of small sloops and catboats, and on the occasion of a big regatta they may be counted by hundreds. We have seen them in such crowds on the occasion of Mayflower's first race in 1886, and again when she met Galatea off Marblehead a year later, that it was dangerous and almost impossible for the racing craft to cross the line. These small craft are in the main staunch and sturdy little fellows, manned by experienced yachtsmen and quite capable of going a dozen miles or so offshore if necessary to follow a race. With them are fishermen, small and large, and other working craft. In the event of a great international race off Marblehead the crush of vessels, small and large, would be infinitely worse than anything yet seen outside of Sandy Hook. Lord Dunraven has never been to Marblehead, and in particular has never witnessed a race there; his knowledge of the place is derived from one or two Boston papers which have been anxious to take the Cup races from New York, and there is no possible reason why his demand for the change should have been acceded to by the committee either last week or last winter. What is true of Marblehead is equally true of Newport, except that the Newport course is inferior; there would still be crowds of small boats and all the New York steamers and tugs. If there were any reason to believe that these important matches could be sailed without interference off Marblehead or Newport, or Norfolk or Portland, we should be glad to see the change made, but no such reason has yet been given. If the races are to be sailed without a large attendant fleet, but two courses are possible, to go to some distant point such as the Labrador coast, in which case probably a few large ocean steamers would follow, or to be off Sandy Hook and go out unawares with no previous notice. Even in this latter case there would be the newspaper tugs and the steam yachts.

Lord Dunraven's refusal to sail more races over the New York course is the less reasonable from the fact that he has been here before and knew exactly what to expect, and also that he has sailed at home under conditions slightly different, but no less dangerous and trying. Only last year his yacht was sunk under him through the crowding of outside vessels about the starting line in the Clyde, and in the regular matches at Cowes, Torquay and on the Clyde the racers are compelled to sail not once but several times in each race through large fleets of yachts and vessels at anchor, something absolutely unknown in this country.

The preliminaries to the present races were arranged long ago, almost all possible points requested by Lord Dunraven being agreed to by the New York Y. C. Knowing well the waters and conditions about New York, his lordship entered into an agreement to sail a series of races there under fixed conditions. This agreement, as he himself has testified, has been fully carried out on its side by the New York Y. C., and yet he has broken it and attempted to make entirely new conditions, withdrawing in a pique because they have not been acceded to almost before they were known to the committee. Had he taken the trouble to meet the committee personally on Wednesday and submitted his ultimatum to them in time for the stoppage of Thursday's race, or, failing this, had he crossed the line on Thursday and sailed until some grounds were given for his withdrawal, he might have made out a case; but his unbusiness-like and vacillating conduct, and the manner in which his various communications have been dispatched to the committee, have placed him in a very bad position.

From the time of the withdrawal of Valkyrie on Thursday morning, many offers have been made of valuable prizes for special races between her and Defender, or even with Vigilant. Col. Chas. H. Taylor, of Boston, at once telegraphed to Messrs. Iselin and Dunraven:

"Owing to the unsatisfactory conditions which seem to exist off New York for a contest of such magnitude as you are engaged in, I hereby offer a $5,000 international challenge cup to be sailed for by the Defender and Valkyrie III. off Marblehead; cup to be called the 'Massachusetts Bay Cup.' In case of acceptance, conditions can be arranged at once."

The replies were:

Charles H. Taylor, Editor Globe, Boston:

Many thanks for generous offer. I must decline at present to sail Valkyrie. C. OLIVER ISELIN.

BROOKLYN, Sept. 13.

Gen. Chas. H. Taylor:

Mr. Kersey telephoned that the Valkyrie is being dismantled and that Lord Dunraven has made no formal reply to the proposition.

The Atlantic Y. C. at once took up the question of arranging a race for a $5,000 prize, and a cup of $1,000 was offered by the Roberts Safety Watertube Boiler Co. Other offers have been made of liberal prizes for races over any course, but Lord Dunraven ordered the yacht stripped and refitted for sea at once.

James D. Smith, chairman, and J. Fred. Tams, secretary of the America's Cup committee, met on Tuesday and with the authority of the other members of the committee made public the letters which passed between Lord Dunraven and Mr. Iselin in regard to resailing the America's Cup races between Defender and Valkyrie III.

After the meeting Com. Smith said to an *Evening Post* reporter: "The letter first submitted from Mr. Iselin explains itself. I do not know where to apply to Lord Dunraven to get a copy of Mr. Iselin's letter offering to resail the protested race of Sept. 10, but the following correspondence shows the facts, as his (Mr. Iselin's) letter of Sept. 16 also shows the fact of his desire to resail the last two races, Sept. 10 and 12, or failing in this, to sail the whole match over, which was surely most magnanimous and liberal on Mr. Iselin's part;

SEPT. 16, 1895.—Dear Mr. Smith: I inclose copies of Dunraven's two letters to me; unfortunately I did not keep a copy of the short note I sent him about resailing Tuesday's race, but as he has my permission to publish it you can of course obtain a copy from him.

I consider it most unfortunate that we could not have devised some way whereby the last two races could have been resailed. I still hold that if Dunraven and myself had both consented to have those races resailed, the committee could have so ordered without in any way affecting their position. Now, of course, it is too late to do anything, and all that I ask is that my offers be fully set forth in the report of your committee—namely, my hailing at the time of the start and the finish of last race; my asking for a meeting of the committee the next day; my offer to resail both races, and my willingness to begin the whole matter over under any conditions and at any place and time agreeable to Dunraven. Very truly yours, C. OLIVER ISELIN.

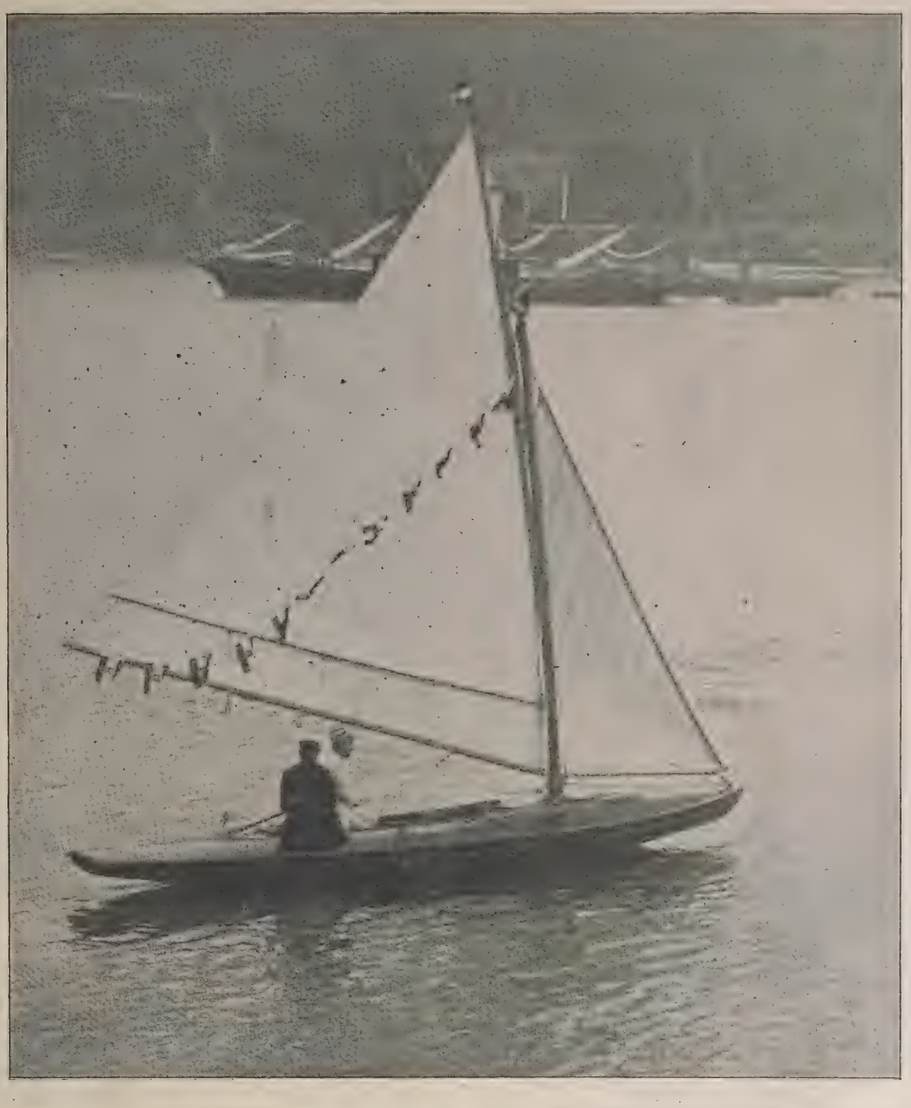
[Inclosures.]

439 FIFTH AVENUE, Sept. 11, 1895.—Dear Mr. Iselin: I have received your note in which you express a wish that yesterday's race should be resailed.

That is a proposition to which, of course, I cannot agree. You would not have protested had you not believed that Valkyrie had caused a foul by committing a breach of the rules.

If she did she must take the consequences.

The regatta committee has decided, for reasons according to their best judgment, but which, I confess, are beyond my comprehension, that she did break the rules. I made no protest, and because I thought the foul was probably accidental, but I consider that Defender caused it. You consider that Valkyrie was to blame. The committee have decided that you are right and I am wrong, and there the matter ends.



Yours very truly, DUNRAVEN.

THURSDAY, BAY RIDGE.

DEAR MR. ISELIN: I certainly could not entertain your suggestion. Had the committee ordered the race to be resailed that would have been a different matter, but how could I possibly agree to resail a race decided and given against me by the decision of the committee?

I wrote you last night to this effect, and am sorry you did not receive my letter. I had no opportunity of communicating with you this morning, but Mr. Duryea will, I dare say, have informed you as to my views. Thanking you for your suggestion, I remain,

Yours very truly, DUNRAVEN.

SPRUCE IV. WITH OWNER AND CREW.

The Seawanhaka Corinthian Cup.

SPRUCE—ETHELWYNN RACES.

THOSE yachtsmen who go to Oyster Bay next Saturday to witness an international race may well imagine that they are looking through the wrong end of their glasses, as the competitors will be but 15ft. waterline instead of 90, and with but 200ft. of sail in place of 13,000. The contests, however, promise to be hardly less interesting, as the British challenger, Spruce IV., owned by Mr. J. Arthur Brand, and representing the Minima Y. C., has sailed a number of successful races in the ½-rater class in England; while the representative of the Seawanhaka C. Y. C., Ethelwynn, won the three trial races of the club and has been successful in several other races in the month that she has been afloat.

Mr. Brand arrived in New York, or rather Hoboken, on the steamer Fulda, late on Sept. 9, being accompanied by his secretary, Mr. D. G. Lee, and by his crew, Thomas Wade. The boat was also on board the Fulda, having been shipped at Southampton. At the pier Mr. Brand was met by his friend Mr. H. K. Sturdee, now at Saugerties, N. Y., and by Sec'y Chas. A. Sherman, of the Seawanhaka race committee; they went to the Marlborough and in the evening Mr. Brand and the race committee were entertained at dinner at the Metropolitan Club by Mr. C. W. Wetmore, of the committee. On Tuesday and Thursday Messrs. Brand and Sturdee with Tom Wade were the guests of the club on the steamer Guyandotte at the Cup races—Mr. W. W. Howard, who has just returned from Europe, being also aboard.

Mr. Brand is a tall and active young Englishman, an architect by profession, a graduate of Oxford University, and for the past ten years prominent in small boat racing. As it was not possible to bring out an amateur friend to sail with him here, he asked that a professional hand be allowed, and on the club acceding to this request last spring he has brought out one of the hands of his 20-ton cutter Tina, a bright and alert young sailorman, Thomas Wade, of Wivenhoe, who has sailed in the various Spruces in most of the races for four years, paid hands being generally allowed in the English races.

Spruce IV. is of the same general type as her American rival, a centerboard boat, 15ft. 9in. waterline, 3ft. 1in. fore overhang, 4ft. 5in. after overhang, making 23ft. 3in. over all, 5ft. 9in. beam, and about 2ft. depth and 9in. draft. She was designed and built by H. C. Smith, of Oxford, of ribband-carvel construction, much like a racing shell, the frames being bent about ⅜×⅝ and spaced 6in., jogged into ribbands about ¾×1in. on which the plank edges meet. The deck is of mahogany, as is the planking, ⅜in. single thickness. The midship section is rather rounder than Ethelwynn, some 3in. less beam and more depth, and more like the Scarecrow, a rounder section. The bow lines are full, especially above water, and the counter is also fuller than Ethelwynn, the width across the transom being 30in., or just double. The deck has considerable crown and the well is only about 2ft. wide. There is a bulkhead just abaft the well, but the forward bulkhead is well forward. The boat was originally fitted with a lifting bulb keel of the Nautilus type, described some time since in the FOREST AND STREAM, but this has lately been discarded in favor of a centerboard of ¾in. steel, of the Linton Hope pattern, but loaded with 50lbs. of lead disposed in two saucer-shaped lumps, one on each side, at the lowest point; by this arrangement the centerboard can never be housed, about 10in. projecting from the trunk when the board is raised. The centerboard is covered with a black varnish. Forward of the mast and right in the bow is a second and much smaller centerboard, about 18in. long. There is an outside keel about 8ft. long, 2in. wide and 1in. deep. The large centerboard raises by a wire rope pendant and tackle beneath the deck. The rig included a lug mainsail of 189sq. ft. and a jib of 42sq. ft., the latter being a roller jib that can be reduced to any size required, and also can be swung out instantly so as to act as a spinaker. This jib will not be used in America, the usual jib on a stay, with separate spinaker, being fitted. The boom is 15ft. 6in. long and the yard 15ft., all the spars being of bamboo. The mast is of male bamboo carefully served, and is fitted into a square piece of wood at the heel, being stepped in a tabernacle, by which it can be lowered for passing under bridges. Some changes will be made in the rig which are permissible under the Seawanhaka measurement. The hull is rather larger and fuller than that of Ethelwynn, but is of heavier build, apparently, and with fuller lines. The boat was taken to Abrams's shipyard at Cold Spring Harbor and rigged there. She has a handsome appearance on the water, being finished with two mahogany beads about 5in. apart, one at the gunwale and one below, with a gilt stripe.

A meeting of the owners of the two yachts with the committee was held on the return from Thursday's Cup race, and all arrangements made. The first race will be sailed on Saturday, Sept. 21, starting off the mouth of Oyster Bay Harbor at noon, the course being windward and leeward, 12 miles. The second race will be on Monday and the third on Tuesday, sailing each day until one boat has won three races. The first race will be to windward or leeward and return, the second triangular. The steamer Aurora will leave Battery Pier at 8:45 A. M., and Pier 31 East River at 9:14 A. M. on Saturday, calling at the Seawanhaka Club house before the start. If there are enough passengers, she will follow the races on the other days also.

The crew of Spruce has a decided advantage over the crew of Ethelwynn; the owner, Mr. C. J. Field, has sailed a Scarecrow last season and this year has had his boat only since Aug. 10. The helmsman, Mr. B. C. Ball, has done a good deal of sandbag sailing, but none in a boat of this type previous to last month, and neither of them have had the opportunity in the short interval since the trial races to do much sailing. What makes the contest more equal than usual so far as the challenger is concerned is that neither of the crew of Ethelwynn has sailed off Oyster Bay save in the three trial races, so that there is little advantage on their part in purely local knowledge.

J. ARTHUR BRAND,
Minima Yacht Club.

Rifle Range and Gallery.

Dominion Off-Hand Rifle Association.

PARRY SOUND, Ont., Sept. 6.—The following scores were shot to-day by the various clubs forming the Dominion Off-Hand Rifle Association:

	100yds.					200yds.

Pacific Slope Rifle Scores.

SAN FRANCISCO, Cal., Sept. 8.—The scores made at the semi-monthly shoot of the Columbia Pistol and Rifle Club held at Shell Mound to-day were as follows:

Rifle—Medal and cash prizes, open to the world, 200yds., re-entry:

Target rifle, Kuhnle medal: F. O. Young 86, D. W. McLaughlin 85, Dr. Rodgers 84, A. Gehret 84.

For members only, no re-entry: Champion class—F. O. Young 83, D. W. McLaughlin 82, Dr. Rodgers 78, L. Barrere 67.

First class—A. Darrell 71, P. Bohr 72, A. Gehret 81.

Pistol: 50yds., medals for members only, no re-entry:

Champion class: C. M. Daiss 92, S. Carr 87, F. O. Young 85, L. Barrere 76.

First class: Dr. Rodgers 90, A. Darrell 90, F. Poulter 78.

Second class: F. Dennis 78, A. H. Kennedy 66, W. Unfred 55.

Open to all comers, re-entry:

Blanding medal: Dr. L. O. Rodgers 94, F. O. Young 91, S. Carr 91, J. E. Gorman 90, L. Barrere 81. ROEBL.

Zettler Rifle Club's Annual Festival.

THE twenty-second annual shooting festival of the Zettler Rifle Club, of New York city, will be held on Sept. 29 and 30, at Charles C. Wissel's Cypress Hill Park, L. I. The park is easily reached from the city, the following being the official description of the route to the park: "Take Union Elevated direct from New York and Brooklyn Bridge, or Fulton, Grand or Twenty-third street ferries to Ridgewood, and Cypress Hill dummy line from Ridgewood to the park."

The programme is a good one, and the list of prizes is very large, the actual cash to be distributed footing up to a big amount.

The following are the conditions for the Ring target: Distance 200yds., ¾in. (25) German ring target; any rifle; open to all comers; first ticket $2, each following $1; two best tickets to count for the first five prizes; the best single ticket to count for the following prizes; tickets unlimited; only one prize obtainable by any shooter. There are twenty-one prizes, ranging from $1 to $50. The premiums offered are: Best five tickets on ring target, $10; second, $8; third, $4; fourth, $2.

The Bullseye target is open to all comers, 10 shots for $1, the best bullseye to count by measurement. In this class again there are eighteen prizes, ranging from $1 to $20, while the list of premiums is also a goodly one.

The Honor target is open to members only, three shots per man. The contest will be for prizes presented by the judges and members of the club, and for $150 donated by the club.

Zettler Bros. present a fine trophy for special competition on a 25-ring target. This competition is open to everybody, three shots free; only one ticket allowed to each shooter.

Two gold lockets presented by the club will be competed for by the judges only, who will be privileged to fire three shots each.

The ladies are not forgotten. For them there is a target of Honor, on which the ladies of club members will be entitled to compete for prizes presented by the club.

The various committees are: Ladies' Committee, C. J. Watson, J. Günther and W. Sell. Shooting Committee, Geb. Krause, Chairman; H. D. Muller, M. B. Engel, R. Busse, C. G. Zettler; B. Zettler, Shooting Master, and Gus. Nowak, Secretary. Shooting commences at 9 A. M. each day and closes at 6:30 P. M.

Cincinnati Riflemen.

CINCINNATI, O., Sept. 8.—The scores given below were made by members of the Cincinnati Rifle Association at their range to-day. Conditions, 200yds., strictly off-hand, 3lb. trigger pull, rifles under 10lbs. weight, at the standard target, 7-ring black. The small attendance to-day was due to members of this Association attending a prize shoot given by the Losantiville Shooting Association at Dayton, Ky.

During the course of the day's shoot word was received announcing the death of one of our oldest and most respected members, Mr. Louis Stegner. It is with the most sincere regret that we make this announcement, and this Association loses one of its best and ablest members:

Gindele	9	8	9	9	9	6	8	9	6	8–81	
	9	10	9	9	9	9	9	7	8	8–87	
	6	7	9	10	5	10	9	8	9	9–82	
	7	10	6	8	9	9	10	8	7	10–83	
*Payne	8	9	5	6	9	10	9	10	9	8–83	
	8	7	8	7	9	10	6	10	9	7–81	
	8	8	8	8	7	7	8	6	10	9–79

	6	6	5	3	6	8	7	6	9	8–64	
Hake	7	5	7	10	6	8	5	7	4	6–65	
	5	7	7	7	5	4	8	9	6	4–62	
	9	6	10	5	7	9	6	4	8	6–70	
	9	6	5	7	5	7	7	4	8	4–62	

*Payne had the satisfaction of making his first clean score to-day, also his second 90, having scored his first 90 at Dayton, Ky., on Sept. 1, just one week ago.

Trap-Shooting.

If you want your shoot to be announced here send in notice like the following:

FIXTURES.

Sept. 24.—WILLARD PARK, N. J.—Live bird handicap, 50 birds, $25 entrance, birds included. Four high guns, handicap 26 to 32yds.; entries close Sept. 20, limited to 15 entries.

Sept. 24-26.—ROCHESTER, N. Y.—Fourth annual tournament of the Rochester Rod and Gun Club; $500 added money; H. M. Stewart, Sec'y.

Sept. 26.—NEWARK, N. J.—Live bird handicap of the Newark Gun Club, at Erb's grounds; 25 live birds, $10 entrance, birds extra at 25 cents; handicaps 26 to 32yds.; four moneys.

Sept. 26-27.—LEAVENWORTH, Kansas.—Second annual tournament of the Leavenworth Gun Club; $300 added money.

Sept. 27, 28.—HARRISBURG, Pa.—Fall tournament of the Harrisburg Shooting Association; first day, targets; second day, live birds. H. B. Shoop, Sec'y.

DRIVERS AND TWISTERS.

Club secretaries are invited to send their scores for publication in these columns, also any news notes they may care to have printed. Ties in all events are considered as divided unless otherwise reported. Mail all such matter to Forest and Stream Publishing Company, 318 Broadway, New York.

An unfortunate accident, that came within an ace of being a fatal one, put a damper upon the tournament promoted by the Lancaster (Pa.) Gun Club last week. Mr. W. H. Burnham, a very popular and well-known shot who hails from York, Pa., was the victim, and we are extremely pleased to be able to state that from all we can learn he is none the worse for his narrow escape. The way the accident happened, as it was related to us by an eye-witness, was thus: Mr. Burnham was shooting his score in a 15-target race when a trap got out of gear. A shooter to his right opened his gun and laid it, with the shell in the barrel, across a rail. Plenty of people have seen loaded guns placed in just such a manner. As soon as all was ready for the shooting to go on again, the owner of the gun stepped up to it and was going to pick it up when it slipped off, and sliding as it were around the rail fell, butt down, on the ground, the gun closing and going off as the butt struck the ground. The whole charge passed so close to Mr. Burnham's stomach that it tore his sweater and shirt from his body, three pellets of shot scoring their way across his skin and one just entering his skin slightly. His sweater was set on fire by the discharge. The charge found its resting place in the lining of the covering that protects the spectators from the elements. Mr. Burnham's nerve is best attested by the fact that he finished his score in the event. He then packed up his gun and took his departure, saying: "Good-by, boys; I've had enough shooting for a month or two, and maybe for always." We hope, however, to have the pleasure of meeting the champion target shot of Pennsylvania in front of the traps before many months are over. The accident is only one more proof that a shell in a gun, no matter in what position the latter may be, is always a menace to those in its vicinity.

In our account of the four-handed match between Ballard-Ivins and Hoey-Murphy we stated that we thought the scores made a record, each man having killed 90 per cent. or better. Fred Hoey called our attention on Sept. 12, at Elkwood Park, to the match shot on March 29, 1894, at Babylon, L. I., on the grounds of the Westminster Kennel Club, grounds that are acknowledged to be extremely fast, and where George Mott, the superintendent, always has strong birds and good flyers on hand. On the date in question Fred Hoey and L. S. Thompson shot a match against George Work and Charles Macalester, 100 birds per man, 200 to the team. Hoey and Thompson won by three birds, scoring the great total of 190 to 187. The individual scores were: Hoey 97, Thompson 93, Macalester 94, Work 93. We have to thank Mr. Hoey for calling our attention to the above score, and shall be glad to know if any score has been made under similar conditions that can beat it. As a curious coincidence, it may be mentioned that Fred Hoey and Edgar Murphy used in the match for the Riverton cup of 1883, shot at Elkwood Park on Sept. 12, the full score of which appears elsewhere, shells that were loaded by Von Lengerke & Detmold for the match shot at Babylon, L. I., on March 29, 1894. The shells were loaded, according to the description on the case, on March 26, 1894, and had been laid one side by Fred Hoey until the morning of Sept. 12 of this year. It may be of interest to some to know that the shells were "Eley's Gas-tight Cartridge Case made in Great Britain" for V. L. & D., and that they were loaded with American E. C. powder.

In a personal letter on a totally different matter, Irby Bennett, of Memphis, Tenn., the popular representative of the Winchester Repeating Arms Company, concluded as follows: "Recently I was in Atlanta and discussed with Mr. John S. Clarke, of the Clarke Hardware Company of that city, the prospect and outlook for their coming tournament in October. Mr. Clarke was very enthusiastic over the same, and believes that the attendance will be extremely large, in consequence of which belief they have increased the added money from $600 to $700. The International Exposition will be in progress at that time, and will unquestionably attract a great many people from all parts of the country. It seems to me that the $700 added money should also attract the shooters, particularly when they can obtain a *one fare* railroad rate for the *round* trip. I feel justified in urging all the shooters of the country to attend this shoot, for the reason that the shooting and the management will be of the best. The exposition itself will unquestionably be worth the visit, and Atlanta is a beautiful, attractive and typical Southern city, and its people are as hospitable as Southerners generally are. I will be in control of the Winchester exhibit at the exposition, and should FOREST AND STREAM'S representative look in on me, he will find a hearty and cordial invitation awaiting him to make our place his headquarters."

FOREST AND STREAM has gotten out a "Tournament Squad Pad" for the use of gun clubs at tournaments. The use of squad pads has grown very largely and there is no other satisfactory method of running a shoot outside of the squad system. It enables the cashier's office to keep up with its work—the greatest necessity when it comes to making a shoot a success. The pads consist of 100 sheets of army and navy bond paper, three or four good manifold copies being practicable with that paper. Clubs that contemplate giving tournaments will do well to bear these pads in mind and send for a sample. As we have had them made in large quantities we can make an advantageous offer in respect of price. A single pad costs 15 cents; ten pads, 1 000 sheets, $1 50. Send for a sample.

The second annual tournament of the Leavenworth, Kansas, Gun Club will be held on Thursday and Friday of next week, Sept. 26, 27. A note in our last issue gave the particulars of the shoot in brief so that it is unnecessary to dilate any further on that matter, merely remarking that the amount of added money—$300—is worth while going after. It is also worth noting that on the second day there are two team races on the programme: one is a two-men team, 15 targets per man, entrance $3 per team, $20 added; the other is a three-men team, 25 targets per man, $4.50 entrance per team, $50 added. Remember that in all events winners of first and second money will be handicapped in the next shoot by being given unknown angles to shoot at.

Mr. Chas. E. Forehand, secretary of the Worcester, Mass., Sportsmen's Club, writes under date of the 13th inst.: "I wish to claim Oct. 15 and 16 as the dates for the Worcester Sportsmen's Club's tournament. There will be $100 added money, and a $50 diamond ring will be given to the man making the highest average. This shoot coming so soon after the Newburgh shoot should draw a good attendance." We suppose that the diamond ring will be given to the shooter making the highest general average in all the programme events of both days. Mr. Forehand has promised to mail us a programme, and that will no doubt explain this point fully.

The Bayside Gun Club, of Keyport, N. Y., is evidently a very healthy organization, twenty-three members out of a possible fifty-four putting in an appearance at the first monthly shoot of the club held on Sept. 4. The conditions of the badge shoot are rather hard on beginners, being given as "known angles, unknown traps," that is, expert rule. Although that system is far and away the most sporting of all, we are of opinion that it is a little too severe on young shots, and does not encourage them or keep up the attendance as well as known traps, unknown angles will do. The club's next regular shoot will be held on Oct. 2.

The Independent Gun Club, of Reading, Pa., will hold a three days' shoot, Oct. 9–11. The first two days will be given up to targets, the third day to live birds. The sum of $100 will be added to the purses each day, making $300 of added money altogether. The tournament committee is: John Shaaber, George Ritter, Brooke Harrison and James Schmeck. The tournaments given in the past by the Reading boys have always been successful and enjoyable, and the tournament of 1895 should be added to the list. The composition of the committee is a guarantee that the shoot will be run all right; everybody knows Shaaber and Schmeck!

The annual fall tournament of the West Newburgh Gun and Rifle Association will be held, as announced some months ago, on Oct. 9–11, the dates just selected by the Independent Gun Club, of Reading, Pa. As, however, the two clubs will draw shooters from different sections of the country, there is little reason to fear any visible effects from such clashing of dates. President Brown, of the Newburgh Club, promises the usual good time and plenty of shooting, which has characterized the shoots of his club in years gone by. Landlord Gedney's lunches also are a special attraction, and there is going to be no change here.

The Rochester (N. Y.) Gun Club's programme has been issued during the past week. The schedule of events is the same that we published in our issue of Sept. 7, so that it is hardly necessary to repeat the details. The "Rules and Regulations" contain some pieces of information of special interest to intending shooters: "Shooting will begin each day promptly at 9 A. M. Ten-gauges at 18yds. The Livingston Hotel has been selected as headquarters. Reduced railroad rates. Ammunition and guns shipped to James McCulloch, 99 East Main street, will be delivered on the grounds free of charge." Also note: "Dropping for place will not be tolerated."

Mr. Sam Dow, president of the Knoxville, Tenn., Gun Club, called at this office while on his way home from Boston, where he had been attending the recent Masonic conclave. Mr. Dow says that the Knoxville's are not talking "shoot in '96" at all, in fact he doesn't think they'll give one. He left New York on Saturday, Sept. 14, *en route* for home, having for a companion U. M. C. Thomas, who was traveling to Atlanta, Ga., to take charge of the U. M. C. Co.'s exhibit at the exposition.

H. L. Lyons, a member of the Kentucky Gun Club, of Louisville, Ky. won the amateur championship of Ohio, Indiana, Illinois, Kentucky and Michigan at the Limited Gun Club's shoot at Indianapolis, Ind. He scored 49 out of 50, tieing with Mr. Elliott; on the shoot off at 25 targets he won easily, breaking 24 out of 25. Mr. Lyons used U. M. C. factory loaded ammunition, E. C. powder and one of Parker Bros. pigeon guns with Whitworth steel barrels. He won the live-bird championship of Kentucky last year, and is one of the most popular men in his club.

During the recent visit of Buffalo Bill's Wild West show to Harrisburg, Pa., the members of the Harrisburg Shooting Association presented Annie Oakley with a mammoth bouquet, the floral trophy being larger than Miss Oakley herself. Frank Butler says that the first time the Harrisburg boys hold a shoot that Miss Oakley has leisure time enough to spare to attend, she'll be there, even "if she has to ride a bicycle up-hill to get there."

We regret that we did not receive some earlier notice of the Lake View Gun Club's tournament and meeting of the Michigan Trap-Shooters' League, which took place at Lake View Park, Kalamazoo, Mich., on Thursday and Friday of this week, Sept 19, 20. The programme was a varied one, the Pumphrey "Equitable" system being used in dividing several of the purses. Ben O. Bush was carded as manager, so that it is safe to assume that everything passed off all right.

Secretaries of gun clubs and other correspondents to this department are requested to read carefully the note in italics that is run at the head of this column. Owing to the absence of the trap editor while attending tournaments, matter that should have prompt attention is often left unnoticed through being addressed personally instead of to FOREST AND STREAM PUBLISHING COMPANY. There need be no fear that any matter thus mailed will be overlooked; it will find its way into the right basket.

With fine weather the tournament of the Rochester (N. Y.) Rod and Gun Club is bound to prove a success. The excellent club house, probably one of the best appointed in the country, guarantees the comfort of the shooters, while the programme and the quality of the management also insures plenty of shooting for everybody, and that smoothness of running which is such a pleasant feature at many of the shoots of to-day.

Mr. W. F. de Wolf, secretary of the Cook County (Ill.) Trap-Shooters' League, announces that the third tournament of the League will be held on Saturday, Oct. 19, at 2 P. M., on the grounds of the Garfield Gun Club, of Chicago, Fifty-fourth and West Madison streets. We believe the second tournament takes place to-day, Sept. 21, on the Eureka Gun Club's grounds, Seventy-ninth street and Vincennes avenue.

Col. C. E. Felton, of Chicago, was in New York on Wednesday last, and was easily persuaded to stop off on his way still further East and try his luck at Elkwood Park on Thursday. The Colonel is paying a visit to his son-in-law, Charlie Willard, late of Chicago, but now of Hartford, Conn., in which city he is looking after the best interests of the Colt Firearms Company.

A 50-bird handicap, $25 entrance, birds included at 25 cents each will be shot at Willard Park, near Paterson, N. J., on Sept. 24 The money will go to the four high guns, 40%, 30%, 20% and 10%; entries close on Sept. 20, the number of entries being limited to fifteen. Handicaps range from 32 to 26yds. Entrance fee, $10, should be sent to T. W. Morfey, of Paterson, N. J.

Although no scores of Jack Parker's shoot have reached us, we learn that Harvey McMurchy knocked them all out, winning first average and relegating Heikes to second hole. Incidentally we may mention that the boys beat Jack Parker in the races where he paid according to the number of birds broken.

Another live bird handicap is announced by W. H. Green, secretary of the Newark, N. J., Gun Club. The event will be at 25 birds, $10 entrance, birds extra, class shooting, four moneys, handicaps from 32 to 26yds. It will be decided at Erb's grounds on Sept. 26

Jack Halstead and Capt. Harry P. Dain, of Peekskill, N. Y., were in New York on Monday last. They were on a sort of "fitting-out" trip, as they will shortly leave on a hunting trip for North Dakota. They expect to be away until the end of October.

The result of the Plainfield-Dunellen shoot, the score of which is given elsewhere, was a surprise to both parties. Dunellen expected to lose, Plainfield thought it would win. A defeat by 5 targets shows that it was a good and close race.

Mr. Fred Sauter, a well-known member of the N. Y. German Gun Club, is on a hunting trip in the Black Forest. A recent letter reports that he has killed a fine roebuck. EDWARD BANKS.

Sands and Adams.

ALTOONA, Pa., Sept. 14.—Yesterday being the date set for the live bird race between W. B. Sands, of Altoona, and E. J. Adams, of Mifflin, Pa., a delegation from this place left on Main Line express, arriving at the scene of the contest at 1:50 P. M. Mr. Adams had carriages in waiting, and it was only a few minutes until we were on the baseball grounds, where we found everything in readiness. The grounds are very suitable, being perfectly level, with a clear background and surroundings. Staid old Mifflintown, as it is properly called, turned out *en masse* to see the match; for although, through the modesty of the two contestants, the announcement had only been made to a few, it had leaked out, and as a result a large crowd of very orderly spectators was present.

The weather was perfect for a shooting match. A strong wind, which at times was almost a gale, blew directly across the traps from No. 1 to No. 5. The sky was clear and the atmosphere cool and bracing. The birds were a selected lot and one of the best I have ever seen at an early fall shoot. This is evident from the fact that but one bird refused to fly out of the left. It is a pleasure to be at a match that is run so smoothly as was this one. There was not a dispute nor a delay. The referee's good judgment prevailed where there was a close decision to be made, without a murmur from the contestants or backers.

It was only a matter of putting guns together after the arrival on the grounds and going to work. Sands won the toss and sent Adams to the score. He drew a stiff driver from No. 3 trap, which he grassed nicely. Sands's first bird was from the same trap and was a very difficult right-quarterer; the second barrel was necessary to stop him. Adams's second and third birds were very good ones and the neat kills he made showed that he was in good form. It was now apparent that the shooting would be difficult, for the wind was doing much to make the birds quick starters and very rapid when on the wing. Sands's third bird, a rather easy right-quarterer, was not touched. This somewhat put him on his mettle, for his next ten kills were clean in the extreme. Adams dropped a quick direct right-quarterer in the eighth round and his eleventh was also soon perched on a neighboring barn roof. Both men lost their fourteenth birds and again each failed to score on the seventeenth round. Adams dropped his nineteenth, giving Sands a lead of two birds. He again failed to score his twenty-third, an incoming twister to the right. It was hit hard with both barrels, but carried everything it received over the boundary line. Sands's twenty-second was thought to be safe, but when the retriever attempted to pick it up it arose again and fell dead just outside the flag line. At the end of the first half the score stood 19 to 21 in favor of Sands.

Then it was that Adams turned to referee and stake holder W. G. Clark, and said, "Bill, let me see that roll you have in your vest pocket." He took a long look at the green bundle, rolled up his pantaloons, chased off several dirty-faced boys who had been innocently gazing up into his determined countenance, and proceeded to saw wood. The last half of the race was a spirited contest, and had not Sands gained on his opponent in the first half, he never would have carried home the money. The birds were starting quick and strong, and both men were doing great execution. Sands made a great effort to stop his thirtieth, but failed. The bird was a dark blue one, and seemed to be hit with both barrels, but did not stop until it reached the roof of a shed some 50yds. back of the dead line. He now led his opponent by but one bird until Adams slipped up on his thirty-fifth, one of the easiest birds he had drawn. Sands dropped his forty-ninth, an easy left-quartering incomer, and many spectators thought he had become rattled and was liable to drop to a tie. This was not the case, however, for he scored the last, a difficult direct left-quarterer, in fine style, and won the race by one bird.

Conditions: 50 birds per man, $50 a side, loser to pay for birds, 50yds. boundary, with dead line 3ft. back of score, modified Hurlingham rules governing. W. G. Clark, referee; W. C. MacDonald, official scorer. The scores:

Adams used the second barrel 25 times, Sands 27 times. Adams's longest run was 15; Sands's, 18.

Neither contestant had ever shot in a race at as many as 50 birds. Adams is practically a new man at live bird shooting, his first experience having occurred within the past two years. He was one of the men who stayed almost to the last in this year's Grand American Handicap, and is unmistakably a good shot. The work he did yesterday is strong enough to win under many circumstances, for the birds were not the kind at which to make straight scores. Sands has shot in many small sweeps and races; in fact, I have seen him in about all such events in this locality for the past ten or twelve years; but such a race and before a large crowd of spectators as that of yesterday is new to him. He is a very careless shot, and to succeed needs a coacher more than any good shot I have seen at the score in years. He seems to have little or no concern about his money, a feature, from a standpoint of cool-headedness, that is commendable; but he is the extreme in this particular. The close margin on which this match was won is likely to result in another and similar one, to be shot on the Altoona grounds. Adams is not made of material so easily knocked out.

TRAP AT WOPSONONOCK.

A return race between teams of the Huntingdon (Pa.) and Altoona gun clubs was to have been shot at the Wopsononock grounds to-day, but the Huntingdon people did not put in an appearance, sending word that they, owing to some unavoidable reason, could not be here until next Saturday, the 21st inst. The home club, however, shot a postponed medal race as well as a regularly scheduled one. Several 10-target sweeps were shot as preliminaries. The day was a most delightful one for an outing—a clear sky and a cool, stiff breeze making the shooting quite spirited. There were some six or eight new members in line to-day, a very encouraging sign of the club's prosperity. The stiff breeze made the flight of the targets very uncertain, with the result that some of the old-timers did not have everything their own way. The remarkable work of Sands was a feature; his experience in the closely contested race at Mifflin yesterday seemed to have a tendency to put him in great form. Some one proposed to him after he had missed his second target in the postponed medal race that he could not make 23 out of the 25 to be shot at in this event. Rubber bands were at once removed and a stakeholder was feeling wealthy for a short time. The detailed score shows what he did. Then the second and regularly scheduled medal race followed. Some one seemed to think he could not repeat that score. Well, I think he had about forgotten how to miss by this time, for he made the 25 straight, winning the gold medal and of course everything else in sight. The strong wind was making the flights very uncertain, and the run, which the two events show of 48 straight was really a remarkable one. He centered his birds well. There was not a ragged break among the 49 out of 50.

All events except the medal races were at 10 targets. The scores:

Events:	1	2	3	Events:	1	2	3
Clover	7	10	10	W Turner	3	2	2
Killitts	6	9	9	Mulhollen	3	4	1
Fay	5	9	..	Bastian	1	3	5
Sands	6	9	7	Kotty	2	6	9
H Turner	2	3	4	Forney	5	6	8
Clark	8	9	..	Koelliker	..	..	2
House	7	5	9	Darr	..	..	1

The scores in the two medal races were as follows, No. 1 being the postponed race, and No. 2 the regular event scheduled for to-day:

	No. 1	No. 2
Clover	1111111011111011110111111—21	1101111111111011111101011—21

PITTSBURG NOTES.

The Herron Hill Gun Club, of Pittsburg, is arranging to have a series of monthly live-bird sweeps during the winter months. Each sweep will be at 25 birds per man, entrance $20, handicap rise. Details have not yet been fully completed, but it is likely that there will be a limit to contestants. Whether this limit will be confined to the clubs in and around Pittsburg I am not yet informed. The wind-up of the series, I understand, is to be a 50-bird, $50 entrance race, open to all. The first race of the series will be shot the latter part of October.

A friendly team race was shot a few days ago between members of the Wilkinsburg (Pa.) Gun Club at 50 targets per man with the following result:

A A Jack	44	O McElroy	39
Robert Anderson	38—82	J Benton	32—71

GRANT.

Lynchburg Gun Club.

LYNCHBURG, Va., Sept. 13.—The Lynchburg Gun Club held its regular weekly shoot to-day. The traps were screwed up tight and the targets were thrown as far and as fast as possible, being also thrown at a very low elevation. They were flyers from start to finish. Scores:

CHOKE BORE.

Perth Amboy Trap-Shooters.

PERTH AMBOY, N. J., Sept. 14.—Our regular shoot should have been held on Saturday, Sept 7, but it was postponed until to-day owing to the international yacht races. Our shoot, which is at 10 birds per man, $3 entrance, American Association rules to govern, was shot as follows:

H Jones	1200222211—8	Wm Hartman	0112110111—8
Wm Dayton	2020011000—4	S Dayton	1200012110—6
H Dayton	1322111010—8	S Hornsby	1200012110—6
J Glenn	0021010100—4		

H. J. MASON, Sec'y.

Highland Gun Club.

MOLINE, Ills., Sept. 2.—The club shoot of the Highland Gun Club was held this afternoon, twenty-three members contesting. James Montgomery was high man with 21 out of a possible 25, G. Benson being second with a score of 20 out of the same number.

The Baltimore Tournament.

OUR Baltimore correspondent writes us in regard to the trophy that will be given by the DuPont Smokeless Powder Company at the big live-bird tournament that will be held in Baltimore, Md., commencing Oct. 22, as follows:

"The cup is of solid silver, weighing 110oz., and is 15in. high, resting upon an onyx pedestal, the entire trophy standing 55in. high. The pedestal forms a gun rack, holding four guns, which are grouped around the cup, the whole making a most imposing appearance. The trophy was designed by Messrs. Hennegan, Bates & Co., of this city.

"The holder of the trophy will have to hold himself at all times in readiness to defend it, as under conditions governing winner of same he is open to challenge by any shooter in the world who is a member of a recognized gun club. The challenger must deposit $100 as against the trophy, $25 forfeit being required when challenge is made, to be deposited with either *American Field*, Chicago; FOREST AND STREAM, New York; *Shooting and Fishing*, New York, or Messrs. DuPont & Co., Wilmington, Del.; and the balance, $75, on the day of match, the holder of trophy naming the date upon which match is to be shot, and which must be within sixty days of receipt of challenge; number of birds to be shot at, if in excess of 25, and place where shoot is to be held, holder of trophy putting up same on day of match against the $100 deposited by the challenger.

"If challenger fails to appear on date set for match, his $25 deposited is forfeited; if holder of trophy fails to appear, he forfeits trophy and championship, unless either contestant should be sick, or there be other good and valid excuse for their non-appearance. In case weather is unfavorable on date set for match, match to be shot on first favorable day thereafter.

"At the second annual tournament to be given next year by Messrs. DuPont & Co., the trophy will be redeemed from the holder of same for $100 cash. It has not yet been determined how many times the trophy must be won to make it the absolute property of the champion.

"All contestants in this championship event will be confined to the use of DuPont smokeless powder exclusively, all other powders being barred in this single event. There will be an ample supply of machine and hand-loaded shells on the grounds, loaded with DuPont smokeless powder; there will also be a complete loading apparatus on the grounds, and shooters can have their shells loaded with DuPont smokeless, for this event, under their own supervision and according to their own directions. In addition to the trophy, the champion will receive between $1,500 and $2,000 in cash, $1,000 being guaranteed by Messrs. DuPont & Co., and all entrance moneys above that amount being added to the purse. There will be no admission charged to the grounds, consequently shooters in the amateur class can compete in these events without fear of jeopardizing their amateur standing.

"The tournament will be held on the grounds of the Baltimore Shooting Association, three sets of King's improved live-bird traps being used for the general events; the championship event will be shot from the center set of traps, commencing Thursday morning, Oct. 24, at 10 o'clock, and continuing until finished. This event, it is anticipated, will require about three days to shoot out.

"Any individual wishing to enter for the championship event can do so by forwarding his name, together with $10 forfeit, to the DuPont Smokeless Powder Tournament Committee, 22 S. Calvert street, Baltimore, Md. On receipt of his entrance record will be made of same in books of committee, and he will be furnished certificate covering receipt of $10 forfeit and giving his handicap distance. The balance of his entrance fee, $15, can be paid at any time prior to the firing of the twentieth gun in the championship event, on the morning of Oct. 24, 1895."

St. Paul Shoot.

THE HUSKY TWINS.

ST. PAUL, MINN., Sept. 13.—This is State Fair week for the big State of Minnesota, and apparently all the population and all the products of the State are centered here at the heart of the commonwealth. The fair does not belong either to St. Paul or Minneapolis, but to the State, and both the Husky Twins unite in their pride at the affair. The fair grounds are located just half-way between the two cities, at Hamline, and are easy accessible by electric car. Some idea of the importance of the occasion may be gained by the fact that the daily attendance ran up to 38,000 on an average. The week is a gala one. The farmers have seen the abundant harvests of the year gathered or assured, and now they meet for a resting spell. The brown, calm faces of the crowd show the sort of men who made the great Northwest. They go about their pleasures as about their work—dead in earnest and bound to get there. The two twins are holding open house for them. The days are a round of hospitality, the nights a succession of blazing street pageants whose size and elaborateness would do high credit to many a city far older or bigger in numbers. It is festival week, and the Northwest is in full flower for it. No better time could be chosen to see the twin cities, or to see the wonderful country of the Northwest, where the wizard of progress has been making such changes in the last ten years.

No better time could be chosen either for the holding of a shooting tournament, and the gentlemen who have had in charge the affairs of the present shoot are to be congratulated alike on their foresight and their executive ability, which combined have brought off a very successful and pleasant affair.

The tournament grounds are those used by the St. Paul Gun Club. They lie on a high, flat-topped hill, from which the whole city of houses, pavilions, tents and booths of the fair can be seen laid out in panorama. There is a fine club house, and the arrangements of the grounds are perfect, the convenience of all appliances being nicely adapted to practical shooting comfort. One battery of traps serves for the regular events. For the unknown angles a battery of three traps is used, and this battery is worthy of note and imitation. The traps are sunk in pits whose covers are just barely above the ground, so that the bird is seen to rise not from behind a high barrier, but as though it started directly from the ground. This arrangement was new to all present and it was very much liked. A trial of it will show that it does not give a shooter much more chance to make high scores, but it does give him more sport.

When the shooters tired of the sport they could go about the grounds, nearly a mile in extent, and watch the various entertainments of a great modern fair. The west grand stand was always full of people watching the horse or bicycle races, or the exhibitions of Dr. Carver, or the feats of the one-legged bicyclist who rides down 60ft. of stairway. The boxing kangaroo was there, and the two smallest people in the world, and the calf with two heads, and the largest ox in the world, and a herd of elk and deer, and a lot of things one does not see every day, unless he goes to fairs or the like. One could have choice of fifty kinds of lunches, with forty-eight kinds of pie and thirty-six sorts of coffee, at the different tents, and he could see meantime more patent gates, and steam threshers, and hay-balers, and corn huskers, and straw-stoves, and things of that sort than he ever knew were in the whole world before. And he could get Jersey cream, and muskmelons, and peanuts, and then some pie. It was lots of fun, and one could learn a lot of things to amuse and teach him, and could incidentally get a notion of how the great empire of the Northwest has been won out of the wide prairies. And he could always go back and get a chance to try to beat somebody shooting, though he couldn't always do it, perhaps, for these Northwesterners surely do shoot a red-hot gait.

The shoot was purely amateur in its lines and it was a good one of its kind. The sliding handicap drive of first to go back 2yds. was used successfully. Bluerock target traps were used. Purses were divided 4th, 3d, 2d and 1st, with abundant merchandise prizes for the lower holes. Dropping for place was billed to bar the offender from division of purses, but no dropping was seen or suspected. Known professionals were barred out of average money. There was a "daily refund" of 5% of the sweep money taken in each day. The names of all professional shooters were put in a hat and the first five names drawn out divided their refund equally. It amounted to $3 to $5 daily for the fortunate. Shooting was at 16yds. and the handicap put the shooter back over 18yds., so this was not severe.

Amateur shooters were present from Dakota, Iowa and Minnesota, among them Clint. Smith, of Fargo, N. D.; Messrs. H. B. Jewell, of Wabasha; Ed Bird, of Fairmont; Joe Dodge, J. W. Nelson, of Duluth; S. N. Gruner, of Hastings; J. McCroden, of Lake City; Ben Powell, of Mankato; A. G. Bierbauer and Saulspaugh, also of Mankato; Tom Paine, of Glencoe; T. J. Graham, of Rosedale; the two Thielmans and Mr. Hill, of St. Cloud; H. W. Jones, of Atwater; Geo. E. Trent, of Wadena, and J. H. Block, of St. Peter. All the above-mentioned towns are in Minnesota, but there was also a good delegation from the local twin cities; Messrs. John Marshall, Jule Joyslin, W. P. Shattuck, etc., of Minneapolis; Messrs. Fred Stolz, J. C. Highhous, Herman Heisbey ("Duke"), W. F. Kennedy, John Pfister, F. T. Ponsonby, P. L. Wann, B. F. Schurmeier, G. W. Baldwin, R. H. Baldwin, H. F. Lawrence and others, of St. Paul. Dr. L. W. Lyon, Mr. F. D. Ponsonby, and Mr. F. Schurmeier, of St. Paul, made up the Executive Committee, all hustlers, and Mr. John P. Burkhard, of the sporting goods firm of Wm. R. Burkhard, managed the shoot most efficiently. Mr. John Brooks, long known in the wholesale trade, was of assistance. The scoring and card work was done well and acceptably. Iowa sent up one of her best shots, Fred Gilbert, of Spirit Lake. The trade was represented by S. A. Tucker, of the Parker gun; W. H. Skinner, of the W.-A. powder, and Capt. Damon, of the Burgess gun.

The weather for the first two days was singularly and oppressively hot. A change set in, and Thursday was pleasant, Friday almost shiveringly cold. Following are the scores. The first day was held only as preliminary and was not included in the daily averages.

First and Second Days.

*No. 6 and 14 were at 10 singles and 5 pairs. Nos. 1 and 8 were shot on the first day; Nos. 9 and 15 on the second day.

Thursday, Third Day.

The main interest of the day centered in the State championship shoot, carrying with it the State diamond badge and the total of next year's entry. This is the greatest Minnesota shooting contest. The badge has been in competition for about twelve years, the holder for the past year being Mr. John Burkhard, who made a gallant though losing fight for it again to-day. The conditions for this contest are very good and well calculated to bring out the shooting ability of the winner, being at 50 targets, 26 singles and 12 pairs, though the angles are known. The contest to-day was very pretty, the issue being in doubt late in the game, and finding decision only in the doubles, which were thrown low and hard. Jewell, of Wabasha, closed the singles with a chance to win, but the left quarterer in the doubles was too much for him. The young phenomenon, Duke, held out well and shot prettily, but Jones, Schurmeier, McKay and Trent passed him. Tom Paine, an old-timer and a beautiful shot, was liked on form well along, but could not stand the pace. McKay (of Minneapolis) was then thought a winner, as he was shooting in great shape, but Trent clung hard to both birds in the doubles and was out with two birds to spare over his nearest competitor. The finish was watched with the utmost interest. Mr. Trent shot a Parker, $150 list, and his load was S. S. powder, in Blue Rival shells, primed. This event was not decided until nearly dusk in the evening, and the shooting at the doubles was at that hour a very difficult proposition. Following are the scores of the day:

Events:	1	2	3	4	5	Events:	1	2	3	4	5

The diamond badge, emblematic of the individual championship of the State, open to Minnesota shooters only, was also shot for on this day. The contest is at 26 singles and 12 pairs, known angles, entrance $6. The badge is shot for each year, the best score taking the badge and the purse of the ensuing year. Scores were as follows: G. E. Trent 45, F. E. McKay, A. F. Snuler and H. W. Jones 43, F. P. Burkhard and B. F. Schurmeier 42, H. C. Hirschy 41, M. F. Kennedy, J. C. Joslyn and John Pfister 39, J. C. Highhous, John H. Block, E. S. Hill, H. B. Jewell and H. C. Lawrence 38, A. G. Bierbauer, L. Thielman and John Nicholson 37, Joseph Dodge and F. A. Richter, T. M. Paine and T. L. Wann 35, Ben Powell, Fred Whitcomb and John Marshall 34, G. M. Baldwin and W. Thielman 31.

G. E. Trent, of Wadena, Minn., won the championship and the diamond badge.

Friday, Fourth Day.

The attendance lightening somewhat, as might be expected, the programme was finished in good season in the afternoon, so that all moneys were paid and all business settled in time for the shooters to leave by the evening trains.

The number of shooters who shot through the programme were about a dozen. The tournament averages tell as follows: First average won by T. J. Graham, of Rosedale, Minn., 90%: $25 cash and a fine watch charm medal, made by Geo. W. Woodley, of St. Paul. Second average won by Fred Gilbert, of Spirit Lake, Iowa, 87 9/10%: a Lefever gun, value $80, by the Lefever Arms Co. Third average won by H. W. Jones, of Atwater, Minn., 87 4/10%: a Winchester repeating shotgun, by the Winchester Repeating Arms Co. Fourth average won by John T. Burkhard, of St. Paul, 86 1/10%: an L. C. Smith 10 gauge duck gun, by the Hunter Arms Co. Fifth average won by C. A. Damon ("Farwell"), of Buffalo, 85 4/10%: cash $25. There were five additional prizes in merchandise given to the lowest average men, grading from the bottom up. There were 11 valuable merchandise prizes added to the purses of the State championship contest of Thursday. The following are the scores of to-day:

NOTES OF THE SHOOT.

Mr. S. A. Tucker was of the opinion that the shoot was held as a special benefit for him and his old coat. Tuck and the coat sold $500 of guns, then went out and made 20 straight alone the first shoot they went into, winning over $20 by it, though ungallantly shooting out a lady, Mrs. Shattuck, who was the only other shooter in the squad. Then Tuck and the coat went in and got 61 out of the next 65, and continued to make straights and disturbances all the rest of the shoot. "My theory is to stick to one coat, one load and one gun," said he, "and I need not add which gun it ought to be."

Mr. W. H. Skinner, of the W-A powder, was much interested in the finish of the State championship race, as some of the men well down in the finish were using W-A. Mr. Skinner says, "I will meet you at Atlanta and San Antonio shoots this fall."

Mr. C. A. Damon, of the Burgess gun, was touching the button on his camera about as fast as the trigger of his Burgess, which is pretty fast.

G. E. Trent, the State badge winner, shot under the name of "Hub."

Fred Gilbert, of Spirit Lake, shot like a witch.

Herman C. Hirschy, of St. Paul, shot under the name of "Duke." He is a boy about 18 years of age apparently, and a mighty clever shot for any age.

Minnesota has a lady shooter who no doubt is the finest lady amateur shot in America at the targets or at game. This is Mrs. W. P. Shattuck, who paced Mr. Tucker, as above mentioned. Mrs. Shattuck is a member of the Minneapolis Gun Club, and for over half the season was high average in a club of hard shooters. At Duluth she shot through the tournament with an average of 87 per cent. In the field she is a clean, neat shot. As seen at the score here she handles the gun with ease, grace and precision.

The Minneapolis Gun Club has another lady shooter, Mrs. Johnson, who sometimes makes it interesting for Mrs. Shattuck. The club could well challenge any other to a match between lady members.

There was health and hope in the keen air of the closing days of the tournament, and one finds himself hoping he may be there again next year.

Appearances at this writing would indicate that the soda water season is nearly over at the Twin Cities.

The management and the clubs and cities represented should be congratulated on the success of the tournament and its satisfactoriness in every way.

E. HOUGH.

909 SECURITY BUILDING, Chicago.

Dunellen Again Defeats Plainfield.

PLAINFIELD, N. J., Sept. 14.—The Dunellen Gun Club brought over a dozen of its members this afternoon to shoot a return match with the Plainfield boys. The previous contest, which took place at Dunellen, resulted in a victory for the home team by a good majority. To-day they made it two straight, winning by the narrow margin of five breaks. The scores stood 213 to 208, close enough to be called an exciting affair. The weather was delightfully cool, but there was tricky wind that played havoc with scores. McCormick, who was none other than Neaf Apgar, shot as a substitute and used a strange gun and ammunition, yet he led the scores as usual with a capital 23. Darby, another Plainfield man, was second with 22; while D. Terry, of the same team, and Grier, of the Dunellens, scored 21 each. Cramer, Henry and Williams for their respective teams rolled up totals of 20 apiece. It was a good afternoon's amusement and the sport was thoroughly enjoyed by all that took part in it. The scores in detail are as follows:

Match, 12 men to a team, 25 targets per man, unknown angles:

Dunellen.

Recent Club Shoots in Chicago.

CHICAGO, Ill., Sept. 7.—There are some matters of private history in relation to the recent contests between the Eureka and the Garfield gun clubs of this city that we feel like seeing made public. This, and the further one of a review of the season's work thus far, are the excuses for this article.

The first match shot was one with the Garfields, and consisted of a team of eighteen men from each club. It was shot on the Eureka's grounds Aug. 3, under smiling skies, and in the presence of a large audience of several hundreds, many of which were of the fair sex. The Eurekas shot an 83 per cent. gait and won by 6 points, score 370 to 364; conditions, 25 targets, unknown angles, squads of six men, composed of three from each club.

The second was the "cup race," for the cup emblematic of the State championship of Illinois, the winner to hold for one year; five-men teams, 30 singles, unknown angles, and 10 pairs, a total of 50 birds per man. This time the Garfields were the only competitors, and though they felt certain of being the winners, they lost to the Eurekas, the score of the latter club being, I think, the highest one ever made in the competition for these cups—199 to Garfields' 188. Immediately on the close of this contest the captain of Garfield team issued a verbal challenge for another race for the same trophy as soon as the Eurekas chose. As Garfields were unwilling, as losing club, to pay for the targets shot at by both clubs, and as a matter of fact only tendered the money for their own targets, Eurekas felt like availing themselves of the "conditions" attached to the cup; but if Garfields should proffer $25 as a wager against said trophy, they would undoubtedly be accommodated quickly with another race. This cup was won by the Eurekas when first offered, and has been held by them ever since. The Garfields have challenged for it each year, but have never been able to take it away.

The third victory was the fifteen-men team race between the same clubs, which was shot on the Garfield's grounds and over their own traps. "Here we shall certainly score a win," the Garfield men said, especially when they saw the large attendance of ladies present to inspire and applaud them on to victory. But when the battle was over Eureka had scored her largest victory of the year, having 15 points to the good.

Then as if to clinch matters and show that the Eurekas were of that stern stuff of which shooters are made, they just walked away with a victory in the first contest of Cook County Trap-Shooters' League, held on Aug. 31 on Cicero's grounds. We are not puffed up at all. We as shooters know the ups and downs of shooting, as well as of life, and we also know that some men, as well as some shooters, win oftener than others.

W. F. D.

Bayside Gun Club.

KEYPORT, N. J., Sept. 4.—The members of the Bayside Gun Club held their first monthly shoot to-day, twenty-three members contesting for the badge.

The officers of the club are: President, Dr. G. G. Hoagland; Vice-President, Dr. O. C. Bogardus; Secretary, D. W. Walling; Treasurer, C. Ackerson. The club numbers fifty-four members to date. Its grounds are very pleasantly located on the outskirts of the town, and command a fine view of Raritan Bay.

The shoot was at 25 bluerocks per man, five expert traps, known angles, unknown traps, with a brisk wind blowing across the traps, which in a measure accounts for the low scores: Thos. Compton 15, Joseph Vigne 14, Wm. H. Perrine 14, O. C. Bogardus 13, Wm. H. Watts 13, Daniel W. Walling 12, C. Ackerson 12, James T. Walling 11, Wilson Walling 10, Josiah Crammer 10, Joseph R. Walling 9, Herbert Stryker 9, Jacob W. Aumack 9, Mark Brower 8, Abram Morris, Jr., 7, Peter M. Force 7, Luke Stoddard 6, Charles Loster 6, Geo. M. Walling 6, H. E. Ackerson, Jr., 5, Wm. Werner 4, Wm. Van Mater 7, Chas. Covert 7.

WIDGEON.

The Riverton Cup of 1883.

TWELVE years ago the Riverton Gun Club, of Philadelphia, Pa., presented a handsome cup to be shot for by the following clubs: Long Branch G. C., Orange Gun Club, Westminster Kennel Club, Philadelphia Gun Club, Maryland Gun Club, Foresters, of Reading, Pa.; Rockaway Gun Club, Staten Island Gun Club, Queens County Hunt Club, Meadowbrook Kennel Club and South Side Sporting Club of Long Island. The contest took place on April 14 in a gale of wind and with the dust blowing across the grounds of the Riverton Club in great clouds.

Under those conditions it was hardly likely that there would be big scoring, and as a matter of fact the highest team total for the four-men teams, 15 live birds per man, was only 44 out of a possible 60. That team was composed as follows: Edgar Gibbs Murphy 13, Dr. Zolnowski 12, Walter Gibbs Murphy 10, and E. S. Chapin 9, members of and representing the Long Branch Gun Club. The cup therefore went to Long Branch, and for a few months rested on the sideboard in the home of the Murphys. Later, on the disbandment of the Long Branch Gun Club in 1884 in favor of the Hollywood Gun Club, the cup was put up for individual competition, so far as we can gather only about three of the members being able to put in an appearance and shoot for the cup. Among that number was the late W. D. Campbell, and he proved to be the winner. In order to realize something on the cup Mrs. Campbell handed it to Phil Daly, Jr., who offered to let it be shot for on his grounds at 20 live birds per man, $20 entrance, $100 being taken from the purse to pay for the cup. It was originally agreed that the shoot should be "class": the cup and 25% of the purse to the winner, 50% to the second and 25% to the third. The date set was Sept. 12, the hour named being noon.

We were desirous of going down to Branchport, the station for Elkwood Park, by the pleasant Atlantic Highland route, a route that gives one a delightful sail down the bay and a railroad ride along the shore where the blue combers of the North Atlantic break with a roar within a short distance of the track. We were aware that the 12th was the day set for the third race between the Valkyrie and the Defender, and that the Monmouth, of the Atlantic Highland route, was in the habit of following the races, so that we were a little doubtful as to whether a boat would run in connection with the train on that morning. To make sure, we tried to get Pier 8 North River by 'phone on the 11th, but the "Hello Lady" informed us that she couldn't raise them. She very kindly and patiently then tried to get the Bureau of Information at the Liberty street ferry; but she couldn't succeed in doing that, although the hour was only 12:30 P. M. As it seemed safest to go down to the last named place in person and make inquiries, we did so, finding a notice that told us that the Monmouth started at 9 A. M. for the races, and would call at the Highlands pier to take on passengers for the races. Our inquiry as to whether we could go by that boat and make connections as usual with the train was answered in the affirmative. It was evidently all right. But what a difference in the morning. At the pier no one seemed to know quite where they were at. It was a case of first she would and then she wouldn't. One of our party who had a ticket to Branchport and return asked at the gangway of the steamer if it was all right for that boat, and was told "Yes." But when we went to buy our tickets, our money was refused and we were told that the boat was not going to carry any but passengers to the race. That settled it. But in deference to a nice old gentleman who tried to explain the situation to us by saying, "We can't do it to-day; we are limiting the number of our passengers. Yes, we stop at the Highlands to *take on* passengers," let us point out how woefully he broke up his own case. In the first place, tickets were still being sold to people who wanted to view the race, and, if the number of passengers was to be limited, would we have taken up more room than those who were to be picked up at the Highlands?

As it was we took the 9:10 train on the Pennsylvania and found it as usual about as good a way to get to Branchport in comfort as any other. Arrived at Elkwood Park we found that we were the first on the field, Col. C. E. Felton, of Chicago, being among our number. Bland Ballard and the Height boys, George and Hart, jr., accompanied by their father, were the next to arrive, followed at a long interval by A. L. Ivins, Dr. J. G. Knowlton, of New York city; Fred Hoey and Edgar Murphy. Phil Daly, Jr., of course had been on the scene all the morning, getting things in readiness for the shoot.

It was 2:15 before the first shot was fired in the cup race. The conditions had been changed so that it was made "one high gun" to take all. With eight entries this meant that the winner would receive $60 and the cup. The birds were a good lot of summer birds, not up to the standard of the four-handed match birds provided on Aug. 30. Yet moderate as were the majority of the birds, only one man went straight, Edgar Murphy. By his score of 20 straight Murphy won again the Riverton cup of 1883, and this time it is his for keeps. It should have been stated above that Murphy's score of 13 recorded in the shoot of April 14, 1883, was the highest score in the match. It is therefore very appropriate that he should once more win the trophy.

H. Height was the first to retire, having lost his 2d, 4th and 7th birds, the 4th bird falling dead out of bounds. Col. Felton, who was clearly out of all form, retired in the next round, having lost four birds—his 2d, 4th, 5th and 8th—his 4th and 8th birds were dead out of bounds. Phil Daly missed his 1st and 4th birds, but shot along up to the end of the 13th round, when he had his bird go over the boundary owing to one of the worst pieces of retrieving we have ever witnessed; gross carelessness on the part of the man retrieving was alone responsible for Daly's retirement at that time. Fred Hoey dropped out in the next round, having lost his 1st, 6th and 14th birds, the latter dead over the fence.

Murphy was the only straight at that time, Ballard, Ivins and Geo. Height all having two misses scored to them. Each man killing his last six birds the relative positions were unchanged, Murphy winning as stated above. He shot well and cleanly, the only real piece of luck experienced by him being his sixth bird; this was a driver from No. 1 trap; it was filled full of lead, but was getting dangerously near the far boundary when the bird suddenly turned right round and flew back toward the score, dropping dead fully 20yds. from the back boundary.

Ballard did not shoot in quite such good time as on the 30th, but he made some excellent kills, scoring his 12th bird with one of the longest second barrel kills we have seen for many a day. After his second miss he shot in much better shape, running 21 straight before he won the pot made up for second money as told below. Ivins was a little slow at times, but he also did some good work with his second barrel. He won a $1 miss-and-out shot after the big event, the score of which has missed connections. George Height tasted some of the bitterness of bad luck in live-bird shooting, losing his 5th and 11th birds, both dead out of bounds. He is a rattling good shot and should be particularly well able to hold his own in the field with the best of them.

The scores of the day are as follows:

Trap score type—Copyright, 1894, by Forest and Stream Publishing Co.

Conditions: 20 live birds, $20 entrance, one money, 30yds., everybody:

Col. C. E. Felton	2 0 2 ● 0 1 2 ● w	— 4

About the middle of the above shoot, when Ballard, Ivins and Daly had each missed two birds and were practically out of the race so far as any chance of the money or the cup was concerned, the three above named made up a sweep of $5 extra on their respective scores. At the close of the 20th round, Ballard and Ivins were tied with 18 apiece, while Daly had retired at the end of the 13th round for the reasons given above. It was arranged to shoot off this tie miss-and-out. Ballard won by killing 8 straight, Ivins letting a dead-easy incomer get away from him.

Previous to the shoot for the cup, Ballard, Daly, George Height and Dr. J. G. Knowlton shot a sweep at 5 birds, $5 entrance, Height lost his first bird, dead out of bounds, but the other three killed straight. The birds were only an inferior lot in this sweep, the majority of them being white birds and moderate flyers. As there was but one money, it was agreed to shoot off miss-and-out. When each man had killed seven or more birds, they agreed to stop and commence the cup shoot, drawing down what was left of the $20 in the pot after the birds had been paid for, the price charged being the usual one of 25 cents. The scores made in the Ballard-Ivins shoot-off and in the above sweep were as follows:

	Tie:	No. 1:
Ballard	4 4 1 3 3 5 5 4 ↓→↗→H↘↓↑ 1 1 1 2 2 2 1—8	←H↗↙↗ 1 1 1 1 2—5

Hingham Gun Club.

HINGAM, Mass., Sept. 6.—The last regular monthly shoot of the gun club for 1895 was held on Turkey Hill grounds on Saturday last. This was the eleventh shoot of the year, and it speaks well for our club that 13 members put in an appearance and shot their scores of 50 targets per man. Messrs. Howe, Higgins and Henderson have taken part in every one of the eleven shoots, while Messrs. Breen, Allison and Spalding have only missed one shoot.

The class A medal goes to G. O. Henderson, the medal for class B being won by G. Otis Higgins. The following table shows the percentages of eight of the members on April 19 and also on Aug. 31. It will be noticed that some remarkable advances were made during the intervening months:

	April 19.	Aug. 31.		April 19.	Aug. 31.
G. O. Henderson	78%	92%	Lincoln	60%	66%
Breen	74%	82%	Higgins	48%	76%
Allison	70%	86%	Spalding	30%	80%
Howe	66%	80%	Maynard	22%	50%

The scores in the last club shoot were as follows:

Class A.

Henderson	0111111111111111111010011111111101111111111111111—46

Trap at Watson's Park.

CHICAGO, Ill., Sept. 11.—The following scores have been made on these grounds during the past three days:—

Sept. 9.—C. S. Wilcox versus C. B. Dicks, 100 live birds per man, $100 a side; looser to pay for birds; Illinois State Rules to govern:

C S Wilcox	2212120000102000201211210—15 1110221212111011201120222—21 1020200121222221220211200—18 2112222222222022221221—24—78
C B Dicks	0202120221222112102010210—18 2222220201112012012220202—19 1110121101112012300022222—19 2100102111102210221102222—19—75

Sept. 10.—Chicago Shooting Club; medal shoot, handicap allowance:

M J Elch	2220111210112111—13+2=15
Henry Ehlers	1011111210111212—13+1=14
J H Amberg	2122222210011111—13+0=13

Sept. 11.—South Chicago Gun Club; live bird medal:

L C Willard	1112112122211122222—20
A W Reeves	2112111010211111022—17
Geo Sibley	2022102102011211111—16

Target medal, 30 empires per man:

Geo Kleinman	0111111111001011011011111111—24
L C Willard	0101010110111111001101001011—19
A W Reeves	0011110001011011011001111101 —19
Geo Sibley	1010111110110101111001001101 00—18

In an extra at 25 targets, Willard scored 24, Kleinman 22 and Reeves 18.

RAVELRIGG.

Trenton Gun Club.

TRENTON, N. J., Sept. 13.—The regular monthly shoot of the Trenton Gun Club was held at its grounds to-day, the shooting being all done from five traps. The club contest was for two badges, first and second. The conditions were 30 targets per man, each man first shooting at 15 for place. The men breaking 11 and over being in the first class, the men breaking under 11 in second class. Following are the scores:

First badge:	For place:	For badge:
E C Hutchinson	111111101111110—13	101110100101111—10
J M Allen	111101111110011—12	101000000101101— 6
M D Hicks	111110101111110—12	110211110011100—10
G N Thomas	111011001110111—11	101110110101101—10

Second badge:	For place:	For badge:
C H Allen	010011111110110—10	111101111111111—14
W Williams	000110111101011— 9	111111101111101—13
H Harper	000110110111101— 9	011110101111111—12
W Taylor	011000100111011— 8	001111010110101—10
E E Bainbridge	101100100100110— 8	101101010100101— 8
E Carson	101100101010101— 8	011011000001111— 8
Smith	010011011001110— 8	001011010110100— 7
D Williams	000011101001010— 6	100001001001001— 5
A Wilson	000011010000010— 4	.....

The ties for the first badge were shot off in series of 10 targets. In the first series Hutchinson and Thomas scored 8 each to Hicks's 6. In the second series Thomas ran right away from his opponent, breaking 9 to his 4. The scores made in an extra sweep at 10 targets were as follows: C. H. Allen 10, Carson, Taylor and Hicks 9, Hutchinson, Thomas, W. Williams and J. M. Allen 7, D. Williams and Kuser 5.

Warren Gun Club's Tournament.

WARREN, O., Sept. 7.—The Warren Gun Club held its second tournament of the season on Sept. 6 and 7. The rapid-fire system was used, and all shooting was at known traps, unknown angles. A total of 3,635 bluerocks were thrown in the 25 events, North's electric pulls being used. The entrance to the various events ranged from 50 cents to $3, and the percentage system governed the division of money. The weather was very threatening both before and during the shoot, and this undoubtedly kept many shooters from attending. B. A. Bartlett, of the Burgess Gun Co. of Buffalo, N. Y., very kindly gave an exhibition of fancy shooting, which was highly enjoyed by all present.

The following 31 shooters were present: Cleveland, O.—Upson, F. H. Snow, Black. Buffalo, N. Y.—Bartlett. Lakewood, N. Y.—B. Graff, J. Graff, Houston. Meadville, Pa.—Johnson, Reisinger, Stein, Prenatt, Gundaker, Smith. Ravenna, O.—Flick, Williams, Morrow. Akron, O.—Hull, Chapman. Youngstown, O.—Weakland. Conneaut, O.—McAvoy. Niles, O.—Naylor, Clearfield, O.—Philips. Warren, O.—Sutcliffe, Ewalt, Schoonover, Jones, Craver, Biery, Holland, Nercher, Perkins.

The following were the guns used: Parker 9, Remington 4, Winchester 3, Greener 3, Lefever 3, Burgess 2, Colt 1, Scott 1, Claybrough 1, New Baker 1, Belgium 1.

The following is a brief summary of ten events taken at random, giving the three highest scores in each event:

No. 1, 15 targets, $2, 18 entries: Upson and Black, 15; Hull, Gundaker and Reisinger, 13; Jones and Ewalt, 12.

No. 2, 20 targets, $2, 8 entries: Bartlett, 18; Houston and Stiles, 17; Snow, 16.

No. 3, 10 targets, $1, 18 entries: Upson, Jones and Prenatt, 10; Snow, Morrow and Stein, 9; Hull, Weakland, Biery and Schoonover, 8.

No. 4, 15 targets, $2, 8 entries: Upson, Bartlett and Houston, 15; Snow, 14; Stiles, 12.

No. 5. 10 targets, 50 cents, 12 entries: Upson, 10; Gundaker and Ewalt, 9; Johnson, McAvoy, Black, Stein and Snow, 8.

No. 6, 20 targets, $3, 12 entries: Hull, 19; Snow and Upson, 18; Johnson, Black and Weakland 17.

No. 7, 15 targets, $1, 22 entries: Upson, Hull and Black, 14; Ewalt, 13; Morrow, Snow and Johnson, 12.

No. 8, 10 targets, $1, 8 entries: Bartlett, 10; J. Graff and Houston, 9; Upson, 8.

No. 9, 20 targets, $3, 12 entries: Black, 19; Upson, 18; Snow, Hull, Schoonover and Weakland, 17.

No. 10, 20 targets, $3, 12 entries: Upson, 20; Flick and Hull, 19; Ewalt 17.

H. B. PERKINS, JR., Sec'y.

Guilford Gun Club.

GUILFORD CENTER, N. Y., Aug. 28.—The scores made to-day by the members of the Guilford Gun Club for the seven prizes of loaded shells, donated for the Walsrode Powder Company by Dr. E. L. Tiffany, were as follows:

Rev. Gottschalk (20) 16; Darling (20) 14; L. Burlison (27) 14; Curtis (30) 13; G. Richards (27) 12; Kinney (20) 11; W. Hall (28) 8; B. Gridley (27) 7; M. Burlison (30) 7; Alcott (25) 6; Burlison (25) 6.

The numbers in brackets show the targets shot at by each man. Darling and L. Burlison, who tied for second prize, shot off the tie, Darling winning.

WADS.

PUBLISHERS' DEPARTMENT.

An Open Letter.

EASTERN FIELD TRIALS CLUB, Organized 1878.—Brooklyn, N. Y., Sept. 11.—To the Hazard Powder Co., No. 44 Cedar Street, N. Y. City: Dear Sirs—In reply to mine, your consignment of "Blue Ribbon" Smokeless came duly. Accept thanks for promptness, etc., and in accordance with your request asking me to pass an opinion on same, would say: It gives me the highest pleasure to say in my reply that I have given it quite a severe test. In comparison to the other nitros, of which I have used all but two on the market both in the field and before the traps, I can conscientiously and honestly say yours is fully up to the required standard in all-around qualities, and in the test gave me most perfect satisfaction; and I feel, from long and varied experiences, qualified to pass judgment on the same. Let me here add, for twenty-five years I have used your black powder in preference to all others, solely from the fact that I found it always more reliable and superior to others, and believing this same standard quality of materials and workmanship, which has characterized your black powder's reliability, will be carefully carried out in your new "Blue Ribbon" Smokeless Nitro. In conclusion will say to brother sportsmen: I don't say that other nitros are not good—far from it—but simply request they order 50 or 100 shells loaded with "Blue Ribbon," or purchase a can and load their own shells, use them in both field and trap-shooting, and note all qualities; bury prejudices, and then say if I have over-estimated its good qualities. Believe me, sincerely yours, (Signed) WASHINGTON A. COSTER.

Winchester Smokeless Cartridges.

THE new Winchester catalogue, No. 55, contains the following information with regard to the classification of smokeless rifle and revolver cartridges:

"The smokeless cartridges enumerated below may be divided into two classes. In the one class are those cartridges in which black powder has been replaced with smokeless powder. In these, to meet the requirements of the guns for which black powder cartridges were intended, no attempt has been made to get additional velocity. The name of the black powder cartridge has been retained and the word 'Smokeless' added. The smokeless cartridge in point of excellence differs from the black powder cartridge only in smokelessness and cleanliness. Velocity and penetration remain the same. In the other class of cartridges may be numbered the .236 Navy, .25-35 Winchester, .30 U. S. Army and .30 Winchester Smokeless. These are purely smokeless cartridges. The velocities obtained cannot be gotten with black powder, nor have we been successfully able to use lead or alloys without metal patches. These are cartridges belonging entirely to the smokeless powder class and cannot be used with black powder. Their excellence is in high velocity and consequent flat trajectory. The full metal patch gives great penetration. The soft nose bullet will expand to give effects upon animal tissues very much greater than the small caliber would otherwise enable."

E. C. Smokeless Rifle Powder.

SPORTSMEN will be glad to learn that the American "E. C." Powder Company's smokeless rifle powder, which has heretofore been supplied to the cartridge companies only, will shortly be put upon the general market.

The "E. C." Company has recently made some large additions to its extensive plant at Oakland, N. J., designed primarily to increase its facilities for supplying the demand for smokeless rifle and revolver ammunition. Large quantities of "E. C." smokeless of the new brand are being loaded in cartridges of nearly every caliber by the U. M. C. Co., and also by the Winchester, .22cal. short, .32 and .38 S. & W.

Most excellent results were obtained with the U. M. C. Co.'s .45.90 smokeless cartridges on bear and elk last year in the Rockies by Mr. Geo. Work and Mr. L. Thompson, the well-known gentlemen amateur pigeon shots of New York, while in many shooting galleries .22cal. smokeless cartridges have entirely superseded black powder, the absence of smoke and fouling being a great advantage.

Excursion Trip to Lake Superior.

THE Northern Steamship Company announces that their palatial steamship North West will close her second successful season with a special excursion trip to Lake Superior, at popular prices, leaving Buffalo Saturday, Sept. 14, 1895. While the service of the ship will be maintained at the high standard which has made it famous, there will be a great reduction in rates, and tickets will include meals, berths and all legitimate traveling expenses. On the up trip stops are made not only at the usual ports of call, but also at Port Huron and Marquette, Mich., and on the down trip, leaving Duluth, Ashland, Houghton, Hancock and Marquette are visited, with opportunity at each point for going ashore and viewing these thriving cities. The Pictured Rocks of Lake Superior, most wonderful phenomena, can be seen on both going and returning trips. The ship will pass close enough to give an excellent view of these wonderful cliffs.—*Adv.*

Tryon's Catalogue.

WE have received from Edw. K. Tryon, Jr., the Philadelphia sporting goods dealer, a handsome catalogue of firearms and sportsmen's goods.

ANSWERS TO CORRESPONDENTS.

E. B. M., Easthampton, L. I.—Will you please tell me if there is any law against a person bringing a deer that he has shot in Maine to his home here on Long Island if he accompanies it? Ans. No.

It will give us great pleasure to forward a copy of our catalogue to any one who "goes a-fishing." Some people charge for their catalogues, some charge for the postage, some charge for both. We are more than willing to give away our catalogues and prepay postage on them. No angler, after looking at the catalogue, can resist buying from us or from our trade-customers all the fishing-tackle he can afford to pay for. That is where WE get back a good deal more than cost of catalogue and postage.

ABBEY & IMBRIE,

18 VESEY STREET, NEW YORK CITY

MARSTERS HAS WORMS.

Sand Worms, 12c. per dozen. White or Blood Worms, 25c. per dozen.

I am with you again with lower prices for Fishing Tackle. I find by experience that putting down the prices and increasing the quality, increases my business every year.

FOREST AND STREAM'S OUTDOOR SCENES.

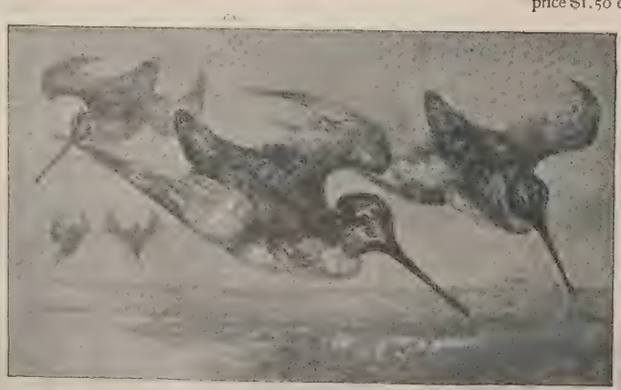
FROM ORIGINALS IN WATER COLORS AND OIL, PAINTED EXPRESSLY FOR THE FOREST AND STREAM.

HE'S GOT THEM.

AS PREMIUMS.

We have prepared as premiums a set of four beautiful and artistic reproductions of original paintings of realistic outdoor scenes. The art work is the best obtainable in New York; the pictures are rich in effect and are intended for framing. They are done in 12 colors. The yacht race is from an oil painting; the others from water colors. The scenes are shown in the small cuts herewith. The plates are 14¾ x 19in. The pictures are sent both to **new** subscribers and to **old** subscribers upon renewal, on the following terms:

Forest and Stream *one year and the four pictures*, $5.
Forest and Stream 6 *months and any two pictures*, $3.



If subscribing for 6 mos. designate by title the two pictures desired. Single pictures will be sold separately, price $1.50 each, or the set, $5. Remit by express or postal money order, payable to Forest and Stream Publishing Co., 318 Broadway, New York.

The pictures are sent by mail, postpaid, wrapped in tube.

Copies of them may be seen at this office, and inspection is invited.

Forest and Stream Water Colors

We have prepared as premiums a series of four artistic and beautiful reproductions of original water colors, painted expressly for the FOREST AND STREAM. The subjects are outdoor scenes:

Jacksnipe Coming In. "He's Got Them" (Quail Shooting). Vigilant and Valkyrie. Bass Fishing at Block Island.

SEE REDUCED HALF-TONES IN OUR ADVT. COLUMNS.

The plates are for frames 14 x 19 in. They are done in twelve colors, and are rich in effect. They are furnished to old or new subscribers on the following terms:

Forest and Stream *one year and the set of four pictures*, $5.
Forest and Stream *6 months and any two of the pictures*, $3.
Price of the pictures alone, $1.50 each; $5 for the set.

Remit by express money order or postal money order. Make orders payable to

FOREST AND STREAM PUB. CO., New York.

A MANITOBA OBJECT LESSON.

THE vast "chicken country" of America is divided by the artificial line which constitutes the boundary between the United States and Canada. The natural conditions of the two countries, so far as they concern the habitat of the chicken, vary but little, excepting the natural variations of climate which obtain in different latitudes. As to the food supply, cover, habits of the birds, etc., they are much the same North and South.

Yet this artificial boundary line, with game protection which protects on the Canadian side, and game protection which, excepting in a few rare instances, is an abstraction on this side of the line, serves admirably as a division for the purpose of comparison. The contrast in respect to the game supply is great. In Manitoba, and presumably in the other Provinces also, there is first of all a popular and genuine sentiment in favor of game protection. The game laws are the earnest expression of the will of the people, and were enacted with the serious intention of enforcing them to the letter. The fine for killing birds is so large that conviction is a serious matter for all, rich or poor. It is a deterrent to even the most hardened and reckless poachers.

Through an organization of game wardens in Manitoba, local and general, the law is in constant action, and the efforts to convict an offender are earnest and persistent. Conviction is in most instances followed by the infliction of the maximum penalty. If the offender be wealthy or of high station, the effort to punish is greater that it may be exemplary. The machinery of the law is not used to condone the offense, nor are there strained constructions whereby the offender is fined for one bird even though he may have killed dozens. The certainty of the penalty thus gives vitality to the law. It is neither a dead letter nor inoperative.

The landowners watch the birds with jealous care. A man shooting out of season is considered as in the act of taking property which does not belong to him. He is almost certain to be reported to the officers, and sure of conviction beyond a doubt if there is proper evidence. It must not be inferred that there are no attempts at game law violations in Canada. There are some violations, but they are reduced to a minimum. When once caught and punished, the offender rarely is guilty of violating the game laws a second time. Added to the fine is the humiliation coming from the ridicule, censure, criticism and disapproval from his friends and the community.

On the American side of the line, shooting before the season opens, shooting without any limit as to the numbers killed in contempt of law or equity, shooting for market, and the lax administration of the game laws when they are administered at all, have produced their natural result—that is, a scarcity of birds in some sections, in others practically no birds at all.

In a few sections, both in Canada and the United States, the hatching was injured by heavy rains, one section not being exempt more than the other from unfavorable weather conditions; yet in Manitoba there are birds in abundance, while in the United States the shooting is comparatively poor. And yet the cause which produced these results is one of public sentiment and law enforcement.

Manitoba has taken wise precautions to protect her own game, and earnest effort to keep her game laws in operation. To guard against foreign invasion of her game resources, a license fee of $25 is charged to non-residents for the privilege of shooting during the season. As a courtesy to a guest of a resident of the Province, a three-day permit can be obtained for such guest.

Notwithstanding the high license fee, Manitoba has a large and growing influx of shooters from the States who prefer to pay $25 with a certainty of good shooting than to pay nothing and strive with uncertainties and disappointments.

Manitoba has caught the true spirit of protection, for it limits to the shooter's own use the birds killed—in other words it has stopped the sale of game. The abundance of birds in that province proves the beneficent effects of stopping the sale of game. The barren and impoverished game areas of the States show the effects of the sale of game. They can be replenished by the same means employed by the Canadian brethren—that is to say, enforce the game laws and stop the sale of game.

SNAP SHOTS.

IF a poverty-stricken individual accosts you in a confidential manner and communicates to you that he has a bolt of dress goods, which he has come into possession of by methods not recognized as strictly mercantile and would be pleased to dispose of to you on favorable terms, all this, and in the same breath beseeching you not to betray him, as he is a poor man who can ill afford to be arrested, what would be the proper course for you to pursue? Should you incontinently hand him and his stolen goods over to the authorities; or, having a regard to the sacred obligations of confidence which he has imposed, though all unsought by yourself, should you regard his proposition as a privileged communication, and without purchasing his plunder dismiss him to try the next man?

It is not always possible to make one case go on all fours with another similar one, but the supposed instance of the stolen cloth is at least partially paralleled by another and real one which has just come to our consideration in a communication received from a correspondent in Forsyth, Montana. He writes, "I have in my possession a whole hide and head of an enormous bison bull, just killed on the prairie of northern Montana. It is properly cured and handled, with no cuts and only one .38cal. bullet hole in it. Using the words of old buffalo hunters who have seen it, it is as large and as hairy as any that ever roamed the Western prairies. Please do not publish anything about it in your valuable paper, as the killing of buffalo in this State is unlawful and publishing would injure me, a poor man; but I ask you to hand this letter to a friend, if you know of any who would like to possess such a specimen. If you can help me in this matter I should be glad and thankful for it."

Clearly the man who writes a letter like that to the FOREST AND STREAM signs his name to it "not for publication but as a guarantee of good faith;" and it is also clear that to give it would be a breach of confidence on the part of this journal, much as we would rejoice to know that the fellow who killed the magnificent bull was in the hands of the Montana authorities.

The English are carrying with them around the globe among other British institutions the trout to which they are accustomed in home waters. New Zealand and Australian streams have been stocked for years; and another achievement has been the introduction of the fish into the streams of Cape Colony, in South Africa. The occasion of the liberation of the fish was made a day of celebration by the sportsmen of the colony, and the ceremonies on the banks of the Buffalo, near King William's Town, took on the importance of a social "function."

Here is an echo of the Bannock "war" and a circumstance which should go on record, for probably it is the last instance of the nature to be recorded for the region of the United States. Most people now understand that the "Bannock uprising" consisted of the heartless and brutal murder of some defenseless Indians by white men, and yet there are men right here in New York city who have given over their projected hunting trips into the mountains because they stand in dread of the Bannocks, whom their excited fancy pictures as on the war path thirsting for the gore of the pale-face.

In times past vast regions of game country have been shut out from white hunters because infested with hostile Indians, and in this way the savage has played no mean part in game preservation. But those days have long gone by, never to return. The individual who stays home in the year of 1895 because he stands in dread of Indians is laboring under a delusion. Because of that delusion, however, possibly a few more Idaho and Wyoming elk will get through the winter.

A Chicago correspondent sends us a late copy of the daily *Chronicle*, which prints a column of talk by a resident of that city, who has returned from the Yellowstone Park burdened with discoveries he has made concerning the Yellowstone National Park. "The facts that he has thought best to disclose he believes will endanger his life should he return to Yellowstone, and this he proposes to do within a few months. He held, however, that it was a matter of patriotism with him to reveal what he discovered, desiring that his name should be omitted in order that he might not be done away with, when he again revisits that portion of the country, by the outlaws against whom his facts are directed. He is morally certain that such would be his lot."

The parlous tale he has to tell is that poachers have killed many buffalo in the Park. There is nothing dangerous to the personal safety of one who makes such disclosures. The FOREST AND STREAM'S special staff correspondent, who went into the Park winter before last and reported the buffalo killing by Howell, came out and told of it, and still lives. If the Chicago man has any facts about the Park and game butchers, he should out with them and give us his name, so that we may estimate the trustworthiness of the evidence.

The Chicago gentleman goes on to tell the reporter that

"When a sporting duke or any other foreign nobleman arrives at the Park, he is coached to say that he desires to hunt in the Teton district, which is south of the Park in the Jackson Hole country. The southern district of the Yellowstone is not definitely marked off from the Teton region. Consequently when he asks for a permit it is tacitly understood that he need not go so far south as the Teton district, but may hunt at will through the National Park, wherein a citizen of this country cannot carry a gun."

Which is fudge.

When the Valkyrie III. flunked the other day there was no end of wild talk in the English papers of a lack of sportsmanship among Americans, and we were assured that there would be no more racing for the America's Cup for many a long year. Now that offical notice of a new challenge for the Cup has already come to the New York Y. C., it is shown that the newspapers which made the most noise about Yankee unfairness did not truly represent the sportsmen of Great Britain. The fact that English yachtsmen are so prompt to come forward for a new trial at the trophy demonstrates that the sentiment on the other side of the water coincides with public feeling here as to the merits of the unfortunate fiasco of 1895.

There will be another Sportsmen's Exposition. At a meeting of the trustees of the Sportsmen's Association, held last week in this city, Chairman Dressel of the committee previously appointed to confer with the Madison Square Garden authorities respecting the time and conditions of the proposed exhibition, reported:

Your committee has communicated with Mr. Frank Sanger, of the Madison Square Garden, and we find we can secure the following dates—the week of March beginning the 16th and ending 21st, inclusive—and can have the Garden for preparatory work the 12th, 13th, 14th and 15th, and for purposes of removal the 22d and 23d. We can also secure the services of Mr. Sanger as manager, and can otherwise make contract on same lines as last year, with the exception that the rent is to be at a less figure and the profits to be equally divided be this Association and Mr. Sanger as manager. Your committee considers this a fair offer, and recommends the closing of contract with the Madison Square Garden people.

The committee was empowered to make the contract specified; and an Exposition Committee was named to take charge of the affairs of the Association. Its members are Messrs. J. A. H. Dressel, Justus Von Lengerke, Albert Chasseaud. There is every reason for indulging the belief that the second annual exposition will as much surpass the first as the first one exceeded the expectations of the promoters.

The Sportsman Tourist.

THE OUTING OF SIX.—V.

Point Sublime—The Grand Canyon—Homeward.

THERE are some scenes in the presence of which the most sublime emotions are lost in the awful sense of the infinite, where the grandest form of expression is absolute silence. A Church may reproduce in some degree Niagara; a Gifford catch some glowing tints from the sunset sky; a Kingsley or a Hearn find language to portray the varying phases of a West Indian day, but brush and pen are powerless as one stands on the edge of Point Sublime. The very heart-beat is stilled and the overpowering realization of the relationship between insignificant creature and omnipotent Creator makes the boldest man veil his face and exclaim with the psalmist of old, "What is man, that Thou art mindful of him?"

As I sat in the shade at Kanab and read aloud Capt. Dutton's inimitable chapter on "Point Sublime," it seemed to us all a beautiful bit of fanciful wood painting—exaggerated and overdrawn. And now, looking back at that never-to-be-forgotten morning, I wonder at the boldness of the man, for language is powerless to express the emotions of the soul, and the half cannot be told. Those who are privileged to look into the abyss and see the massive forms and ever-changing tints that mortals cannot imitate nor words describe can but faintly grasp and vaguely conceive that which their sight presents to them, while for those who depend upon the writer or the artist for their knowledge even an imagination of the chasm of the Kaibab is as impossible as a definite conception of an orthodox paradise.

* * * * * * *

The pointers had passed their second quadrant, and as I looked at them through the trees I saw that the night was more than half gone. There was just the suspicion of a breeze in the tops of the balsams and spruces that were noiselessly nid-nodding beneath the starlit sky. From the native meadow down the creek came the tinkle of the horse-bell. Nature was asleep. There was no sound of bird or bug or rustling branch; even the murmur of the brook was hushed. I arose, and the air, laden with life-giving fragrance, made me feel like another being. In a few minutes I had a fire blazing and the coffee-pot on. Then I wrangled the saddle horses and, looking at my watch, aroused the dreaming camp with the call:

"Boys, it's 3 o'clock. All aboard for sunrise at Point Sublime."

As the flush of early dawn crept through the tree tops we started out. There were eight of us, Mr. Stewart being accompanied by his son, and we had three of the horses saddled so that we were able to take turns in riding. Our guide said that Milk Springs was but three miles from the point, but when we returned he acknowledged his mistake, for it was a long eight. We went down the creek for perhaps a quarter of a mile and then turned abruptly toward the mighty river of the West, climbing a low ridge whose farther side was the outer bank of the cañon itself. When we reached the level summit it was broad daylight. Under our feet was a carpet of mosses and flowers. Spruces and firs had disappeared and great pines blended their branches in a living canopy above our heads. The silence was profound. There was no song of bird; no murmurs from the swaying boughs. Nature herself was mute before her masterpiece. The forest ends. The moss carpet overhangs the brink of a wall that drops a sheer thousand feet. Is it the cañon? No, but one of those vast lateral amphitheaters into which Manhattan Island might be dropped, and its grandest buildings, loftiest spires seem but anthills at the bottom of the abyss. Far down it we peer until the transept loses itself in the blackness of the profound chasm. Even as we look a change, magical, brilliant, instantaneous, comes across the picture. Far to the east, over the plateau of the Paria, rises the sun. His rays touch the tops of the farther cliffs. These spring into life. Rainbow tints reflect from them up to the very zenith, down into the dark nooks and alcoves, wrapped but a moment before in the slumbers of night. And as the sun climbs higher the daylight descends, until from a mile below into the ethereal blue above there is one glorious expanse of scintillating diamonds, rubies and sapphires that, reflected and refracted by the violet veil, clear as crystal yet tinting all, make the south one kaleidoscopic mass of ever-changing arches, spires, crystals. Human eye cannot grasp nor human mind conceive the splendor there displayed, and yet this was not the Grand Cañon, simply a side chapel in the vast cathedral.

Then our path withdraws, and once more we tread the forest mazes. Suddenly from the right comes the crack of a rifle, followed by a desultory fusillade. An uninjured buck gallops proudly out of sight. This episode past we hasten on, too eager to note the dusky grouse that fly from the boughs above or the flowers that fleck the moss below. Ahead, jutting far to the southwest, is a promontory. It is not timbered, as is the country through which we have passed, but is covered with sagebrush and lies as bare as the desert under the rays of the rapidly rising sun. It is that which we have come hundreds of miles to see—Point Sublime. No longer is the moss beneath our feet. Behind is the wall of pine; before, clear in the dry, transparent atmosphere, are the snow-crowned ranges of central Arizona. We brush our way through clumps of rare and magnificent cacti with all their gorgeous splendor of purple, crimson, scarlet and gold; through stalks of giant yuccas, whose creamy bells, nodding a dozen feet above our heads, had long since chimed the matins of approaching day. Rising above these is a solitary cedar. To it we hasten. Suddenly—as suddenly as the lightning's flash—the earth opens at our very feet. The eye sees below, around, the grandest panorama of earth—seen, but the mind cannot perceive, for with that glance the heart fails, the very senses become powerless; time, space, personality itself is lost in the contemplation of Infinity.

For hours we stayed there. The transcendent beauty of the morning glided into the sleeping majesty of noon, the crystal veil enhancing every change of form and color. The longer we dwelt upon the picture the more supernatural, the more indescribable did it become. If there should be but one grand scene of all those I have visited that I could again behold it would be the Grand Cañon of the Colorado as I saw it on that perfect June morning. From Greenland Point on the east, over Powell's Plateau to the lofty peaks of Logan and Trumbull and the more distant terraces of the Ninkaret on the west, every detail was impressed as with a stylus on the tablets of memory, and as I look back I see the glorious picture, old as man himself, and yet eternally new as plainly as I saw it then.

The return to camp was made in the noontide heat, but our path was shady and we had time to observe the more quiet beauties of nature, that relieved the mental strain to which we had been subjected. Up the trees scampered the graceful white-tailed squirrel. About us were the birds of a new clime. Up hill and down we went—from semi-tropic heat up to the realm of sub-Alpine flowers. On that homeward walk we obtained *Corallorhiza multiflora, Clematis douglasii, Fritillaria pudica*, and, *mirabile dictu*, a single specimen of *Calypso borealis*, as shy and beautiful as in the woods of Maine or of the Adirondacks.

By 5 o'clock we had finished dinner and turned our faces homeward, stopping for the night with the "V. T." outfit in De Motte Park. Early Tuesday morning we bade adieu to Mr. Stewart, who returned to his sheep. We headed for Kanab, via Jacob's Lake, at which point we had the misfortune to lose our way and get on the Lee's Ferry trail. So after traveling all night on the desert without food or water, at 10 o'clock on Tuesday morning we drove once more to Mr. Robinson's door and were received, hungry, tired and dirty as we were, with genuine Utah hospitality. On all our trip we saw neither snake, scorpion nor tarantula. The following is a list of the avifaunal species that we noted:

Dendragapus obscurus, Say.—Dusky grouse
Columbigallina passerina, Linn.—Ground dove.
Catharles aura, Linn.—Turkey vulture.
Buteo borealis calurus, Cass.—Western redtail.
B. abbreviatus, Cab.—Zone-tailed hawk.
Archibuteo ferrugineus, Licht.—Ferruginous roughleg.
Heliœtus leucocephalus, Linn.—Bald eagle.
Megascops asio trichopsis, Wagl.—Mexican screech owl.
Myriarchus cinerasceus, Lawr.—Ash-throated flycatcher.
Cyanocitta stelleri macrolopha, Baird.—Long-crested jay.
Corvus corax sinuatus, Wagl.—Mexican raven.
Icterus cucullatus nelsoni, Ridgw.—Arizona hooded oriole.
Spinus psaltria arizonœ, Coues—Arizona goldfinch.
Amphispiza bilineata, Cass—Black-throated sparrow.
Pipilo fuscus mesoleucus, Baird—Cañon towhee.
Colaptes cnfer, Gmel.—Red-shafted flicker.
Vireo vicinior, Coues.—Gray vireo.
Helminthophila lucice, Coop.—Lucy's warbler.
Dendroica gracice, Coues.—Grace's warbler.
Harporhynchus bendirei, Coues.—Bendire's thrasher.
Sitta carolinensis aculeata, Cass.—Slender-billed nuthatch.
S. pygmœa, Vig.—Pygmy nuthatch.
Parus inornatus griseus, Ridg.—Gray titmouse.
P. gambeli, Ridgw.—Mountain chickadee.
Psaltriparus plumbeus, Baird.—Lead-colored bushtit.
Turdus aonalaschkæ audubonice, Baird.—Audubon's hermit thrush

We also saw a great number of humming birds, but owing to lack of fine shot were unable to secure any. I mention the dusky grouse not on account of his rarity, but on account of the latitude. The bald eagle was seen drinking at Jacob's Lake.

On Thursday morning our little party disbanded. Four of the party went to Panguitch Lake to enjoy another month of hunting and fishing, while Andrew and I returned home to tell our triumphs and study the material we had collected. Ten days later I arrived in Provo, and the vacation of 1895 was at an end. SHOSHONE.

AN OUTING IN THE SIERRAS.—III.

Lake Tahoe and Vicinity.

AT about 8 A. M. on Aug. 4 I was one of nineteen uncomfortable persons who four on a seat crowded the stage for Lake Tahoe, and started from Truckee for that place. The drive was over a lumpy dusty road, the day was very hot, and the sixteen miles, which should have given us all great pleasure, gave us more suffering, all because those concerned fail to furnish adequate transportation from Truckee to the lake.

Why a railroad is not substituted to make of the trip a pleasure is hard to understand. The travel would support it, and it would so increase travel that the lake's resources would be greatly increased. At about 11 A. M. eighteen hot, disgruntled, disgusted, dust-covered people gladly got off the stage at Tahoe City. The nineteenth was the driver, he was used to such treatment. Even the bride and groom of the victims, both affectionate on the start, had long ago subsided into sulky gloom. Tahoe City is located on the western shore of Lake Tahoe. As a city it is not very important; there are possibly more, but all of the houses that I remember numbered I think three: one the unpretentious hotel at which the stage stopped, one a restaurant on one of the wharves, and one a boat-house. Not long ago I was told there had been a very good hotel, but it had burned.

We all hurried through the hotel, down the bank on to the wharf and boarded, according to which of the two agents had succeeded in catching us first, one of the two small steamers which for $3 the round trip carry passengers around the lake, stopping at all places. These are the Meteor, "the fastest boat on the lake," carrying mail and express matter, owned and run by the Bliss Lumber Co. at Glenbrook, and the Tallac, owned and run by the Tallac Hotel Co. The Tallac man caught me first, and on her I started for the Tallac House, due south and about twenty-five miles away, and stopped en route at a number of very pleasant looking places, viz.: Sunnyside, Idlewild, McKinneys; then up Emerald Bay—a beautiful long (three miles) narrow (one-half mile) cañon, filled with deep blue water, with a summer boarding house at its head, as there were at the other places mentioned quite a number of cottages; and finally at about 1 P. M. we ran alongside of the wharf at Tallac, by far the most developed summer resort on the lake. The ride had been a delightful one, and almost made up for the stage ride; but the Meteor, starting at the same time, soon justified her reputation and showed us her stern. Both boats were well filled, for in addition to the people on an outing there were parties from Truckee, Boca, etc., spending and enjoying their Sunday by a trip in their own land conveyances to the lake and on the boat around it, with dinner at a selected point.

Lake Tahoe is beyond question a most beautiful and pleasant summer resort, surrounded as it is by mountains, more or less (generally less) forest-covered, with snow-flecked faces. One of them, Mount Tallac, is over 9,700ft. high, but it don't show its altitude, for there are many other high ones, some nearer, and the level of the lake is over 6,000ft. On the face of Mt. Tallac there is a cross-shaped gulch; and in it, long after the snow has left the most of the mountain, there remains, generally through the year, a beautiful crop of snow. The principal beauty of the lake is due to its magnitude (twenty-five miles long, over twelve miles wide) and its sea-like blue water in the deep parts and green along the encircling bench of shore water. This is characteristic of all these mountain lakes, and in regard to one of the little ones, Falling Leaf, a young lady described it to me as "a sapphire set in emerald." But so far as I have seen them there is not a lake in the Sierras that compares in beauty with several in the Adirondacks. Raquette, Forked, Blue Mountain, Piseco, are all superior, for all have islands to break up the expanse of water. Lake Tahoe has but one, I think, that's all I saw, and it is at the extreme head of Emerald Bay.

The Tallac House became my home for several days, or rather one of its cottages, of which there are a number; mine was on the inner end of the wharf, two stories, with verandas on all sides. Its situation over the water made it cool and pleasant on a hot day, but during the cool nights it was not a choice place for a person subject to rheumatism. A lamp would have increased the comfort of my room, but the risk of fire accidents has made it a rule of the house that the candle alone can be used.

I enjoyed my visit—there was a full house, and of the guests many were very pleasant companions. They come from Los Angeles, Santa Barbara, San José and other towns of Southern California. The hotel is pleasantly located, the table good and the proprietor courteous and obliging. There are many pleasant drives, and the hotel furnishes good teams and vehicles, and it has an outfit of boats and boatmen. This part of the resources is open to criticism. Five dollars per day is a high price to pay for even what they advertise—good boat, boatman, outfit and bait (minnows). My boat the first day was very poorly outfitted and the boatman was incompetent. This, however, didn't occur again. The outfit consists of a pair of large spinners, with lines, a landing net and minnows. The "party" is supposed to furnish anything else he may want, and most of us did depend upon our own rods, flies, spoons and spinners of other sizes and patterns, and our own kit of tools to repair damages.

In the deep water—where the larger fish generally are found—the Tahoe gear does the best work, but in some of the smaller lakes and on the shoals and after dusk other gear is desirable.

The Tahoe spinner and rig is different from anything I have ever seen elsewhere. It is 4½in. long and 2in. broad at wide end. To this is attached by swivels at wide end, with a gimp snell about 18in. long, and a large single long-shanked hook, generally Limerick or Sproat, on which a 4in. minnow can be threaded. The spinner is of copper, silvered on one side; the line, at least 100ft. long, is composed of seven strands of fine copper wire, twisted.

Using one of these, I was on one occasion in company with a friend using an abalone spoon of smaller size. He had many more strikes than I did and caught many more fish, and after dusk small luminous spoons were useful. I used for trolling the Orvis bass fly rod (split-bamboo), made for me by him in 1881—fished with by me in sea and fresh water in Europe, West Indies, Alaska, St. Lawrence River, Adirondacks and Rangeley, proving true on everything from a minnow to a small shark, and always in order. It carried its weight of line, spoon and some good trout several times on Lake Tahoe, and is good as new. I stayed five days at Tahoe, but did comparatively little fishing. We were having a hot wave; thermometer up to 90°, and fish were hard to find. Between 5 o'clock and sunset we had fair luck, but Tahoe Lake is like Webber Lake, encircled with a shoal, which goes off quite abruptly into deep blue water, and the fish had gone off also. This encircling shelf carries green water to its edge, but so clear that at 12 or 15ft. the fish could be seen. My largest on Tahoe was a rainbow weighing a little over 6lbs. I had spent a very hot Saturday on the veranda, simply loafing—reading, smoking and helping the ladies trim balsam (known as "fir" here) for pillows, and congratulating myself upon my wisdom, as boat after boat came back with the stereotyped report, "Not a strike."

By invitation of Dr. Brigham I was to dine and spend Sunday with him, so at 5 P. M., having discarded all idea of fishing, I took boat for the Doctor's place, about two miles to the northward. We rowed along the edge of the green water. At about midway of the route there was, I knew, a "pit hole" in the reef, a few hundred feet in diameter. I had theorized that, as the hot weather had driven all of the fish off the shoals into the deep water, these holes, of which there are very few, might have harbored some of the refugees. So I told the boatman to fit up his spinner, and as we approached the hole to slow down, which he did; and with my line almost perpendicular, my hook a hundred feet below, I very quickly had hold of a good trout, and I saved him. And a lucky thing it was that I did, for on arrival at the Doctor's I found that after exhausing all resources not a trout had been procurable, and the dinner would have been minus the fish course. My six-pounder filled the deficiency, and an hour after he was in the lake he was on the table; and whether due to the speed of this transformation, superior cooking or quality of fish, I can't say; but he was not only simply delicious, but far superior to the big Eastern trout (4½lbs.) that I caught in Lake of the Woods.

I am now about to express an opinion upon a much-argued question, as to the relative qualities, game and edible, of Eastern and Western trout, not artificially bred.

I place in both capacities as No. 1 the Eastern brook trout—*salvelinus*, charr, or by any other name—when naturally bred in streams or lakes in the Eastern States. No. 2, the rainbow trout. No. 3, the McCloud River. No. 4, the Eastern brook trout caught in small California lakes.

Only one angler had at Lake Tahoe luck which might be considered remarkable. This was Dr. Hall; his was very astonishing. The second day of my visit I was one of a party of six that made an excursion to Falling Leaf Lake, a four-mile delightful drive through the woods. Then we took possession of three of the four boats on the lake and trolled along the shore till, in three hours, we reached the inlet at the upper end. We did not get a strike. We did not see another boat on the lake, which is a small one. We landed and lunched under the trees near the inlet. While lunching a gentleman came to us to borrow a corkscrew and we loaned him one. He was Dr. Hall; he said he had caught fifty-six trout that forenoon.

Mr. Ayers went down to his boat to look at them. Sure enough the tank was crowded, but every fish was dead

and strung on willow wands. Tahoe boatmen keep the fish alive in these tanks, which are modified centerboard wells. Indians don't. Indians carry their fish on willow or other twigs. Tahoe boatmen don't. There was an Indian camp on the lake. We think Dr. Hall visited it. Two days after the Doctor brought in from Cascade Lake a 7lb. rainbow trout. It was but a little after noon, yet that trout looked and smelt as though he had been caught quite a while or had been left in a very hot place. We wondered if there were not some Indians on Cascade Lake also and if the Doctor didn't meet them.

There is one drawback to Tahoe Lake: the change from ordinary drinking water to the "best water in the world," as that of the hotel is said in its cards to be, is too abrupt. It is undoubtedly pure water, for it is piped from Falling Leaf Lake, where there are no sources of contamination, but whether it be due to large amounts of snow water in the lakes or their stillness, the new-comer is very apt soon to begin to suffer diarrhœa, and were it not that a prescription of Dr. Brigham's—that soon checks it—is kept handy at the club house, there "would be trouble in the camp."

As a whole I enjoyed my visit, and some day hope to repeat it. There were few hours that it was not too hot to fish, but in the evening we could always be sure of a few.

On Sunday, while at Dr. Brigham's, some of his friends,

TALLAC MOUNTAIN FROM FALLING LEAF LAKE.

Mr. and Miss Bliss, from Glenbrook, came over with their little steamer, the Emerald, and took us all on a trip up Emerald Bay, and during our trip a heavy thunderstorm came up from the southeast, and the effect was grand.

At the head of Emerald Bay there is a small, rocky islet, on the highest point of which there is a structure which has a story. It is a plain, unpainted, rough board shanty, surmounted by a rude wooden cross. This is The Deserted Grave. A few years ago there was drowned during a storm on the lake an old man—whose name I forget—who for many years had made his living as a fisherman on the lake. He had squatted on this islet and there lived a hermit life. Electing there to make his final resting place, he had dug out of the rock a tomb, over which he had built this shanty and cross, and there he was to be buried. His body was never found and the grave stands empty.

On Monday, the 12th of August, I bid adieu to the California contingent of my Tahoe friends and in the Meteor moved to Glenbrook, Nevada. Not a very long journey, for Lake Tahoe—as shown in the map I sent you—is partly in Nevada, and Tallac, California, and Glenbrook, Nevada, are very close neighbors. Glenbrook is out of the fashionable swim, as its existence depends more on business than on pleasure.

A gentleman residing there, Mr. W. B. Bliss, the moving spirit of a great lumber company located there, had kindly invited me to go back with him by the old stage road to Placerville, thence by railroad to Sacramento. I had accepted, and what happened I will tell you next week. PISECO.

Still on its Wild Career.

PROVIDENCE, R. I., Sept. 16.—*Editor Forest and Stream:* Here we have the wild game egg scare again. Just came across the inclosed clipping in the Minneapolis *Tribune* for the 12th inst. Did the originator of the fake have his copy set up and electroplated and the plates sent to all the United States papers, or what? TODE.

A SKIRMISH WITH A LOUP-CERVIER.

I AM not much of a gunner, as the reader will perceive before he has finished this sketch, only a plain minister with a strong fascination for the woods and a little shooting now and then at the swift-winged partridge or the quick-witted woodcock, so I never lose an opportunity to take my three weeks' vacation in October among the lakes and forests of northern Maine. After a close and hard summer, therefore, it was with a great sigh of relief that two years ago I boarded the train and hastened to a little town some thirty-five miles northwest from Bangor, which has always been my base of supply on these occasions. One does not look for large game in this vicinity; now and then a stray fox, as the sun hides him under the hills, runs across the path and stirs the blood a little, and once in a while a wildcat is heard and sometimes seen; partridge and woodcock and duck often abound, and the gunning is good. Deer are often seen at nightfall drinking from the lakes, but I never could bring myself up to the point of shooting one of the graceful creatures.

The morning after my arrival in this hamlet, a fine October day, with a small fowling-piece not in very good condition, having been at rest for at least ten months, but with its single barrel very well answering my purpose, I set out for the hunting grounds. A large pond lies among the hills and sends an arm into the heart of the village here, so that one has only to spring into his boat and row away under a bridge or two a brief five minutes to find himself on the surface of a fine lake, surrounded by hills, some highly cultivated, some heavily wooded, full of inspiration and zeal. I reached the "Inlet" in about forty-five minutes. It is so called because it is the entrance of a small stream into the lake, which, flowing through marshy ground, has hollowed itself a channel without perceptible current for a mile or more. It winds round long points and through dense shrubbery, now almost hidden by the overhanging woods, now creeping from luxuriant growths of grasses, now opening out clear with muddy shores, or entering a labyrinth of fallen trees and old stumps. It varies in width from 75 to 150ft., so that one can easily scan both banks as he rows along.

As I entered it the hush of a New England autumn was on the stream and among the woods, inviting one to dream rather than to shoot. The foliage was rich. One could count a hundred different tints from green to yellow, red to vermilion. The stream narrows down gradually, and at last I reached the old log that had served me these several years for a wharf, and hiding my fishing tackle which I always carried, for sometimes the fish were more gullible than the partridge, I plunged into the forest.

Partridge and woodcock were scarce that morning, but with little care I meandered along the old wood roads, finely shaded, among which squirrels were chattering and birds flitting. Once in a while a gray squirrel would scamper across the path and mount some old fence or tree. Most everything was there except the game I wanted.

At last I reached a growth of spruce and hemlock and began to 'wake up and look about me. It was on the side of a deep ravine where, the previous winter, a great many hemlocks had been felled and the bark stripped from them, leaving the logs to be yarded the coming winter. The frost was still on the ground here, making it necessary to move with caution, for one was likely to slip and then to slide somewhat unbecomingly down the hill. I was stepping along thus lightly, now on a more level bit of ground, when I heard a rustling among the leaves on the opposite side of the little brook that runs through this ravine, and supposing it to be a partridge sat down on a log to await her appearance. A half of a minute perhaps I waited, when, springing noiselessly upon a pile of wood not 20yds. distant, a large loup-cervier appeared in full view. I did not wait for him to see me, but fired instantly, and the next instant found myself flat on my back with my feet on the log I had so suddenly vacated, and wondering if I had hurt the animal as much as I had myself—for this gun seemed to shoot from both ends—I hastily scrambled to my feet. Well, there sat the creature in the coolest possible condition in exactly the same place I first saw him. Apparently he had watched the proceeding with some interest, but entirely unmoved. Hastily reloading, I fired again, direct in his face, bracing myself for the rebound of my gun, when, instead of getting his eyes put out or running away, he bounded toward me, but hesitated before reaching my place and looked defiant enough. Evidently partridge shot were not having much effect on its tough skin, but I reloaded and taking its gentle hints to be careful, stood cautiously on the defensive.

We stood and looked each other direct in the eyes, I guess, two minutes, when it slowly turned, and with a glance over its shoulder every now and then at me, walked the length of a long log, sprang to the ground and moved away. I did not follow, for it had sat still and made itself a target for me to shoot at twice, within easy range, and now, though I bethought me of several shells in my left pocket loaded for duck, it seemed cowardly to strike at its back. I had lost the battle in a fair fight.

I had also lost my zest for gunning in that particular place, so hurried back toward my boat; but in my haste ran clumsily into a flock of partridges, which scattered in every direction, leaving only one as the result of a startled and random shot. Being near my boat, I left this one in the stern under an old piece of canvas, and hurried after the others; and after an hour's hunt succeeded in getting one, and returned to the river. I was within 30ft. of the boat, I should judge, when to my consternation that loupcervier sprang from the stern sheets with my partridge in its mouth. It did not run, but sat quietly down on the opposite bank of the stream, perhaps 40ft. distant, and looked defiance at me. My gun had only partridge shot in it, and it would be useless to fire. But to remove the shell and substitute another with duck shot, while the work of a few seconds only, might scare the creature away or inspire it to something worse. I concluded, however, that such was the only thing for me to do, and if it fled or attacked me I must take the consequences. That exchange of shells was a quick process, the reader may be assured, and did not disturb the thief at all. I instantly fired, and it sprang sidewise into the woods and disappeared, leaving my bird on the bank. I noticed also a good many hairs and slight traces of blood, showing that this time my shot had made an impression. I waded across the brook to the place from which it disappeared, and with extreme caution followed its trail as nearly as I could among the leaves, with a careful eye to the trees, for I suspected the creature might be in somewhat of a fighting mood now, and perhaps would take the chances at a hand-to-hand fight with me.

I might possibly have gone ten rods in this cautious manner, when apparently from directly overhead came a ter-

rific yell that lifted my hair and started the cold shivers down my spine. It proved not quite overhead, however, but in front of me, so that I caught sight of it and had my gun leveled and ready for a spring instantly; and not an instant too soon, for it sprang at me with tremendous force. I fired and down it came, not quite where it planned—on my head—but among the rocks and leaves at my feet, with a charge of duck shot in its head. I got out of the way in a hurry, but finding there was no further danger, returned and shot it dead. J. W. STROUT.

MASSACHUSETTS.

WISCONSIN WANDERINGS.

Some Marshfield Men.

MARSHFIELD is one of the live towns, a little to the northwest from the center of the State. The Tremont House is a plain $2 house, but Foster Bros., who keep it, will sit up nights to accommodate their guests, and run down everybody in town to get a gun for a guest who wants to go shooting. And there are lots of other good fellows there, too.

If you ever go there drop into the Central depot and ask for Mr. Kerr, the night operator. Tell him you are one of the FOREST AND STREAM family, and he will meet you with open arms. You will be calling him "Jim" before you have known him an hour. He knows every bit of country around there for miles, and he would rather roam the woods with you than to eat when he is hungry. If you can tramp as far in a day as he can, you are a good one. One morning we got on a hand car at 4 A. M. and pumped it nine miles; from that time till nearly dark Jim tramped the woods, and when he came out on the track ahead of the car he executed a number of gyrations that would have been the envy of a circus tumbler, sandwiching Indian yells and shots from his gun between the wild leaps and somersaults. When we came up to him, the Dutchman of the party said, "Vot's der matter, Jim? I dinks you vos crazy mit insanity all retty. Nicht bar?" "Not a bit of it," said Jim, "just showing you how the Indian acted after eating a peck of green cucumbers."

When we got the car going its best Jim jumped off and ran a race with it, keeping it right up until he ran into a big thistle. Jim has been round a good deal and had several ups and downs, but they haven't soured him a bit. He is full of good comradeship, and will rejoice to see you knock down a partridge in full flight more than if he did it himself.

Bert Jones, in the express office, is another good one. Young, handsome and high spirited, a born sportsman with a big heart, he will do anything he can to help a brother sportsman to a good time. Not only are these two young men good sportsmen, but they are good company, and they don't have to take a bottle when they go shooting either.

But how about the game? Well, we saw deer, bear and wildcat tracks in the woods, and saw two deer. We killed squirrels, gray and black, and partridges. It is not a real good place for any game but partridges. I tramped perhaps ten hours in all in search of them, and flushed twenty-two. The cover is too thick for satisfactory shooting while the leaves are on. I got twelve shots and was lucky enough to knock down six, but lost one, as I had no dog. After the leaves fall the cover will be fairly good to shoot in, as there are very few evergreen bushes. The shooters here say the birds won't lie to the dog, and I did not see a setter or pointer in the town. Very few birds are shot on the wing. They are generally treed by a mongrel dog, and the shooter walks up with a shotgun and "knocks 'em right out of their feathers." Then the dog pounces on them with a yelp and chews up the remains. There are partridges all over the north half of Wisconsin, and doubtless they are plentier in some sections than around Marshfield; but there is no place where a gentleman shooter can sooner become posted as to the location of the various partridge pockets in the neighborhood. Accurate information about the haunts of the birds is often hard to get, and it takes a lot of time to find them. At Marshfield the hunter need not look for trespass sign boards. There are none there.

Tramp Bears.

During the past two weeks bear have frequently been seen in nearly all parts of middle Wisconsin, and are said to be quite common in many localities. They appear to be on the move, most of those seen were crossing open fields. In a good portion of the State there are no acorns this year and the bear are probably hunting a supply of late autumn food. The same is true of the squirrels. There is a 40,000 acre tract of woods just south of Marshfield, and last November the ground was fairly covered with acorns, upon which thousands of squirrels were feeding. I shot dozens of them in a few hours. Two weeks ago I spent a whole day in those woods and saw not one squirrel. There are no acorns on the trees. People in the more settled portions of the State say there were no squirrels last year, but now they are numerous.

Barron, Wis.

An old resident of this place, who I believe is entirely reliable, says he has been in the woods twenty-seven miles northeast of Barron for the last three weeks putting up a saw mill. It is four miles from the nearest house. This man says there is a good crop of acorns, that both deer and bear are plenty. Also many partridges and squirrels. No doubt it is a satisfactory spot for a good hunt. Perhaps it's no better than a hundred other places, for the whole north half of the State still has deer and bear in varying numbers, and there are a thousand lakes that have not been fished enough to hurt them any. Oh! that this whole region could have been kept for the people's hunting ground, and not one of its millions of majestic trees ever feel the keen edge of the axe, or its waters ever be vexed by the fishing net. But it cannot be. The homesteader is following the lumberman, finishing the destruction, and our grandchildren will shoot no deer in Wisconsin. O. H. HAMPTON.

Michigan Quail.

JACKSON, Mich.—Everything points to exceptionally fine quail shooting in this vicinity this fall. The birds passed through the winter in good shape and the season has been very favorable for breeding. Farmers generally say that they are more abundant than for many years past. F. N. W

A CAMP ON ROARING RIVER.

IV.

"Beware the fury of a patient man."

TUESDAY noon Smyth returned with the flour, and excitement ran high. The Doctor said it reminded him of the advent of a bull train loaded with provisions and whisky into a new mining camp. Naturally enough Smyth wanted to know what had been done during his absence; how many deer and elk had been killed; what success with the rainbows and Dolly Vardens of Roaring River, etc., etc. The boys had depended upon the Doctor's tact and talent to carry them through this trying ordeal, which they well knew was in store for them, but even the Doctor's genius signally failed him on this occasion, and for once his honeyed words and gallant efforts proved abortive. To say that Smyth was mad doesn't half express it, and he turned loose such an avalanche of Scotch-Irish, English, Latin, Greek and Chinook invectives as the echoes of the Roaring River cañons had never before been called upon to chronicle. Then he turned his attention to One Lung. Words being inadequate, he proceeded at once to illustrate his theory that "there is but one argument that will effectually convince either a mule, an Indian or a Chinaman of the error of his ways, or that is at all effective in inducing either to do his duty: a club." He lammed him all over camp, dragged him through the ashes of the camp-fire by his queue, stood him on his head, cuffed him, thumped him and walked on him until, as Mead remarked when he interfered for humanity's sake, "There won't be anything left of the poor cuss, Smyth, except a piece of a queue and part of a wart if you don't let up." Then Smyth politely requested One Lung to start a fire and get supper and plenty of it at his earliest possible convenience. Doubtless the poor Chinaman's fear of "Injuns" had been superseded by his fear of immediate destruction at the hands of an avenging angel, for you just ought to have seen the number and quality of the flapjacks he turned out.

After supper Smyth, much to the relief of Mead and Swift, gave One Lung verbal notice and fair warning that if there was any more nonsense, any more "Injuns," or any more three-in-a-bed business while he was in that camp the wolves and bears would have a chance to feed on a dead Chinaman. The boys thought that Smyth was a little too cruel, but they got a good night's sleep for once. The Lord only knows how poor One Lung passed the night.

V.

"For those that fly may fight again,
Which he can never do that's slain."

There is always a calm after a storm. Wednesday morning came bright and fair and still. Birds sang in the trees, pheasants drummed in the thickets, blue grouse hooted from the tops of the tall firs, and the murmur of Roaring River came up from the abysmal depths of its dark cradle. It was just such a morning as brings all the better qualities of man's nature to the surface; just such a morning as makes one love his God, his fellow-man and himself. The pure mountain air is an ethereal nectar to the lungs and membranes poisoned and inflamed by the feculent air of the peopled valleys, always surcharged as it is in summer with dust and impurities; and one is made to feel that he is risen to a purer and higher life. There is a freshness and vigor about the mountains that is inspiring and that makes a fellow feel glad that he is alive.

Doubtless poor One Lung felt duly grateful under the circumstances that he was alive when, at 3 o'clock in the morning, the alarm clock, previously manipulated by his friend Smyth, announced to his unwilling ears that he must crawl out and rustle up firewood and breakfast.

One Lung's vocabulary of English was decidedly limited, but he had succeeded in framing a sentence of three words which (to himself at least) sufficiently expressed his sentiments in general and of camp life in an "Injun" country in particular. The last thing at night, the first thing in the morning and all day long, sometimes with emphasis, sometimes softly and inaudibly, often appropriately and more often inappropriately, came that wail of despair: "No more fun!" until finally it was adopted by the whole camp as a kind of rallying cry. Yes, it was 3 o'clock in the morning when the rattle of tin pans and the aforesaid wail called the boys from their sweet slumbers, and soon the whole camp was astir.

It had been agreed the previous evening that Mead and Swift should fish while Smyth and the Doctor should hunt this day in order that the larder might at once be supplied with proper evidences of the prowess of the gang, and in recognition of the requirements of a properly reguted camp among the wilds of Roaring River. One Lung was to pick berries, of which there were plenty close to camp.

It has often been asserted by those who ought to know better that there are no Dolly Varden trout in Oregon except in the Mackenzie River.

Dolly Vardens have been taken in several other Oregon streams, notably in Williamson River that empties into the upper Klamath Lake.

Mr. Waters, a ranchman of that country, a reliable man and a man that knows a Dolly Varden when he sees it, tells me that he has seen Dolly Vardens taken out of the Williamson that would weigh 12 or 14lbs. Dr. Cox, Henry Prettyman and others substantiate his statement. Smyth has often declared that he has taken 4 and 5lb. Dolly Vardens out of Roaring River, and one of Mead's chief objects in making the trip into that country at this time was to verify Smyth's assertion and, of course, have some fun with him.

After a most substantial breakfast, in which flour played an important part, the boys went forth on their missions as previously arranged and agreed. The Doctor took his shotgun and struck out for grouse, Smith with his Marlin .38-55 went for deer, while One Lung, after placing his Nordenfelt where it could be readily put in operation in case of a hurried retreat, went, with many misgivings and his usual wail, "No more fun," for berries. And it might be remarked that Smyth admonished him to pick berries and not spend his time looking for "Injuns," under the pains and penalties of a vine-maple club when he returned.

Mead and Swift slid gently down the almost perpendicular mile to Roaring River, and went to work among its pools and rapids with that diligence and energy for which they are both noted when on a trout stream.

The first clause of that unwritten law that governs all true sportsmen directs that no game or fish shall be taken that cannot be used. So it was not at all strange that, in this land of plenty, even before high noon all the boys except poor One Lung were back at camp with ample evidence of success. The Chinaman was afraid to come in, for he didn't exactly know just how many berries were required to satisfy Smyth's demands. The Doctor had secured a fine bag of blue grouse, pheasants and a brace of ptarmigan that had strayed down from their lofty heights to feed on the berries. Smyth had shot a four-pronged buck almost within sight of camp and had returned even before the sun peeped in over the hills. His long trip for flour entitled him to the rest the boys found him enjoying when they returned, and by mutual consent he was allowed to sleep that gentle sleep, "balm of hurt minds, great nature's second course," as Swift poetically put it, without being disturbed, even though the boys could hardly smother the compliments prompted by the sleek four-pointer that hung temptingly near his tent. Mead and Swift had enough fish to last the camp two days if it had to take fish straight, and there, sure enough, were the Dolly Vardens, two of them, good 4-pounders. Rainbows predominated, but there was a good showing of pure-bred mountain trout.

While the Doctor and Swift cleaned the fish and set the camp to rights, Mead strolled out to the berry patch to bring the Chinaman in, for their mouths were watering for juicy venison steaks and fat trout.

Presently that monotonous song, "No more fun!" was wafted to his ears, and calling to the poor heathen they started on their return to camp.

Mead had carelessly thrown his pistols and other weapons aside before leaving camp, as he had no thought of seeing any kind of game so close at hand. One Lung was in advance with his pail of berries, wrapped in his own dismal reflections and occasionally murmuring, "No more fun!" when all of a sudden he stopped short and gazed intently at a small berry patch near the trail. "You savey him?" he asked in a whisper, and then with the despairing shriek, "Him bear!" he dropped his pail of berries and ran for camp as if the devil was reaching for his queue.

Away went the bear in the opposite direction, but the Chinaman never stopped or looked back until he reached camp. Seizing Mead's pair of six-shooters, one in each hand, he fired the whole twelve shots straight up into the tree tops and then ran for his Nordenfelt. But Smyth was on his feet by this time and had the poor devil by the throat and was about to administer a sedative not prescribed by the best medical authorities, when Mead appeared on the scene with explanations and appeals for mercy in One Lung's behalf, that softened even Smyth's cold and stony heart. One Lung wrung his hands and moaned, "No more fun!" "No more fun!" which on this occasion was construed by the boys to mean no more berries unless they picked them themselves.

VI.

"Or in the night, imagining some fear,
How easy is a bush suppos'd a bear."

The afternoon was spent around camp by all hands—by the boys with that contentment and happiness that are born of success; by One Lung with that resignation that is born of despair. Guns, pistols and knives were cleaned and oiled, rods wiped and put away in their cases, lines unreeled and festooned among the branches to dry, and the whole camp put in ship-shape for a two or three days' trip further back in the mountains for elk. Swift said that he proposed to have just as good a pair of antlers as those that hung on Mead's walls at home, and the Doctor declared that, for juiciness and flavor, nothing else in the wide world could compare with elk steaks; so it was agreed that there should be an elk hunt. This lazying around camp of a hot afternoon after a successful forenoon's work is most enjoyable. To the ordinary sportsman, preparation and anticipation are his greatest delights.

A trip into the elk country of any of our mountains involves a deal of severe hard work, and puts a fellow's powers of endurance to a sore test; all of which the boys thoroughly understood and fully appreciated.

One Lung watched these preparations for what he readily understood to mean a prolonged absence, with distrust and dismay, but his well-founded dread of Smyth's vengeance kept his mouth shut. Of course it was everybody's understanding (except One Lung's) that the Chinaman should remain at camp and look after things in general during their absence.

Now the idea of staying in camp for two or three long days and nights alone, even with his 300-per-minute Nordenfelt for protection, was the last idea in the world that One Lung felt disposed to entertain, but he stoically kept his own counsel. The smell of fresh meat and fish drew quite a number of forest varmints around camp that night, as was made painfully evident to the poor Chinaman by the frequent rustlings in the adjacent brush and by an occasional growl or howl in the not very remote distance, and he spent most of the night sitting by the door of Mead and Swift's tent with his Nordenfelt handy. Smyth was very tired and slept soundly, which of course relieved the Chinaman of much serious embarrassment. Naturally enough in his state of mind he would now and then see some monster approaching him from among the shadows, and on such occasions he would incontinently seek safety inside the tent. But he was afraid Smyth might awake and find him there and so he spent the night alternating between in and out. But the long night wore away, daylight came, breakfast over and everything snugly stowed away.

The boys commenced to strap on their harness and One Lung, much to the astonishment of the others, commenced to climb a tree. He had something to say, and he didn't propose to let his friend Smyth have the floor or the advantage of him on this particular occasion. When he had reached what he evidently regarded as a safe altitude and seated himself on a suitable limb he proceeded with his oration something after this fashion: "You savey him Injun? You savey him bear? You savey him clougar? You savey One Lung? One Lung no likee die! him heap good man! him likee see him flodder, him mudder! him alle samee no likee stay!"

"Come down from there or I'll fill you full of cold lead," said Smyth as he picked up a Winchester. But One Lung had anticipated all this and knew that Smyth wouldn't shoot him. And doubtless he had canvassed the whole situation during the night and had made up his mind rather to die the death of the brave than suffer lingering torture. He had had his say and evidently meant what

he said. The boys didn't know, of course, whether his declaration meant that he intended to try and find his way out to the settlements or stick by them, but they were wasting valuable time and pulled out.

VII.

"Then horn for horn they stretch and strive,
Deil take the hindmost, on they drive."

The Cascade Mountains are extremely rough. Of course all mountains are more or less rough, but the Cascades are unusually so. There is much fallen timber, and the growth of sal-lal, fern, thimbleberry, devil's walking stick, buck brush and vine is truly wonderful to behold, and more than surprising when you try to get through. On the mountain sides this growth is interwoven like an immense basket, and it is next to impossible to get up or down or anywhere unless one is lucky enough to strike a good deer trail. But by following the crests of the high ridges reasonable progress may be made. The elk are always away back except in midwinter, when the deep snows drive them down. They have their constant companions in the cougar and elk wolf, whose chief avocations seem to be annoying the herds and destroying the calves and the sick, wounded, aged and feeble. The life of the ordinary elk must be one of care and anxiety. Doubtless the elk of this country would have long since been exterminated were it not for the hardships that must be endured and the difficulties that must be encountered and overcome in the hunting of them. All old hunters know that a herd of elk can be easily annihilated when once overtaken in the mountains if reasonable care is exercised and if the hunter feels so disposed. They often seem to get rattled, bunch up and stand like a lot of fools until the last one of them is shot down. This statement may not apply to the elk of other countries, like Colorado, Montana and Wyoming, for instance; I do not know; but it is certainly true of the elk of the Cascade and Coast ranges.

The boys kept to the ridges and made good progress under the circumstances, and before noon they had reached a country that, apparently, was the home of the elk. There was plenty of sign, and their trails were well marked and well worn. It is not the easiest thing in the world to find water about these high ridges, but that instinct born of familiarity with one's surroundings soon enabled Smyth to locate a fine spring of pure, sweet water not a hundred yards from the spot they had chosen for camp. Lunch and an hour's rest found the boys ready to investigate the "deep recesses and dark cañons of nature's innermost temple," as Mead put it, or "a'most anywhere else," as Swift suggested, that might by any possibility reward their efforts and perspiration with an elk or two. But before starting they took the wise precaution to carefully study their compasses and the general lay of the country. And, too, they discreetly gathered plenty of firewood and built a make-shift of a "shack" for the night, and where they could *cache* away their superfluous luggage. Then they sauntered forth on their missions of death. They went in pairs; Mead and the Doctor taking one course, Smyth and Swift another. But fate had decreed that there should be no deaths that day. They found plenty of sign and some small game, but no elk. Not a gun had been fired, for although some tempting shots had presented themselves at smaller game, they were after elk this time and didn't propose to alarm them unnecessarily or jeopardize their chances of success without more than ordinary provocation. They felt well satisfied with the outlook and chatted merrily while busying themselves, each in his own way, about supper and the other usual requirements of camp life. Smyth and Swift had seen a black wolf that "was so sassy and impudent" that they felt strongly tempted to

MINER'S CABIN—BIG HORN BASIN.

"puncture" his "nasty carcass," but they had refrained for the sake of better game. The Doctor and Mead had found a salt lick within a mile of camp in a deep cañon.

They had not been able to detect anything peculiar about the flavor of the water, but the elk and deer evidently had, for they had worn a deep hole around it where they had come from the cañon and "pawed and licked," etc., etc. There was lots to talk about and the boys munched away at their rough mountain grub and chatted and laughed, and munched and chatted, just as a set of jolly sportsmen would under such conditions. Then they put their pans and knives and forks away without washing—just as hunters generally do under such circumstances—lit their pipes, spread themselves out on the grass, already a little damp with dew, and prepared for the usual interchange of ideas, experiences and hunting yarns.

S. H. GREENE.

PORTLAND, Oregon.

[TO BE CONCLUDED.]

What about Squirrels this Year?

CONKLIN STATION, N. Y., Sept. 11.—In twenty-five years' hunting I have never seen so few squirrels at this season. Millions of nuts of all kinds. Have got fourteen grays, but have scouted about ten half-days to do it. They may come later, but I doubt it. M. T.

A DOUBLE IN MOUNTAIN SHEEP.

COME with me, dear reader, to the interior of a miner's log cabin in the northern end of the Big Horn Mountains in Wyoming. Around a rough table, in the center of which a candle placed in the neck of an empty beer bottle sheds the only light—for it is after supper—sit four prospectors and hunters engaged in a social game of "high-five." In the corner occupied by the stove Frank, the cook, is busy washing the dishes after the evening meal, while on two of the bunks which occupy one side of the cabin three more hunters, the writer among the number, are half sitting, half reclining, upon buffalo robes and blankets, watching the game of cards which their friends are engaged in. The light shed by the single candle produces strong contrasts of light and shadows, and the whole scene, if reproduced upon canvas, would require the brush and genius of a Rembrandt to do it justice.

Few words are spoken except such as have reference to the card game. Finally Billy J., one of the players, addressing me, says: "Well, Mr. F., are you going with

WASHING GOLD.

me after those sheep to-morrow?" to which I jokingly reply that I'd go if I were quite sure that the sheep whose tracks Billy claims to have seen are wild and not tame ones.

Billy and Jake had been hunting that day about 5 miles northwest of the camp. They had killed an elk and brought the venison home, and furthermore stated that they had scared a large band of mountain sheep which had unfortunately winded them before they had got sight of them.

It seemed strange indeed that such wild game as elk and sheep should still abide in the neighborhood of the camp, which at that time was peopled by at least fifty miners and prospectors, who when fresh meat was needed took an off-day and a turn at hunting to supply their larder. Still, I knew from experience that deer and antelope were yet reasonably plentiful, though of course very wild, and finally concluded to go with Billy and Alex. W. next morning and see whether we could not get a sheep.

Bright and early we intended to start, but a strict regard for the truth compels me to state that it was 8 o'clock before we left, because my horse had strayed during the night and had to be found first. Poor Sorrel Jim! A couple of months later and he laid down afflicted with some mysterious disease and died. He was a first-rate hunting horse, gentle, sure footed and of great endurance, and for a Western horse rather good-looking.

Well, as I said, it was 8 o'clock before we started. We took a lunch along and also our canteens filled with water, for there was none where we intented to hunt. The trail led us first past the base of Big Bald Mountain, then in a northerly direction to the headwaters of Porcupine Creek and finally west to the base and up the side of Medicine Mountain. There the stiff climb and the rarified air of this altitude—some 10,000ft. above sea level—soon told upon our horses, which we had to rest every few minutes to let them regain their wind. As the weather looked rather threatening in the morning I did not take my camera along, and of course have since regretted that fact. The view to the west of Medicine Mountain is simply magnificent. Some 180 miles away the main chain of the Rockies, snow-covered and looking blue in the distance, can be distinctly seen, enabling me to point out to my two companions the country where I had hunted the previous fall—in the Sierra Shoshone. At our feet lay the Big Horn Basin. So clear and transparent was the atmosphere that all the more northern affluents up the Big Horn River, the Stinkingwater, the Grey Bull, Gooseberry Creek, etc., could be distinctly traced to their sources, looking like blue silk threads among the reddish-yellow coloring of the surrounding Bad Lands, while here and there small fringes of green denote where a few cottonwood trees have found water and soil sufficient for their existence. The sublimity and color effect combined in this view I have never found elsewhere. No wonder then that the former inhabitants of the country, the red men, used to come here to worship their deity. On the very top of Medicine Mountain can still be seen the so-called Medicine Wheel, the plan and general arrangement of which bear a striking resemblance to the famous Calender Stone of Old Mexico. As the name implies, this Medicine Wheel is a circle composed of loose stones. In the middle of it is a hut (also of stone) from which spokes of stones radiate (like in a wheel) to the circumference, there terminating in smaller huts. It is said that these smaller huts were, during the religious ceremonies, occupied by the medicine men of the different tribes, while the larger hut in the center was supposed to be the abode of Manitou. The wheel appears to be of great antiquity. The nearest Indian tribe, the Crows, whose reservation is only a few miles distant, know nothing about its age, and the former inhabitants of the country, the Sioux, say it was on Medicine Mountain when they and their forefathers occupied the land.

Medicine Mountain itself is evidently an extinct volcano. Our horses threaded their way to the top among numerous funnel-shaped craters, which were from 6ft. to about 20ft. in diameter, and here we found, sure enough, fresh signs of sheep. It was certainly a good locality for those animals, though at no place does the mountain rise above timber line, like its neighbor, Big Bald Mountain, does. We now tethered our horses and began to hunt afoot. I was to walk along the very top of the ridge while my two companions were to hunt a couple of hundred yards below me. We had hardly left our horses and had not yet separated when I, being slightly in advance, distinctly smelt game. Now, this statement may seem incredible to some Eastern sportsmen, but I nevertheless affirm that I have on more than one occasion distinctly smelt elk, deer and sheep before I have ever seen them—that is, of course, when the wind blew from the game to me, as it did on this occasion.

I motioned to my companions, who acknowledged the scent, if such an expression is permissible under the circumstances. A minute or so later I saw three sheep—all of them rams—a couple of hundred yards straight ahead of us and some 70 or 80yds. below the top of the ridge feeding among some dwarfed elders with which the side of the mountain was more or less covered. A minute inspection with the field glasses showed that they bore fair heads, and a stalk was at once arranged. Directly above the sheep the mountain was comparatively flat and level, and as the wind was in our favor we safely reached a point where, sheltered from view by the low branches of a cedar, we had gotten within some 80yds. of our game. Another look of observation now showed me that not three but eleven rams were feeding right below me, all unconscious of danger. Asking Billy to take the glasses and watch the result of the shot (Alex W. declaring that he did not care to shoot) I prepared to slay the biggest ram. Well did I know that I, as the beast was almost directly below me, had to be very careful not to overshoot, but was hardly prepared to hear Billy's "right over his back" as the right barrel of the little .40 Express woke the echoes of the mountain. Hurriedly aiming the left barrel, loaded with a solid bullet, at what I thought almost the feet of another ram as they rushed past below me, I saw him stagger to the shot, but he recovered himself in an instant and went on with his mates.

Quickly reloading, I ran along the edge of the cliff to obtain if possible another chance at the rams, which had gone in the direction of where we had left our horses. As I reached the shelter of a pine tree I saw on the small plateau, slightly below and not 40yds. from me, my wounded ram. He was walking along looking very sick, with his shoulder all covered with blood. To make sure of him I gave him the right barrel of the little Fraser behind the shoulder, to which he succumbed at once. The noise of the shot brought the rest of the band into view again, galloping wildly past. Selecting a ram with a good head, I aimed a trifle ahead of him and saw him go down all of a heap. Then Billy began to pump lead from his Winchester at the now thoroughly demoralized band, but without result; and Alex. W., whom I had lost track of since my first shot, was also now heard from, firing three or four shots in rapid succession. When he came to join us he told us that he had wounded a large ram, shooting him in the sticking place, and that he had found blood. While he and Billy tracked the wounded ram, whom they followed for over a mile, but finally lost, I sat down to admire my prizes. Was there ever such luck? The whole thing, from the time we began to hunt afoot to the killing of the two rams, had hardly occupied twenty minutes; and furthermore, these accommodating

IN THE TONGUE RIVER BASIN.

sheep had run right toward our horses to save us the trouble of packing them, and here two of them were now lying dead within 10yds. of each other. How I now wished for my little camera! Surely St. Hubert had been my patron saint that day, and I duly pledged the old saint in a tumblerful of sherry.

When my two companions returned we gralloched the two rams and packed the hindquarters and the heads on Billy's horse, leaving the forequarters to be called for the next day. Then we alternately walked and rode back to camp, which we reached in good season. The heads of the two rams, the horns of which measure, one 14½, the other 14in., while nothing extra as to size, are nevertheless among the most prized of my collection, bringing back to my memory my shortest and at the same time my most successful stalk after that wariest of all our mountain game, the bighorn of the Rockies.

PAUL FRANCKE

An Old-Time Lobster's Claw.

OVER forty years ago, Elias Totman, of Phippsburg, was fishing off Bald Head, Small Point, when his hook caught in something heavy and he began to pull up a dead weight that might have been a small anchor. Imagine his astonishment when a huge lobster came over the side—a lobster so big that it weighed 35lbs., and its claws were 13in. long and 9in. broad. The lobster was boiled in a wash boiler because the family kettle was not large enough. About six years ago Mr. A. Y. Johnson of this city came into possession of one of those great claws, that has been kept in the Totman family all those years. The other day he gave the claw to Mr. Henry Sargent.—*Portland Daily Press.*

ORIOLES AND BIRD SHOT.

Englewood, Sept. 18.—*Editor Forest and Stream:* "It's the unexpected that happens." Who would ever have thought that John Burroughs, that lover of nature, was endowed by his Creator with such a niggardly supply of generosity that he could refuse an occasional grape in return for the pleasure he ought to receive from the songs and the beauty of the loveliest of all our summer birds—the oriole? I quote from the New York *Tribune* of this morning: "John Burroughs says that the bright and beautiful oriole is an enemy of the grape, consuming enormous quantities of that fruit, and he has taken to shooting those that visit his own vine and fig tree with No. 1 bird shot," etc. (I presume the shot part is the editor's!) Every man of intelligence knows that all our summer birds must eat to live, and if they cannot find insects will live on seeds and fruits.

That beautiful little meadow songster, the bobolink, after doing his meritorious work among the insects at the North is slaughtered by the million because he depredates among the rice fields at the South. The mockingbirds also make terrible havoc among the peaches and other fruit, and the market gardeners at the South say they are forced to kill them in self-defense, and in these two cases the slaughter may be justified. Our catbird is the most provoking fruit destroyer in the North, and the robin is nearly as bad, but they do not commence on the grape until it ripens, and from that time until the crop is picked they can hardly do damage enough to warrant our killing them. If every bird that steals a grape or cherry now and then is doomed to capital punishment for the slight offense, our country will soon be like England, where every boy robs every bird's nest that he finds.

The beautiful and fascinating oriole has always been my special pet, and I doubt whether any one has studied his habits more closely. About the time that grapes begin to ripen he begins to pack his trunks for his annual winter visit to the South; but whether they go or stay it matters little, for they are not only "few and far between," but very small, and the idea of their "consuming enormous quantities of grapes" is simply preposterous. He is essentially an insectivorous bird and ought to be protected both by sentiment and law. Didymus.

Adirondack Wolves and Panthers.

Carthage, N. Y., Sept. 19.—*Editor Forest and Stream:* In the first week in June I had a trap set for a bear. I caught a wolf in the trap set for the bear; he was quite a large one, and I should judge by his teeth he was quite an old one. The past winter I saw tracks of several. I received the bounty, $30, from St. Lawrence county on the wolf.

In October, 1873, I met Verplank Colvin at Deer Lake, now known as Lost Pond. I and my brother, John Muir, got many wolves and several panthers that fall, and have got one or two panthers each year for several years since; sometimes caught them in traps, once six with a dog. When closely pursued by a dog they will go up a tree. In my opinion there are not many wolves in the Adirondack forest now. George Muir.

Bullfrog and Duckling.

Rouse's Point, N. Y.—I suppose it is quite a common thing to see a big duck swallow a small frog, but how many readers of Forest and Stream have seen the tables turned and the big frog swallow the small duck? I had often read of such a thing, but didn't put much stock in it, till one day this summer on going down to my boat landing I spied a big bullfrog. He sat so quiet that I thought I would poke him up a bit; but on reaching down to him I saw that he had a young duck partially down his throat, in fact, all that remained of ducky was his two legs and a bit of his tail sticking out. I took hold of one leg and after dancing Mr. Frog in the air awhile, he let go his grip, after which I put an end to his dieting on young duck. W. McComb, Jr.

[Why?]

Says the Dog to Himself.

It is unjust to whip me for not obeying when I do not understand.

It is unjust to blame me for working badly for a master of whom I am afraid.

It is not kind to feed me poorly and house me worse.

Neglect after a hard day's work is poor return for good service.

A master who is cruel to me would be equally cruel to his neighbors were they as weak and defenseless as I am.

When necessity presses men to steal, I cannot expect to be better than they when my stomach craves food.

Prizing a dog for his commercial value is often mistaken for genuine affection.

Game Bag and Gun.

CHICAGO AND THE WEST.

The Death of George Fulton.

St. Paul, Minn., Sept. 18.—News of the saddest sort reaches me by wire from Mr. O. C. Guessaz and Mr. J. M. George, of San Antonio, Tex., announcing the death of Hon. George Fulton, whose funeral occurred Sept. 13. The telegram said, "All Texas is bathed in sorrow." This might well be, for Texas had no nobler nor more esteemed and distinguished son. I made mention last winter of the royal hospitality Mr. Fulton extended our hunting party at his ranch home near the Gulf coast. Ours was but one party of many whom he has thus entertained, as only he could do, at his hospitable and elegant home. There will be many a heartache away up in the North country as well as in Texas over this news.

Mr. Fulton was a royal man, a man with no littlenesses in his body or soul. As a ranchman he combined all the dash, the courage and generosity of the old days with the elegance and refinements of the present days. No Northern man I ever met could be the host George Fulton was. As a man of affairs he was one of the best known in his State, and already honored in political matters, he was fast rising into yet greater prominence in the councils of the ablest men of once the greatest of commonwealths. He was barely of middle age at the time of his death, and the successes of life, all the things a man likes to gather as fruitage of ambition, were just in his hands. He needed no more to make him happy, however, and had he lived twice the natural span he could have done no more toward being a man worth admiration, a very prince among his fellow men. Mr. Fulton was one of those rare men whose presence remains with you after you have left him. Time was a small element in the friendships he inspired, and even to those who knew him but for a few days he always seemed near, plain, close at hand, easy to call up in clear picture. For his hundreds of friends in this country, his thousands of friends in the Southwest, he will long days after to-day continue to remain thus clear, thus near, thus dear, and all of those will know that all of this is written in genuine feeling, and that it is the voice not of one man, but of very many. There is no man to take the place of this shining work that death loved. All we can do is just to remember him.

Shake-up for "Sooners."

From Chicago I have word by letter and daily dispatches of a great shaking up of the illegal shooters on the Fox Lake chain of waters in the northern part of Illinois. The Illinois duck law was up on the 15th, and many dozens of shooters were out before the crack of dawn to see what birds or shadows of birds they could shoot at. There was a lot of shooting of this sort Saturday and Sunday, and a great deal of shooting after sunset, until it was too dark to see at all. This has for years been the custom around Fox Lake, such shooters being ignorant or careless of the fact that the Illinois law forbids shooting at wildfowl before sunrise or after sunset. This year the State warden, either assisted or led by a big force of deputies, got out into the marsh and arrested a good job lot of the "sooners," thereby creating a big howl around Fox Lake, Grass Lake and all that system of waters. Among those taken in custody were J. Weber, J. Mattern, Fred Willett, Gus. Carlson, George Keller, F. W. Wagner, Geo. Mason, etc., etc. F. W. Wagner, of 673 Wells street, Chicago, was arrested by deputy S. L. Hough, who seems to have cut a good deal of ice along in this and other raids. Wagner was arrested and fined $10 for shooting after sunset. O. W. Richardson, a Channel Lake summer cottager who does business in Chicago, had the misfortune to have his boat, Katydid, a very nice one, together with a good outfit, confiscated by the same disrespectful hands. He thinks it real mean that this should be thus. He says there were 300 guns out before daybreak, and that no one knew it was wrong. He says a man of his had borrowed his boat, but even that man had not fired a shot. [He did not need to, under the statute, for he could "pursue with intent," etc., etc., and thus be guilty.] George Mason, 100 North Clinton street, Chicago, president of the Excelsior Iron Works, was arrested by Deputy S. L. Hough on Saturday, a day before the law was out. He lamely says that it was his little niece, with her "toy gun," that was the wicked one, she having killed eight rail and some blackbirds. [Illegal to kill blackbirds, too, George.] Mr. Mason claims that rail are not waterfowl (if he will look at the law he will find they are), and says he is going to engage in bitter, bloody, cruel war, yes, even in Waukegan Circuit Court. Still, others who do not like the indignity of being arrested like common people threaten to prove the game law unconstitutional and dead wrong. All of which is good stuff for game protection. The more the matter is advertised, the better for the birds. There would be fair shooting even at Fox Lake to-day had even so poor a law as the Illinois statute been observed since its enactment. As it is, continued night shooting from open water blinds, shooting in and out of season, has left it so that a duck had no chance to light and feed or rest. When ducks cannot feed or rest, they leave. The hotel men and cottagers who have allowed the law to go unenforced have lost money and lost sport too by it. These waters are naturally great ones for fowl, but they have been so harried the only wonder is there is a bird left.

Confiscating Guns.

The Chicago *Tribune*, to which at this distance I am indebted for most of my facts on the above, has one statement which is at least curious in regard to the method of punishment of some of the guilty parties in these raids. It quotes Mr. R. A. Dandliker as saying:

"I was neither arrested nor fined. My son Rudolph, aged 12, and a 13-year-old friend, Edward Reber, left my residence on Crab Apple Island, Fox Lake, in a boat on Saturday morning to shoot rail. The game warden caught them and took their guns. I went over to the Columbia Club and paid $10 for each boy. They had killed two rail. Warden Blow said he would straighten out the matter and there was no need for us to go to court."

If Warden Blow is "straightening out" these things and assessing fines himself instead of taking his prisoners before a justice and having them tried in due process of law and under due record of the law, he is doing something illegal and wrong, for which he has not warrant of law nor support of sportsman sentiment. Within the proper construction of the law, all sportsmen will commend his deputy wardens and him, and wish more power to their arms. It is certainly a good piece of work they have been doing up Fox Lake way.

Was a Little Slow.

Some timid and anonymous gentleman writes me about Mr. Crane's story of the Dutchman and his lost drum, which was published in Forest and Stream of Sept. 14:

"This is too bad for your friend Crane, for the story appeared in the London *Punch* twenty-five years ago, with a Scotchman as the hero, and the Lord knows from whom they borrowed it. A man is pretty hard pushed when he has to steal funny stories from an *English* paper."

That's right. But my anonymous friend has his data confused. Dave Crane (I am anonymously informed) wrote the story for *Punch* many years ago, and it took the readers of that paper twenty-five years to see the point; so he told it again over here. I admit this was a little slow.

The Safe is Oiled.

A while ago Billy Mussey went down East, to Philadelphia, and New York, and Boston, and Coney Island, and Scranton, and all those cities, to learn all he could about fitting up and running the best kind of a billiard hall. So after he had told them some things he came back home and said he guessed he would have to think it out by himself. He thought quite a while, and then with a wild whoop he tore his old place all inside out and began refurnishing it with cut glass tables, and silver cues, and gold cuspidors, and everything of that kind you can think of. Benches were no longer good enough, so he put in about 700 jeweled chairs with silk bottoms. Everything was new and elegant, and knowing the boys would be scared to come into such a palace, Billy had an informal opening, for ladies and gentlemen, on Thursday, Sept. 12, so as to get the people sort of used to the look of things. The regular opening was Saturday, Sept. 14, and by this time the sportsmen of Chicago are back in the home from which they were ejected when Billy tore up the carpet. We all read of the "sportsmen's paradise," but the Chicago shooters say that it is at 106 Madison street. It is said there is not a cut glass billiard table in America outside of Billy Mussey's hall. Everything is new—with one exception. The old safe has not been replaced, and no improvements have been made on it, except that the hinges have been oiled a little. Drop a $100 in the slot, some cold day next winter, and see it work.

In the Northwest.

Sept. 19.—Great cities these two of St. Paul and Minneapolis, and a great country this Northwest of which they are the capitals. I imagine the genuine Down-East man who has never been out West this far—if indeed in these days of cheap and rapid travel there is any such man left—would be surprised to see what a pitch of civilization is struck here. The cities are cities in every sense of the word, great and wonderful cities in a great and wonderful land. Great business industries, great fortunes, great luxury, great intelligence, all are here. Above all, these are great sporting towns. This is far enough for one to see at his best the real support of sportsmanship, the amateur sportsman, who goes into sport because he likes it. I do not mean to say that the amateur sportsman is not seen of equal grade in the older communities further to the east, but that he is not seen in anything like equal numbers. The further west you go, the greater is the per cent. of amateur sportsmen to the population. Here you will find a very large per cent. of the business and professional men devoted to outdoor field sports of some sort—to the gun, rod, sail or paddle. There is no fishing country like Minnesota, and on its thousands of lakes the yachts and sailboats are many more than thousands. The shooting is no longer what it was, but we must remember that when a Minnesota man speaks of poor shooting, it may be sport which to an Eastern man would seem gloriously good. There are at least grouse and fowl enough, so that apparently every other citizen owns dog and gun, and very shrewd judges and good handlers of both one will find these citizens, too. The quality of the sportsmanship here is good. The breath of the city has not yet overcome the fresh, free breath of the prairies. These cities are on the edge of the prairies, the big West toward which so many have turned. I don't know whether it is the surroundings of prosperity here in the cities, or whether it is the air of hope and vigor that blows in from the prairies, but surely one cannot stay here long without getting back many hopes and ambitions and beliefs in his ability to lick the world. With the privilege of beginning over again in some of his sporting experiences, who could not gladly settle down here, pitying the staider folk of the completed East, where the fight and the fun is all over, and nothing is left but to step with the machine. You don't hear of men going back East in ripples and waves and seas of emigration. The only pity is that there is not a million miles of the old West of America extending on out instead of the Pacific Ocean. That ocean is surely a mistake!

But it is all too modern. My Eastern friend perhaps does not believe, for instance, that he could get all the modern wrinkles in sporting outfit so far West; yet he would be in error. There is not so large nor so great a show window in the whole sporting goods trade in New York city as that of Wm. R. Burkhard at St. Paul, and there is only one (Spalding's) which approaches it in Chicago. And M. F. Kennedy & Bros. are not content with one modern and up-to-date sporting goods house, but have two, one in each of the Twin Cities. And they invent things out here, too, as see Mr. Jas. Boyd's shell box with revolving top, which acts as a shell box, an ice box, a cigar box, a tackle case, a lunch box and a piano stool all in one. You have seen pictures of the man who wanted to be shot up in the air on a spring so that he could be nearer the "sky scrapers?" Well, if you touch a spring in the lid of your Boyd box, the spring does shoot you up, seat and all, to a position about 15in. higher, so you see clear of your blind and swing clear on both birds in your doubles. It is a good thing.

But always inventions, and more inventions, and modern stores where for next to nothing you can get all sorts of things to get the best of the birds with. It's a wonder we have any birds at all. But who is going to invent a million-multiplying, incubating machine, to give the boys some birds to shoot at?

The birds ought to be preserved, there is no doubt of it. I am so firmly persuaded of that that I think I must, now that I am so near to my old friend, the prairie chicken, go out and kill a few of him, and smooth down his feathers, and pretend to be sorry I killed him, then eat him. And when I go I shall take the best sort of gun and the best sort of ammunition, and I shall shoot with the best sort of care. For I do not want to miss my chance at pretending I am sorry.

Chicken Grounds.

A gentleman just down from Pembina, N. D. (Major J. M. Taylor, of New York), says they had very good sport at that point this week. Dr. Wm. Richeson, of St. Paul, is just back from a shoot near Red Lake Falls and Carthage. I asked him what luck and he said:

"Very poor, not much shooting. We only got 100 birds in four days."

Then I asked him how many guns shot, and he said two! If 1,000 guns had luck as good as that, and they shot for thirty days, how many birds would it take? We can no longer have the big bags of the past days.

Dr. Richeson said that if one would take the spur of a new road which is building northeast from Red Lake Falls, and go up it along the creek bottoms for abou

thirty miles, he would get into new and good chicken and grouse ground.

Several private cars have been at Argyle, Minn., with hunting parties, and there were two special car parties also in at Red Lake Falls last week. The latter were not getting many birds. All these points are well up toward the northern part of Minnesota.

I am advised that a drive to the lakes north of Detroit Lake, at Detroit, Minn., will give good duck shooting in season. There is a good flight comes down the State along that chain of lakes. This flight does not come down the Mississippi River, but down the Missouri.

Fall Celebrations.

This seems to be a great country for fall harvest celebrations. Last week we had the State celebration for Minnesota here. On Sept. 24–27 the James River Valley fair will be held at Jamestown, N. D. As was the case here, there will be a target tournament, modern and well conducted, which will be one of the special and important features. This will be a two days' shoot, Sept. 25 and 26, under the management of Mr. C. E. Robbins, secretary of the North Dakota State Sportsmen's Association, a prominent business man and sportsman of Fargo, N. D. In spite of the fact that the shooting season is now on, this event will no doubt attract a nice little gathering of shooters at the trap.

The Wave of Shooting Travel.

The wave of Eastern shooting travel—it is an immense one, bigger than most people know—has not yet reached its height. On the other hand, most of the local chicken shooters are either now afield or back from their fall shoots. The birds are not yet too wild for sport with the dogs, but before long they will begin to go up wilder. Then for the big, rocking, cackling cocks on a sharp October morning! When you stop one of that sort you've really done something. And you must not forget to pretend you're sorry. I am going to be sorry about twelve or thirteen times some day this week, if I have luck, if I can hit a chicken any more. But if I can't hit 'em, I'm going to be a good deal sorrier.

It was the Same in the Past.

CHICAGO, Ill., Sept. 14.—Mr. John Stockton, of Chicago, a sportsman whose experiences take him back a decade or so beyond those of a very young man, the other day unearthed among his belongings a bit of paper which caused him to indulge a bit in reminiscences. He thinks the little newspaper clipping was printed in Chicago away back in the '70s, probably before the fire. It was written by a friend of his, Mr. E. I. Tinkham, cashier of one of the banks here I believe, and a sportsman of the old set which anteceded most of the sportsmen of to-day in Chicago. Mr. Tinkham has been dead for some years, and we may well regret that we never knew him, for he seems to have been a fellow of most excellent humor. Mr. Stockton thinks that the matter was probably never really published in the New York *Commercial Advertiser*, but was quoted from that to add color to the story. The little quip is very neatly done, and speaks best for itself.

The New York *Commercial Advertiser* publishes the following letter, received by a well-known Wall street banking house from its correspondent in Chicago:

"TWENTY-SECOND NATIONAL BANK, Chicago, Oct. 27.—Messrs. A. B. C. & Co., No. 166 Exchange place, New York.—Dear Sir: At the request of your senior partner, who starts this day on his grand duck-hunting expedition to the Missouri River, I write to ask you to sell seller sixty days—300 mallard ducks, 100 butter balls, 300 teal, 400 canvasbacks.

"In consequence of the probable success of his party, he anticipates a great decline in their value, and he wishes to take advantage of the present high prices. To prevent any accident to himself, he is armed with a breechloader, and his companions are each provided with steel-clad armor to insure a like safety while in his neighborhood. He also desires me to say to yourselves and to the boys in the office who have families to provide for, that for a week at least he designs preventing the necessity of a visit to the meat markets on the part of either of you. I annex a statement of the probable result of his trip to Koshkonong. With great respect, I remain very truly your friend,

"E. I. T., Cashier."

Statement of the probable result of five days' shooting at Koshkonong of A. B. C., Esq., member of the N. Y. Stock Exchange, director of the Western Union Transportation Company, and Fellow of the Academy of Design:

Number of boxes of cartridges taken by Mr. C.	2
Number of cartridges in each box	250
Whole number of cartridges taken	500
Number of shot in each cartridge	75
Aggregate number of shot taken	37,500
Average number of shot required to kill one duck	3
Probable number of ducks killed on above basis	12,500
Number of ducks to be sold short	1,000
Number of ducks to be given to E. I. T., Esq., of Chicago	3
Number left over to be presented to friends in New York, Brooklyn, New Jersey, Mamaroneck, Grand Park and other foreign places	11,497
Number of special trains on Chicago & Northwestern Railroad required to bring ducks	5
Probable rise of Chicago & Northwestern Railroad stock in consequence of increased earnings growing out of this trade, per cent	9
Amount of semi-annual dividend of Chicago & Northwestern Railroad warranted on above estimate:	
On common stock, per cent	4
Payable in stock	5

CHICAGO, Oct. 27, 1870, E. E. E. I. T., Statistician.

[The actual result of this grand hunt was a hurried telegram from the camp to buy in 999 of the ducks sold short. Like most other hunting and fishing excursions, the party was just one week too late. EDS. *Commercial*.]

Down the Mississippi.

Capt. J. P. McCarthy, of the 50ft. sloop yacht Frolic, now in commission at Chicago harbor, tells me that he has in view a trip down the Mississippi River this fall and winter. He wishes to make up a party of four gentlemen (each to pay only his pro rata of expense) who are able to spend two, three or four months on the cruise, as may be determined. The course will be up the Chicago River, through the old Illinois Canal, over the locks at Bridgeport, and down the Des Plaines River to the Illinois. A few days or weeks are to be spent shooting ducks along the Illinois, then the journey will progress slowly southward, with stops in Arkansas, Louisiana, or wherever the sport may demand. Midwinter is expected to find the party at the mouth of the Mississippi, and thence Frolic will either go to Cuba or proceed west along the Gulf to Corpus Christi. A magnificent trip could be assured, and I hope Capt. McCarthy may hear from several gentlemen and be able to make up his party for a very enviable way of passing the winter—the more so since he promises FOREST AND STREAM a story of the journey. Who wants to go?

Poisoned Fish to Eat.

Dispatches of late date from Anderson, Ind., say that market fishermen have been scooping out a lot of poisoned fish from the White River, and have shipped them to Chicago markets. The fish were killed or made helpless by the refuse from a strawboard mill.

Has Another Snake.

My friend, Dr. Taylor, of Brownsville, has sent me a section of a snake killed near that place recently. He says, "It is not a horn snake, but it may have a stinger. It seemed to fight with its tail. It is a new sort of snake here, color jet black and red." Examination shows this snake to be the same as that sent up by our Louisiana friend, though the colors have remained more vivid. I am willing to accept the belief of Mr. McIlhenny that the snake has no sting, and that the hard tip of the tail is only an extended and hardened scale. I want a little more ivory in these snake antlers, please. But send them along and after awhile we will get what we want.

Scarcity of Bluebirds.

Mr. F. F. Merrill, of Milwaukee, speaks to me of local dearth of bird life, notably of the bluebird. "I always note these things pretty closely," said he, "and this year I have only seen three or four bluebirds. I wrote to a friend in Mississippi and he tells me that the extremely severe weather last winter killed thousands of birds and that he has seen hardly any bluebirds since."

Elk Horns In Wisconsin.

Another large and perfect set of elk horns has been found near Palmyra, Wis., not far from Milwaukee. Enough of these antlers have been found in the last five years to establish the fact that this animal once ranged over lower Wisconsin and Michigan and no doubt over upper Illinois. E. HOUGH.

THE GAME LAWS OF PENNSYLVANIA.

BY JOHN W. HAGUE, A.M.

(A paper read before the Ornithological Society of Western Pennsylvania.)

MEMBERS OF ORNITHOLOGICAL SOCIETY: I have been highly honored by your president, Dr. T. L. Hazzard, by inviting me to read you an address upon the laws relating to birds. I have divided this subject into two general heads:

I. The game or edible birds.

II. The song and insectiverous, or non-edible birds, with the laws relating to each of these classes.

In discussing this topic I do not propose to give you the dry bones of the several acts of the Assembly of this Commonwealth, but will endeavor to clothe them in such form that it will be interesting as well as instructive.

The law, as a general thing, is a dry subject, but when it relates to birds there is always sufficient in it to interest and entertain every one who has ever thought upon this subject. Some one in the past has given this subject some thought, and the result was an attempt to make laws governing the killing of game birds and the fixing of certain definite seasons when such killing would be lawful. Crude as the attempt was, it resulted in great good. But I fear it was not begun soon enough.

Upon this historic ground where we now stand all sorts of birds in the dim past were wont to gather, nest and feed. The Indian began their slaughter; the white man continued it.

As the population grew and increased the territory of our songsters was narrowed, and they were subjected to more assaults of their enemies—not only human enemies, but the wild beasts as well.

Forests were cut down and their hiding places removed, until hawk, owl and beasts added their quota to those killed by the human race, more readily found, since their detection was made so easy.

I have not gone back into the misty past to dig up the ancient and obsolete laws, but I have taken those from the year 1878 up to those of the present time. In that year this law was enacted relating to quail:

No person shall kill, or expose for sale, or have in his or her possession after the same has been killed, any quail or Virginia partridge between the first day of January and the fifteenth day of October in any year, under a penalty of ten dollars for each bird so killed, exposed for sale, or had in possession.

This section remained in the above form until the 25th day of April, A. D. 1889, when some one, looking forward to the protection of this delicious bird, changed the date of the killing from Oct. 15 to the 1st of January, and made the open season begin Nov. 1 in each year and end Dec. 15.

Under the interpretation given to this section of the law, every one who had read it decided that it was contrary to the spirit of the law and its direct commands to have quail in possession after the date named. In the enforcement of this law it became necessary to carry it up to the Supreme Court of the State to get a decision, and it then became evident that some one had blundered. Who it was or when it was done we have no present means of knowing.

His honor, Judge Paxon, stuck on or stumbled over the adjective "same," and rendered a decision that killed and destroyed at a single blow or stroke of his pen every legitimate means of protection.

You can go, in season and out of season, along Liberty street and see the evidence of this harsh, cruel and unjust decision. The mother quail and her half-grown brood hang in bunches at the doorways, and no restraining power in our laws. It is a sad spectacle indeed, and it is not to be wondered at that every naturalist and ornithologist raises his voice to demand a revision.

It is only lawful to kill quail from Oct. 1 to Dec. 15 in any year, but the law of 1878, Section 32, provides that "a period of 15 days after the time limited for the killing has expired the holders of dead quail shall not be liable to any penalty under this act." As a matter of fact, this permits and encourages pot-hunters and violators of the law to go into the meadows and fields and kill quail that much longer.

There are always unscrupulous persons who will purchase them and encourage this unlawful killing, and there are no means provided under the law to stop it.

Is it any wonder that our quail, like the buffalo of the Western plains, exists only in small coveys, in isolated places, and then only under the protection of some naturalist or of a farmer who refuses to permit killing on his land.

Judge Paxon says "that quail killed or brought from another State can be had in possession or sold at any and all times!" So under this decision our quail are killed in our State, and had in possession and sold throughout the entire year, in the markets and in some stores, and when challenged by an officer of the law they present a commission man's receipt, that the birds were brought from another State. Hence, since quail may be brought from another State, so may every game bird in existence.

In this same act the wild duck and wild goose is mentioned, but it prohibits the killing of them with a swivel or punt gun, or any device except a gun that is raised to and fired from the shoulder.

On May 17, 1893, this law was altered and changed to prohibit the killing except on Monday, Wednesday and Friday of each week from the first of September until January first following.

The enactment of this law was a wise move for protection, and ought to have satisfied every sportsman in the land. But greed seems to be uppermost, and the bloodthirsty disposition of hunters cried out for more, and still more, until it would seem that only the death of the last fowl would satisfy their greed.

On the 16th day of April, A. D. 1885, another act was passed.

This one is more deadly than any other yet passed. It takes off the daily limit of killing every other day in the week, and extends the time from January until the first day of May following, so that instead of only having four months for lawful killing the time is extended four months longer, making a total of eight months.

You will also notice that in this act, as in others cited, the law does not prohibit the killing of these birds even upon the Sabbath day, a day above all others that should be sacred and consecrated to Almighty God, the maker of all.

Having cited these several laws relating to two classes of game birds, I need but to say that the laws relating to the others are similar in every respect. But these are sufficient for our purpose.

I now want to call your attention to the penal clause of these several laws quoted heretofore, and to show you their deficiencies and the loop-holes through which the violators escape the just punishment which ought to be visited upon them.

Sec. 9, act of June 3, A. D. 1878, says, and I only quote the penal clause, or so much thereof as to make it intelligible:

"Under a penalty of ten dollars for each bird so killed, exposed for sale or had in possession," meaning quail. Sec. 4 of the same act says: "Under a penalty of ten dollars." This applies to the wild duck or goose.

Sec. 3, act of May 17, A. D. 1883, says:

"Any person or persons offending against the provisions of this act shall be liable to a fine of twenty-five dollars for each and every offense, to be sued for and recovered before any alderman or justice of the peace."

And in the amendment approved April 16, 1885, there is no penal clause whatever. It is true that the 34th Section of act of June 3, A. D. 1878, says what may be done:

"Under this section the person desiring to put a stop to the unlawful killing must go before some magistrate and make complaint, and sign an affidavit charging some person with having violated some part of the law, and the magistrate is required to issue his warrant to the officer to cause the person to be arrested and brought before him, when he shall determine the guilt or innocence of the defendant, and if he is convicted he shall be sentenced to pay a fine and costs, and if he refuses to pay it then he shall undergo an imprisonment in the county jail one day for each dollar of the penalty imposed."

It would, indeed, seem that this was a perfect law, and that it contained every requisite, but as we scrutinize it we will find these defects, viz:

First. The violation is being done in some field, woods or forest, away from the county seat or from any village in the county, because the birds do not inhabit the streets of any of these places.

The wild ducks are upon the waters of pond or river, that are away from any cluster of houses or number of people. They would not be found in the river near the Federal street or the Seventh street bridges, between the two cities, or on the Monongahela River between the Point bridge and the one at Smithfield street; but they are found below the Davis Island dam or up the river above Sharpsburg or Brilliant stations, or above McKeesport, or some other place where the country is open and the river clear of crafts.

Second. You must go before some magistrate! A fortunate thing, indeed, if there is such a dignitary, but how in the world can he be found? And how far will you be compelled to go until you locate his honor? When you get to his home, fortunate indeed will you be if you find him at home.

I went one time to get a justice on Mt. Washington, South Side, Pittsburg, and I learned that he was a tipstave in one of the courts. Another was a clerk, and another a crier in one of the courts. I knew one who was an interpreter of languages in the courts; another a carpenter, who left his home to do an honest day's work; another one is a farmer, and so *ad infinitim*.

But suppose you did find one at home or in his office! Tell him what you want, and the chances are that he will not comprehend what you want; he will not know the law and will be unable to give you any relief; but if he is in the humor, and writes an information charging a violation, it will be defective and in the end result in the escape of the violator.

But if he gets what he thinks covers the case, a warrant will issue and no constable can be found.

Now, the constable may be a coal digger or mechanic of some kind and he likewise is away from home, and there is no one with courage sufficient to carry out the authority it contains and arrest the man.

But suppose all these have been overcome, and you start to the scene of the shooting, you find your men gone, escaped through these long, tedious delays. And as they were strangers the officer cannot find them, though he hunt far and near.

You have not arrested the man; you cannot take him before the magistrate; you cannot try him, and as he is not tried you cannot convict him, consequently you cannot fine him, and the whole thing becomes a farce, a delusion and a snare.

So you see that this section is deficient and defective like those mentioned before.

And so are all the laws relating to game birds, no matter by what name you call them.

The question naturally presents itself, if this is the con-

dition of the laws now found upon the Statute Books, what is the use of these laws; and if they cannot be enforced, why should there not be an entire new set of laws enacted?

The answer to this question will be properly presented at the right time and in the proper place.

We will now pass to the second head of our subject.

II. The song and insectiverous or non-edible birds, and the laws relating to them.

The beginning of our investigation will begin with the act of June 3, 1878, and Section 12, which says;

No person shall at any time within this State kill, trap or expose for sale, or have in his or her possession, after the same has been killed, any night-hawk, whippoorwill, sparrow, barn-swallow, woodpecker, flicker, robin, oriole, red or cardinal bird, or any other insectiverous bird, under a penalty of five dollars for each bird killed, trapped, exposed for sale or had in possession.

Section 13, same act, says:

That Section 12 shall not apply to any person who shall kill any bird for the purpose of scientific investigation, or have the same stuffed and set up as a specimen.

From the passage of this law until May 14, A. D. 1889, the law remained unchanged, and no attempt was made to enforce it until within the last two years, when all the laws relative to song birds was put into motion.

The Legislature of 1889 enacted *inter alia* this law, the caption of which is:

An act prohibiting the killing or taking of song and wild birds, except in certain cases, and providing a penalty therefor.

SEC. 1. That no person in any of the counties of this Commonwealth shall kill, wound, trap, net, snare, catch with bird lime, or with any similar substance, poison or drug, any bird of song, or any linnet, bluebird, yellow-hammer, yellowbird, thrush, woodpecker, catbird, pewee, martin, bluejay, oriole, kildeer, snowbird, grassbird, grosbeak, bobolink, phoebe bird, hummingbird, wren, robin, meadow lark, night-hawk, starling, or any wild bird other than a game bird.

Nor shall any person purchase or have in possession, or expose for sale, any of the aforesaid song or wild birds, or any part thereof, after the same have been killed.

Any person or persons violating any of the provisions of this act shall be deemed guilty of a misdemeanor, punishable by a fine of not less than ten nor more than fifty dollars, or both, at the discretion of the court.

Section 8 made the penalties recovered under this act payable to the county treasurer.

On the 15th day of April, 1891, this act was amended, making the *Passer domesticus*, the English house sparrow, an exception, and permitting this bird and the various kinds of hawks, owls and crows to be killed without mercy, making them outlaws, so that every man's gun could lawfully be raised and fired at them.

It also makes half of the penalty recovered payable to the informer who would sue for it.

Having quoted these few laws for the protection of song, wild and insectiverous birds, I have given you every law upon this subject to be found in the laws of Pennsylvania.

In these laws you will notice the adjective "same" is continually used instead of a noun or a personal pronoun.

This abominable use lead to the killing of all the protection that the law gave to game birds, and here we find the laws relating to our song and insectiverous birds infested with the same complaint, and when this law met such disaster at the Supreme Court what hope have we that our laws relating to the song birds will fare any better before that august tribunal?

I tell you I should fear to present this subject there, with the hope that I would bear off the palm of victory.

A close examination of these laws would lead you to think from the wording of the act that you could have a part of a live bird in your possession lawfully, because the act says, "or any part thereof after the same had been killed."

How the writer of that act or the members of that Legislature expected persons to have the head, wing or leg of a living bird in their possession without killing the bird I am at a loss to understand. But such is just the interpretation of the expression used.

Now, what shall be said about the ambiguity of the other phrases of the law: Can birds be caged under this law?

I am of the opinion of this act that the framer of it intended to express in this act a complete protection to this class of birds, because he starts out at the beginning of the act by saying:

Whereas, The wilful killing and taking of song and wild birds is the cause of great injury to the agricultural interest on account of the increase of noxious insects, which would be otherwise destroyed by said birds.

Birds that are killed certainly cannot destroy these noxious insects, so hurtful to the agricultural interest, and if they cannot how can birds caged up and hung in the parlors and rooms of our city friends destroy the noxious insects in the country destroying the fruit crops of our farmer friends?

This perhaps may be thought to be rather broad, as it takes in the scope of the entire field, and would shut out every object, no matter how beneficial and beneficent.

As there are exceptions to every rule, so there are exceptions to this.

I may say right here that any object looking forward to a scientific investigation of the nature, structure and characteristic of birds as regards their habits, plumage, nesting and methods of breeding, and their seasons and flights, ought to be encouraged, and provisions made for its careful pursuit and investigation by scientific and careful men.

One of the ways to do this is, of course, to be permitted to kill at any and all seasons, so as to get birds in different plumage and at different seasons of the year, and at the different ages of the birds.

Another method would be to be permitted to gather the eggs of the different classes of birds and to appropriately label and describe them.

Last, and a method I would cheerfully advise and recommend, would be the establishment of an aviary, to be located in a public place for the edification and instruction of the public at large.

With the parks of our twin cities within reach of each other aviaries could be constructed and put in charge of naturalists, who would care for and properly feed every species of native and foreign bird, and have it in an atmosphere suitable to its nature.

I do not think that I overstep the bounds of propriety nor anticipate when I say that the authorities of Schenley Park contemplate such an aviary, and that one of our best local naturalists, Mr. George Atkins, of Pittsburg, has been consulted about the plans for such a place.

I am aware that he and his wife, who, by the way, is a most excellent taxidermist, have sent many perfect, excellent and costly specimens there already, and contemplate sending others.

When I quoted Sec. 7 of this act, you may have noticed that it contained the penal clause, and if you did, your attention must have been called to the fact that it contained no remedy providing for failure to pay the fine imposed.

But such is the case. If a man were convicted under this law and refused to pay the fine imposed, no court in the land would have power under this law to imprison him for his refusal. The court is powerless, and the defendant walks out free to resume his depredations whenever and wherever he pleases.

To you, who are so interested in the protection of these useful and delightful companions, it would seem that every law is a dead letter. And so it is, and now what will you do, and what steps will you take to rectify and correct the defects that I have pointed out?

Permit me to call your attention to another part, that is unmentioned in all these laws relating to birds of both classes that I have named.

First. There is not a single officer in the State of Pennsylvania who is charged or sworn to enforce any bird law now in existence.

Second. There is not, and never has been, a dollar appropriated by the State of Pennsylvania to enforce a single bird law ever passed by its Legislature!

In all these laws there is a defect in the remedy to enforce them. What the law ought to state or express is something like this:

"Any person violating this law shall be fined five dollars for each and every bird killed; and the sum of five dollars for each bird found in his possession, dead or alive; and the further sum of five dollars for each bird caught, trapped or snared, or confined in a cage; and in case of default to pay the fine or costs, or any part thereof, the defendant shall undergo imprisonment in the county jail or workhouse for so many days or so many months, as may be desired."

With a law fashioned something after this form, have an officer appointed, whose duty it shall be to arrest every person suspected of violating this law in any respect, and authorize him to do so on view, at any place or at any time, and at all hours. Empower him to search every man who has been hunting or been in the fields with dog and gun. If he, the hunter, refused to expose his game upon the demand of the officer, and if he finds unlawful game in the possession of the hunter, have the officer take him to the office of a magistrate and make complaint, and have a fine imposed according to law, together with the costs of suit, and in default of payment commit the defendant to imprisonment in a county jail or workhouse.

Also, make a clause in the law to punish every offender who resists arrest or refuses to expose his game upon demand of the officer, and make the penalty to include both a fine, half of which is to go to the officer assaulted, and a term of confinement in the county jail.

Further, have the Legislature of the State make an appropriation sufficiently large to pay men who interest themselves in the protection of both game and song birds.

And while at it why not appoint them to serve as a game commission, who will have charge of this entire business; to give their entire time to it and to prescribe the rules and laws to govern and protect game.

Encourage the formation of gun clubs, to provide "game preserves," that they will stock and protect, where birds of all kinds can nest and increase, until the good times of long ago will be the happy hunting seasons of to-day.

In fact, to give us a fair sample of the times that Adam, the first man, had when he stood alone, the master of everything that breathed, surrounded by the greatest collection the world ever saw of birds of every kind, and whose sweet songs were so joyful that even the morning stars sang together.

What is more delightful than to be awakened from a refreshing sleep at the break of day to hear the sweet songs of the birds?

If you walk out in the early morning you will see off to one side a dark little bird, singing as if his throat would split, and away off in yonder tree another one attracts your attention, and you are enraptured; you are at peace with God and humanity! But in an instant you are at war, up in arms, belligerent. A man with his gun comes along and the sweet songster of a moment ago is dead at your feet. He has killed it! And for what? Only to try his gun. What ought to be done with a person of that kind? What punishment is severe enough for him? He throws it away, as he cannot eat it, and he walks off.

If you will permit me I will relate to you a case that came under my own observation in attempting to enforce the laws for the protection of quail:

One day two ladies came into my office, and after addressing me said: "There is a man comes out our way toward Castle Shannon every week. He brings a dog and gun, and he is shooting all the time, and we are sure he is killing all the birds. What sort of birds we do not know for certain, but we are satisfied he is killing quail."

As the time was August, I could not conceive of a person wanton enough to destroy game out of season. The message was repeated again some time in September, and I determined to investigate and see who it was who was doing the killing. Accordingly I arranged with a gentleman to send me word when the hunter came out again, and come in on the train if he had to get me word and could do it no other way, and I would pay him for his time and trouble.

The man came into my office one day on a run, and said, "The hunter is out there again, and we saw him shoot seven times, and are sure he has quail. Come to the train right away."

To the train we went, but no man. We waited until the next, and Mr. Hunter stepped off the train. I went up to the man, called him by name, and asked him what he had killed, and got the characteristic answer, "Nothing." I was not satisfied, and I thrust one of my hands into his pocket and drew out a half-grown quail wrapped in paper. I continued until I drew from his pockets the old quail and six young ones, and also a half-grown rabbit.

He had been having his fun, but when the magistrate got through with him he paid $75 of fines and the costs. It was a dear lesson, but was not as severe as it should have been.

An instance of the greed of men, as relate to the song birds, developed itself this summer when I was at or near Willow Grove, on the Pan Handle Railroad.

I called at a man's house, surrounded with three acres of excellent land, which had been purchased and paid for by the birds he had caught and sold, the whole being worth some $5,000 or $6,000.

He was invited to make a visit to a magistrate's office, some four miles distant, and he contributed $30 and costs, a mere nominal sum for the lives of hundreds of birds that he had captured, killed and sold.

These are but few of the samples that could be cited, but they are sufficient to show you the need of new laws, new officers and sufficient money to pay for such service.

In the limits of Allegheny county there are about seventy-five gun clubs, whose membership number upward in the hundreds, and whose combined wealth would amount to hundreds of thousands, and yet with all their wealth and membership the combined effort of them would not be to enforce these game laws or to prosecute a single violator of the laws.

The State of Oregon has a reputation among sportsmen in this country of being one of the best protected States in the Union, and more especially that pheasants are fully and completely protected.

In a conversation with a gentleman the other day he informed me that it was impossible to get a mongolian pheasant from there dead or alive. That no one could get even the mongolian eggs on account of the severe penalty of their laws. He said that the express company would not carry them out of the State under any consideration, but that he had to resort to most desperate measures to get a setting of eggs, and that his friend traveled over 200 miles into another State to get them shipped to him.

Having been advised of this severe law I became interested in it and looked it up, and I have the pleasure of quoting verbatim Section 1,935 of that law, which says:

Every person who shall between the 15th day of November and the 1st day of September of the following year kill any grouse, pheasant, mongolian pheasant, quail or partridge, except for breeding purposes, shall be guilty of a misdemeanor.

This is certainly a most startling declaration of the law, and one that will puzzle the brains of our best naturalists and ornithologists as to how they shall carry it into effect. It is the first time in my life that I knew pheasants had to be killed before they could be used for breeding purposes. It is also more startling since its perfection has been published all over the land, and held up to the lawmakers of our country as a model for them to copy.

Permit me to again refer to Section 7 of the act of 1889. I do this for the purpose of directing your attention to its concluding sentence, which says, *inter alia:* "* * * punishable by a fine of not less than ten nor more than fifty dollars, or both, at the discretion of the court."

What does this mean? Does it mean that the court shall impose a ten-dollar fine and then impose a fifty-dollar fine for the same offense?

It seems to me that such is not the spirit of the context. There is evidently something left out, and what could you imagine it to be? My construction of a completed sentence would be to add this, or something similar:

"* * * or to undergo an imprisonment for a period of —— days in the county jail, in default of payment of fine or costs, or any part thereof."

Any sentence added to what has already been suggested would make a complete law, and one capable of giving efficiency to carrying it into effect, and would create a wholesale respect for it.

Having virtually wiped out all the bird laws of this State, it is but natural that some suggestions should be made to replace them, and the following are offered:

Create, with enlarged powers, a commission of men learned in such legislation as will prevent the occurrence of the blunders and deficiencies which have been designated in this paper to supply laws which can be enforced by the properly designated officers at once, without resorting to the red tape business required by the present system.

Have this commission also to be men learned in the natural history of the birds, and also of mammals, so that everything relating to their nesting, plumage and flight would be carefully considered, and upon this commission let some of them at least be men learned in the law.

Have a uniformity of seasons when game birds could be killed lawfully, and limit the licenses to be issued by the prothonotary to naturalists and ornithologists, and men of like characters, and have their applications approved after examination by a society of recognized naturalists and ornithologists in every county in the State, and without such certificate to refuse to issue the license.

Upon the completion of the work of this Commission, have their work presented to the House and Senate of the State at Harrisburg to pass the laws recommended by them and not to allow any amendments by the members there, but to cut off the egotism of the blundering ignoramus who would add a proviso to suit his idea, or method of dealing with these laws. I have dwelt upon this part of the suggestions because I was in receipt from one of the honorable gentlemen who occupied a seat in the House a few years ago of a letter containing a dozen lines in which over half the words were misspelled, and in which there was an abundance of capital letters distributed in the wrong places.

I have mentioned this particular case because it is in conformity with what has been stated heretofore. I do not blame the poor ignorant men sent there so much as I do those who sent them. They are on the same parallel with the poor, old, ignorant, worn-out man who cannot scrape the streets any more, and the good intelligent people of the ward make an alderman of him. Some of them can hardly write their own name. I know one now who manages to get his name properly written, but somebody else must do the other part.

When the laws are made and approved by the Governor and signed, then have an appropriation of money made by the Legislature to pay for carrying them into effect. Don't have the great State of Pennsylvania go begging for a man to enforce them for charity or glory, but pay for the service and let it be *quid pro quo*.

As I hear some economist say, this will cost money, then it is suggested that the Fish and Game Commissioners be consolidated and made into one Commission, and let one third be fish men, another third bird men and the last third be men learned in mammal lore, and in this way al-

three branches could be covered, and good and perfect results could be obtained.

And in conclusion permit me to say, with these suggestions carried out we may see the days spoken of, when all the trees have the whistling songsters upon them and the morning air ringing with their sweet carols, such as have not been heard of in many long years gone by, and the State of Pennsylvania shall have a perfect system of laws for the care and protection of birds.

Shooting for Records.

SIDNEY, N. Y.—*Editor Forest and Stream:* What true sportsman does not read with contempt the accounts of performances of would-be "record" hunters. Will it never cease? In reading the eleven days' record of Geo. P. Finnagan, of Smithville Flats, one wonders why an intelligent man cares for the killing of some twenty partridges in one day, to say nothing of the slaughtering of 146 during the time mentioned, unless it be for a record. Should a man, because he has every day in the field, if he chooses, take more interest in the number he kills than in the sport? Delaware county, adjoining Chenango, can boast of far more game of every species than the latter—but thanks to true sportsmen, we have no "record" hunters. This section is overrun with foxes this fall, they having gradually increased during the past few years. In fact all game has multiplied fast during the past two seasons. B. SQUIRES.

September and October.

THE finest shooting grounds in the Northwest are on and tributary to the lines of the Chicago, Milwaukee & St. Paul Railway. The crop of prairie chickens promises to be exceptionally good this year; also ducks and geese. In northern Wisconsin and the Peninsula of Michigan splendid deer shooting is to be had.

The game laws will be changed in several of the Western States this year.

Full information furnished free. Address Geo. H. Heafford, General Passenger and Ticket Agent, Chicago, Ill.—*Adv.*

Don't Buy Your Outfit

IN the East if you are going on a hunting trip in the Northwest. We have everything you want in the sporting goods line, and our experience will perhaps keep you from buying a great many things you don't want.

We have all the modern Nitro Loads at Eastern prices. Don't encumber yourself with stuff until you get on your hunting ground. You can depend on us. Wm. R. Burkhard, 57 and 59 East Seventh street, St. Paul, Minn.—*Adv.*

Sea and River Fishing.

BOSTON RODS AND GUNS.

BOSTON, Sept. 20.—The season has closed with the owners of Camp Sebago. This camp was built last winter by a party of Boston merchants on the eastern shore of Sebago Lake. The camp is a delightful one, some fine photographs of which I saw the other day through the kindness of Mr. Fisher, of Harding, Whitman & Co., who was really the prime mover in getting up the camp. The main room is a large one, with a remarkable stone fireplace at the end, the opening of which includes a radius of 4ft. 9in. Only natural stone is used. The front is in the form of an arch. The company will build an icehouse this winter, including a refrigerator built into the same. On the whole the club has enjoyed all the salmon fishing reasonable sportsmen could ask for. One salmon of 11lbs. has been taken, the largest of the season. Mr. Dumaresq was the happy captor, and is high line for the season of 1895. Two salmon of 8lbs. have been taken, one of 7lbs., two of 6lbs., one of 5½lbs., three of 5lbs., one of 4lbs., one of 4½lbs., three of 3lbs., seven of 2lbs., one of 1lb., and one 3lb. brook trout, making twenty-four fish in all of a total weight of nearly 100lbs. The summer has been a very busy one with most of the club, and they have been able to be in camp but little more than in holidays. They have let their men go earlier than they anticipated this fall, for the reason that business is so pressing that they cannot spare the time to be in camp as they would like to be. Another season they expect to be in camp more and to greatly increase the record of salmon taken.

Now and then a sportsman is fitting out for the Maine woods, and will take his rod along, though it is chiefly for gunning that the majority go. Richard Loring, well known as a gunner in the vicinity of Boston, will start about Oct. 4 for a trip to some waters beyond the Katahdin Iron Works. He will have his fishing rods in his kit, but he does not propose to try them on trout. There is a pickerel pond where he is going, and pickerel in the fall he is delighted with. He says that he has had all of trout in September, October or later that he cares for. Here is another good sportsman who does not believe in September trout fishing.

The legal open season on partridges in Maine begins today, Sept. 20—the new law, passed last winter. Reports continue to come in of a good many partridges in Andover, Hebron, Paris, Auburn, Rumford, Rangeley, Kenebago, Upton—in fact, many of the towns in the western part of Maine mention partridges more plenty than for several years. The papers published in the eastern part of that State generally mention more birds than for several seasons, and numbered among these papers are such papers as are not specially given to booming the hunting and fishing. Hence their reports can safely be regarded as true.

Charlie Cook will leave for his vacation this week. With his wife he will go to Cornish, Me., on the Ogdensburg branch of the Maine Central. Then he will go further on to where there is good bird shooting. After Oct. 1 he hopes to secure a deer.

Another moose has been seen near Andover, Me. Geo. H. Cutting writes me that he means to try for the fellow in the open season. Doubtless there will be a number of hunters after him. He also writes that another camp is to be built in the Narrows of Richardson Lake, between the Stevens cottage and the Haines camp. The Portland & Rumford Falls Railroad is being rapidly pushed up the valley, and the cars are running as far as Houghton's. Beyond that point the road is being built through the mountains to Bemis. This road opens a new fishing and shooting region between Mexico and Bemis. It is a very wild region, and deer and partridge should be plenty. Several gunners talk of an excursion up that line this fall. One of the directors of the road says that the cars are to be running to Bemis very soon.

The lack of shore birds along the Massachusetts coast is still a matter of surprise to the gunners. Charlie Cook tells me of two gunners who have put in a couple of days at Anisquam this week without shooting a bird. Not even coot were flying. But a gentleman was on the car with me the other day who was telling a friend of a fine bag of golden plover and yellow-legs that he had lately made in the neighborhood of Ipswich. His name I did not find out.

Sept. 21.—The first bag of partridges of the season came to Boston to-day from Maine. It is early for such game—the open season in that State beginning only yesterday—but the gunners who killed the birds informed my informant that they were legally shot. They came from the line of the Grand Trunk, the gunners admitting that they boarded the train at Bethel early this morning. Since the bringing of partridges out of Maine is not legal at any time, I am not to publish the names of the lucky gunners. But they declare that they had had the brood spotted for some weeks by a man who acted as guide for them, and that they left Boston on the 19th and were on the grounds early on the morning of the 20th. They believe that they could have secured more birds, from the fact that one or two local gunners were on the ground soon after they got the first shots at the game. They say that partridges are plenty in that part of the country, but that woodcock are almost unknown this year. They think that some wet weather might bring out a few woodcock, but at present the woods and swamps are very dry indeed. The season has been so dry nearly all over southern Maine that the trees are turning very rapidly, and the leaves are actually coming off fully three weeks earlier than usual. It is suggested that the trees will be nearly bare early in October, and that deer shooting will be favored thereby.

Mr. Hal. Haskell, son of E. B. Haskell, one of the senior proprietors of the Boston *Herald*, is still at Allerton Lodge, Mooselucmaguntic Lake, where he will remain for the early shooting. Senator and Mrs. W. P. Frye are at their camp—Cupsuptic Lake—and are entertaining several parties of friends. SPECIAL.

SOME ANGLERS OF BANGOR.

FROM the standpoint of fishing and shooting there are few places in Maine so well situated as the big city of Bangor. Lying in close proximity to the great Aroostook country, without doubt the very best section of the State to-day for sportsmen, and also close to the celebrated Machias region, its people are singularly fortunate in the ease with which they can obtain the best of sport. These reasons probably account in a measure for the fine sportsmen who are found living there. It would be hard to find kinder or more unselfish gentlemen than I have met in that city. Prescott H. Vose is a genial representative of the class, and is a sportsman of the finest caliber. With B. L. Fowles, of Norcross, as both companion and guide, Mr. Vose has lately made a trip into the Aroostook country which proved unusually interesting. They went first to Norcross station on the line of the Bangor & Aroostook R. R. and then to Mr. Fowles's camps on Poins Island in Pumadumcook Lake. Here it might be said the trip really began with a carry to third Katepsconegan Lake, where they camped on the west shore. A splendid view of Mt. Katahdin was visible here through a notch of mountains on the northeasterly side. From this place they went on a three day's trip over the mountains to head of Rainbow Lake. In a small pond close to this lake they had the best fishing of the trip. It seemed quite filled with trout of good size, and from its remote position they think it has not been fished before. The trout rose steadily to their flies and proved very gamy.

Mr. Vose mentions as a feature of the fishing at that place the fine success they had with white flies after dark. On a stream running into Rainbow Lake they discovered a beaver dam which on inspection proved to be of marvelous construction. The little animals had built a dam about 6ft. high, making a pond of nearly two acres. They had cut down about twenty poplar trees, and of this number eighteen had fallen toward the pond as intended by the little architects. One of these trees was so large that they took the trouble to measure it, finding the stump to be 18⅝in. in diameter. They had many opportunities to shoot large game had it been the open season. Bear signs were very numerous and the sight of a deer became a common occurrence. The country over which they traveled was nearly all mountainous, and a good part of it has never been lumbered over. Mr. Fowles is an ex-member of the Maine Legislature, and it would be difficult to find a better woodsman. His camps on Poins Island are very comfortable, and he certainly has a wonderfully good sporting country near by.

Another Bangor party who went into the woods a short time ago consists of W. L. Miller, Chas. P. Webber and Ralph Brann, all of Bangor, and W. T. Jenkins, of Boston. They will be gone four or five weeks and went first to Moosehead Lake. From there they go down the west branch of the Penobscot, through Chamberlain and Eagle lakes to mouth of Allegash, then carry into Aroostook waters, returning via B. & A. R. R. It is all a very wild country, furnishes fine fishing and some of the best shooting in Maine. Mr. Miller, of this party, is one of the gentlemen shown in the picture of a moose on sled taken at North Twin Dam, Maine, which has been so generally used this year by the railroads in advertising that country for big game. The moose is a fine specimen and was shot by Mr. Miller, the picture being snapped by one of the railroad employees at the station on their way out.

Still another Bangor party who have gone into the woods are Hon. F. H. Appleton and wife and C. A. Gibson. Their trip is nearly the same as the last-mentioned party, but going the reverse way. They will go in at Houlton, cross country to Allegash and go up west branch of Penobscot, coming out at Moosehead Lake.

HACKLE.

Is this the Last Leap?

LINDSAY, Ont., Sept. 16.—*Editor Forest and Stream:* When Old Sam wrote his last letter, something had gone wrong; perhaps the bass were not biting, or they would not shake their jaws, nor stand on their tails; anyway he was in a bad humor and vented some of it on me. I am surprised at his saying that no one agreed with my ideas. If he will look again over the letters of the other correspondents, he will find that a great many think as I do. Nearly all agree as to the two foot limit. Those who have spoken of the matter agree as to playing a leaping fish with the tip of the rod held low, to one side, and several of us agree with Dr. Ellzey as to the cause of the actions of a bass when hooked.

Some correspondents are a little off the trail. There is no doubt but that a bass jumps out of the water and shakes himself. In the first place what is the shake? I am quite convinced in my own mind that it is simply the result of the tail movement; he cannot keep his tail still and shake his jaws. In the second place what is the explanation of the jumping and shaking? Is it an intelligent action or the action of a bewildered creature?

Old Sam and others say they have known bass to get the line tangled; so have we all; but, how often does it happen? Is it not a wonder it happens so rarely? The bass lives in hiding, under some weeds, in the shadow of a snag, at the foot of a boulder; all his life he has been accustomed to rushing out, seizing his prey and back to his hiding place; he has done it thousands of times, and when he seizes a bait with a line attached, about which he can possibly know nothing, he instinctively attempts to do as he has always done, as he feels the continued resistance, and makes his frantic movements; is there anything to be surprised at if he sometimes gets "hung up?" Is it an intelligent act? I think not.

After all, there is no occasion to quarrel about it. Everyone has a right to judge for himself. As for myself, I do not agree with Another Kingfisher, but have a great respect for science. I fully believe the great Darwin when he says that fish are of the lowest order of intelligence. However, the philosopher, Dr. Johnson, tells us that we can only judge of things by comparison. Now, Darwin probably compared the intelligence of fish with his own mind and placed them accordingly. By all means let others have the same privilege.

S. SIMPSON, M. D.

The Camping-Out Fashion.

MUSCATINE, Iowa, Sept. 2.—A number of articles in your excellent journal of late speak of the growing desire, or fashion or "fad," for a spell of outdoor living. While the papers are full of reports from lake and seaside outing resorts, I believe few realize how universal this passion has become. Taking the vicinity of Muscatine as a sample, both banks of the Mississippi have been one vast camping and picnicking ground during the summer months of last year and this. They go out by boat and buggy for trips extending from five hours to eight weeks. This is not only to get out to fish—which is permissible in the Father of Waters at all seasons—but to be out, live under the trees and enjoy boating, fishing and resting. The number of people who thus enjoy an outing must run into the thousands in this locality alone. It is not only the well-to-do who enjoy this pleasant privilege, but you see the mechanic, the laborer, perchance with wife and children, start off in a rowboat for a day or perhaps go up or down the river to a camp some friend has fixed some days before. As to fish, did it ever occur to you why under the sun Uncle Sam should spend vast sums of money to foster the growth of fish and at the same time allow indiscriminate slaughter of them by all the devices known to man in such rivers as the Mississippi, Missouri and Ohio? THERON THOMPSON.

Nahant Sea Fishing.

BOSTON, Sept. 15.—We, the fishing club, went down to Nahant and had fair fishing considering the roughness of the water, which at times dashed over the highest rocks along the shore. Mr. Brugemann caught the largest number of perch and pollock, but Mr. Fay was awarded the cracker for catching a 2lb. tautog, together with other fish.

There are two low rocks off Senator Lodge's estate which are reached from the shore by wading knee deep at low tide, where good-sized perch bite very freely. These rocks are almost entirely submerged at high water, and care must be taken to return to shore before the water gets too deep or else it is a case of swimming. We generally stay out there about an hour. Sea worms are the favorite bait, though clams will answer the purpose.

BOSTONIAN.

The Leaping Bass.

RADFORD, Va., Sept. 5.—*Editor Forest and Stream:* Will Old Sam, Dr. Ellzey, Simpson or any other expert on the leaping bass explain to me how, on a recent successful bass fishing trip on Wolf Creek, Bland county, this State, I caught a 1½lb. bass through the eye? When I first tightened on him when hung, he leaped about 18in. I did not lower my rod, it being very elastic, and my line was taut all the while. When I landed the bass the hook was outside of the mouth and through the right eye, which was pulled nearly out of the socket, the toughness of the cartilage which surrounds the eye being sufficient to hold the fish. The indications of the upper lip show that when I struck him he was caught through the upper lip at first. R. H. ADAMS.

A Lake Champlain Gar.

ROUSE'S POINT, N. Y., Sept. 19.—Here is what I consider a queer catch. Mr. Jos. Racine on the 15th, while out for bass, using minnow for bait, took a gar pike, or, as it is better known hereabouts, a bill fish weighing 4½lbs., and measuring just 3ft. in length.

We have no authentic record of gar pike of this size being taken with a rod and line by any of our fishermen heretofore. I have the fish mounted for my collection.

Another queer catch is a lizard which a boy took on a night line which he put out on the shore just for fun. He brought the lizard to me, night line and all, being too much afraid of the thing to unhook it. W. M. C.

"Hunting and Fishing along the Northwestern Line"

is the title of a booklet recently issued by the Chicago & Northwestern Railway. It is profusely illustrated, and gives information in detail concerning the best hunting and fishing grounds in the West and Northwest. Copies will be mailed free to any address upon application to W. B. Kniskern, General Passenger and Ticket Agent, Chicago & Northwestern Railway, Chicago, Ill.—*Adv.*

Do You Fish?

IF SO, you may be glad to know that the streams along the line of the Lehigh Valley Railroad have been restocked with many varieties of fish, and it will pay you to visit them if you want good sport. Address Chas. S. Lee, General Passenger Agent, Philadelphia, for full information.—*Adv.*

The Kennel.

FIXTURES.

BENCH SHOWS.

Oct. 8 to 11.—Danbury, Conn.—Danbury Agricultural Society. G. L. Rundle, Sec'y.

1896.

Feb. 19 to 22.—Westminster Kennel Club's twentieth annual dog show, Madison Square Garden, New York. James Mortimer, Supt.

FIELD TRIALS.

Oct. 22.—Columbus, Wis.—Northwestern Beagle Club's third annual trials. Louis Steffen, Sec'y, Milwaukee.

Oct. 29.—Assonet Neck, Mass.—New England Field Trial Club's fourth annual trials. Arthur R. Sharp, Sec'y, Taunton, Mass.

—, Morris, Man.—Northwestern Field Trials Club's Champion Stake. Thos. Johnson, Sec'y, Winnipeg.

Oct. 30-31.—Monongahela Valley Association Trials, Greene county, Pa. W. H. Beazell, Sec'y, Homestead.

Nov. 5.—Chatham, Ont.—International F. T. Club. W. B. Wells, Sec'y.

Nov. 5.—Oxford, Mass.—New England Beagle Club trials. W. S Clark, Sec'y.

Nov. 7.—Newton, N. C.—U. S. Field Trial Club's Trials A. W. B. Stafford, Sec'y, Trenton, Tenn.

Nov. 11.—Hempstead, L. I.—National Beagle Club of America, fifth annual trials. Geo. W. Rogers, Sec'y, 250 West Twenty-second street, New York.

Nov. 18.—Eastern F. T. Club, at Newton, N. C. W. A. Coster, Sec'y, Saratoga Springs, N. Y.

Nov. 25.—Continental Field Trials Club's quail trials at Newton. P. T. Madison, Sec'y, Indianapolis, Ind.

Dec. 2 to 4.—High Point, N. C.—Irish Setter Club's trials. Geo. H. Thompson, Sec'y.

1896.

Jan. 20.—Bakersfield, Cal.—Pacific Coast Field Trial Club. J. M. Kilgarif, Sec'y.

Jan. 20.—West Point, Miss.—U. S. F. T. C. trials. W. B. Stafford, Sec'y.

Feb. 3.—West Point, Miss.—Southern F. T. C. seventh annual trials. T. M. Brumby, Sec'y.

COURSING.

Sept. 24.—Lisbon, N. D.—Cheyenne Valley Coursing Club's meeting. H. C. Waterhouse, Sec'y.

Oct. 1.—Aberdeen, S. D.—Aberdeen Coursing Club's meeting. J. H. Davis, Sec'y.

Oct. 8.—Huron, S. D.—American Waterloo Cup. F. B. Coyne, Sec'y.

Oct. 23.—Goodland, Kan.—Altcar Coursing Club's meeting. T. W. Bartels, Sec'y.

Oct. 28.—Goodland, Kan.—Kenmore Coursing Club's meeting. C. F. Weber, Sec'y.

Toronto Dog Show.

AS FOREST AND STREAM has already given a list of entries it is not necessary to refer to these other than to say that a substantial increase on last year was evident. The quality pretty well all through list was good, in fact, about the best we have seen at Toronto yet. Judging was rather late in commencing on Monday, but despite this and the fact that the judges present had considerable extra work, consequent on Mr. Mason's absence, nearly all classes were got through quickly, and finished including nearly all specie by Tuesday afternoon. The heat on Wednesday was extreme, one of the hottest days on record, and the large dogs on the south side of the building suffered considerably. Blinds on rollers would be a desirable addition to the windows on this side. The aisles and benches were kept clean and sweet and the attendants were more obliging and civil than is usually the case. Mr. Stone had things well in hand and the work moved along with little friction. His committee rendered him valuable aid, and Mr. W. Mole, V. S., was attentive and obliging in his office work.

In mastiffs Dr. Lougest took all he asked for, including the kennel special and Mastiff Club diploma for best dog and bitch, with Emperor William and Lady Diana. Dr. Lougest and his son were both present.

St. Bernards turned out in force and showed quality throughout. In roughs the Belle Isle Kennels' Eboracum won over the Canadian dog Scion Lomond (not Lion Lomond, as catalogued), shown light in flesh. Artilla was first in the bitch class, with the Canadian-bred Lady Melrose following. But two were shown and the challenge classes proved a blank. Judith had many claimants at $50, her catalogue price, a printer's error; she was alone in challenge bitches. The corresponding dog class did not fill. The Alta Kennels' Rex Watch and Notre Dame were the winners in the open classes. Count Willard, the puppy winner, looks like making a winner if his head fills out; he is straight on his pins, a free mover and has plenty of bone.

Dr. Lougest's bloodhounds had been well advertised as a drawing card and were a continual source of attraction. Their owner regretted not bringing more of them. Of course this kennel was all there was; our one local dog, Mr. Sweetnam's Czar, from Mr. Winchell's kennel, being put third in two classes.

But two Newfoundlands were entered, Sir Edward Landseer winning easily.

Great Danes were a mixed looking lot of all types. The Terra Cotta Kennels had the only entries in Russian wolfhounds, champion Argoss and Princess Forna; Ataman IV. and Rija having bloodless victories. A brace of deerhounds recently over from England won two firsts, second from the only other entry being withheld. We expected to see large classes of greyhounds.

Champion Gem of the Season was the only entry in challenge dogs. Southern Beauty was put over White Rose in the bitch class. But two entries in open dogs and one in open bitches.

Foxhounds made sixteen entries, while pointers were light but good. The only challenge entry in the heavy class was absent and but one entry in the light class, Wild Lily. She of course was given first. Mr. Davey's kennel won both kennel specials.

In English setters Cactus and Maid Marion were alone in the challenge classes and won. Seven faced the judge in open dogs; Albert's Ranger, the Detroit winner, being placed at the head, followed by Brighton Fred and Ontario. Nine entries in open bitches. Flowers of Sulphur, handled by Ben Lewis, won; Starlight B. second Rose Rapid II. third. Mr. Davidson expressed his satisfaction at seeing a much more level lot of English setters than before.

But one challenge Irish shown, Bob, Jr. It cannot pay the Association to keep on so many poorly filled challenge classes. Barely enough when they fill at all to take the money. Henmore Shamrock was put over the Toronto dog, Toronto Bleaney. Red Brian, the winner at the Toronto spring show, had to do with he, Bleaney with more flesh could make it warm in a much stronger class. Now he looks light in body. Toronto Mollie won first over Nina's Concord, handled by Tom Blake, and after ward the special for best bitch bred in Canada, and with her kennel mate, Toronto Bleaney, that for best brace. Bleaney won the dog special.

Gordons showed improvement, the bitch class especially. The judge told the writer it was the best and evenest class of five he had ever seen. Princess Bonnie, from Dr. Dixon's kennel, was at the head; Canadian-bred ones second and third. Daisy Ivanhoe, another of Dr. Dixon's, was reserve.

Collies made fairly large classes, but no "cracks" appeared. Finsbury Hero and Canadian Monarch, both owned in Canada, were first and second in open dogs. In bitches, the Toronto winner of '94, Old Hall Perfect, was again first. Heroine, the bitch so highly written of at Boston and winner of a first there, here had to take one letter. The heavy-coated, six-year-old Otterburn Rhoderick, gone behind, won first in novice and Canadian classes.

Sir Toby, a fair bulldog, was disqualified by Mr. Mortimer for a Dudley nose. Juno II., the bitch recently bought by Mr. Laurin, of Montreal, was alone in the bitch class and got first.

Bull-terriers were fairly numerous. Principio and Vesper Belle, both old-timers, were alone in the challenge classes. The one entry in heavy-weight open dogs received a blue ribbon. In the bitch class Edgewood Robin had to follow the Mount Royal Kennels' Newmarket Syren, while she in her turn had to give in in the novice class to the winner in light-weight open dogs.

Boston terrier classes did not fill.

Irish terriers were really good, Mr. Palmer winning first with Brickbat, Jr., the only challenge entry, and first and second in open dogs with Brian O. K. and Brigg's Best. Dramore Biddy divided the same kennel's two bitches, Eileen and Kathleen.

But three Dandies and three Scotch were benched, a big difference in the case of the latter to last year's entry.

Hard Tack won in Bedlington dogs and the blue Blue Bell in bitches.

Elphinstone was alone in Skye dogs and won. Queen of Skyes beat Endcliffe Maggie in bitches.

Black and tans filled well, five dogs and five bitches. But two poodles in all.

Spaniels, as is always the case here, made immense classes, too numerous to go into in detail. Old faces won in the field classes. Black Duke was alone in the challenge dog class, black or liver; for a wonder the corresponding bitch class had no entries. Red Jacket won in the color class; Red Obo second; Red Roland absent. An outsider won in the open black dog class, and repeated his win in novice and Canadian classes. Woodland Prince, first in bitches; a Black Duke bitch, Miss Phyllis, second; others mostly well known.

Dachshunds were a poor lot, and the beagle classes have dwindled to nothing, but twenty-two entries in the twelve classes provided. Fox-terriers were better than we have had them before, especially the Canadian entries. Toys of all kinds were few.

Among the exhibitors present from a distance were Miss Griffin, Detroit; C. M. Nelles, A. Laidlaw, Geo. Douglas, P. Skyes, Tom Blake, Ben Lewis, T. A. Klein, Dr. Wesley Mills, Jos. Lindsay, T. Gilbert, T. A. Carson, C. Y. Ford, T. G. Davey, R. Gibson, R. McEwan, Lovell & Wodehouse, D. Gillies, A. Murdoch, A. Macdonald, H. Falconer, Geo. W. Foster, Major Guillot, H. W. Jeffrey, Dr. Lougest and son, W. B. Palmer, John Saunders, W. J. Tulk, J. W. Wurtele, C. S. Wixom and many others.

Ben Lewis goes to Montreal with his string, S. W. Thomas to Providence.

AWARDS.

MASTIFFS.—CHALLENGE—*Bitches:* 1st, Dr. C. A. Lougest's Lady Diana; 2d, H. Falconer's Attraction. Reserve, B. F. Lewis, Jr.'s, Ethel. —OPEN—*Dogs:* 1st and 2d, Dr. C. A. Lougest's Emperor William and Hans Sachs; 3d and high com., H. Falconer's Grimsby Caution and Rags. Com., W. Hopkins's Leo. *Bitches:* 1st and 3d, Dr. C. A. Lougest's Vere and Roselyn. Very high com., H. Falconer's H. R. H.—NOVICE—1st, S. Gilbert's Donald; 2d, Dr. C. A. Lougest's Roselyn; 3d and very high com., H. Falconer's H. R. H. and Rags. High com., W. Hopkins's Sullivan.—CANADIAN—1st, S. Gilbert's Donald; 2d, H. Falconer's Rags. High com., ——'s Guide. Com., W. Hopkins's Nell.

ROUGH-COATED ST. BERNARDS.—*Dogs:* 1st, Belle Isle Kennels' Eboracum; 2d, J. C. Guillot's Scion Lomond; 3d, G. Barron's Imperial. Reserve, H. Stableford's Scottish Leader, Jr. Very high com., C. P. Meredith's Odin. Com., Mrs Annie Buckley's Hespler. *Bitches:* 1st, Belle Isle Kennels' Artilla; 2d, T. J. Tilly's Lady Melrose —CANADIAN—*Dogs:* 1st, H. Stableford's Scottish Leader, Jr.; 2d, C. P. Meredith's Odin; 3d, T. Wilson's Rossin. High com., Mrs. Annie Buckley's Hespler, C. H. Walker's Sir Ian. Com., J. M Masson's Benachie. *Bitches:* 1st, T. J. Tilley's Lady Melrose; 2d, J. C. Palmer's Nell Gwynne.—NOVICE (rough and smooth-coated)—*Dogs:* 1st, J. C. Guillot's Scion Lomond; 2d, H. Stableford's Scottish Leader, Sr.; 3d, C. P. Meredith's Odin. Very high com., T. Wilson's Rossin. High com., B. Smith's Lord Nelson. *Bitches:* 1st, Belle Isle Kennels' Sunol; 2d, J. C. Palmer's Nell Gwynne.

SMOOTH-COATED ST. BERNARDS.—CHALLENGE—*Bitches:* 1st, Alta Kennels' Judith.—OPEN—*Dogs:* 1st and 2d, Alta Kennels' Rex Watch and Nicode; 3d, T. I. Steward's Barry. Very high com., G. M. Gibbs's Prince Victor Emanuel, Belle Isle Kennels' Clovis. *Bitches:* 1st, Alta Kennels' Notre Dame; 2d, Belle Isle Kennels' Sunol; 3d, R. W. Tuck's Brunelle II.—CANADIAN—1st, T. I. Steward's Barry; 2d, G. M. Gibbs's Prince Victor Emanuel; 3d, R. W. Tuck's Brunelle II.—PUPPIES (rough and smooth-coated)—*Dogs:* 1st, G. W. Foster's Count Willard; 2d, W. I. Stevenson's Hesper III.; 3d, E. E. Starr's Imperial Starr. Very high com., B. Smith's Lord Nelson. High com., Mrs. Hartley Dewart's Senator. *Bitches:* 1st, Alta Kennels' Notre Dame; 2d, R. W. Tuck's Brunelle II; 3d, F. R. Smith's Queen Boadicea.

BLOODHOUNDS.—CHALLENGE—1st, Dr. C. A. Lougest's Kaween.—OPEN—*Dogs:* 1st and 2d, Dr. C. A. Lougest's Dick Turpin and Berry's Badshaw; 3d, G. B. Sweetnam's Czar. *Bitches:* 1st, 2d and 3d, Dr. C. A. Lougest's Venus, Black Bess and Queen of the West.—NOVICE—1st and 2d, Dr. C. A. Lougest's Dick Turpin and Black Bess; 3d, G. B. Sweetnam's Czar.

NEWFOUNDLANDS.—1st, J. Seagram, Jr.'s, Sir Edwin Landseer; 2d, Gibbs & Singular's Nero.

GREAT DANES.—*Dogs:* 1st, Stewart & Johnson's Don Cæsar; 2d, 3d and very high com., T. & B. Kennels' Beelzebub, Myrtle Navy and Orinoco. *Bitches:* 1st, Stewart & Johnson's Oneida; 2d and very high com., T. & B Kennels' Ruth and Jezabel; 3d, T. Rae's Juno.—NOVICE—*Dogs:* 1st, Stewart & Johnson's Augustus Cæsar; 2d, 3d and very high com., T. & B. Kennels' Myrtle Navy, Orinoco and Dreadnaught. Com., C. J. Eisele's Duke. *Bitches:* 1st, Stewart & Johnson's Oneida; 3d, J Rowan's Nell. PUPPIES—*Dogs:* 1st, 3d and high com., J. Rowan's Daisy, Senator and Young Nell; 2d and very high com., Stewart & Johnson's Valkyrie and The Defender. High com., A. W. M. Connely's Lady Mac.

RUSSIAN WOLFHOUNDS OR PSOVOI.—CHALLENGE—*Dogs:* 1st, Terra Cotta Kennels' Champion Argoss. *Bitches:* 1st, Terra Cotta Kennels' Champion Princess Irma.—OPEN—*Dogs:* 1st, Terra Cotta Kennels' Ataman IV. *Bitches:* 1st, Terra Cotta Kennels' Riga.

DEERHOUNDS.—*Dogs:* 1st, E. Lynge's Gurth. *Bitches:* 1st, E. Lynge's Lorna.

GREYHOUNDS.—CHALLENGE—*Dogs:* 1st, Terra Cotta Kennels' champion Gem of Season. *Bitches:* 1st, Terra Cotta Kennels' champion Southern Beauty.—OPEN—*Dogs:* 1st, J. Wolfred Wurtle's Justinian II.; 2d, Miss L. B. Nicholls's Misterton. *Bitches:* 1st, W. F. Randall's Grimsby Jess. *Puppies:* Equal 1st, Fred Habart's Silton and Miss Charie Habart's Kitty Sprigntly; 2d, T. G. Fox's Lord Shelbourne; 3d, Terra Cotta Kennels' Gem II. MISCELLANEOUS.—1st, A. Laidlaw's Black Prince; 2d, W. Kennedy's Prince Snips; 3d, W. G. Bond's Harvey.

Champion Association Stakes.

Editor Forest and Stream:

It is proposed to make the stakes of the Champion Association so that any dog will be eligible no matter whether a winner or not. This I think a step in the right direction, but acting on a suggestion made by Mr. Edward Dexter, I think some respect due dogs that have previously distinguished themselves by winning, and that the Club can recognize these winnings in this way:

Make a rule exempting all dogs having won first or second in any recognized trials from having to compete in the first series of heats, and be deemed qualified to go into the second series without the farce of running the preparatory series of heats.

This will save much valuable time in the general running off, and certainly be no more than just to dogs that by previous winnings have proven beyond doubt, or question, that they have the necessary merit to entitle them to a place in the competition.

This will be recognizing previous winners only to the extent that is right and just, and due them.

W. W. TITUS.

J. M. Freeman.

A GOOD sportsman has passed away, a man of sterling qualities in all the walks of life. J. M. Freeman died at Bicknell, Ind., after a prolonged illness, which had its inception at the field trials at West Point, Miss., last February. As a sportsman he was best known to the readers of FOREST AND STREAM, but of his business and domestic life those who knew him have only words of praise. As a sportsman he was of the highest and best type. Unpretentious, earnest and of unswerving integrity, he had the confidence, esteem and loyalty of all who knew him. He died in the prime of life, being hardly at the beginning of middle age. Few men are more beloved in life, none more mourned when life is ended.

Providence Awards.

MASTIFFS.—CHALLENGE—*Dogs:* 1st, Dr. C. A. Lougest's Emperor William. *Bitches:* 1st, Dr. C. A. Lougest's Lady Diana.—OPEN—*Dogs:* 1st, Dr. C. A. Lougest's Hans Sachs. *Bitches:* 1st, 2d and 3d, Dr. C. A. Lougest's Vere, Lady Cameron and Roselyn.

Foote's Kentwood. *Bitches;* 1st and 2d, Rinada Kennels' Hempstead Kit; 3d, J. L. Heard's Dame Fortune.

ENGLISH SETTERS.—CHALLENGE—*Bitches:* 1st, F. E. Perkins's champion Spectre.—OPEN—*Dogs:* 1st, C. E. Lewis's Harry; 2d, Oak Grove Kennels' Dick; 3d, F. E. Perkins's Drake. *Bitches:* 1st and 3d, Oak Grove Kennels' Monk's Nun and Nellie F.; 2d, F. E. Perkins's Clara. *Puppies:* 1st, A. J. Loepsinger's Fuss.

IRISH SETTERS.—CHALLENGE—*Dogs:* 1st and reserve, Oak Grove Kennels' champion Kildare and champion Kildare Glenmore. *Bitches:* 1st and reserve, Oak Grove Kennels' champion Queen Victoria and champion Norna.—OPEN—*Bitches:* 1st, Oak Grove Kennels' Bostal Norna.

GORDON SETTERS.—CHALLENGE—*Dogs:* 1st, J. B. Blossom's Heather York. *Bitches:* 1st, J. B. Blossom's Flomont. Reserve, H. O'Reilly's Fan.—OPEN—*Dogs:* 1st and 3d, J. B. Blossom's Heather Bruce and Doc; 2d, C. T. Brownell's Heather Dash. *Bitches:* 1st, J. B. Blossom's Sally Beaumont; 2d, C. T. Brownell's Norah. *Puppies:* 1st, C. T. Brownell's Angenette.

SPANIELS.—CHALLENGE.—1st and reserve, R. P. Keesbey's Moonlight Belle and Coleshill Rufus.

FIELD SPANIELS.—BLACK—*Dogs;* 1st, Dr. S. J. Bradbury's Drayton Warwick. *Bitches:* 1st, Toon & Thomas's Endcliffe Myrtle.

COCKER SPANIELS.—CHALLENGE.—BLACK OR LIVER—1st, Swiss Mountain Kennels' Middy.—ANY OTHER COLOR—1st, G. L. Tarr's Bim. OPEN—BLACK—*Dogs:* 1st, J. P. Willey's Little Tim; 2d, Swiss Mountain Kennels' King S.; 3d, W. T. Payne's Reno. *Bitches;* 1st and reserve, Swiss Mountain Kennels' Dart and Susanne; 2d and very high com., J. P. Willey's Flossie Butler and Nellie Abbott; 3d, G. L. Tarr's Taunty. RED OR LIVER—*Dogs:* 1st, J. P. Willey's Ned; 2d, Swiss Mountain Kennels' Cherry Punch. *Bitches:* 1st, J. P. Willey's Daisy Bell; 2d, Swiss Mountain Kennels' Zuleika; 3d, Mrs. R P. Keasbey's Miss Tommy.—ANY OTHER COLOR—1st, W. T. Payne's Lorraine; 2d, J. P. Willey's Nina.

CLUMBER SPANIELS.—*Dogs:* 1st, Toon & Thomas's Endcliffe Forester. *Bitches;* 1st, Toon & Thomas's Endcliffe Fairy.

COLLIES.—CHALLENGE—*Bitches:* 1st, Lambert Stansfield's champion Highland Floss.—OPEN *Dogs;* 1st, J. Arthur Ingham's Roy. *Bitches:* 1st, Ghent Holdsworth's Merry Belle. *Puppies;* 1st, C. Y. Ford's Otterburn Olive.

BULLDOGS.—OPEN—*Dogs:* 1st, Toon and Thomas's Sheffielder. *Bitches;* 1st, Robert L. Keach's Lady Nan; 2d, Chas D. Bernheimer's Sybil. Very high com , E. Willard Roby's Robin Pelagia.

BULL TERRIERS.—CHALLENGE—*Dogs:* 1st, Dr. R. S. Huidekoper's champion Cardona. *Bitches;* 1st, Frank F. Dole's champion Starlight. Reserve, Dr. R. S. Huidekoper's champion Edgewood Topsy.—OPEN—*Dogs:* 1st, reserve and high com., H. F. Church's Little Flyer, Gully's Boy and Roderigo; 2d and 3d, Frank F. Dole's Victor and Dennis. Very high com., William Faversham's Sir Brice. Com., E H Chadwick's Defender. *Bitches:* 1st, Frank F. Dole's My Queen; 2d, H. Fred Church's Young Miss Giddy; 3d, William Faversham's Lady Marlborough. *Puppies:* 1st, William Faversham's Lady Marlboro; 2d, Frank F. Dole's Edgewood Roger. Very high com., H. Fred Church's Roderigo and Dr. R. S. Huidekoper's Hannibal. High com., H. Fred Church's Annie Jay.

FOX TERRIERS.—CHALLENGE—*Dogs:* 1st, Blemton Kennels' Blemton Victor II. *Bitches:* 1st, L. & W. Rutherford's Warren Captious.—OPEN—*Dogs:* 1st, Blemton Kennels' Blemton Stickler; 2d, very high com. and high com., L. & W. Rutherford's Warren Sage, Warren Rector and Warren Critic; 3d and high com., Mere Kennels' Charlton Nigger and Mere Dominie. Reserve, John E. Thayer's Hillside Domino. Very high com. and high com., W. B. Palmer's Raby Reckon and Blemton Firebrand. *Bitches:* 1st and 2d, L. & W. Rutherford's Warren Capture and Warren Dusky; 3d W. B. Palmer's Spinster. Reserve, Blemton Kennels' Blemton Flush. High com., Mere Kennels' Mere Grisette. Com., Rochdale Kennels' Martin II. *Puppies:* Equal 1st, Mere Kennels' Crisette, L. & W. Rutherford's Warren Rector; 2d, Mere Kennels' Mere Dominie. Reserve, L. & W. Rutherford's Warren Critic. High com., J. E. Thayer's Hillside Defender and Hillside Serious.

WIRE-HAIRED FOX TERRIERS.—CHALLENGE—*Dogs:* 1st, H. H. Hunnewell, Jr.'s, Cribsage. *Bitches:* 1st, H. H. Hunnewell, Jr.'s, Surrey Janet.—OPEN—*Dogs:* 1st and 2d, W. B. Palmer's Endcliffe Banker and Endcliffe Brisk. Reserve, H. T. Foote's Brittle Boy. Very high com., G. W. H. Ritchie's Mister Great Snap and H. H Hunnewell, Jr.'s, Hill Hurst Trick. *Bitches:* 1st, W. B. Palmer's Endcliffe Fidget; 2d, very high com. and high com., H. H. Hunnewell, Jr.'s, Bushy Bramble, Hill Hurst Dimple and Hill Hurst Olive. Reserve, W. B. Palmer's Daisy Cutter. High com., H. T. Foote's Brittle Buzz and Brittle Bee. *Puppies:* 1st, 2d and very high com., H. H. Hunnewell, Jr.'s, Hill Hurst Ginger, Hill Hurst Dimple and Hill Hurst Coquette. Very high com., Dr. James Ferris Belt's Wawaset Vixen.

IRISH TERRIERS.—CHALLENGE—*Bitches;* 1st, Walter J. Comstock's Dunmurry.—OPEN—*Dogs;* 1st and 2d, W. B. Palmer's Briggs's Best and Brian O. K.; 3d and very high com., Samuel D Parker's Trim and Tubb. Reserve, Edward Brooks's Heather Spunk. *Bitches;* 1st, reserve and high com., Edward Brooks's Gesseia Hi. Blackbrook Brackett and Chancery Lass; 2d, W. B. Palmer's Kathleen. Very high com., Z J. Lewis's Our Maggie. *Puppies:* 1st, 2d and high com., Samuel D. Parker's Irish Sun, Puzzle and Cady. Reserve, W. B. Palmer's Eileen. Very high com., M. W. Murray's Emerald Jim.

BOSTON TERRIERS.—CHALLENGE—1st, Phelps & Davis's Topsey.—OPEN (25lbs. and over)—*Dogs:* 1st, Benj. Cornbill's Pilot; 2d, Dwight Baldwin's Bob. Very high com , Gayle J. Forbush's Zab. *Bitches:* 1st, Phelps & Davis's Clytie; 2d, Benj. Pope's Trilby.—(Under 25lbs.) *Dogs:* 1st, Benj. Pope's Spider; 2d, Phelps & Davis's Commissioner II. Very high com., Mrs. Esther Deffly's George Dixon. *Bitches:* 1st and 2d, Leslie A. Burritt's Miss Taora and Daisy. Very high com., Benj. Pope's Topsey. *Puppies:* 1st, Phelps & Davis's Hilda; 2d, W. G. Kendall's Pig Wig. Very high com., J. A. Boutelle's Cleo.

BLACK AND TAN TERRIERS.—CHALLENGE—1st, H. T. Foote's champion Broomfield Sultan.—OPEN—*Dogs:* 1st, W. B. Palmer's Rhodes Orme. *Bitches:* 1st, S. D. Ripley's Surrey Gem; 2d, W. B. Palmer's Gipsy Queen.

SCOTTISH TERRIERS.—CHALLENGE—1st, Brooks & Ames's ch. Tiree.—OPEN—*Dogs:* 1st and 2d, Brooks & Ames's Wankie Tam and Kilcree II. *Bitches:* 1st and 2d, Brooks & Ames's Wankie Janet and Vorda.

DANDIE DINMONT TERRIERS.—CHALLENGE—1st, Toon & Thomas's Lothian Judy. Reserve, E. Brooks's Ainstey Daisy.—OPEN —*Dogs:* E. Brooks's Roderick Dhu.

BEDLINGTON TERRIERS.—*Dogs:* 1st, M. A. H. Thelberg's George W.; 2d, W. Lougest's Mount Vernon Wonder. *Bitches:* 1st and very high com., W. Lougest's Mount Vernon Tibbie and Mount Vernon Rose; 2d, Toon & Thomas's Endcliffe Wasp.

DACHSHUNDS.—CHALLENGE—*Dogs:* 1st, J. Lythgoe's Janty. *Bitches:* 1st, A. M. Lythgoe's Lucretia.

PUGS.—OPEN—*Bitches;* 1st, W. J. Wheeler's Belle D.

CHESAPEAKE BAY DOGS.—*Dogs:* 1st, Oak Grove Kennels' Deacon. *Bitches:* 1st, Oak Grove Kennels' Daisy; 2d, B. A. Smith's Bigelow's Rose.

POODLES.—CHALLENGE—1st, H. H. Hunnewell, Jr.'s, Diamond.—BLACK CORDED—*Dogs:* 1st, Mrs. J. P. Wade's Bourdo. *Bitches:* 1st, 2d and reserved, C. D Bernheimer's Leah, Cigarette and Black Maria. Very high com., Mrs. J. P. Wade's Victoria.—ANY OTHER VARIETY—*Dogs:* 1st, H H. Hunnewell, Jr.'s, Jocko. *Bitches:* 1st, 2d and very high com., H. H. Hunnewell, Jr.'s, Hill Hurst Fluff, Hill Hurst Marquise and Hill Hurst Posey.

ITALIAN GREYHOUNDS.—OPEN—*Dogs:* 1st, Minnie Lewis's ch. Spring. *Bitches:* 1st, Kate Lewis's Tinnie II. High com., Mrs. G. M. Nicholoy's Flossie.

MISCELLANEOUS.—*Dogs:* 1st, C. A. Parsons's Dandy. *Bitches:* 1st, Parsons & Sullivan's Nellie; equal 2d, Mrs. W. L. Brown's Lotze II. and Mrs. J. P. Wade's Flossie.

Binghamton Awards.

THE awards of the Binghamton, N. Y., shoot, Sept. 10–13, J. Otis Fellows, judge, were:

GREYHOUNDS.—*Dogs:* 1st, E. H. Clinton's Thatcher II. *Bitches:* 1st, E H. Clinton's Queen.

FOXHOUNDS.—*Dogs:* 1st, J. J. Hogan's Frank.

POINTERS.—*Dogs:* 1st, Low Legg's Sam Higbee.

ENGLISH SETTERS.—*Dogs:* Equal 1st, Glenwood Kennels' Dashing Ned; Isabel Stanley's Snell; 2d, M. S. Heller's Mollo's Echo; 3d, J. J. Kane's Don K. *Bitches:* 1st, Glenwood Kennels' Mollo's Nellie. *Puppies:* 1st, Wm. B. Terry's Nellie.

IRISH SETTERS.—*Dogs:* 1st, Mrs. J W. Pister's Deacon W.; Equal 2d, W. R. Winans's Kenmore Jr., Prof. J. F. Riley's Nero. *Bitches:* 1st, F. S. Anderson's Katie; Equal 2d, S J. Weir's Low D., W. R. Wynans's Elcho's Dell; 3d, A P. Fish's Biddie D.—PUPPIES—*Dogs:* 2d, J. A. Lewis's Tipperrary F. *Bitches:* 2d, Charles Rothgeber's Daisy R.

COCKER SPANIELS.—*Dogs:* 2d, F. F. Sigler's Dash.

SCOTCH COLLIES.—*Dogs:* 1st, C. M. Packard's Finsbury Dude; 2d, C. H. Kent's Dandy K.; 3d, C. W. Beman's Don Supurbus. *Bitches:* 1st, C. M. Packard's Betsey of Fairview; 2d, C H. Kent's Princess Bonnie K; 3d, E. B. Emens's Ethel's Lassie.—PUPPIES—*Dogs:* 1st, H. C Larrebee's Donlarrie; 2d, C. H. Beman's Don Supurbus; 3d, E. B. Emens's Wallace. *Bitches:* 1st, C. H. Kent's Princess Bonnie K.; 2d, E. B. Emens's Daisy Eyebright.

BULLDOGS.—*Dogs;* 1st, J. H. Parrott's Robin Adair; 2d, J. S. Newing's Jacko. *Bitches:* 1st, C. S. Fowler's Mag.

BULL-TERRIERS.—CHALLENGE—1st, Rochester-Pittsburg Bull-terrier Kennels' champion Duke of Rochester.—OPEN—*Dogs:* 1st, Geo. H. Rochford's Beeze; 2d, Thos. J. Connelly's Paddy. *Bitches:* 1st, R. P. B. T. Kennels' Daisy Bell.

BOSTON TERRIERS.—1st, Mrs. J. T. Weisheimer's Bessie.

ENGLISH BEAGLES.—OPEN—*Dogs:* 1st, Eugene Wilber's Trailer. *Bitches:* 1st, Glenwood Kennels' Corinne. PUPPIES—*Dogs:* 1st, L. E. Hine's Kado. *Bitches:* 1st, Glenwood Kennels' Corinne.

FOX-TERRIERS.—OPEN—*Dogs:* 1st, C. H. Barrett's New Forest Billy; 2d, R. M. Bradley's Stub; 3d, J. B. Hadsell's Ginger. V. H. C., Hill Bros.' Warren Prince. *Bitches;* 1st, C. H. Barrett's Larchmont Rose. *Puppies:* 1st, J. B. Hadsell's Ginger.

TOY-TERRIERS.—OPEN—*Dogs:* 1st, E. C. Johnson's Trilby.

ST. BERNARDS.—OPEN—*Dogs:* Equal 1st, Ruth Joseph's Napoleon, Mrs. F. E. Woodruff's Pete; 2d, W. A. Hustace's Duke of Avondale.

Fish for the best Irish setter, Deacon W. Collar for best beagle, Corrine. Kennel secrets for largest collie to be decided by weight, Finsbury Dude. The collie by Rawdon Lee for best in class 47, Finsbury Dude. The collie by Hugh Dalziel for best in class 48, Bessie of Fairview. Silver medal for best collie, Finsbury Dude.

Omaha Bench Show.

THE second annual bench show of the Omaha Kennel Club opened Sept. 18. As the first two days of the show were coincident with the Nebraska State Fair, held in Omaha, and there were costly and highly attractive civic and military parades on the streets of Omaha in the evenings, and other strong counter attractions, the first two days' attendance at the show was very light; but the attendance on the third and fourth days was very good and of the best class of citizens, thus demonstrating that the Omaha people fully appreciate a show of thoroughbred dogs. At this time it is not expected that the show will be a financial success.

While the show is under the management of men who have had the experience of but one other show, it is said by old exhibitors and handlers that the management was simply perfect. Everything was kept neat and clean.

The classes of dogs, under the supervision of Mr. W. E. Nason, were brought into the ring promptly, and although Mr. Davidson did not arrive in time to commence judging until 7 o'clock P. M. of the first day, the 225 dogs were all passed upon by 3 o'clock on the second day. Through the close and attentive work of the secretary, the catalogue of awards was ready by 9 o'clock on the third morning of the show.

The show benched and fed the dogs, using Spratts dog biscuits. The hall gave ample room for aisles and exercising rings.

Among the exhibitors in attendance were: Thos. Blake, Detroit; F. A. Howard, Columbus, O.; Geo. Clayton and A. F. Kramer, Chicago; H. B. Stannard, St. Louis; C. A. Pratt, Little Rock; Jas. Cole and A. K. Wolfe, Kansas City; H. L. Robinson, Topeka; John Purse, Denver; A. C. Shallenberger, Alma, Neb.; C. E. Bunn, Peoria, Ill.; J. C. Ford, F. H. Perry and Mr. McGuire, of Des Moines. Among the prominent Omaha exhibitors may be noted C. N. Powell, J. P. Davenport and G. H. Moore.

The weather was excessively hot, the thermometer ranging from 80° to 102°, which made it very disagreeable for the dogs, exhibitors, visitors and all concerned. On the morning of the second day the great Dane bitch Princess Lucille, belonging to A. K. Wolfe, Kansas City, slipped her collar and jumped through the second story window to the street, 15ft. below, and escaped into the city, and although thoroughly advertised in the local press, she has not yet been found. Princess Lucille did the same thing at the Des Moines '94 show. Mr. Wolfe does not blame the management. He thought as the show was on a second floor that there would be no danger of the dog escaping if she did slip her collar, and had not counted on her jumping through an open window.

(Owing to pressure on our columns, the list of awards is held over till next week.)

Western Massachusetts Fox Hunt.

THE committee having in charge the arrangements for the next annual meet of the Western Massachusetts Fox Club have decided upon Wednesday and Thursday, Nov. 13 and 14. It is proposed introducing some new features at this meet.

It is most earnestly desired that the weather this season shall be pleasant, as the past three annual hunts have been sadly hampered with unpropitious weather.

WORONOCO.

The Immortality of the Lower Animals.

Editor Forest and Stream:

A clipping reached me yesterday entitled "The Dog's Immortality." It is from FOREST AND STREAM of Sept. 14, and consists of letters from W., C. H. Ames and Transit.

Not in reply to, but in comment upon the remarks of these gentlemen, I would say:

1. To W., that my experience with men has shown me that scientists and "the most of the members of the clerical profession" are not more prejudiced than others. The laity, with regard to any profession, are as apt as, if not more apt than, the members of that profession to be governed by preconceived notions. Not such a layman, however, if he be a layman, is W. He belongs to that class, all the members of which I love, whether they be professionals or laymen, who want to know the truth. I am particularly pleased by this remark of his: "The fashion has been and still is to call evidences of intelligence in animals instinct, which has always appeared to me only another way of dodging the force of facts." The most commonly accepted definition of instinct is: That which we do naturally. I would like to ask, Does anybody do anything which he does not do naturally? No creature is born all at once. He is a succession of births. A man walks, and talks, and thinks, and loves, just as naturally as the babe suckles or the chick pecks at a grain of corn. Reason might be defined as the guiding instinct—the instinct by which the individual knows how to govern himself. And that the lower animal has the power of self-direction nobody would ever think of questioning were he not influenced by the teaching of some psychological school.

2. Mr. Ames says: "I consider that true speech in the higher, human sense * * * consists in just this—the conscious use of symbols to express abstract ideas."

That the lower animal has abstract ideas there may be some who doubt. I have a world of proof, some of which I have published, that they have. But what is the function of speech in the economy of the subject? To communicate ideas, to intercommunicate ideas, to transmit ideas. That the lower animals communicate ideas Mr. Ames is not disposed to question, as I think nobody is any more. But do the lower animals intercommunicate ideas? A few days since I received from an esteemed correspondent—Edwin B. Woodruff—a story (of the truth of which there can be no question) of two dogs which tracked a woodchuck to a hole. To this hole there were two entrances—one on either side of a stone fence. The dogs stationed themselves one at each entrance. After a time they digged. One of them grew tired of this and quit. They met on the wall, put their noses together, had a consultation, then filled the entrance on one side of the fence. This done, they went to the other side. The smaller of the two entered the hole, engaged the woodchuck, fled, was followed by it. When it was out of the hole the larger dog pounced upon it and killed it. I have the witnesses at my call to prove the truth of this story in any court of justice—before any jury except one composed of partisan psychologists. Now, could there have been the laying of the plan which was carried out without the intercommunication of ideas? And could there have been the intercommunication of ideas without signs—arbitrary signs—of those ideas? No; unless the ideas as entities passed directly from the mind of one dog to another, and from that of the other to that of the one, if which occurred dogs have an infinitely freer intercommunion than men—even psychologists. Again: Do succeeding generations of lower animals learn from the experiences of preceding generations? I think so. Take the Constantinopolitan dogs. They live in distinct districts—wards. Each of these wards has a government—crude of course, but not overly-much cruder than the government of some wards in New York or Chicago. When a dog goes from one ward to another, he is pitched upon, killed, and eaten if possible. When he yelps, sends out his cry of distress, his fellow citizens rush to his assistance. Now, did every puppy of any ward in Constantinople have to learn from experience, that particular ward would soon be depopulated. The truth must be that the older dogs tell the younger dogs to carefully stay within their own borders till they are grown and fleet of foot, and then to venture within the borders of the enemy with all their faculties about them, with their friends on the watch and ready to come to their assistance with discretion. What occurs here but the transmission by one generation of its experiences to another? Though, of course, among the Constantinopolitan dogs there has never arisen a Macaulay or a Bancroft, yet I have no doubt that some of them are better historians and historical philosophers than others. The lower animal has memory. Why? That he may learn from experience; that he may have the facts of his *sensory continum* pass side by side with the facts of his *memory continum;* that he may think, that he may reason, that he may know, that he may conduct himself in accordance with that knowledge. Then he is responsible not only for himself, but also for his offspring. As in the case of man, so in the case of the lower animal, each generation has the responsibility of properly starting the succeeding generation. And this responsibility could not be met and discharged without the power of transmitting ideas. More. Those ideas could not be transmitted without signs, arbitrary signs of ideas. I might give many, but I will take space—if I am allowed it—to give only one example of the use by a lower animal of an arbitrary sign to convey an idea. Always when my dog Phlip, who "passed over to the majority" last spring, after blessing me by his love for a little less than two years, was given a bowl of water he would thank the giver, whether it was given in the name of Him who said: "Inasmuch as ye did it unto the least of these ye did it unto me," or not, by shaking his head up and down—a trick which he was not taught, but which he hit upon as an arbitrary sign of his thankfulness.

3. I am not one of those to whom Transit refers in saying: "Most of them are notably deficient in considering the immortality of the dog in connection with the immortality of man, to the exclusion of all other animals, or at least the lower animals are ignored." My great hope is for the immortality of the whole sentient universe. Note, that I do not say my knowledge nor my belief, but my hope. My great and my thrilling hope is that there is not a being capable of feeling that will not live always. The material universe is the embodiment of a thought. You may destroy an embodiment, but cannot destroy a thought nor any part of it. This infinite thinker, whom I would not attempt to define, is either cruelty or love. I would rather think him the latter.

CHARLES JOSIAH ADAMS.

RONDOUT-ON-THE-HUDSON, KINGSTON, N. Y., Sept. 18.

The Beagle Trials.

Editor Forest and Stream:

A Field Trial Committee meeting of the National Beagle Club of America was held Sept. 9, 1895, at the rooms of the American Kennel Club, 55 Liberty street, Mr. George Laick, Chairman. Present were Messrs. H. L. Kreuder, H. F. Schellhass, J. W. Appleton, A. D. Lewis and George W. Rogers. The report of the committee on classes, Messrs. Kreuder and Rogers, submitted the following which were passed:

Open Class A—For dogs of all ages, 15in. and under, that have not been placed first in any open class at field trials held in America.

Open Class B—For bitches of all ages, 15in. and under, that have not been placed first in any open class at field trials held in America.

Open Class C—For dogs and bitches of all ages, 13in. and under, that have not been placed first in any open class at field trials held in America.

Open Class D—For dogs and bitches 15in. and under, whelped on or after Jan. 1, 1894.

Champion Class E—For dogs and bitches, all ages, 15in. and under, having been placed first in any open class except Derby at field trials held in America.

Champion Class F—For dogs and bitches, all ages, 13in. and under, having been placed first in any open class except Derby at field trials held in America.

Class G, Brace Stakes—For two dogs or bitches 15in. or under, the *bona fide* property of party making entry at time of entering and starting of class. Four dogs or bitches may be selected, from which two must be drawn and named to start prior to starting of class.

Class H, Pack Stakes—For dogs or bitches 15in. or under, the *bona fide* property of party making entry at time of entering and starting of class. Eight dogs or bitches may be selected, from which four must be drawn and named to start prior to starting of class.

CONDITIONS.

Class A.—Entries close Oct. 19, 1895. Fee to start $10, of which amount $4 forfeit must accompany entry and balance to be paid prior to starting the class. First prize $40, second prize $25, third prize $10.

Class B—Entries close Oct. 19, 1895. Fee to start $10, of which amount $4 forfeit must accompany entry and balance to be paid prior to starting of class. First prize $40, second prize $25, third prize $10.

Class C—Entries close Oct. 19, 1895. Fee to start $7, of which $3 forfeit must accompany entry and balance must be paid prior to starting class. First prize $25, second prize $15, third prize $7.

Class D—Entries close Oct. 19, 1895. Fee to start $5, of which $2 forfeit must accompany entry and balance to be paid prior to starting class. First prize $20, second prize $10.

Class E—Entries close immediately before starting the class. Fee to start $10, which must be paid in full before class is started. First prize 60 per cent.; second prize 30 per cent.

Class F—Entries close immediately before starting of class. Fee to start $10, which must be paid in full before class is started. First prize 60 per cent.; second prize 30 per cent.

Class G—Entries close October 19, 1895. Fee to start $10, of which $5 must accompany entry and balance to be paid prior to starting class. First prize 60 per cent.; second prize 30 per cent.

Class H—Entries close October 19, 1895. Fee to start $20, of which $10 must accompany entry and balance to be paid prior to starting class. First prize 60 per cent.; second prize 30 per cent.

It shall be understood and agreed that no class shall be started unless two or more entries are made and filled. In the event of any class being declared off, the money shall be refunded.

Trials begin Nov. 11, and to continue to end.

In addition to regular prizes the club will present a handsome rosette or silk ribbon properly inscribed to the winner of each prize-winning dog.

RULES.

Every entry must be registered in A. K. C. Stud Book, or an extended pedigree, as far as can be obtained, submitted to the field trial committee.

It is expressly understood and agreed that the National Beagle Club of America reserves the right to reject the entry of any dog or bitch that, from the best information obtainable and according to their judgment, is not a standard-bred English beagle.

Entries for different classes close as per time stated in classes and conditions. All entries must be filled out in full on blanks furnished, and mailed to field trial committee as per address on entry blank not later than Oct. 19, unless otherwise provided for.

The stipulated forfeit money must in each case accompany entries. No exception to this rule will be granted.

Dogs can be forwarded per express, addressed to National Beagle Club of America, Hempstead, L. I.

All dogs sent by express, as well as all others, will be taken care of at Hempstead, L. I., under direction from National Beagle Club of America. Competent handlers will be on hand to handle and run dogs in trials, in case owners of same cannot or fail to reach place of meeting on time.

Dogs must be at Hempstead, L. I., before 10 o'clock A. M. on Nov. 11.

It is expressly stipulated and understood that the National Beagle Club of America does not hold itself responsible for loss or damage done to any dog sent in its care.

The filling of classes, drawing from same and measuring dogs will begin Nov. 11 at 10 o'clock A. M. sharp, and Class A will be started at 1 o'clock P. M. on the same day.

The headquarters of the club will be at Roth's Hotel, where ample accommodations for members of the club and their visiting friends have been provided for. Comfortable arrangements for the kenneling of the dogs have been made, and they will be well looked after.

The place of meeting may be reached as follows: Long Island R. R., Thirty-fourth street ferry, or James Slip ferry, New York, or Flatbush avenue station, Brooklyn, to Hempstead, L. I., which is twenty-one miles from New York city.

At an adjourned field trial committee meeting of the National Beagle Club of America Mr. Bradford S. Turpin, of Dorchester, Mass., and Mr. Charles Quynn, of Frederick, Md., were selected to officiate as judges at their coming field trials. GEO. W. ROGERS, Sec'y.

Field Trial Echoes.

POPULAR WINS.

IT is a long time since one handler made such a record as did Frank Richards at Morris, Man., where he won both Derby and All-Age Stake in each trial—the Continental and Manitoba—and second in the Champion Stake. It is still longer since two dogs have shown such genuine merit and superiority as did Minnie T. and Sam T. Withal, there never was a handler more heartily and sincerely congratulated than was Mr. Richards, and many were the expressions of pleasure that Mr. W. W. Titus owned such good dogs and had succeeded so well. "Billy" Titus has competed for years, and has taken the disappointments of defeat with a grace better than some take success. In this instance the success is all the more praiseworthy since it came from the fairest of handling and good work. It was plain honest handling; the dogs did the rest.

NOISY VS. QUIET HANDLING.

At the chicken trials there was less whistling and loud calling to the dogs than is commonly seen at field trials. The English handlers were particularly noticeable for their quiet and gentlemanly handling. They also observed the most punctilious fairness. Their quiet yet effective ways were in shining contrast to the loud and meaningless whistling of a few other handlers. Noisy handling is unskillful and far less effective than quiet handling. A dog can work much better if left more to his own resources. There are two or three handlers from the States who should give this matter some study.

Mr. Jack Armstrong was taken ill after the Manitoba trials, and went to Winnipeg for treatment. Mr. W. E. Warner, the popular manager of Mr. Gould's kennel interests, informed me that everything was being done for his comfort and that the last reports were that he would be about again in a few days.

Mr. C. C. Chipman, of Winnipeg, was an interested spectator at the trials, between the times he could take a spare day from the multitude of responsibilities pertaining to the management of the Hudson Bay Company's vast business interests in British America. He has the small matter of 2,000 men under his supervision, yet I fancy it is easier done than managing a field trial.

Mr. D. E. Rose returned to Tennessee immediately after the trials ended.

Messrs. Storey & Spracklin intend to remain at Dominion City, Man., about two weeks before returning to their homes. The former lives at London, Ont., the latter at Chatham, Ont.

The handlers from the States were greatly assisted by Mr. Thos. Johnson in their entanglements with the customs. He was on the customs bonds of many of them, and exercised his friendly offices to the utmost to arrange for their prompt clearance.

Capt. C. E. McMurdo, of Charlottesville, Va., was a visitor at the trials during the running of the Champion Stake. His pleasure at meeting old friends was only equalled by their pleasure at seeing him.

In regard to the diploma, which is a part of the reward for winning first in the Champion Stake at Morris, Man., Mr. Thomas Johnson, the secretary of the Northwestern Club, says that it will not be any ordinary affair, but will be gotten up in the finest style of the penman's art. It will contain the names of the competitors and other pertinent matter all beautifully engrossed.

The prize money was paid promptly, whereat the boys felt pleased, for some of the coin of the realm is not a bad adjunct to glory.

On Friday evening the Manitoba Field Trials Club gave a dinner to the landowners of Morris and vicinity.

Mr. George Ewing, New Islip, L. I., remains for a few days' chicken shooting after the trials.

A Good Dog Sick.

PORTLAND, Oregon.—*Editor Forest and Stream:* By the careless, inaccurate use of words some time since I unfortunately led the Eastern friends of my old dog Mike to think that he was dead. If he could read and understand the letters I received in consequence of that mistake of mine he would certainly lose none of his self-respect, even if his respect for his master was diminished. Notwithstanding the fact that he is now about twelve years old he is in good health and condition with one serious exception.

On his throat there is a swelling that is hard and gradually increasing in size, resembling goiter on the human neck. I don't know what to do for the poor old fellow and wish somebody would tell me. It seems to be a very common trouble with our dogs in this country, and it invariably proves fatal. At least a dozen dogs within my knowledge have died with it. Three good dogs—Captain Ankeney's, Captain Dodge's and another—were operated upon by surgeons, but the operations only seemed to hasten death. S. H. GREENE.

[Apply tincture of iodine to the enlargement two or three times a week. Give one five-grain thyroid tablet (Armour's) three times a day. Should there be no improvement in a short time give two tablets three times a day.]

International Derby Entry.

CHATHAM, Ont., Sept. 16.—Owing to the absence of the secretary the time for payment of the second forfeit in the International Field Trials Derby has been extended by the committee from Sept. 1 to Oct. 1. The entries for the All-Age Stake close Nov. 1.

WM. B. WELLS, Hon. Sec'y I. F. T. C.

POINTS AND FLUSHES.

BETWEEN the lightning and the customs officials the exodus of the field trial party was made vivacious—of the customs, more later; but of the lightning? On Saturday, Sept. 14, a storm came up which was spitefully snappish. The lightning shocked the telegraphers at Morris. Our old friend, "Dick" Merrill, went to Glen Lea—a town about 15 miles north of Morris—for his dogs. While taking the crates out of the barn a bolt of lightning struck it, and the results came nearly being disastrous. Mr. Merrill was knocked down, Tom Richards was prostrated, a boy was knocked senseless, and a horse was paralyzed. Mr. Merrill says that it seemed as if a ball of fire exploded within a few inches of his eyes and knocked him down. Lightning may be able to kill horses and such things, but when it runs against a good dog man it has something more in its own class. Mr. Merrill has not named any date for a return match.

Rodes and Dan, two of the best foxhounds in Mr. W. S. Walker's celebrated pack at Point Leavell, Ky., have just been purchased by Mr. O. F. Joslin, Oxford, Mass. These hounds are highly recommended by Mr. Walker, and will be entered at the Brunswick Fur Club's field trials at Oxford next month.

Following is the list of officers elected by the Canadian Kennel Club at its annual meeting: President, Mr. H. Bedlington, Hamilton; First Vice-President, Mr. J. S. Williams, Toronto; Vice-Presidents, Mr. F. W. Green, Halifax, N. S.; Mr. G. B. Bruce, Calgary, N. W. T.; Mr. R. McEwen, Byron, Ont.; Mr. P. G. Keyes, Ottawa, Ont. Secretary-Treasurer, Mr. H. B. Donovan, Toronto. Executive Committee: Dr. H. S. Griffin, Mr. W. B. Palmer, Hamilton; Mr. T. G. Davey, Dr. J. S. Niven, London; Dr. W. H. Drummond, Montreal; Mr. G. B. Sweetnam, Mr. C. A. Stone, Mr. A. A. Macdonald, Toronto; Mr. H. Gorman, Sarnia; Mr. Andrew Laidlaw, Galt; Mr. F. S. Wetherall, Compton, Que. Three names tied for the twelfth member of the Executive. The Secretary-Treasurer reported 3,929 registrations.

The New England Field Trial Club anticipates a good trial this fall. Their entries close Oct. 1. A. R. Sharp, Sec'y, Taunton, Mass.

Entries to the Danbury Dog Show close on Sept. 30. Entry fee $1. G. M. Rundle, Sec'y, Danbury, Conn.

The United States Field Trials Club announces its All-Age Stake in our business columns. Entries close Oct. 1. W. B. Stafford, Sec'y-Treas., Trenton, Tenn.

In our business columns: Lock Box 13, Ridgeway, O., offers English setter. O. L. Hennigan, Brick, Ala., offers foxhounds. J. B. Cook, Afton, N. Y., offers partridge dog. Muckross Kennels, Springfield, Vt., offer Irish setters. G. F. Richardson, Mt. Pleasant, Mich., offers English setters. West Philadelphia Kennels, Philadelphia, Pa., offer bull terriers. Sheriff, Newberry, Mich., offers pointers. H. J. Andrews, Afton, N. Y., offers rabbit hound. G. Bell, Toronto, offers fox-terriers and cockers. J. A. McGibbon, Farmington, N. H., offers foxhounds.

Owing to press of matter on our columns we are forced to hold over some communications and the reports of the Providence (except awards) and Newburgh dog shows till next week.

Soon after the field trials began at Morris, Man., there were signs that the customs officers were watching the imported dogs very closely and that there would be exactions and delays which would be troublesome. When the trainers and dog owners prepared to leave Manitoba after the trials were concluded, the red tape seemed to multiply. An officer had been in attendance betimes at the trials to keep a list of the dogs which were dutiable. Such dogs as did not compete were taxed 20 per cent. on the valuation. In some instances the owners were permitted to make their own valuation. In at least one other at the boundary line, no valuation less than $50 was accepted. The officer at Morris charged an extra fee of 50 cents per dog for clearance papers. Other fees were charged at the boundary line for much the same thing. It was the general consensus of opinion that the owners and trainers from this side of the line would not favor future trips across the line for field trial competition. By inadvertence some of the dogs were valued at $200 and $250, so that the situation concerning them was embarrassing. It is said that the duty paid on dogs which competed will be returned at a later date.

The Manitoba Field Trials Club gave out but little information as to business transacted at its meetings held during the running of the trials at Morris. It was learned that the election of officers would take place in the near future at a meeting to be held in Winnipeg.

The Eastern Field Trials Club's All-Age and Subscription stakes close positively on Oct. 1. There is every indication that the trials at Newton, N. C., this year will be of the best. Those who contemplate entering should attend to the matter in time. There are always a few who are shut out by their own negligence. Make your entries in time.

Mr. E. M. Little has kindly sent us a photograph of Roxie—English setter—and her five puppies, all very lifelike and artistic.

As the entries of the second annual whippet race meeting of the Country Club close positively on Oct. 2, the matter is an important one for beagle owners to bear in mind. The meeting will be held at Clyde Park, Brookline, Mass., on Oct. 9 to 12. A full programme of the races is now ready for distribution. Address D. E. Loveland, Sec'y, 125 Tremont street, Boston.

Back Numbers are Filed Away.

NEWARK, N. J.—*Editor Forest and Stream:* We return the copy of FOREST AND STREAM of Saturday, Aug. 24, it having reached us in a badly damaged condition, and would request that you mail us a good number. We only ask this as we are very choice of your publication, and do not destroy, but carefully file away the back numbers.

BAILEY & ALLING.

SAIL PLAN OF ETHELWYNN.

Designed by W. P. Stephens for C. J. Field.

Eastern Field Trials Club's Entries.

BROOKLYN, N. Y.—*Editor Forest and Stream:* The following have been declared out of the Eastern Derby of 1895:

Charlottesville F. T. Kennels' Dowlahand Amen, T. G. Davey's Brighton Maud, H. R. Edwards's Harwick, Avent & Thayer's Loulanier, Fleet's Pet and Flirty Lit, F. R. Hitchcock's Tory Cecelia, and C. G. Stoddard's Coinage.

The judges for the Eastern Trials will be Messrs. Bradley, Bell and Wallace.

I have reports from Newton that birds are very plentiful and bred well on the grounds.

WASHINGTON A. COSTER.

Irish Setter Club's Trials.

WEST CHESTER, Pa., Sept. 19.—I regret to say that there was an error in the ad. that I sent you a few days ago. The prizes should read: Derby—60 per cent. to first, 30 per cent. to second. All-Aged Stake—40 per cent. to first, 30 per cent. to second, and 20 per cent. to third, the club deducting 10 per cent. of total entry fees. Entry blanks will be ready in a day or so.

GEO. H. THOMSON, Sec'y,
Room 22, 400 Chestnut Street, Philadelphia, Pa.

KENNEL NOTES.

Kennel Notes are inserted without charge; and blanks (furnished free) will be sent to any address. Prepared Blanks sent free on application.

BRED.

Mr. Geo. L. Small's Zenobia, rough-coated St. Bernard bitch, July 30, to champion Otos.
Mr. C. E. Bunn's
Parepa Rosa, mastiff bitch, May 21, to Leamington.
Minna Minting, mastiff bitch, May 23, to Marquis.
Fortuna, mastiff bitch, May 28, to Leamington.
Rowena, mastiff bitch, June 3, to Leamington.
Jean, mastiff bitch, June 7, to Rossington.
Birdie Beaufort, mastiff bitch, July 17, to Marquis.
Breeder's Joy, fox-terrier bitch, May 29, to Piper.
Miss New Forest, fox-terrier bitch, June 7, to Streak of Luck.
Eunice, fox-terrier bitch, July 19, to Streak of Luck.
Restless, fox-terrier bitch, July 30, to Streak of Luck.

WHELPS.

Mr. J. R. Taylor's Fly C., pointer bitch, whelped, Aug. 24, ten (five dogs), by Kent's Tribulation.

SALES.

Mr. W. B. Townsend has sold ——, pointer dog, to Mr. T. T. Ashford.
Mr. H. G. J. Hallowell has sold
——, Irish setter dog, to Hon. Alan Wood, Jr.
——, Irish setter bitch, to Mr. Milton Bray.
——, Irish setter bitch, to Dr. I. M. Schwab.
Dr. S. C. Alexander has sold
——, pointer dog, to Mr. T. T. Ashford.
——, pointer bitch, to Mr. T. T. Ashford.

DEATHS.

Rochelle Kennels' champion Gypsy Girl, black and tan terrier bitch, Aug. 25, caused by double pneumonia, resulting from heat prostration.

Yachting.

Beverly Y. C.

THE doubtful prizes in the races of Aug. 31 and Sept. 2 have been awarded, as protests are decided and boats measured.

Race No. 228, Aug. 1.—Third class—Agnostic taking first prize, Puzzle second prize and Eina third prize.

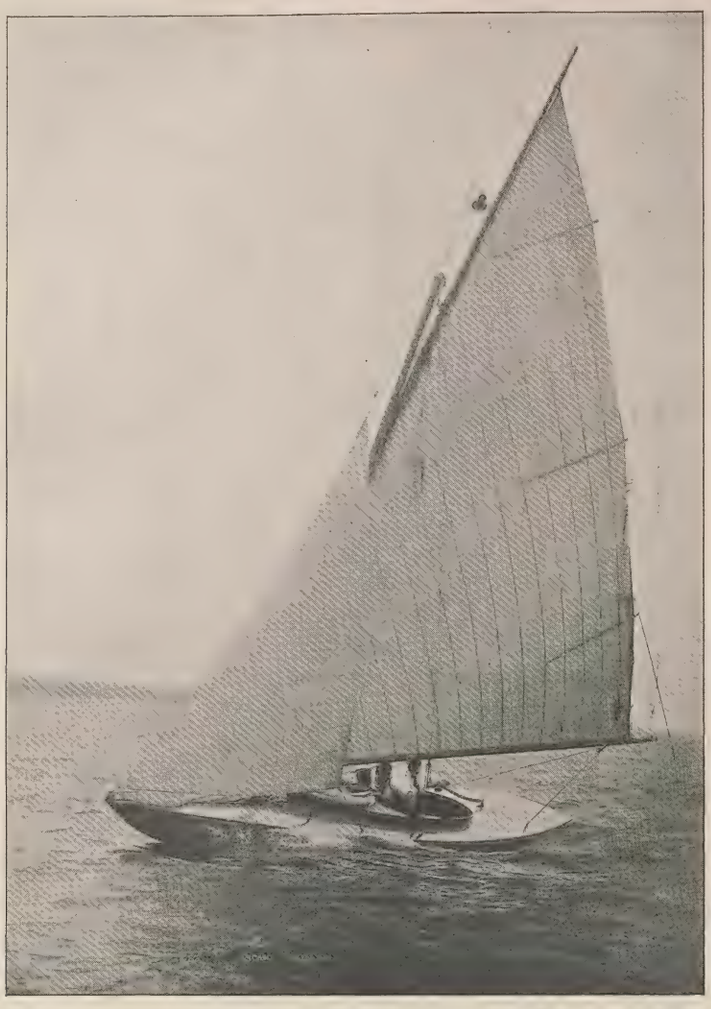
Race No. 229, Sept. 2.—Special class—Ashumet is ruled out on Isem's protest and prize goes to Salmon. First class—No prize awarded, as Mr. Edwards reported his boat left one buoy on wrong side. Second class sloops—Flirt takes first prize. Third class cats—Eina first prize, Melro second, Doris third. Fourth class sloops—Silence measures out of class, and prizes go as follows: Grilse first, Fin second, Sylph third. Fifth class sloops—Waskite takes third prize on allowance.

The 230th regatta, third championship, was sailed off club house Sept. 14 in a breeze calling for reefs at start, but lightening out toward finish

Surprise, Mist, Sylph and others, not sailed by club members, were on hand and sailed course, starting just after the racing boats.

Wind was fluky, changing from N.E. to N. by W. at times, so that second class having twice to go from Scraggy Neck No. 10 to Dry Ledge, laid their course easily, while third class had a dead beat from Scraggy Neck No. 8 to Dry Ledge, between these two the two Scraggy Neck buoys being only three-quarters of a mile apart.

Grilse carried reefs and off wind set an enormous spinaker and did nobly. As long as Sylph followed on the course she was badly beaten.



The change of rules allowing any sails in sloop classes has worked well; the light sails are very large and cause a good deal of fun in the handling, the general rule seeming to be, the smaller the boat the larger the spinaker. In this race Laurel broke spinaker pole, and was practically out of it. Courses: 19¼ miles for special class, 12¾ for first and second, 8 for third, 8½ for fourth and 5½ for fifth.

	Length.	Elapsed.	Corrected.
SPECIAL CLASS.			
Ashumet, C. H. Jones	34.03	3 28 52	3 21 37
Salmon, W. E. C. Eustis	38.06	3 44 01	3 42 16
FIRST CLASS SLOOPS.			
Little Peter, W. G. Cotton	28.10	1 58 14	1 47 56
SECOND CLASS CATS.			
Kalama, Chas. Brewer	26 04	2 03 48	1 50 25
Anonyma, F. L. Dabney	24.09	2 05 40	1 50 08
Bernice, J. G. Young, Jr.	25.08	2 08 50	1 55 04
THIRD CLASS CATS.			
Eina, John Parkinson	20.01	1 44 00	1 29 30
Colymbus, Alfred Winsor	21.06	1 45 40	1 32 45
Melro, D. L. Whittemore	20.03	1 47 32	1 33 14
Puzzle, Wm. Amory, 2d	20.01	1 48 18	1 33 48
Doris, John Parkinson	21.01	1 49 20	1 35 58
FOURTH CLASS SLOOPS.			
Grilse, W. E. C. Eustis	19.02	1 58 45	1 42 10
Fin, Howard Stockton	17.09	2 08 45	1 49 44
FOURTH CLASS CATS.			
Howard, H. O. Miller	18.0	2 07 10	1 49 58
Dawde, R. S. Handy	17.6	2 08 02	1 49 06
Cinch, H. Parker	18.1	2 01 20	1 53 55
Squall, T. G. Palfrey		Withdrew.	
FIFTH CLASS CATS.			
Vif, Ralph Winsor	15.4	1 25 31	1 09 47
Imp, Geo. B. Dabney	15.5	1 29 31	1 13 53
FIFTH CLASS SLOOPS.			
Waskite, H. N. Richards	12.9	1 24 50	1 06 53
Hilda, Robert Winsor	12.3	1 25 32	1 07 04
Laurel, H. & F. Burgess	14.	1 28 12	1 12 01

Howard's length is protested and prizes in this class withheld pending remeasurement.

First prizes won by Ashumet, Anonyma, Eina, Grilse, Vif and Waskite; second prize by Colymbus.

Howard wins and holds pennant; Eina and Waskite win legs for pennants; Eina tieing Doris and Melro; Waskite tieing Hilda. The sail-off will take place on the 21st. Judge, W. Lloyd Jeffries.

SCUD.—1 RATER.

The British Half-Rating Class.

THE OXFORD CANOE-YAWLS AND THE SOLENT RATERS.

THE class of yacht which is engaging public attention this week through the international races of the Seawanhaka Corinthian Y. C. at Oyster Bay is entirely new to this country, but is well known in England under the title of the "Half-Rating Class." The limit of the class, as we have frequently explained, is ½-rating by the Y. R. A. rule—that is, the length multiplied by the sail area and the product divided by the constant, 6,000 equals the rating: 15ft. l.w.l. × 200sq.ft. of sail, divided by 6,000=½. Though the Y. R. A. rating rule is not used or recognized in the United States, it has been the fashion for several years of some American yachtsmen to use the term "rating" as synonymous with the American "sailing length" or "corrected length," according to which faulty nomenclature a British half-rater becomes a "15-rater" in this country. The correct designation of the class in the Seawanhaka races is the "15ft. racing length" class, the understanding with Mr Brand and the Minima Y. C. being that the Seawanhaka measurement should be followed: any slight difference between it and the Y. R. A. rule being if anything in favor of a British rater racing in American waters, allowing her to carry more sail.

The half-rating class in Great Britain properly includes three different types of small craft: the ordinary canoe-yawl, of both the keel type, like the Vital Spark, and the lighter centerboard type, such as the many "Nautilus" canoe-yawls built by Mr. W. Baden Powell; the Solent half-raters, mainly fin-keels; and the Oxford racing canoe-yawl, a shoal draft centerboard craft of the sharpie type.

It is from this latter class that Spruce IV. has been evolved, though she is really a wide departure from the first models. We are indebted to the kindness of Mr. Brand for much of the following information and for a number of the photographs. The lines of the Oxford yawls are from the *Model Yachtsman and Canoeist*.

The Oxford University Sailing Club, of Oxford on the Thames, is a unique organization in that it begins its racing season in the fall and continues all through the winter, ending in the spring; its races are the first reported each year in the yachting journals, and also the last, after all other craft are laid up for the winter. The Thames at Oxford is very narrow and crooked, the club course is described as being shaped like the letter Z, and only the most enthusiastic sailors would think of racing over such water and in all sorts of winter weather. There are times when the course is wider, the freshets flooding the meadows, but even when this happens the depth over the flooded portions is barely three feet. Mr. Brand was at Oxford University from 1885 until 1888, his ownership of a yacht beginning in the former year with the open boat Pixie, a cutter rigged craft 20ft. over all, 17ft. 6in. l.w.l., 6ft. beam; and carrying, for sea work, two centerplates of the ordinary form, and for river racing a single larger triangular plate. She was built at Hastings, Sussex, by Tutt, the builder of the famous old lugger, New Moon. With very full lines forward, but a fine afterbody, Pixie was fast in a light and steady breeze, and though races were not so numerous in those days, Mr. Brand won twenty-two prizes in her in two years. In addition to the up-river work, Mr. Brand has always spent much time on the Solent and about Dartmouth, and Pixie was used on the Channel as well as the river, finally coming to an end by capsizing on Aug. 20, 1887, outside Dartmouth Harbor.

The first of the Oxford canoe-yawls was Isis, built in 1888 for R. A. Hinckley, owner of the very successful canoe Battledore, twice winner of the R. C. C. challenge cup. Isis had but 4ft. beam and was very much rockered fore and aft, much of the American sharpie type. What first suggested the adoption of this type at Oxford we have not been able to learn, but in the course of a few years it was developed into a very speedy class of racing canoe-yawls. Isis was very successful, winning prizes at Bourne End and other places; following her came Moor Hen, owned by Mr. Moore, a similar boat, but with less rocker and not so successful. The next two boats, Merlin and Yankee, were larger and quite successful in the races.

It was in the summer of 1890 that the Oxford canoe-yawl first attracted more than local attention through the performances of Shadow and Snake, both designed and built by T. C. Smith, a local builder, the former for R. A. Hinckley and the latter for C. C. Lynam. They were both 18ft. waterline, Snake being 4ft. 10in. beam and Shadow 4ft. 6in.; the difference in model being shown by the accompanying lines. Both boats have wide side decks and can be heeled until the masts are almost in the water; having, in practice, with a crew of two or three, a wide range of stability. Snake has a remarkably long and narrow well, right up to the mainmast. They are sailed without ballast, carrying one lug mainsail of 200sq. ft. in racing, though sometimes the main and mizen rig is used. Snake is built of cedar and her centerboard is ¼in. iron. In details and fittings the two were merely large canoes, using the drop rudder and deck steering gear.

Shadow cruised down the Thames, then by steamer from London to Southampton and later by steamer from Cowes to Teignmouth, spending a part of the summer on the Solent and about Dartmouth, her owner living aboard for two months. She did some good racing on the South coast in light winds against the boats of the day. Snake went to the British Canoe Association meet at Falmouth and proved very successful, beating everything she met, being especially good in windward work in close quarters. Next year, 1891, Torpedo was designed and sailed very successfully by Walter Stewart, a canoeist well known in this country, which he has twice visited, while Gipsy and Spruce I. were added to the fleet. In 1892 two important modifications were made in the Oxford type; square sterns were introduced and self-bailing cockpits. The new boats of the year were Serpent, C. C. Lynam, and Ragamuffin I., H. Welch Thornton, both fuller in the body and less like the sharpie; this change continued, with a shortening of the waterline and lengthening of the deck, in the boats of 1893, Spruce II., Ragamuffin II., Snake II. and Free Lance, with Query late in the autumn. Both Spruce and Ragamuffin had bulb fins, that of the latter being fitted to lift. Next year there was a new crop; Spruce III., Ragamuffin III., M, all with weighted centerplates, the first pair having lug mainsail and a jib, the other, with Query, only one large lugsail.

It was in 1888 that Mr. Brand built his first boat, a 12ft. dinghy, named Unique, for the existing Oxford dinghy class. She was built by the Smith Brothers, the first of their boats with no deadwoods, but with a great rocker to her bottom; her beam was 5ft. She was successful at Oxford, and won the championship in the dinghy class on the Solent in 1889. She was the first boat at Oxford to use bamboo spars, now so common there. Mr. Brand's next boat was the sloop Coquette, 1888, 18ft. over all, 14ft. 6in. l.w.l., 6ft. 3in. beam, and 2ft. 3in. draft without board. She was raced in 1888-9, but was too short and wide.

In 1890 Mr. Brand built a 9ft. yacht dinghy to race against the late Mr. Henry Emanuel's 9ft. dinghy, but Mr. Emanuel's death prevented a race; the boat, however, sailed four races and won three first prizes. In the same year Mr. Brand raced in Shadow at Dartmouth and also saw on the Solent two of the then new half-raters—Thuy, designed by Herbert F. Ridsdale, and Humming Top, designed by Arthur E. Payne—and determined, from his experience at Oxford, to bring out a boat of the Oxford type for racing on the Solent; his expectations being that in light winds and smooth water the shoal centerboard boat would beat the deeper-bodied keel craft. The result was Spruce I., designed by Mr. Brand and her builder, Theodore Smith, 18ft. over all, 16ft. 2in. l.w.l., 5ft. beam. She has a centerplate dropping 1ft. 8in. below the bottom and a deep drop rudder, and carried a lug mainsail of 123sq. ft. and a mizen of 30ft., 153ft. in all; the crew being the only ballast. The well is 6ft. long and but 8in. wide, and fitted with a bucket well of oiled canvas, so that no water can get aboard, making her capable of standing very hard weather.

Mr. Brand has been one of the most active of the Minima Y. C. from its organization, and in his work for the club he has taken part in amateur theatricals, among other plays in the comedietta "Sugar and Cream." It was from a character in this play that the name Spruce was first taken, and Mr. Brand has retained it for four successive boats.

Spruce I. was launched on July 16, 1891, and sailed her first race at Hamble, on the Solent, next day in the Minima Sailing Club race for 1-raters and half-raters, winning first prize, showing herself very fast off the wind, but not as good to windward as the keel boats. Her rating was but .41, but she raced in the Solent for some time against both 1-raters and half-raters with great success and then went to Dartmouth. She sailed a fine race in the Torbay regatta in a very hard wind, winning first prize easily. She ended the season by one successful race on the Thames; her record being: 34 starts, 20 first prizes, 4 second prizes, 5 other prizes; total value £50.

Her second season began on the Thames, then she went to the Solent in August and September and later to Dartmouth, where she sailed some hard and exciting matches with Ragamuffin I. Her record for 1892 was: 44 starts, 12 first prizes, 10 second prizes, 7 other prizes; total value £28.

The second Spruce was a departure from the conventional Oxford yawl, having a bulb fin, but unlike the Solent half-raters she has a small centerplate forward of the fin. She was designed and built by Theodore Smith, her over all length being 19ft. l.w.l., with crew of two on board, 16ft. 6in., beam 5ft. 6in., rating .46. She is rigged with lug mainsail and roller jib, the latter being clearly shown in the larger cut. The jib rolls on a light wooden roller through which the jib stay runs, this roller being revolved by an endless line on the lower end; it is so hung in connection with a club which swings about the mast that by means of an outhaul the whole rigging of the jib may be swung off square to the keel, making a spinaker. The jib may be rolled up until just a corner shows, or it may be unrolled to its full extent in reaching.

Spruce II. has some special features besides the jib, which is in common use in the half-rating class; she has two sliding seats, a folding watertight bucket well, a special fastening to the bulb-fin by which it can be taken off by unscrewing two nuts, a pivoted rudder which may be lifted to clear weeds, etc., and a patent horse for the runners, so made as not to buckle in the center: her blocks, too, are of aluminum. During Mr. Brand's ownership she won nine firsts out of sixteen starts. The construction of the bucket well is as follows:

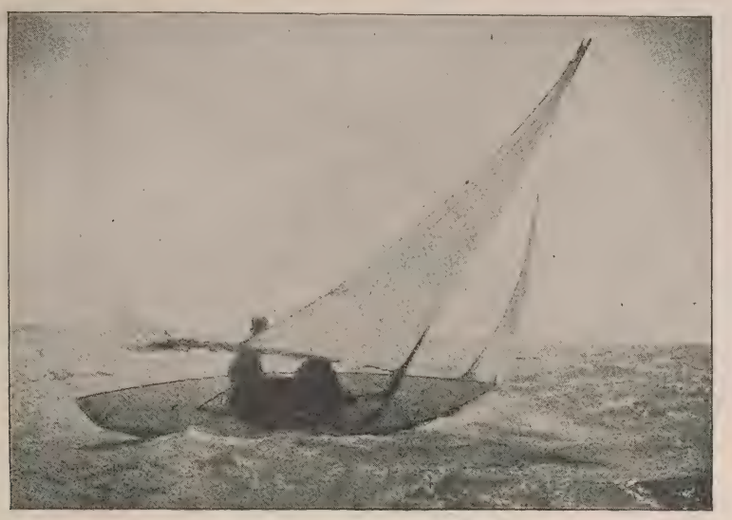
This well is most useful, as it folds up and stows away under the deck, and thereby gives full use of the boat in smooth water, and when rough stuff is met such as coming down a river and going out to sea it is fixed in its place in a few seconds.

It is simple in construction, being made of watertight canvas in the shape of a bag, which bag is attached to a wooden frame which is cut in half at the forward and after end and held together by brass hinges fixed on the under side at *A A*. The wooden frame fits outside the coaming of well on the deck and is about ¼in. above the deck level. It is held in its place by six flat brass staples (three on a side, marked *B*), which are fastened on deck, being raised up about ½in. above the deck; into these staples six tongues (*C*) slip, which are fast on under side of wooden frame. The under side of the frame has a ring of india rubber (*D*), which is pressed down and the whole frame held in its place by the two buttons (*E E*), which are made level to the frame by the blocks of wood (*F F*). All that has to be done to unship it is to turn back the two buttons (*E E*) and lift the well out; by lifting the well out the two hinges close, which brings the brass tongues (*C*) out of their staples (*B*); they are also put in the same way.

The whole bag is then shut together like a Berthon boat and put under the side deck out of the way; it is most handy, as with this well one is able to get at the stores, etc., when under way. The rest of the bag is just the same as in Spruce I.; the bottom of canvas bag lies on the floor boards; at the bottom are attached the loop for turning the water out and four thin floor boards held together by the same waterproof canvas, so that they also fold up and stow away with the well. They are a great preventative to the chafing of the bottom of the well, and take up no room. There are fitted two pockets, one at each end of the canvas bag, for putting lunch, pipe, etc., in.

Spruce III. was built in April, 1894, by H. C. Smith, of Oxford; she is 24ft. over all, 15ft. 6in. l.w.l., 5ft. 6in. beam, the hull of cedar, with a weighted centerplate instead of a fixed bulb-fin; she has a lug mainsail of 190sq. ft., but late in the season she was altered to sloop rig and greatly improved. She began her racing in April on the Thames, and after being successful there she went to the Solent; Mr. Brand was taken ill with pleurisy and Mr. F. C. Keller sailed her until he recovered, after a month's illness. She was successful on the Solent and later at Dartmouth and also at the B. C. A. meet at Salcombe. During the season of 1894 Spruce started 63 times, winning 19 first prizes, 18 second prizes, 15 third prizes, 1 fourth prize, or 53 prizes valued at £72, with three cups valued at £80. At the B. C. A. meet she was steered by Miss Constance Bennett, winning first prize, besides which she has won four other ladies' races.

It was Mr. Brand's intention to build a fourth Spruce this year and to sail a match with the new half-rater built at Clayton, N. Y., for Mr. W. W. Howard, Miss Bennett to steer the new Spruce and Mrs. Howard the other boat; but after the visit to America was planned the design of the boat was altered, she being intended for racing on the Sound rather than on the Solent; though of course neither owner nor builder was familiar with American conditions and weather.



Mr. Brand's adventurous and nomadic disposition has placed him rather at a disadvantage in his many races, as, in a boat built for one particular locality and to race with certain local craft, he has each year visited several different localities and encountered the various local fleets on their own waters. Under these circumstances, each

SPRUCE II.

boat has frequently raced under conditions for which she was not designed; and her owner has been at a disadvantage, owing to the time spent in traveling, in the matter of alterations and constant trial. As a rule Mr. Brand's boats have been best off the wind and especially in reaching, and not so good to windward, the new boat being no exception.

The Solent half-raters have been frequently described and illustrated in the FOREST AND STREAM and a further description is hardly necessary; the photos, by West & Son, show Scud, a one-rater of the present type, wide and shoal; and one of the Herreshoff boats, we

WEE WINN.—HERRESHOFF ½-RATER.

believe Wee Winn, the half-rater, though the photo is labeled Morwena, one-rater. The details of the modern lug rig, practically a leg o' mutton, are clearly shown in the picture of Scud. Spruce IV. was described last week.

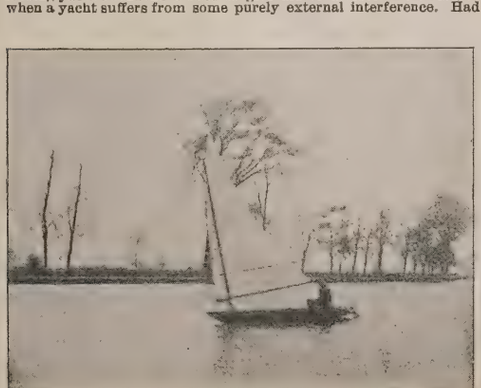
The America's Cup.

THE following letter should have preceded those published last week, but it was not given out until Sept. 18:

"ON BOARD DEFENDER, Sept. 12, '95—Dear Lord Dunraven: Although the regatta committee have given Defender yesterday's race, under the circumstances I should much prefer calling the race off and resailing it to-morrow. I trust this will meet with your views. If so, kindly answer at once. Very truly yours, C. OLIVER ISELIN."

On Sept. 19 the following statement was given out on the part of Lord Dunraven and telegraphed to London:

"Lord Dunraven would like it clearly understood that the offer contained in Mr. Iselin's letter, Sept. 16, which appeared in this morning's paper, to resail either the last two races or the whole series, has never been made known to him either by Mr. Iselin or by the members of the Cup or regatta committees."



From the comments which we have already seen in some American papers, it appears that the effect of this announcement has been to lead many to the belief that Mr. Iselin's offer to resail the second race had never been made to and declined by Lord Dunraven. That such is not the case, but that the offer was made to his lordship, understood and positively declined by him, is shown by Mr. Iselin's letter, as above, and by the reply to it published last week.

Mr. Iselin, after once having made a protest, and, as it now appears, on good grounds, was not in a position to withdraw it without a decision. The feeling between the partisans of Defender and Vigilant is but too well known through the early meetings of the two yachts and the accompanying pointed correspondence, and this feeling still exists. Had Mr. Iselin withdrawn his protest and waived a decision by the committee, it would have been said by many that he had tried on Valkyrie the same tactics of which he was accused in the two cases in which Vigilant was involved; but that owing to the greater prominence and the number of witnesses in the Cup race, he was afraid to press the protest to a decision. Contemptible and unjust as such a charge would have been, it is no worse than some of the things already said. In our opinion, having made a protest, and on good grounds, he had no option in justice to himself but to demand a decision on the merits of the case and after all evidence had been heard. Having done this, and being vindicated from the charge of even technical foul sailing, he at once offered to Lord Dunraven to call the race off and resail it.

The other matter, of a subsequent offer of Mr. Iselin to resail the last two or all three races, was made to the two committees who alone had power to consider it, and as they decided that it was beyond their powers to accept it, no possible necessity existed for making the double offer known to Lord Dunraven. The publication of Lord Dunraven's statement does an injustice to Mr. Iselin, as it conveys the intimation that he had never offered to resail the second race.

The discussion of the whole matter of the races, protest and correspondence still continues on both sides of the Atlantic, not a few of the British papers condemning Lord Dunraven's withdrawal from a fair course. Most of the writers, however, display an utter ignorance of yacht racing with more or less personal or patriotic bias that robs their opinions of all value. Sentiment is all very well, and no one has fought longer and harder for fair, just and chivalrous dealing toward all Cup challengers than the FOREST AND STREAM, but we cannot overlook the fact that yacht racing is conducted, for good reasons, under strict technical rules, and that the interpretation of these rules is governed by long established precedent. No one acquainted with both rules and precedent is qualified to discuss the intricate details involved in the case.

The regatta committee has been condemned not only by Lord Dunraven, but by many Americans (the latter at least being able to plead ignorance of yachting usage) for not calling the race off under the provisions of Art. 10 of the New York Y. C. rules. It is true that under this provision the committee is endowed with extraordinary powers, but it is answerable to the club for the abuse of such powers. There is no precedent for calling a race off at the start on account of an injury of unknown degree to a competitor who is willing to continue the race, nor for ordering a race resailed after a result has been reached, whether by the decision of a protest or otherwise. This special power is intended to cover certain emergencies, as when a leading yacht abandons a race to give aid to a vessel in distress, or when a yacht suffers from some purely external interference. Had

SNAKE II.

the committee attempted to interfere at the start it would have laid itself open to wholesale criticism, possibly from both sides.

The America's Cup Committee has replied to Lord Dunraven's letter of Sept. 13 in a dignified but positive and convincing manner, which disposes of several of the immaterial issues raised by Lord Dunraven. We give first the latter's letter, already published, and then the reply of the committee.

The America's Cup committee has replied to the letter from Lord Dunraven published last week. We reprint the letter, as follows:

439 FIFTH AVENUE, Sept. 13, 1895.—Gentlemen: I have the honor to acknowledge the receipt of your letter of the 12 h inst. You say my letter of Wednesday night to Mr. Canfield was not handed in the New York Yacht Club until 1 A. M. on Thursday, and was not in your hands until 8 A. M. of the same morning. There must, I think, be some mistake. I received Mr. Canfield's letter at 10:30 P. M. on Wednesday, and my reply was delivered by my own servant at the New York Club at 12:15 A. M. to the club clerk. The steward or clerk in charge was called on the telephone at 12:30 and was requested to find if Mr. Canfield was at the Knickerbocker Club and, if so, to deliver the letter at once. The reply was that he would endeavor to find Mr. Canfield; that he had a short time before left the Knickerbocker Club, and had left word that he would call at 7 A. M. to see if there were any messages for him.

The request that Mr. Canfield should not open my letter on the 10th until the protest was decided was unnecessary, as the Cup committee

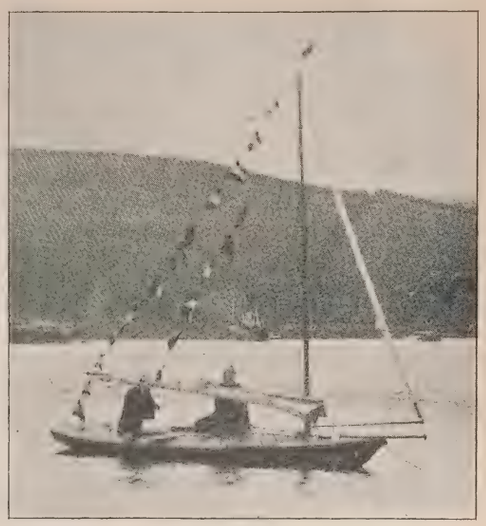
SPRUCE I.

was not hearing the protest; but whether my letter of Wednesday night was delivered at the New York Yacht Club at 12:15 or 1 A. M., whether it was in the hands of the committee at 7 or 8, and whether my letter of the 10th was read at 12:30 or 2:30 P. M., appears to me to be a matter of minor importance. What is of importance to me is to allay the unjustifiable opinion implied in your letter of the 12th that in coming to the decision conveyed to you in my letter of the 10th I went back on the agreement signed by Mr. Smith and myself.

You say, "We can only regret that the conditions that you named therein—that is, in my letter of the 10th—as absolutely necessary, should not have been so presented when the agreement of terms was formulated." Permit me to observe that I named no particular conditions as indispensable, as you will perceive on referring to my letter.

I hold that in any match a fair field and no favor is a condition precedent to any agreement as to terms, and that, failing that, any party has a perfect right to withdraw absolutely or conditionally. Articles of agreement cannot and are not intended to lay down fixed rules to meet every imaginable contingency. Certain contingencies have arisen, as you are aware. Confining myself to the subject of my letter—the overcrowding:

As far back as October I wrote concerning the difficulty of insuring a clear course, but did not insist upon my views because I thought the persons responsible should be free to take what steps they thought best. In view of the failure in that respect it might have been better if in my letter of the 10th I had absolutely withdrawn; but my desire to sail off the races was great, and I withdrew conditionally and suggested steps which I thought would remove the difficulty.



These steps were not taken, and I hold to my determination to sail no more, and so acting I emphatically deny that I went back in any way on the agreement as to terms.

I did not know whether Messrs. Canfield and Busk were officially representing the committee when they came to see me at the Waldorf. I judged by their conversation that they were not, and I understood from them that the committee had not come to a definite conclusion upon my letter. I now conclude, from your communication, that they were officially representing the committee.

In that case, the proposal made to me by the committee was that I should withdraw from my determination expressed in my letter of the 10th, and should sail the third, possibly the final race, on condition that sufficient room was secured at the start, and that in any further races my suggestion that the dates of the races and the times of starting should not be made public should be carried out.

The proposition did not commend itself to me. Nobody denied the overcrowding, of course; but in any case either my complaint was, in the opinion of the committee, unjustifiable, in which case I could not have agreed with them and should have withdrawn, being fully convinced of the necessity and prepared to take the full responsibility for doing so; or it was justifiable, in which latter case the committee were, I think, bound to give redress before the next race was sailed.

I so far withdrew my letter of the 10th as to say I would sail the third race if the committee would undertake to declare the race void

SPRUCE II.

if in their judgment either vessel was interfered with by steamers, the committee putting anybody they liked on board the yachts. I was willing to leave the matter in their hands, stipulating only that they put experienced and practical yachtsmen on Valkyrie III. As far as I am concerned I have no wish to continue the discussion which you accurately describe as superfluous, and will conclude by expressing regret that if any desire to resail Tuesday's race was known to exist the regatta committee did not order it resailed under Article X. of the New York Yacht Club regulations, in which case, whatever my opinion as to the cause of the foul may be, I should have been at the disposal of the committee, and that the Cup committee could not see its way to adopting what appears to us the simpler course of hoisting the letter "G" yesterday and postponing the race to such time as they had arrived at a definite conclusion upon my letter of the 10th inst.

I have the honor to remain, very faithfully, DUNRAVEN.

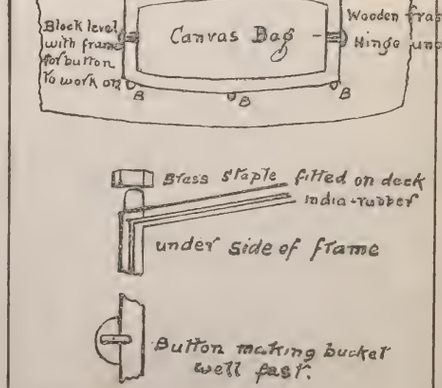
NEW YORK YACHT CLUB, New York, Sept. 17, 1895.—My Lord: We have the honor to acknowledge the receipt of your letter dated Sept. 13. We should be glad to limit our reply to acknowledging its receipt, but as this whole matter will probably come before the public we feel that we should correct certain misapprehensions which we fear may arise.

You say: "The request that Mr. Canfield should not open my letter of the 10th was unnecessary, as the Cup committee were not hearing the protest." You inform Mr. Canfield that you had learned that the Cup committee had nothing to do with the protest, and at the same time you request him to keep the letter (of the 10th) unopened until the protest had been decided. You did not inform him that it was unnecessary to refrain from opening your letter.

If the details which you give as to time of delivery, etc., of letters imply any neglect or discourtesy on the part of the committee, we must deny that there has been any such neglect, and must disclaim any intention of being discourteous—otherwise we agree with you that these facts are of minor importance.

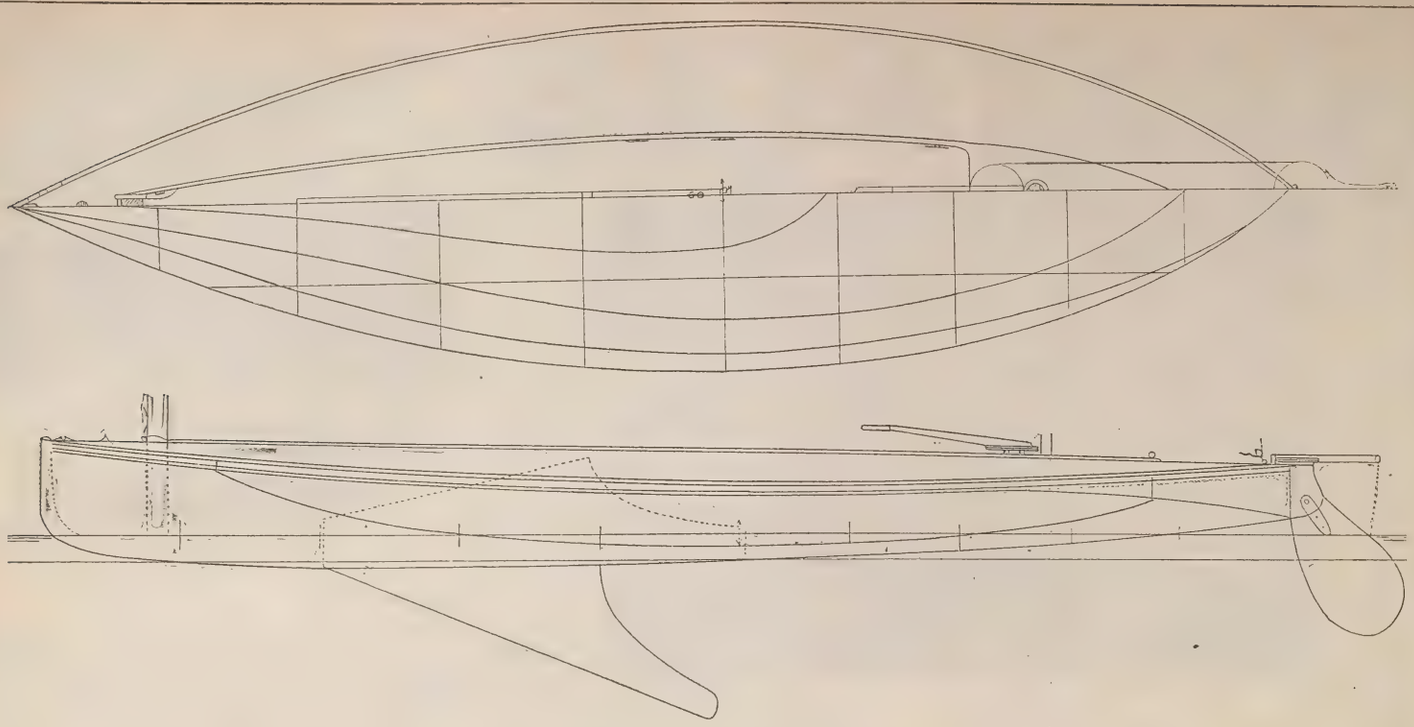
Your assertion that you named no new conditions in your letter of the 10th is absolutely exact. We should have said in your letter of the 11th. In your letter of the 10th you only declined to continue the contest under the existing circumstances, and gave your reasons for declining. In the interview at the Waldorf at 9 P. M., Sept. 11, you stated upon what conditions you would continue, and you adopted substantially the same conditions in your letter of Sept. 11.

In the interview at the Waldorf the two representatives of the committee pledged the committee to one condition, namely: To secure a clear start, and obtained your permission to postpone the time of the starting for that purpose.



The representatives declined absolutely to agree to the condition that the committee should assume the grave responsibility of declaring the race void if in their judgment either vessel were interfered with by the attending vessels. In our opinion it would be impossible to secure a race absolutely free from interference, and the relative amount of interference would be much too delicate a point for us to decide. The representatives declined to agree to postpone the race fixed for the next day, Thursday. The representatives informed you that the question of not announcing the dates and times of starting any future races must be submitted to the committee. The representatives assured you of renewed efforts through the press and during the race to secure a clear course. You finally declined to say whether you would sail the next day's race (Thursday's) or not, and said that, in any event, Valkyrie would cross the starting line.

In view of the definite replies given by them, we cannot understand how you could doubt that the representatives sent you were acting for and with the authority of the committee.



As to postponing Thursday's race in order to consider your letter of the 11th, the committee felt that the points had been fully covered in the conference at the Waldorf and did not desire more time for reconsideration of the answers given by the representatives at that time. The committee did not consider as practicable your suggestion to keep secret the dates and times of starting any future races.

You raise the question as to whether your complaint of the steamers was justifiable or not. The steamers undoubtedly interfered with Valkyrie, and Defender as well, and there seems to be no reason why you should not have complained of such interference; but we certainly demur to your conclusion that therefore the Cup committee, having admittedly done all in their power, were bound to give redress before the next race was sailed.

You fully knew the objections to a course off New York two years ago, and nearly one year ago you suggested a change of locality. This proposition we declined at that time. There was the best of

BUCKET WELL.

SNAKE II.—Oxford Canoe Yawl.

evidence at the start on Thursday that the course, as well as the start, would be kept clear. It seems to us that the question before every one is not whether your complaint was justifiable, but whether your action in withdrawing from the contest on the grounds of your complaint was justifiable.

As to your suggestion that the regatta committee might have ordered Tuesday's race resailed, we reply that we must decline to discuss the action of a fellow committee.

In conclusion, we would express our profound regret and chagrin that a friendly contest in a noble sport, between two great nations, should have degenerated into a war of words.

We have the honor to remain your obedient servants,

JAMES D. SMITH, Chairman,
A. CASS CANFIELD, Secretary,
For the America's Cup Committee.

The Earl of Dunraven.

The following letter completes the correspondence between Lord Dunraven and Mr. Iselin:

ON BOARD DARTMOOR, Sept. 12, 1895.—Dear Lord Dunraven: Although the regatta committee has given to Defender yesterday's race, under the circumstances I should much prefer calling the race off and resailing it to-morrow.

I trust this will meet your views. If so, kindly answer at once.

Very truly yours, C. OLIVER ISELIN.

On Sept. 17 the following was posted at the New York Club house:

As there was some delay in replying to the letters of Sept. 10 and 11 from the Earl of Dunraven, the America's Cup Committee beg to state the letter of Sept. 10 was handed to their Secretary about 12:30 P. M. Sept. 11, with instructions not to open the same until a decision on the protest had been given by the Regatta Committee.

This decision was not reached until 2:30 P. M. on that day, and from that hour no time was lost in laying the matter before the Cup Committee, and a verbal reply was made the same evening.

The letter of Sept. 11 was delivered at the New York Y C. house at 1 o'clock A. M. Sept. 12, and delivered to the Regatta Committee at 8 o'clock the same morning.

On Sept. 18 Messrs. Ratsey and Glennie, with some of the crew of Valkyrie, sailed for England, and the yacht will probably sail on Sept. 24. Lord Dunraven has spent some time at Newport, where he has been most hospitably entertained, but he will sail for home on Sept. 25 as the guest of Mr. Laycock on the Valhalla, that yacht having sailed from New York for Newport on Sept. 21.

On Sept. 20 the following was received by Mr. Smith, of the Cup committee, from Mr. Charles Day Rose, son of Sir John Rose, of the banking firm of Morton, Rose & Co., London:

"*America's Cup Committee, New York Yacht Club:*

"I beg to challenge for the America's Cup next year. The race to be sailed on conditions satisfactory to the committee.

"CHARLES ROSE.

"39 HILL STREET, Berkeley Square, London."

Mr. Rose's challenge was purely informal, but at the request of Mr. J. Pierpont Morgan Mr. Smith drew up a form of preliminary challenge which was cabled to London.

The following was received on Sept. 23:

"The formal challenge by mail will follow and will read: 'In behalf of the Royal Victoria Yacht Club, and in the name of C. D. Rose, a member, the club challenge to sail a series of matches for the America Cup against any yacht or vessel built in the United States.'

"The following are the particulars: 'Challenger's owner, C. D. Rose; name of yacht, the Distant Shore; length of load waterline, 89ft.; rig, cutter.'

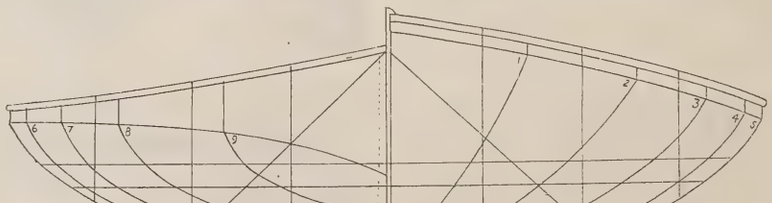
"The challenge will be absolutely unconditional."

Mr. Rose is not a yachtsman, but is well known in turf circles, his name does not appear in Lloyds' Yacht Register and he is not known as being interested in yachting. He has, however, just purchased the big cutter Satanita, and announces that the new challenger will be designed by Mr. J. M. Soper, of Fay & Co., Southampton, designer of Satanita, Blue Rock, Reverie and Castanet.

Seawanhaka Corinthian International Challenge Cup.

SPRUCE—ETHELWYNN.

THE result of the series of three to five races for the international challenge cup, established this year by the Seawanhaka Corinthian Y. C. for yachts of ½ to 2½-rating or 15 to 25ft. racing length, is still in doubt, the first attempt at a race, on Sept. 21, having failed for lack of wind. The second day's work in a fair sailing breeze resulted in an easy win for Ethelwynn.



The challenger was taken to Oyster Bay on Sept. 13 and overhauled at Abrams's shipyard, Cold Spring Harbor; being rubbed down and pot-leaded and her spars shipped and sails bent. When afloat for the first time in American waters she made a very handsome appearance, with her mahogany deck and wales, the latter set off by the double beading and gold stripe. Her rather broad transom is carved and gilded in addition to the name "Spruce" in gold and blue. Her bamboo spars have attracted much attention, such large sticks being a novelty in this country, where bamboo is known only in the form of fishing poles. Her mast is about 4½in. in diameter at the deck and diminishes very little to the top. Her roller jib has not been shipped and will not be used here; but it was at the Seawanhaka club house, and also excited some curiosity, being the first one seen in this country. Mr. Brand was under way during last week about Oyster Bay, ut the weather was light indeed.

Olita has been entirely re-rigged with Young's hollow spars and ails by Wilson & Griffin, and will sail in any open races. On Sept. 17 he was under way in charge of two young sailors, her racing crew, Messrs. Vaux and Burchard, being absent. In going about she proved too quick for the young hand at the tiller, and the result was a capsize. Spruce came to her rescue, and also the naphtha launch Twilight, under charter by Mr. Brand as his "Hattie Palmer," and she was righted and towed in without damage.

Ethelwynn came over to Oyster Bay from Greenwich on Sept. 19, and the two rivals were under way on Friday, but with hardly any wind. On Friday night she was measured by Mr. Hyslop, her waterline with 100lbs. of lead being 15.14, and with 150lbs. 15.24. The trial of the boat without ballast and with different weights shows that she is quite as fast in very light weather with 100lbs. as with no weight in her, and as the season is late and strong winds, or even an equinoctial gale are to be looked for at any moment, it was decided to put in 150lbs. This would allow her to carry 218sq. ft., the square root of which is 14.76, but the measurement of her sails showed less by 22sq. ft. The mainsail measured but 165sq. ft., while the jib used in windward work measured 35sq. ft., or 197sq. ft. all told. The mainsail used was that made by Wilson and Griffin, a very good sail, while the diminutive jib was cut after Mr. Wilson's pattern, an odd-looking but good sail. Spruce was measured on Saturday morning when just off the ways, a weight of 300lbs., to represent crew, being placed on board her, as on the other boat. To Mr. Brand's great astonishment she came out 15.83 on the waterline, or some 3in. more than when measured early in June at Southampton, in spite of the fact that her lifting bulb-fin and hoisting gear had been removed, lessening the weight over 100lbs. The final computations, after measuring the windward jib and the second of the three mainsails, showing a curious coincidence, the measurement coming out exactly 15ft., without a fraction.

FIRST DAY—SATURDAY, SEPT. 21.

Friday and Saturday are remarkable for the highest temperature of the entire summer, the record in New York at 4:30 P. M. on the latter day being 96 degrees. Friday was hot and sultry in the extreme, with a very light S. W. wind, and though Saturday morning promised better with a light S. W. wind and some indications of more, the afternoon was as bad as it could be for yacht racing. The two yachts were towed out by their naphtha tenders just before noon, and the steam yacht Oneida with the race committee aboard ran out to the Center Island buoy, where the line was marked by a float and flag anchored N. W. of the buoy. With the committee were Messrs. H. K. Sturdee, representing Mr. Brand, and F. B. Jones, of the Indian Harbor Y. C., Mr. Field's club, to represent him. The Indian Harbor Y. C. launch was in attendance on Ethelwynn. The steamer Aurora came up from New York just before the start with a number of yachtsmen and

ladies on board. There were many yachts about, from the big steam yacht Corsair down to small catboats.

A light wind was blowing, about W.S.W., enough to send the two boats along very fast as they worked about the line, and the tide had just turned ebb. At 12:25 Messrs. Ward and Zerega started in the club naphtha to lay the leeward mark, a float with red ball, the course being N.E. by E., 3 miles. At 12:35 a preliminary signal was set, and at 12:45 the preparatory was given, the start being at 12:50. Just before the start both were on starboard tack some 50yds. above the line standing S.E.; Spruce paid away about 30s. before the gun and Ethelwynn followed. Ethelwynn was very smart with her spinaker, having it set and broken out as she crossed the line 5s ahead, Spruce losing a little time in breaking the stops. With spinakers to port they ran on slowly, the wind dropping almost as they crossed the line. Ethelwynn soon ran ahead of Spruce and had a lead of 30yds., then Spruce ran up and blanketed her and they did a little luffing; soon Ethelwynn drew clear again. In the first hour they sailed only a couple of miles, then the wind hauled to the northwest and spinakers came in, Spruce taking the first of the breeze and running away, carrying a reaching jib while Ethelwynn, though she had once set her large jib and taken it in, continued under her working jib. They were timed at the lee mark: Spruce 2:05:35, Ethelwynn 2:07:43. There was now a light wind, just enough to set them sailing instead of drifting; with sheets in Ethelwynn walked up on Spruce, pointing and footing, and in a short time had made up the lost two minutes and was on Spruce's weather beam as they stood in on starboard tack toward Lloyd's Neck. The wind fell here, and Ethelwynn in trying to tack lost her way and lay for some time becalmed and unable to regain headway; Spruce, with her crew to leeward and boat heeled so as to give good draft to the sails, holding her course and keeping what little way she had. In a short time she was clear ahead and able to luff across Ethelwynn's bows, and she held on until when well under the shore she was some 300yds. ahead. Both boats stood on the inshore tack each time until the board touched the sand, then made a short leg off.

They now worked the shore in short and frequent tacks, dodging the strong ebb tide, gaining and losing alternately; but at 3:25 Ethelwynn was again ahead, crossing Spruce's bow when on the port tack. They held on along the shore for a time, making little headway, then Ethelwynn started out to cross the tide on a long port tack. She was carried far to leeward, and when she went on starboard tack the tide was on her weather bow and swept her back to where she had been an hour before—under Lloyd's Neck. Spruce worked the shore for a while longer, being generally praised for so doing; but finally her turn came, and with hardly any wind she met the ebb tide. The result was that at 4:35 she dropped anchor well back under Lloyd's Neck and just a little ahead of Ethelwynn; the latter sailed on until beside Spruce, when she signaled her tender and took a line for home. Just before Spruce anchored the committee decided to call the race, and started in the Oneida's launch for that purpose. Com. Benedict passed a line to Spruce and towed her in ahead of Ethelwynn.

SECOND DAY.

First Race—Monday, Sept. 23.

Sunday was, if anything, hotter, calmer and more oppressive than Saturday, and Monday morning was but little cooler. There was, however, a nice S.W. breeze inside the harbor, though it was calm outside at 10 A. M. When the Oneida ran out at noon there was a light breeze from S.W. by W., and the mark was set a little later for a course N.E. by E. Spruce had been out of water over Sunday, and on Monday morning early Ethelwynn was carried up the beach and laid on edge in a very odd position, her masthead touching the beach. Her bottom was rubbed down and polished, and when the tide was well up, at 11 o'clock, she was righted and launched. Only 100lbs. of her lead was replaced, the 50lbs. carried just inside the forward bulkhead on Saturday being removed. Her large jib, a new sail, was not satisfactory, and was not set on Saturday off the wind, but by dint of hard stretching of the luff rope it was improved, and she set it as soon as the course was given—a run to leeward. The tide was still running a strong flood when the preliminary signal was given at 12:30, the wind being of moderate strength. The working for the line began with the preparatory at 12:40, Ethelwynn dodging about in a very lively manner to keep the weather gauge of Spruce. There was not much choice of position in a one gun start down wind, but still Ethelwynn flitted about to windward of Spruce until just before gunfire, when she jibed over and went straight for the line, crossing some 5 or 6s. ahead and breaking out her spinaker to port. Spruce, close astern, soon had her spinaker out and drawing and blanketed the leader, but Ethelwynn luffed out; however, Spruce soon got by her to windward after running off the true course. Spruce now ran ahead until she was clear of all blanketing, the wind being a little lighter. After the first 20m. Ethelwynn, for no visible reason, began to gain on Spruce, and after about 15m. of slow work by both was under Spruce's lee beam. Ethelwynn held well to windward for a time, but as they neared the mark she bore down for it with a lead of possibly 50yds. At 1:38 her spinaker came in and her boom jibed over and soon after she turned, the times being:

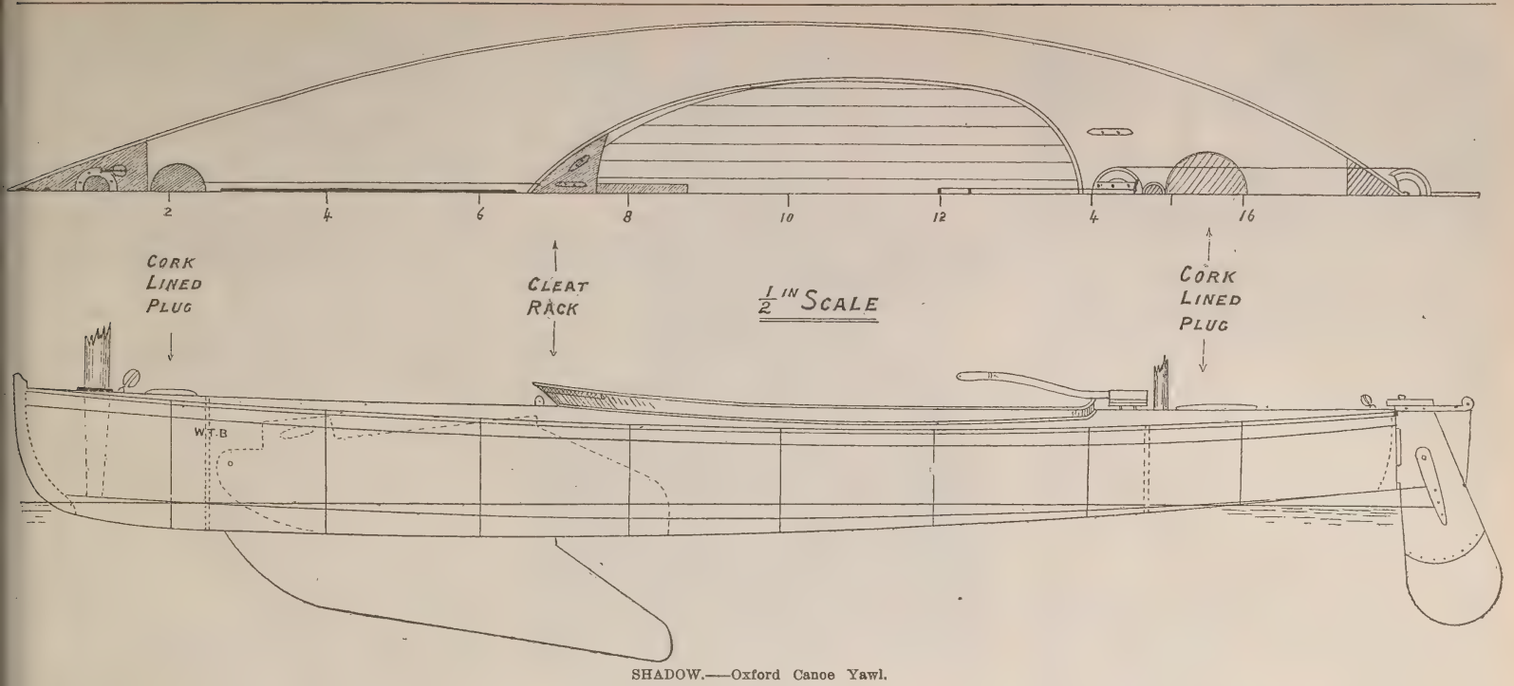
	Actual.	Elapsed.	Gain.
Ethelwynn	1 39 40	0 54 40	0 00 17
Spruce	1 39 57	0 54 57	

There was now a good breeze, and freshening gradually until whitecaps began to show when the end of the round was reached, off Center Island buoy. Ethelwynn set her odd little Wilson jib and began to open the distance, soon having a long lead on Spruce. She stood inshore on one long starboard tack, her crew lying flat on deck and the boat standing up very stiffly, while with both of her crew seated upright on the gunwale Spruce heeled considerably. When close inshore by Lloyd's Neck at 2 o'clock, Ethelwynn went about for the first time and stood up along the beach, splitting the ebb tide and going very fast. In the next half hour she made a number of short tacks inshore, getting away steadily from Spruce, which was sailing the same course At last Ethelwynn started out to cross the tide that had been fatal to her on Saturday, but now she had a fresh breeze and some sea. As she went on she pointed high and rode the seas lightly and easily, throwing little spray, while the bluffer bows of Spruce pounded the water badly. Ethelwynn fetched the mark very cleverly, but Spruce did not allow enough for the strong ebb tide, and had to make a greater number of short tacks before rounding. The times at the end of the first round were:

	Actual.	Elapsed.	Gain.
Ethelwynn	3 02 02	1 22 22	0 05 48
Spruce	3 08 07	1 28 10	

Ethelwynn made a good turn, but was slow in setting her spinaker flying. She was so far ahead that Spruce could not blanket her and she ran off very fast, though with less wind. Spruce made a good stern chase, as the times show, making a gain of a minute.

	Actual.	Elapsed.	Gain.
Ethelwynn	3 36 58	0 34 56	. .. ..
Spruce	3 42 03	0 33 56	0 01 00



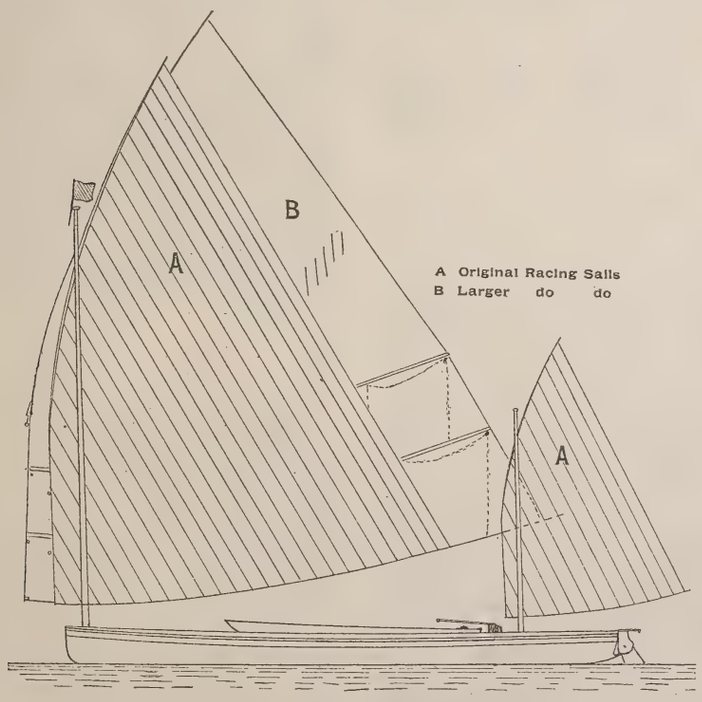
The windward work began with a stronger tide, but rather less wind and smoother water, than on the first round. Ethelwynn still managed to increase her lead, but Spruce sailed better to windward than before. The wind let up a little toward the finish, Ethelwynn finally fetching the line on the one long tack across the mouth of the harbor. The full times were:

	Actual.	Elapsed.	Gain.	Elapsed.	Gain.
Ethelwynn	4 47 15	1 10 17	0 02 36	4 02 15	0 07 41
Spruce	4 54 56	1 12 53	. .. ..	4 09 56	. .. ..

The steamer Aurora followed the race, some forty yachts being also present.

TUESDAY'S RACE.

The course Tuesday was triangular, 2 miles to a leg, twice over, 12



SHADOW.—Oxford Canoe Yawl.

miles in all. Ethelwynn crossed the line at 1:00:35, Spruce IV. at 1:00:50. The first leg was E. by W. ¼ N., the wind light out of the N. by W. Spruce IV. had weather position, but Ethelwynn passed her, and at 1:15:04 was in the weather and two lengths ahead.

The official times at the first mark were, Ethelwynn 1:42:31, Spruce IV. 1:44:42. Second leg was a port reach. The mark times were, Ethelwynn 2:05:12, Spruce IV. 2:07:09. At 2:45 they were approaching the last mark with light wind, the American boat ¼m. ahead.

The Corinthian fleet of New Rochelle will hold a special race for the half-raters on Monday, Sept. 30, for a prize presented by the late Robert Center. This prize is known as the Center trophy, and was presented to the club by Mr. Center some time ago, but has never been raced for. It was the desire of the donor that the prize be sailed for by small craft, manned by not more than two men, and the club, in accordance with his expressed wish, now offers it to the half-raters. The prize will be awarded immediately after the race. The start, which will be a flying one, will be made at 1 o'clock, and the yachts will go over a triangular course of 5 miles, to be sailed over twice, as follows:

From starting line sail S.W. by S. ½ S. to and around the red and black horizontally stripped buoy off the eastern end of Execution

1/5 IN SCALE

Reef, 1¾ miles, leaving it on the port hand; thence N. by E. to and around the black spar buoy off the eastern end of Hen and Chickens Reef, 1¾ miles, leaving it on the port hand; thence N.W. by N. to and around the black can buoy off the northern end of Hen and Chickens Reef, ¼ mile, leaving it on the port hand; thence W.S.W. to and around the red buoy off Premium Point (end of starting line), 1¾ miles, leaving it on port hand; thence back over the same course, leaving all buoys on starboard hand (thus sailing around the triangle in the reverse direction), to the finish line.

Entries will close with J. D. Sparkman, New Rochelle, at 10 o'clock on the morning of the race.

Some special races open to the class will be sailed after the cup matches. The S. C. Y. C. announces the following for Saturday, Sept. 28:

Prizes are offered in the following classes:

Class I.—Sloops, cutters, yawls and cabin catboats of the 30ft. and 25ft. racing length classes.

Class II.—15ft. racing length of sloops.

Class III.—The club catboats.

A prize in silver will be awarded to the winning yacht in each of the first two classes, and to the helmsman of the winning club catboat.

The starting signal will be fired at 11 o'clock, and under the rules each yacht must be steered by a member of the club or some amateur. Entries will close with Charles A. Sherman, 64 Leonard street, by noon Sept. 27, or at the club house by 10 o'clock on the morning of the race.

"The Crack Train of the World."

A PROMINENT New York merchant and importer of leather goods said in our hearing the other day, "I have traveled all over Europe and America, and I consider the train which leaves Chicago every day at 6:30 P. M. for St. Paul and Minneapolis, via the Chicago, Milwaukee & St. Paul Railway, 'The Crack Train of the World.'" In which statement thousands of others heartily concur.—*Adv.*

British Opinions.

SOME of the leading British sporting papers comment on the Cup races as follows:

The *Yachting World* of Sept. 13 says:

Two out of the possible five races for the Cup have been sailed and lost—one actually, the second virtually. The Cup committee's decision in the matter of Defender's well-grounded protest has, up to the time of writing, not been cabled across; but, whatever the verdict, there can be no possible doubt that the American champion achieved a moral victory. Until thoroughly reliable written reports reach us it would be foolhardy to venture upon too minute a critical survey.

Land and Water says:

The feeling between the English and the Americans was most friendly, and we were all hoping to see the merits of the two yachts fairly tested. The New York Y. C. did everything in its power to insure a proper race but the one thing needed, that of sailing outside the harbor. The committee knew perfectly well that public opinion would be decidedly against them. Every sentiment pointed to their ordering the race to be resailed, but they simply had not the power to do it. Lord Dunraven bore willing testimony to their absolute impartiality, though he disagreed with the statement of fact on which their decision was arrived at.

The great mistake lay in the choice of course. The Americans are a yachting nation. Here, where hardly one man in two hundred knows anything about yachts, it is hard to imagine the intense excitement that was aroused throughout America by the recent contest. The New York Y. C. must have known, when they chose New York bay as the course, that they were putting a premium on obstruction. No place more easy of popular access could possibly have been hit upon. The consequence was that the crowds of excursionists made the contest not a yacht race, but an obstacle race. It bore equally hard on each boat, and it absolutely prevented a fair and square match. The yacht club appealed frantically to the steamers to keep clear, and the steamers in reply followed level with the yachts the whole way, got to windward of them and washed them impartially, hid the markboat, and turned the whole race into a scramble.

Lord Dunraven did not go over to America to dodge steamers and tugboats. He went over to try and wrest the America's Cup from the Defender in a fair race. That he had not a chance of doing so was due in the first place to the choice of course, and in the second place to the behavior of the American crowd. The New York Y. C. must be acquitted of all blame on the second count. They did their best to keep a clear course, and they failed because they had not the necessary legal authority. The fiasco is as sore a disappointment to American as it can be to English sportsmen.

Taunton Y. C.

DIGHTON—SIX MILES NORTH OF FALL RIVER, MASS.

Aug. 28.

THE first open regatta of the new Taunton Y. C. was sailed on Aug. 28 in a moderate breeze. The racing rules, measurements, etc., of the club are those of the New York Y. C., and the start was a one-gun start, with preparatory signal. Four of the boats were almost brand new—Palmyra, built for the Larchmont 34-rating class; Dorothy, a catboat very similar in form and appearance to the well-known Mojave; the No. 3; and Agnostic, a clever evasion of the new Beverly rules for 20-footers. Four new steam yachts were to race, but only one showed up to start, thus again proving what the FOREST AND STREAM has stated about the impossibility of getting steam yachts to the starting line for a race.

CLASS A—SLOOPS UNDER 30FT

	Length.	Corrected.
Palmyra, Wm. F. Palmer	32.06	1 35 19
Narika, A. Homer Skinner	31.11	1 42 21
CLASS B—CATBOATS OVER 20FT.		
Kaleva, Benj. Davis	28.03	1 41 19
No 3, Wilton Crosby	28.06	1 43 41
Nellie, John Waldron	27.11	1 43 53
Dorothy, H. Manley Crosby	26.06	Did not finish
CLASS C—CATBOATS UNDER 20FT.		
Agnostic, Daniel Crosby	22.11	1 45 59
Barnacle, Wm. J. Braley	14.02	1 51 55
Fedora, Hinckley & Copping	19.11	1 57 31
Yarah, F. H. Borden	17.04	2 00 25
Junior, W. K. Hodgman	15.06	2 19 59

Larchmont Y. C.

THE special races of the Larchmont Y. C. on Sept. 19 brought out only Acushla and Dragoon in the 34ft. class and Vaquero in the 21ft.; she and Acushla making a private match of $50 per side. The race was sailed with little or no wind, the times being:

34FT. CLASS.

	Start.	Finish.	Elapsed.
Acushla, Hanan Bros.	12 06 35	4 01 50	3 55 25
Dragoon, F. M. Freeman	12 06 02	4 08 33	4 02 31
21FT. CLASS.			
Vaquero, W. G. Brokaw	12 05 00	4 08 12	4 03 12

Vaquero beats Acushla on the regular allowance in the special match and Acushla beats Dragoon. The schooner race for the Colt Memorial Cup was sailed on Saturday, with special races for the 34- and 21-raters; the times of the schooners being:

	Start.	Finish.	Elapsed.	Corrected
Emerald	12 37 55	4 14 25	3 36 30	3 36 30
Amorita	12 38 50	4 44 57	4 06 59	3 59 57

Acushla led Dragoon, but neither finished in time. Vaquero sailed alone over one round of the course.

YACHTING NEWS NOTES.

A handsome excursion steam yacht has just been completed for Wm. Zink & Co., of St. Louis, by the Marine Iron Works of Chicago, in which they have placed one of their 1895 pattern of 8×8 balanced piston valve high-speed marine engines. Boiler allowed 165lbs. working steam pressure. The yacht is 50ft. long on deck, 10½ft. beam, draws 3ft. of water, has flush deck and is licensed to carry seventy-five passengers. Delivery will be made under her own steam via Illinois and Michigan Canal and the Illinois and Mississippi rivers.

Rifle Range and Gallery.

Revolver Shooting in England.

THE weather was very good for revolver shooting at the South London Rifle Club on Aug. 29; the following scores were made, Mr. Rand making the very good score of 39 at 50yds.

Twenty yards target:

F Rand	767767—40	Capt T W Heath	766755—36
C Knapp	565777—37	E Howe	747765—36
Lieut J Howard	556767—36	Clementi-Smith	464747—32

Fifty yards:

F Rand	776577—39	Lieut J Howard	466666—34
E Howe	665757—36	C Knapp	467347—31
Capt T W Heath	666665—35		

Scores to date toward the revolver championship of the South London Rifle Club:

	20yds.	50yds.
Walter Winans	42 41 41 40 40	40 39 39—322
Capt T W Heath	39 39 39 39 38	37 36 36—306
C Knapp	40 40 38 38 37	38 35 34—300
E Howe	40 39 38 38 37	36 35 33—296
Lieut J Howard	40 40 38 37 36	34 34 32—290
Clementi-Smith	38 36 35 34 33	35 34 33—277
C F Lowe	37 36 32	37 34 ..
F Rand	42 40 39 36 ..	35 .. ..
Lieut Varley	37 29	35 .. ..

Sept. 4 was a perfect day for revolver shooting at the North London Rifle Club. Mr. Winans made his fifth highest possible score at the club this year below are details of scores:

20yds. target:

Walter Winans	777777—42	Lieut Clemence	765657—36
Major Palmer	676776—39	A J Comber	576647—35
Major Munday	767577—39	Lieut Richardson	666564—33
Knapp	767765—38	E Howe	647759—31
Carter	765577—37	A F Allman	646567—31
Luff	567757—37	W Bashford	753077—29
Lieut Howard	677575—37		

The scores for the revolver championship of the North London Rifle Club now stand as below. Mr. Winans has such a lead that he cannot be now caught, but his score is so exceptionally good for the aggregate, averaging 41 out of a possible 42 at all sorts of shooting, that he intends to still continue shooting so as to try and still improve it and make an unbeatable record for the club. He only needs two more highest possibles at 20yds. to have a highest possible total for that distance,

Below are details of the scores to date: A, alternating target; D' disappearing target:

	20yds.	A.	D.	50yds.
Walter Winans	42 42 42 39 41 41	41	42	38 39—410
Maj Munday	40 39 39 39 39 39	39	39	37 36—386
Knapp	40 39 38 38 36 35	41	36	34 34—371
Comber	40 39 38 37 37 36	38	38	35 33—371
Maj Palmer	39 39 38 37 37 36	36	36	31 31—370
Carter	38 37 36 36 35 35	37	37	31 28—350
Luff	39 38 37 36 34 33	33	27	30 27—334
Lieut Richardson	38 35 35 34 34 33	33	34	33 28—317
Capt Earle	36 34 32 32 30 ..	32	32	33 31

McCormack, Ricketts. Ashby, Treadwell, C. F. Lowe, Frost, Shilton, Evans, Howe, Rand, Hore, Denyer, Franzman, Brading, Andrews, Capt. Peters, Clementi-Smith, Chicken, A. J. Comber, Maj. Jones, Capt. Thompson, Lieut. Chitty, Capt. Cowan, Granville, A. Crawley, Bashford, Diggins, Col. Atherton, Aldridge, Allman, Stallibrass, Baxter, Treadwell, Howell, Geraud, Joyce, Hare, Howard, Lattey, Gill, Varley, MacDonald, Wells, Clemence, etc., have not yet shot out their full scores.

Presque Island Rifle Club.

ERIE, Pa., Sept. 7.—The following scores were made by members of the Presque Island Rifle Club at their regular practice shoot:

J R Brown	9	7	7	9	7	9	6	10	10	5—79
	6	7	5	7	6	8	7	7	7	10—70
Shafer	10	7	6	9	7	5	6	8	5	6—69
	4	4	8	6	9	7	6	9	9	8—70
Stidham	4	9	4	7	10	7	8	7	8	7—71
	5	2	7	9	7	6	9	7	7	6—65
Germann	8	7	8	7	9	9	5	5	6	5—69
	9	5	6	4	6	3	7	10	8	8—66
Paul	5	6	5	9	6	5	8	10	6	4—64
	9	7	6	4	7	4	7	5	4	8—61
Treiber	6	7	8	4	5	8	7	9	4	6—64
	6	9	5	6	3	4	6	6	4	5—54
Froess	5	4	10	3	5	5	7	7	9	9—64
	9	8	4	1	7	4	8	8	4	7—60
Bacon	5	6	4	10	10	8	3	4	2	7—59
	4	4	6	4	6	9	5	8	3	8—57
W J Leyer	8	7	4	4	3	8	5	4	8	6—57
	4	5	4	8	6	7	6	5	5	6—56
Olvitt	4	10	4	6	7	4	6	3	7	10—61
	3	7	3	6	4	8	4	4	9	3—51
Rahn	3	7	6	9	5	6	8	8	8	4—64
	4	4	3	4	5	6	5	7	6	5—49
Patton	8	5	3	4	6	7	8	4	5	7—57
	4	1	3	4	5	10	7	7	6	5—52
Derby	4	3	6	3	7	7	6	7	5	5—53
	3	5	7	6	8	5	2	7	5	6—54
Dr Wheeler	5	7	4	6	5	7	7	4	3	5—53
	3	4	3	4	1	5	6	4	4	7—41
Hubbell	4	6	2	1	3	3	4	4	1	3—31
Sheperd	2	5	2	3	2	1	2	4	5	4—30

The scores which were made in the match shoot, which also took place to-day, are given below, the contestants being Company A of the Erie regiment of the National Guard, and a team of the Presque Island Rifle Club:

First string:

Presque Isle Rifle Club.

J G Germann	3	5	7	6	6	7	6	6	8	10—64

Lyman Rapid-Fire Target.

THE Lyman rapid-fire rifle targets are finding much favor. They are in two sizes, for 25yds. and 50yds. The smaller one sent post-paid for 15 cents a dozen, the larger one for 25 cents a dozen, by the Forest and Stream Publishing Co.

Trap-Shooting.

If you want your shoot to be announced here send in notice like the following:

FIXTURES.

Oct. 3.—RED BANK, N. J.—Ninth tournament of the New Jersey Trap-Shooters' League, under the auspices of the Riverside Gun Club. Shooting commences at 10 A. M.; league contest at 2 P. M.

Oct. 8-10.—SHERIDAN, Wyo.—Tournament of the Sheridan Gun Club, under the management of Frank Crabill and Mark R. Perkins.

Oct. 9-11.—NEWBURGH, N. Y.—West Newburgh G. and R. Association tournament. W. C. Gibb, Sec'y.

Oct. 9-11.—READING, Pa.—Tournament of the Independent Gun Club; first two days targets, third day live birds.

Oct. 15-16.—WORCESTER, Mass. — Tournament of the Worcester Sportsmen's Club; $100 added money, and a $50 diamond ring to highest average. Chas. E. Forehand, Sec'y.

Oct. 15-17.—ALEDO, Ill.—Annual tournament of the Aledo Gun Club; live birds and targets. J. W. McRoberts, Chairman of programme committee.

Oct. 16-17.—WEIR CITY, Kan.—Live-bird championship of the State under the auspices of the Business Men's Gun Club.

Oct 16-17.—ELIZABETH, N. J.—Fourth bi-monthly tournament of the Elizabeth Gun Club; first day, targets; second day, live birds.

Oct. 19.—CHICAGO, Ill.—Third shoot of the Cook County Trap-Shooters' League, on the grounds of the Garfield Gun Club, at 2 P. M. W. F. de Wolf, Secretary of the League.

Oct. 22-24.—BALTIMORE, Md.—Dupont Smokeless Powder Company's tournament at live birds. Stanley Baker, Sec'y.

Oct. 23-25 —ATLANTA, Ga.—Annual tournament of the Clarke Hardware Company; targets; $700 added money.

Oct. 25-26.—SEATTLE, Wash.—First annual tournament of the Washington State Sportsman's Association, under the auspices of the Seattle Gun Club; live birds and targets. C. F. Graff, Sec'y.

Oct. 27-30.—SAN ANTONIO, Texas.—First annual tournament of the San Antonio Gun Club; $1,000 added money. Willard L. Simpson, Sec'y.

Nov. 5-7.—KEWANEE, Ill.—Annual tournament of the Kewanee Gun Club.

1896.

Jan. 4-5—PHŒNIX, Ariz.—Annual tournament of the Arizona State Sportsmen's Association.

Jan. 9-11.—SAN ANTONIO, Texas.—Grand mid-winter tournament, under the management of Texas Field; $2,500 added.

April 1-3.—NEW YORK.—Interstate Association's Fourth Annual Grand American Handicap.

May 5-8.—NEW YORK.—Tournament of the American E. C. Powder Company; $2 000 added money.

May (second week) —MEMPHIS, Tenn.—Tournament of the Memphis Gun Club, $2,000 added money.

May 26-28.—FRANKFORT, Kan.—Annual tournament of the Kansas State Sportsmen's Association.

May 30-June 1 —MILWAUKEE, Wis.—Eleventh annual tournament of the South Side Gun Club.

June 8-13 —BUFFALO, N Y.—Thirty eighth annual tournament of the New York State Association for the Protection of Fish and Game, under the auspices of the Audubon Gun Club. E. W. Smith, Sec'y.

June 17-19.—CLEVELAND, O.—Third annual tournament of the Chamberlin Cartridge and Target Company.

DRIVERS AND TWISTERS.

Club secretaries are invited to send their scores for publication in these columns, also any news notes they may care to have printed. Ties in all events are considered as divided unless otherwise reported. Mail all such matter to Forest and Stream Publishing Company, 318 Broadway, New York.

Mr. W. N. Drake, manager of the New Jersey Trap-Shooters' League, writes as follows: "In looking over your account of the N. J. Trap-Shooters' League tournament, which was held on Sept. 3, I find a couple of errors You have the South Side and Union gun clubs tied for second place, whereas South Side leads by four breaks to the good, viz: South Side, 109, 106, 104, 103 and 101—523; Union, 111, 105, 102, 101 and 100—519 In the individual scores you have A Sickley credited with 115 out of 125, it should be 113, viz.: 23, 23, 23, 22 and 22—113." The figures referred to as appearing in our account of the last tournament of the league were compiled as carefully as possible from the scores of the previous shoots sent in to us. Mr. Drake has the original scores of all but the last two shoots—the Climax and the South Side tournaments—in the league's score book; at the last two shoots, then just referred to, the scores were kept on an ordinary score sheet. Thus his figures are probably the correct ones and are unquestionably "official." We are obliged to him, therefore, for the corrections sent us.

W. G. Clark, of Altoona, Pa., made an offer to Allen Willey, of Hartford, Conn, to shoot him a series of three 100-bird races at pigeons for $100 a side each race. Clark offered to shoot one race at Altoona; the other two to be shot in New York or New Jersey (as live-bird shooting is illegal in Connecticut), making exception in the case of two grounds. Mr. Willey writes that he will shoot Clark three matches for the sum stated, if Clark will allow him a handicap of three misses as kills. He objects, however, to shooting either of the matches at Altoona, stating that he has made it a rule, which he hopes he will be able to stick to, never to shoot another match on his opponent's home ground. He proposes that the three matches be shot at Elkwood Park, N. J. As Mr. Willey is unable to shoot pigeons in Connecticut, it is by no means unreasonable that he declines to shoot in an opponent's "yard."

Our attention has been called to a fact which we had overlooked, viz.: that the dates selected for the live-bird tournament at Baltimore, Md., were practically the same that had been selected some months ago by the Clarke Hardware Company, of Atlanta, Ga. It is a very great pity for the success of both tournaments that this mistake should have been made by the Maryland management. The attractions at Atlanta outside of the actual shooting are so many that the single fare rate to that city will act as a decided counterbalance when it comes to weighing the advantages of both shoots. If not too late, and we don't see that it is, as it is nearly a month yet until the dates chosen, it would be a gracious as well as advisable act on the part of the Baltimore people to choose a later date.

The third grand shoot of the Independent Gun Club of Reading, Pa., will be held October 9, 10 and 11, added $150 each day, open to the world. John Shaaber, Brooke Harrison, George Kemp, George Ritter, John Gates, James Smeck, committee. All shooting will be at known traps, unknown angles. All manufacturers' agents and professionals will be allowed to share in the first, second and third divisions of the purses only, at any time. All purses divided into five moneys. Shooting to begin at 9 A. M. sharp.

The Independent Gun Club, of Reading, Pa., has prepared an interesting programme for Oct 9, 10 and 11. The shooting will be at known traps, unknown angles. All purses will be divided into five moneys, of which professionals and manufacturers' agents will be allowed to share only in first, second and third. One hundred and fifty dollars added each day.

Remember that on the 15th and 16th of October, 1895, the Worcester Sportsman's Club, of Worcester, will hold a two-days' tournament. $100 in cash prizes, entrance free, no handicap, and nobody barred. Five prizes, including a $50 diamond ring. Programmes will follow later. Charles E. Forehand, secretary.

Jamestown, N. D., had a bluerock tournament this week in connection with the James River Valley Fair. They are up to snuff on the James, as witness one of the shooting rules: Any one caught dropping for place or figuring for averages will forfeit his right to participate in the division of the purse.

Under date of Sept. 20, Mr. E. Taylor, secretary, Cincinnati, writes us that of the 1896 events the Ohio Trap-Shooters' League will hold its annual meeting and tournament at Dayton, O., May 12 to 14, under the auspices of the Buckeye Gun Club; $200 added to league events.

It is very probable that the series of team races at live birds shot this spring between the Climax Gun Club, of Plainfield, N. J., and the Keystone Shooting League, of Philadelphia, Pa., may be duplicated this fall.

The Peekskill, N. Y., Gun Club and the New Utrecht Gun Club, of Long Island, have arranged to shoot a team race at live birds some time in the latter part of this month or in November, the date not being chosen as yet.

Secretaries of gun clubs will find food for reflection in the programme issued by the management of the South Side Gun Club, of Newark, N. J. The programme is referred to elsewhere.

Mr. H. P. Collins, Baltimore agent for the DuPont Powder Company, paid FOREST AND STREAM a visit last week and had much to say about the great DuPont live-bird tournament next month.

The Home City Gun Club, of Springfield, O., will hold a three-days' strictly amateur tournament in the near future, the last day being devoted to sweeps at English sparrows.

Send in your scores and don't forget that all matter for this department should be addressed to Forest and Stream Publishing Company, 318 Broadway, New York city.

The regular monthly prize shoot of the Endeavor Gun Club will be held on their grounds, Marion, N. J., on Saturday, Sept. 28, at 2 P. M. J. A. Creveling, Sec'y.

In claiming dates for tournaments, too much care cannot be exercised in the choice of dates. Watch the list of fixtures in FOREST AND STREAM.

The West Newburgh Gun and Rifle Association is earnestly announcing its intention to give a great tournament on Oct. 10 and 11.

EDWARD BANKS.

The Baltimore Tournament.

WE have an advance sheet of the DuPont tournament at Baltimore, Oct. 22, 23 and 24, designating the following events, all at live birds:

Tuesday, Oct. 22.—No. 1, 5 birds, entrance $5; No. 2, 7 birds, $7; No. 3, 10 birds. $10; No. 4, 15 birds, Maryland handicap, $15; No. 5, miss and out, $5

Wednesday, Oct. 23 —No. 1, 5 birds, $5; No. 2, 7 birds, $7; No. 3, 10 birds, $10; No. 4, 20 birds, Monumental City handicap, $20; No. 5, miss and out, $5

Thursday, Oct. 24.—The DuPont Smokeless Powder grand championship handicap, for trophy, $1,000 guaranteed, to be shot at center set of traps and to be continued until finished; "DuPont Smokeless" exclusively to be used in this event; entrance $25.

The object of the E. I. DuPont de Nemours & Co. grand smokeless powder championship handicap live-bird tournament is to bring together each year the representative gentlemen live-bird shots of America and of the world, to determine from year to year the champion wing shot.

In order to attain this end a tournament of sufficient magnitude to attract the best shooters of the country has been inaugurated, and in the main event—the DuPont smokeless powder grand championship handicap—the purse is guaranteed to be at least $1,000, in addition to the championship trophy.

This, it is hoped, will prove sufficient inducement to bring together in one grand handicap race all the leading live-bird shots of this country, so that whoever wins the championship will have won it from his peers, and will stand preëminently as the champion live-bird shot of America, so long as he successfully defends his title according to conditions governing holder of trophy. Messrs. DuPont & Co. reserve the right to call in cup at any time by paying holder of same $100 cash.

In sweepstake events money will be divided 40%, 30%, 20% and 10%, class shooting. In handicap events money will be divided 40%, 30%, 20% and 10%, high guns. Sweepstakes shot from 30yds., 50yds. boundary. Handicap distances range from 24 to 33yds. Black powder and guns larger than 12-gauge barred. American Association rules to govern.

Trap at Milwaukee.

A RATTLING good live-bird match took place here Friday afternoon between Theo. A. Thomas and Dr. J. L. Williamson on one side and the ever good-natured Col. Brand (Old Man) and Wm. Mirgeler on the other, for the price of birds and expenses. The match was at 50 live birds per man, Brand and Mirgeler to have 10 dead birds to add to total score. Thomas shot his Parker, the Doctor his new Lefever, with 3¼in. shells and 4½drs. E. C. powder and ¼oz. chilled No. 7. Brand shot a Lefever and Mirgeler a Parker. The shoot was disappointing in one respect, as Mirgeler's shells were not suited to his gun, he having had the chambers lengthened, but could not get the long shells. He is a splendid live-bird shot, but it does not show in the score. Toward the last of the race he did all right after a change in shells. Col. Brand tripped on his 16th bird, and would have made it warm for the rest of the boys, but the sun got behind the woods and the old veteran could hardly see the birds. Thomas and the Doctor shot, as the score show, in a No. 1 gait, as both killed 48, the lost falling dead but a few feet from the line.

A large crowd witnessed the match and applauded vigorously the good kills, and gave a long-drawn-out "Ah!" as the easy birds went over the fence and out. When the Kansas City boys get to Milwaukee they will need to have their shooting clothes on, as we have lots of good live-bird shots here. Below find score of match:

F. A. W.

Cook County Trap-Shooters' League.

CHICAGO, Sept. 21.—This contest was held at Chicago on the grounds of the Eureka Gun Club, on Saturday, the 21st inst. The day was far from being an ideal one, with a high, powerful wind blowing. This, with strong, quick traps, throwing 65 to 75yds., at unknown angles, made the hardest kind of shooting; but it seemed to make no difference to the nervy shooters of the Eureka Club, for their No 1 team brought in 126 dead, their No. 2 team showed up with 115 dead, and their No. 3 team 100 even. Thus the first twelve men of the Eurekas shot over an 80 per cent. gait, and an average of about 76 per cent. for the whole eighteen men. Eureka team No. 1 was first, No. 2 team second, and Cicero Gun Club, the gamiest lot of shooters we ever saw, third, with 101 scored.

These gentlemen said: "We do not expect to win, but we shoot just the same," and we will get there yet, and we believe that such a spirit persevered in will get them "there," or any other club, every time.

They are nervy, gentlemanly fellows, who have the stuff in them that makes shooters.

Garfield showed up with only four shooters; an article appearing in a morning paper to the effect that they would not contest because of some unsportsmanlike transactions in the Eureka-Garfield contests. It's very unfortunate that there are some who are always such poor losers. We are very sorry they took offense, and have asked to be corrected wherein we misrepresented anything, but have been told there was nothing untruthful, but simply unsportsmanlike, and this last is a matter of opinion only.

The next contest will be held on Garfield's grounds, Oct. 19, at 2 P. M. TRAP.

Traps at Chicago.

THE following clipping is from a local Chicago press report: "Only two gun clubs, the Eurekas and the Ciceros, will be represented at the second annual monthly shoot of the Cook County Trap-shooters' League, which takes place at Seventy-ninth street and Vincennes avenue this afternoon. The Garfield Club was to have entered, but at the last moment the members of the team notified their captain, O. von Lengerke, they would not appear. Their reason for this was an article in a weekly sportsman's publication accusing the Garfields of unsportsmanlike transactions in the recent Garfield-Eureka club shoots.

"Teams of six men will represent each club, and they will shoot at 25 targets each, known traps and unknown angles." It would seem as if the Garfield Club shooters were too mature to seriously sing "I won't play in your yard."

Lynchburg Gun Club.

LYNCHBURG, Va., Sept. 19 —The club held its weekly shoot to-day. There was very little energy displayed by the people at large to-day. It has been the warmest September day in the history of this town. The thermometer at the Weather Office registered 99 1/10. It is simply too hot to do anything but perspire. Below find scores of the shoot:

No. 1, 25 unknown angles: Nelson 21, Moorman 8, Scott 14, Dornin 20.

No. 2, same conditions: Nelson 18, Moorman 17, Scott 13, Dornin 23.
No. 3, same conditions: Nelson 20, Moorman 19, Scott 15, Dornin 24.
No. 4, same conditions: Nelson 18, Moorman 17, Scott 11, Dornin 23.
No. 5, special event, same conditions: Scott 10, Dornin 8, Nelson 5.

F. M. D

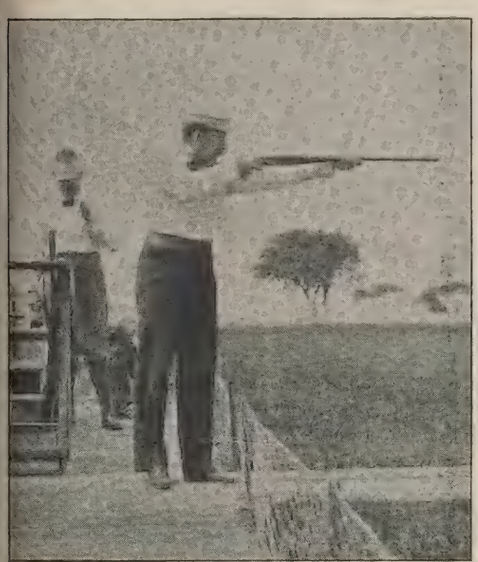
The Four-handed Match at Elkwood Park.

In our last issue we gave a full and complete account of the four-handed match which took place at Elkwood Park, N. J., on Aug. 30. It will be remembered that the contestants in that match were: A. L. Ivins, of Seabright, N. J., and Bland Ballard, of Louisville, Ky., on one side; and Fred Hoey, of Hollywood, West End, N. Y., and Edgar G. Murphy, of Long Branch, N. J., on the other. It will also be remembered that the former pair won by the united score of 185 to 183, the scores being Ivins 93, Ballard 93, Murphy 93 and Fred Hoey 90.

While each man was shooting his practice birds, we took a snapshot with the intention of obtaining some negatives which would show their positions while at the score. Owing to the intervention of Labor Day (Sept. 2), a day on which no man other than an editor, compositor or railroad man, would work, we were obliged to hold them over until this week's issue.

It will be noticed that, as usual, each man has his own distinctive style. It is very seldom that one sees two shooters who stand in anything like the same position when facing the traps. This was particularly noticeable when we gave a reproduction of photographs taken of every man in the Grand American Handicap at Paterson, N. J., last April. It is just as noticeable in the four pictures that appear in this issue.

The South Side Gun Club.



THE governing committee of the South Side Gun Club, of Newark, N. J., consisting of Major R. Heber Breintnall, president of the club, W. R. Hobart, its secretary-treasurer, and I. H. Terrill, the manager, has issued a regular programme, which will be carried out every Saturday afternoon during the fall and winter season. Shooting will commence at 1:30 P. M. each day. This programme holds good until March 31, 1896.

The shooting grounds are located at Newark, on New Jersey Railroad avenue, opposite the Lehigh Valley coal depot. They are very easily reached from New York, the committee giving the following directions as to "how to get there:" "Take the D., L. & W. or the Central R. R. of N. J. (Newark branch) to Broad street, Newark, and thence by trolley cars south; or take Pennsylvania R. R. to Emmett street station, five minutes' walk from the grounds. All street car lines transfer."

As stated in a recent issue of FOREST AND STREAM, the club has increased its shooting capacity and roofed over its platform, thus permitting shooting during any kind of weather. Its club house, though not so large as some, is still commodious enough for all purposes and is exceptionally warm and comfortable when the rigors of our wintry climate set in in earnest.

One of the features of this "every Saturday's programme" is a team match. The conditions of this race are "sporting," and will cause lots of fun: "Two teams to be chosen from all the shooters on the grounds; 25 empire targets per man, known traps, known angles, the winning team to have birds without charge." Another feature is the "individual championship match," of which the programme gives the following details:

"Open only to amateurs, 50 single empire targets. The first match

A. L. IVINS.

will be at known traps and angles, after which the shooters will be classified; those who have made 43 or better will shoot in the next match at known traps and unknown angles; between 42 and 37 at reversed traps, and those below 37 at known traps and angles. The prize will be the 'Essex County Cup.' The winner in each match will be entitled to his birds free in the next cup match in which he shoots, and the cup will become the property of the shooter winning it the greatest number of times during the season."

The club asks shooters to "remember," among other things: "That we are the oldest inanimate bird shooting club in the world. * * * That our grounds have been open every Saturday afternoon since March, 1881. * * * That you can be calling 'pull' in less than one hour from City Hall, New York. * * * That we do not want the earth, but we want shooters to come and see what talent, experience, and good fellowship can do for them. * * * That shooters from a distance are particularly welcome."

There are many other details and matters of interest in this programme that could be read with advantage by the management of any gun club. We have the greatest respect for the management of the South Side Gun Club, and believe that it can run a shoot of any kind with as little friction as any club management in the country. This is no mere flattery. The secretary, W. R. Hobart, will be pleased to furnish any further information; his address is 246 Mount Pleasant avenue, Newark, N. J. Send to him for a copy of the above programme if you want pointers on how to excite additional interest in club practice shoots.

The Joplin Shoot.

JOPLIN, Mo., Sept. 12.—The Business Men's Gun Club, of this city closed a three days' tournament to-day. Its success was very gratifying to everybody. Everything was done to make the shoot attractive and interesting. The club was fortunate in securing the services of J. A. R. Elliott, of Kansas City, to look after the running of the traps and pulls. It is hardly necessary to state that empire targets, traps and electric pulls were used.

The tournament was strictly an amateur one, all professionals and manufacturers' agents being barred. The scores of some of the participants, however, were very "professional." McIlhany's average was over 90 per cent. for the three days. Huffman scored 98 out of 100 in the big team race, missing his first and third targets, and then breaking out straight, making the fine run of 97. Calhoun also figured very much in this race, scoring 97 out of 100. These are records that any professional would feel proud of.

There were ten events each day. The principal event of the first day was the three-men team race; the conditions were 30 singles per man: 10 known angles, 10 unknown angles and 10 unknown traps and angles. Seven teams entered this contest. Weir City won first on 76, Galena and Joplin team No. 1 tied for second on 74, while Joplin team No. 2 won third. Jim Elliott was permitted to shoot with this team, and his straight was a big factor in the race, as it put his team in for money.

The big event of the second day was the 50 target race; in this event Best captured first with 48, Calhoun was second with 47 and Sergeant third with 46.

The most interesting event of the tournament took place on the third day. This was a three-men team race, 100 targets per man. This was also won by the Weir City team, with an average of 96½. This was also live-bird day. Only two events were shot, however, as the birds were a very inferior lot. One event was at 10 and one at 15 birds. McIlhany and Best carried off the honors in these events, each scoring 24 out of 25.

Below are the scores of those who got in for money:

First Day.

No. 1, 12 entries, 10 targets, all amateurs: Best 10, McIlhany 9, Sergeant 9, Fry 9, Calhoun 8, Hamilton 8, A. Dixon 8, Leeman 8.

No. 2, 12 entries, 15 singles. Experts—Best, McIlhany, Sergeant and Fry; balance amateurs: Calhoun 15, Cragin 15, C. Dixon 15, Leeman 14, Huffman 14, McIlhany 13, Best 13, Morgan 13.

No. 3, 10 entries, 25 singles. Experts—Calhoun, Cragin, C. Dixon, Leeman and Huffman: McIlhany 25, C. Dixon 23, Huffman 23, Best 23, Leeman 21.

No. 4, 12 entries, 20 singles. Experts—McIlhany, C. Dixon, Leeman and Huffman: Calhoun 20, Sergeant 20, McIlhany 19, Liles 19, A. Dixon 18, Morgan 18, Huffman 18.

No. 5, 16 entries, 10 singles. Experts—Calhoun, Sergeant, McIlhany,

FRED HOEY.

Liles: McIlhany 10, Sergeant 10, Green 10, Fry 10, Best 9, C. Dixon 9, Calhoun 8, Huffman 8, Cragin 8.

No. 6, 11 entries, 25 singles. Experts—McIlhany, Sergeant, Green, Fry: Calhoun 24, McIlhany 23, Leeman 23, Liles 22, Morgan 22.

No. 7, 11 entries, 20 singles. Experts—Calhoun, McIlhany and Leeman: Calhoun 20, Huffman 19, Best 19, McIlhany 17, A. Dixon 17, C. Dixon 17.

No. 8, 12 entries, 25 targets, all at reverse pull: McIlhany 24, Huffman 23, Leeman 22, Best 21.

No. 9, 17 entries, 20 singles (experts from event No. 7)—Calhoun, Best and Huffman: Morgan 20, McIlhany 19, Liles 19, C. Dixon 19, Horn 18, Leeman 18.

No. 10, team shoot, 3 men to a team; 10 singles, all known; 10 singles, unknown angles; 10 singles, unknown traps and angles; 30 to each man; 7 teams (21 men), entered.

Weir City.		Galena.	
McIlhany	26	Horn	26
Calhoun	25	Huffman	27
Best	25—76	Leeman	21—74
Joplin.		**Joplin.**	
Sergeant	27	J A R Elliott	30
Kinmouth	26	Fry	21
Liles	21—74	Thornton	20—71

Second Day.

No. 1, 15 singles, 12 entries, all amateurs: Calhoun 15, C. Dixon 15, Liles 14, Sergeant 14, A. Dixon 14, Huffman 13.

No. 2, 20 singles, 16 entries. Experts—Calhoun, C. Dixon, Liles, Sergeant, A. Dixon; balance amateurs: Horn 20, McIlhany 19, Liles 19, Calhoun 18.

No. 3, 10 singles, 18 entries. Experts—Horn, McIlhany and Liles: Horn 10, Kinmouth 10, Calhoun 10. Best 9, A Dixon 9, McIlhany 8, Parks 8, Huffman 8, Sergeant 8, Fry 8, Leeman 8. Davidson 8.

No. 4, 25 singles, reverse traps, no handicap, 14 entries: Sergeant 24. Calhoun 23, McIlhany 21, Huffman 21, C. Dixon 20.

No. 5, 20 singles, 17 entries. Experts—Horn, Kinmouth, Calhoun, Best and A. Dixon: Calhoun 19, Leeman 19, C. Dixon 19, McIlhany 18, Sergeant 18, Cragin 18, Sumner 17, Huffman 17.

No. 6, 25 unknown angles, no handicap, 16 entries: McIlhany 23, Calhoun 23, Sergeant 23, Huffman 22, Kinmouth 22, Best 21, A. Dixon 21.

No. 7, 20 singles, 23 entries. Experts—McIlhany, Calhoun, C. Dixon, Leeman, Sergeant and Cragin: Kinmouth 20, Best 19, A. Dixon 19, McIlhany 18, Cox 18, Huffman 18.

No. 8, 10 singles, 27 entries. Experts—Kinmouth, Best and A. Dixon: Best 10, McIlhany 10, Kinmouth 10, C. Dixon 10, Fry 10, Sumner 9, Carney 9, Calhoun 9, Bryant 9, Sergeant 9, Morgan 9, Davidson 8, Porter 8, Weber 8, Horn 8.

E. G. MURPHY

No. 9, 50 unknown angles, 12 entries, no handicap: Best 48, Calhoun 47, Sergeant 46, McIlhany 43, Huffman 43.

No. 10, 40 reverse traps, 11 entries, no handicap: McIlhany 38, Huffman 36, Calhoun 33, Best 33, Sergeant 33, Kinmouth 29, Horn 29.

Third Day.

To-day the three-men team race, 100 targets per man, referred to above was shot off. The scores as a whole were remarkable, 844 targets out of 900 shot at being scored, making a general average of 93.7. Weir City won by two breaks, Joplin being third, one additional miss behind Galena. The scores were:

Weir City.		Galena.	
Calhoun	97	Huffman	98
McIlhany	95	Kinmouth	92
Best	91—283	Horn	91—281
Joplin.			
C Dixon	95	Sergeant	92—280
A Dixon	93		

The live-bird scores were:

No. 1, 10 live birds, $5, 14 entries: Best 10, McIlhany 9, Calhoun 8, Dixon 8, Carney 8, Sergeant 8.

No. 2, 15 live birds, $7.50, 10 entries: McIlhany 15, Sergeant 15, Best 14, Carney 14, Bryant 14, Calhoun 13, Horn 13.

The Altoona Gun Club.

ALTOONA, Pa., Sept. 21.—To-day was the date chosen by the Huntingdon (Pa.) Gun Club for the return team race between members of that organization and members of the Altoona Gun Club, to be shot at the Wopsononock grounds. The Huntingdon people neither put in an appearance nor sent any excuse for not doing so.

The day, although extremely warm, was such a delightful one for an outing on the mountain top that a few of the Altoona boys went up to the grounds and indulged in the following sweeps:

Events:	1	2	3	4	5	6	7	8	9	10
Targets:	10	10	10	10	10	10	10	10	10	10
Clover	10	10	5	10	4	9	8	10	7	8
Killitts	7	7	10	5	7	8	9	..	..	..
Forney	6	6	5	7	..	8	8	8	7	8
Fay	8	7	..	6	4	9	..	..	..	..
Sands	9	8	7	7	7	8	10	7	9	8
Shifer	..	6	..	..	..	..	..	..	..	..
Koelliker	..	..	..	2	..	4	4	2	..	1
Harry	..	..	..	..	..	..	8	..	..	..

Event No. 3 was a walking match, with use of second barrel, which if used scored ½.

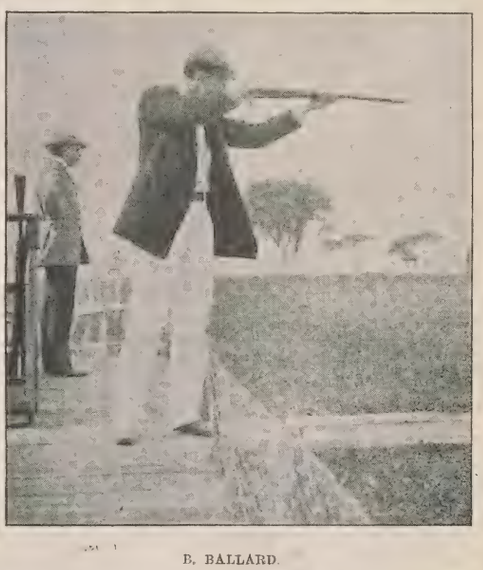
No. 5 was 5 pairs of doubles.

Nos 9 and 10 were at unknown traps and unknown angles.

The other events were known traps and unknown angles.

A two-men team race at 100 live birds per man between two well-known Altoona shooters and two prominent Pittsburg shooters is being arranged and will likely be shot off the coming week or the first week in October.

A match at 100 live birds each for $100 a side between the two well-known amateurs, H. S. Vandegrift and Joseph A. Glesenkamp, of Pittsburg, was shot at the Country Club grounds on Thursday of this week. There was quite a large attendance and the contest provoked almost as much interest as a stronger race would have done. The birds were a fair lot. Glesenkamp is a better shot than his score shows, but he has not had practice. The scores:



H S Vandegrift	2222212210112022201212212—	22
	2022020221121012002001012—	17
	1210111202202101221110000—	17
	1210021212122021022222122—	21—77
J A Glesenkamp	0220221202220000102200210—	14
	1200000120021010000021101—	13
	0122102002212220022200100—	15
	1223102222011102211121121—	22—62

A. H. King was referee, John G. Messner and E. B. Vandegrift, scorers, and W. J. McCrickart, trap puller.

The following 10-bird race followed the match:

A H King	2202222222—9	McWhorter	1222101112—9
John Shaffer	1121201111—9	Bessemer	2222220222—9
T Wall	1121222020—8	Parker	0101001 —3
W S King	2121220111—9	H S Vandegrift	200 —1
D Martin	0002100 —2		

A match has been made between John H. Shaffer, the well-known Pittsburg hotel man and member of the Country Club, and John G. Messner, winner of the Grand American handicap, at 100 live birds each for $100 a side, to be shot at the Country Club grounds on Fri-

B. BALLARD.

day, Sept. 27. Both men will shoot from the 28yd. mark. This event is creating a great deal of interest. Shaffer is a good steady shot and has won many races from some of the best shots in western Pennsylvania. Messner has been shooting well up in the nineties in his recent races and the winning score is naturally expected to be a high one.

GRANT.

Watson's Park.

CHICAGO, Sept. 15.—Audubon Gun Club:

Chas Morris	2112220012100021—11+5—15

The tie will be shot off in the next monthly shoot. RAVILRIGG.

San Antonio Gun Club Tournament.

SAN ANTONIO, Tex., Sept. 12.—*Editor Forest and Stream:* I am afraid our friends in the East have possibly underrated the possibilities of Texas, and have not given our little club in this far-away spot the credit to which it is entitled.

We propose to make this event the greatest tournament ever held in Texas, and we are in hopes to make it one of the grandest held in the South. If we can possibly do such a thing we propose to go Memphis one better, although we are not able to get up quite as large a guaranteed purse.

It is also our purpose to organize an association, and when I state to you now that I have a list of almost 3,000 shooters in the State of Texas alone I think possibly you will realize what we have here and what kind of an association we can form with a proper effort.

WILLARD L. SIMPSON, Secretary S. A. G. C.

New Utrecht Gun Club.

The Lancaster Tournament.

LANCASTER, Pa., Sept. 13.—The second annual fall tournament of the Lancaster (Pa.) Gun Club was held yesterday and to-day. It was a successful affair and will do much to create new interest in trap-shooting in this section. New Jersey was represented by Neaf Apgar, of Plainfield, who was shooting Walsrode powder well in front, and by T. W. Morfey, of Paterson, who held up the end for the American E. C. Powder Company. The weather was intensely hot on the first day, the high wind that made the targets hard to find not doing much to cool the atmosphere. The targets were thrown extraordinarily hard and low, so that the scores are far better than they seem to be. Mr. Frank Clark acted as referee. Scores:

* No. 8 was at 10 singles and 5 pairs.

Second Day's Scores.

The programme for the second day included five counts—two at 10 birds, two at 7 birds and one a miss-and out. An extra miss-an l-out was also shot off. "Brewster," who shot so well the first day at targets, really carried off the honors of to-day, scoring 40 out of 43 birds, two of his lost birds being recorded in event No. 2, which was shot at 21yds. rise, gun below the elbow until the bird is on the wing, use of one barrel only. James C. Wiley, of Lancaster, and Dr. Taylor, of Columbia, both shot well on this day, Dr. Taylor staying in the miss-and outs just long enough to make them expensive. There was a good wind blowing that aided the birds to a marked degree, while the birds themselves were good flyers. The birds were retrieved in capital style by Anderson's pointer, Dandy, who gathered over 400 birds during the day without showing any signs of being tired. Scores.

Nos. 5 and 6 were miss-and-outs. The results in these events were:

No. 5: Morfey, Vincent and Desmond 8 (divided), Taylor 7, Wiley, Miller and Harrison 5, Apgar, Weaver and Dover 4, Martin 3, Brewster and Schmeck 2, Martin and Desmond 0.

No. 6: Apgar, Brewster and Morfey 6 (divided), Vincent and Taylor 5, Desmond 4, Evans 3, Miller 2, Dommel 1, Hart and Wagner 0.

Cincinnati's Annual Shooting Pow Wow.

THOUGH trap-shooting for many months has been rather dead in this city the two days' tournament held on the Independent Gun Club ground here Sept. 11 and 12 will do much toward reawaking the old time interest.

Had the weather been anywhere near more agreeable, the shoot I herewith send you would in number of entries have been twice the number that they were. However, the boys are not complaining, but they would had the merchandise prizes been less and the birds not what they were represented to be—"scorchers." The handsome grounds of the club were crowded both days and the interest manifested and the continual applause given the men at the score for a good kill at an unusual hard sparrow flight was honor enough. Three States were represented in the entries, they being Ohio, Indiana and Kentucky—Ohio, outside of Cincinnati, proving a disappointment. All contestants in prize shoots won a prize by shooting in for place, the five highest places receiving tickets entitling the holder to draw a number from a prize box, highest score drawing first and so on. Would send a list of the merchandise prizes and the winners, but fear it would take up too much of your space, there being in all some 235. This tells how the boys shot, however, also as to whether entitled to prize by getting a place:

All ties divided. First money $9.10; second money $5.45; third money $3.65. Judge at artificial birds, Wm. E. Limberg; sparrows, Henry Goodman.

Some Montana Shooting.

BUTTE, Mont., Sept. 8.—*Editor Forest and Stream:* Following are the scores made at a shoot at Twin Bridges recently. I am going to try to find some business which will take me East about the time of the DuPont tournament at Baltimore. You know, business becomes very pressing upon a shooting crank when there is a tournament at the other end of the line. We expect a big live-bird shoot at Ogden or Salt Lake some time in October or November, a feature of which will be a contest between teams representing Utah and Montana, the full particulars of which I will give you as soon as the details are arranged.

The shoot at Twin Bridges was given by the Southern Montana Fair Association, and was rather poorly attended. The main interest was in the individual cup shoot and the Madison county medal. The cup was won by James Conley, of Anaconda, with a score of 15 straight, and the medal by Mr. Morrison, of Twin Bridges, with 10 straight. Mr. T. Burton Leiter, a Chicago shooter, was one of the contestants in the latter shoot, while Mr. Haskell, known to all of the fraternity in and about Chicago, took part in the first afternoon's sport, and divided honors with your humble servant by killing 17 straight. The scores were as follows:

No. 1, 7 birds, $4 entrance:

Rueger	0011111—5	Conley	0112120—5
Leiter	1120202—5	Wright	1122111—7
Haskell	1111221—7	Morrison	2111021—6
Cowan	2211221—7		

No. 2, 10 birds, entrance $7.50, Madison county medal, first four names contestants for medal, balance for sweeps:

T B Leiter	2120202212— 8	Wm Haskell	1212121112—10
G Warner	1021222221— 9	J F Cowan	2122211122—10
J Morrison	1212122213—10	M Wright	1111112110— 9
H Hamilton	0202012112— 7	C E Rueger	1220210111— 8
J Conley	2102012112— 8		

No. 3, 10 birds, $5 entrance:

Conley	1112111111—10	Rueger	11012 — 4
Wright	1111211111—10	Cowan	1112221121—10

No. 4, 5 birds, $2.50 entrance:

Conley	12121—5	Wright	11211—5
Rueger	21012—4	Cowan	01122—4
Knight	11121—5	Cummings	01110—3

No. 5, cup shoot, 15 birds $10 entrance:

Conley	1222122211212111—15	Hamilton	1021110202012201—10
Knight	2122122202112111—14	Rueger	2212010021110222—10
Wright	0121111210102022—11	Cowan	2112202111212112 —14
Morrison	2010222102121111—12		

Average of those who shot in all events:

	Shot at.	Killed	Average		Shot at.	Killed.	Average
Conley	47	43	91.5	Rueger	47	31	70.
Wright	47	42	90.	Cowan	47	45	95.8

JNO. F. COWAN.

Greencastle vs. Bedford.

BEDFORD, Ind., Sept. 17.—Inclosed I hand you clippings, the result of team shoot at that city on 9th inst., between Greencas le Gun Club and Bedford Rod and Gun Club. We had expected to meet there a team representing the Danville (Ind.) Gun Club, but they did not materialize:

Bedford: Stipp 44, Glover 42, Sherwood 43, Reath 29, J. Eblesisor 39, O. Eblesisor 42; total, 239.

Greencastle: Thompson 39, Maloney 36, Steele 26, Callender 38, Frazier 40, Kleinbub 38; total, 217.

After the match four of our boys went on to Indianapolis and shot through the Limited Gun Club's tournament, where we had a good time and were nicely treated by the management.

J. B. STIPP, Sec'y

Decision of a Referee.

WE have received from Mr. J. W. H. Reisinger, of Meadville, Pa., an account of a very curious ruling on the part of a referee that recently came under his notice. His letter, dated Sept. 10, reads as follows:

"Knowing your detestation of the practice of dropping for place in shooting for purses, I report a case and ask for your opinion as to the justice and regularity of the referee's decision in the matter.

"At the Warren, O., shoot last Friday, in a 15-target event, Upson, of Cleveland, entered in the first squad, but subsequently was changed to the third and last squad. After the first two squads had shot, the change was noticed and objections made; but as he could not then be put back in his proper place, Mr. Upson was changed to the first man on the squad, instead of last or next to last, where he had been placed. This left a man named Packard (Frank Packard, I think), of Cleveland, in the last place; he was shooting under the alias of Black. The highest scores made by the other two squads were two 13s, leaving the 15 and 14 holes open. As the third squad neared the end of its string, it was noticed that all had made three misses save Upson and Black, each of whom had a straight score. When Upson broke his 15th target, the crowd near me said in substance, 'Watch Black, he will miss his last one.' Sure enough, Black threw up his gun carelessly and missed, the gun seeming to me, as I sat directly behind him, to be pointed at least a rod from the target.

"He was at once accused by several different persons in the crowd of purposely missing his last target, and protests were made to the referee. After a few moments' consideration, the referee ruled that the target should be scored 'broke,' first money in consequence being divided between Upson and Black. It seems to me that if the shot was honestly fired Black had second place, but if it was purposely dropped he was out of place entirely and out of the tournament. The decision looks like a case of 'Not guilty, but don't do it again.' What do you think?"

We think that, if in the mind of the referee there was no doubt that Black did not try to break the target, the proper decision was to return him his stake, politely request him to quit shooting and see that he did it. If the facts are as Mr. Reisinger has put them, there was no doubt in the mind of the referee as to Black's intentions, because he called the target broken, changing his previous decision. The placing of Black on an equality with the man who broke straight is hardly fair to the man with a straight score, and we think the referee, if he changed places with Upson, would be of the same opinion.

To our way of thinking, the case is one which is outside the province of a referee. It is a case which should be adjudicated upon by the tournament committee, or, if there is no such body, by the officers of the club who are running the shoot on behalf of their club. The referee would be a competent witness and might have to be called, but after all he is a poor person to judge whether a man was trying to break a target or not. A good referee has all his attention taken up by watching the flight of the targets and looking out for that "perceptible piece" necessary to constitute a "break." If he is doing his duty he has no time to be watching the shooters and their actions, and such a duty should not be imposed upon him.

Meadville Gun Club.

MEADVILLE, Pa., Sept. 18.—No. 1, 25 targets, unknown angles, A. S. A. rules:

O. F.

PUBLISHERS' DEPARTMENT.

A Double-Headed Compliment.

A PROMINENT sportsman, in speaking of FOREST AND STREAM the other day, said it was the poorest advertising medium among the sportsmen's journals. Said he, "Here's the ——, it's got nothing of interest in its reading columns, and its subscribers have to fall back on the advertisements. Then there's the ——, that only touches on one subject, and the only thing new in it is the advertisements. But your blame paper is so interesting I haven't got time to read the advertisements."

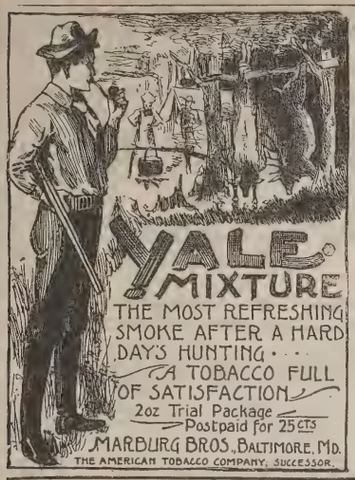
This, on its face, seems rather a back-handed compliment, but in reality it is just as pleasing to the advertising department as it is to the editorial.

Perhaps a little more so.

It proves what it set out to disprove; for the paper that is most interesting and has the widest scope is naturally going to have the largest number of readers and be of most value to the advertisers.

People are not numerous that pay out good dollars to get papers that have nothing in them worth reading besides the advertisements, and if they were their patronage would not be worth having, for such people are more apt to send for information than for goods.

FOREST AND STREAM has the interests of the advertiser at heart in making the paper the most interesting and widely circulated of any.



A Rust Preventive.

NEW YORK, July 9.—GENTLEMEN: After using my gun for three days about the salt water duck snooting in March of this year I cleaned it with "Three in One" and put it in an ordinary canvas case and left it in a gunning house on an island in Great South Bay. It was not taken out, cleaned or in any way cared for since it was put away until last week, when I opened the case to inspect it. I have found the gun absolutely free from rust and in perfect condition, an experience which I have never had before under like circumstances, although I have used almost every advertised rust preventer. I deem this test an extraordinarily hard one and am an enthusiastic believer in your "Three in One." Yours respectfully, CHAS. E. HILL, 6 Wall St.

G. W. COLE & Co., 111 Broadway, City.

ANSWERS TO CORRESPONDENTS.

B., Dallas, Texas.—The capercailzie and the black cock are two distinct birds.

It will give us great pleasure to forward a copy of our catalogue to any one who "goes a-fishing." Some people charge for their catalogues, some charge for the postage, some charge for both. We are more than willing to give away our catalogues and prepay postage on them. No angler, after looking at the catalogue, can resist buying from us or from our trade-customers all the fishing-tackle he can afford to pay for. That is where we get back a good deal more than cost of catalogue and postage.

ABBEY & IMBRIE,

18 VESEY STREET, NEW YORK CITY

MARSTERS HAS WORMS.

Sand Worms, 12c. per dozen. White or Blood Worms, 25c. per dozen.

I am with you again with lower prices for Fishing Tackle. I find by experience that putting down the prices and increasing the quality, increases my business every year.

One lot of Split Bamboo Fly and Bass Rods will be sold at 98c. until all are sold. These Rods are all nickel mounted, solid reel seats, beaded butts, silk wound. Extra tip. Complete in wood form and cloth bag, and will give satisfaction. Lengths and weights of Fly Rods are: 9ft., 6oz.; 9½ft., 6½oz.; 10ft., 7oz.; 10½ft., 7½oz.; 11ft., 8oz. **Reel seats below hand.** Lengths and weights of Bass Rods are: 8½ft., 9oz.; 9ft., 10oz.; 9½ft., 11oz.; 10ft., 12oz.; 10½ft., 14oz; **reel seats above hand.** Any of the above rods sent by mail on receipt of price and 30c. extra for postage.

No. H.—A special lot of hard rubber and nickel, raised pillar, multiplying reel, with balance handle and side spring click, 40yds., 68c.; 60yds., 78c; 80yds., 88c.; 100yds., 98c. Any of the above reels sent by mail on receipt of price and 10c. extra for postage.

No. E—Special lot of hard rubber and nickel, raised pillar, click reels, 40yds., 48c; 60yds., 53c. Sent by mail on receipt of price and 5c extra for postage.

No. C—Special lot of extra fine nickel plated, raised pillar, multiplying reels with click and drag, and screw off oil cup, 40yds., 58c.; 60yds., 68c; 80yds., 78c; 100yds., 88c.; 150yds., 98c.

Single gut leaders, mist color, 1yd., 20c. per doz.; 2yds., 40c. per doz.; 3yds., 60c per doz. Double gut leaders, mist color, 2yds., 75c. per doz. Hand twisted treble gut leaders, 3ft. long, 10c. each, 90c. per doz.

A special lot of Trout Flies at 16c. per doz. Sent by mail, 1c. per doz. extra for postage.

A special lot of Bass and Pickerel Spoons at 5c. each. Sent by mail, 1c. extra for postage.

All kinds of **Hollow Point best quality hooks**, snelled to single gut, 10c. per doz.; double gut, 15c per doz.; treble gut, 20c. per doz; four-ply, 25c. per doz. Sent by mail, 1c. per doz extra for postage.

300ft. braided linen reel lines on blocks, 40c.; 300ft. hand made linen reel lines on blocks, 9 thread, 38c Sent by mail, 3c. extra for postage.

Brass box swivels, all sizes, Nos. 1 to 12, 15c. per doz. Sent by mail, 1c. per doz. extra for postage

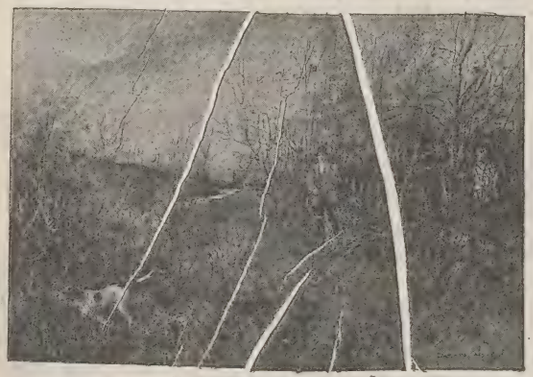
"Outside the Danger Line."



Mr. Wilmot Townsend's new drawing, "Outside the Danger Line," depicts a flock of broadbills alighting; and the study of action will readily be recognized by observing gunners as true to the life. The scene is on a calm day, when, with nothing to alarm them, the ducks have concluded to rest a while far from shore. Reproduced by the artotype process, the plate being 16×21in. Edition limited to 100. Price is $3.

FOREST AND STREAM'S OUTDOOR SCENES.

FROM ORIGINALS IN WATER COLORS AND OIL, PAINTED EXPRESSLY FOR THE FOREST AND STREAM.

HE'S GOT THEM.

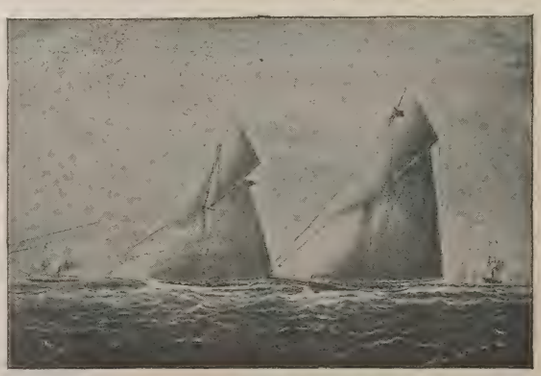
AS PREMIUMS.

We have prepared as premiums a set of four beautiful and artistic reproductions of original paintings of realistic outdoor scenes. The art work is the best obtainable in New York; the pictures are rich in effect and are intended for framing. They are done in 12 colors. The yacht race is from an oil painting; the others from water colors. The scenes are shown in the small cuts herewith. The plates are 14¾ x 19in. The pictures are sent both to **new** subscribers and to **old** subscribers upon renewal, on the following terms:

Forest and Stream *one year and the four pictures*, $5.
Forest and Stream 6 *months and any two pictures*, $3.

If subscribing for 6 mos. designate by title the two pictures desired. Single pictures will be sold separately, price $1.50 each, or the set, $5. Remit by express or postal money order, payable to Forest and Stream Publishing Co., 318 Broadway, New York.

The pictures are sent by mail, postpaid, wrapped in tube.



Copies of them may be seen at this office, and inspection is invited.

BASS FISHING AT BLOCK ISLAND.

JACKSNIPE COMING IN.

VIGILANT AND VALKYRIE.

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2. | NEW YORK, SATURDAY, OCTOBER 5, 1895. | VOL. XLV.—No. 14. No. 318 BROADWAY NEW YORK

For Prospectus and Advertising Rates see Page iii.

The FOREST AND STREAM is put to press on Tuesdays. Correspondence intended for publication should reach us by Mondays and as much earlier as may be practicable.

LOUIS PASTEUR.

ON Sept. 28 Professor Louis Pasteur, chemist and scientist of world-wide fame, died at Villeneuve after a severely painful illness. As chemist and scientist he was best known to the world, but if a life-long effort to ameliorate and cure the ills which afflict humanity is worthy of a title, he was one of the world's greatest philanthropists.

Professor Pasteur was born at Dôle, Dec. 27, 1822. His origin was humble, his father being a journeyman tanner, poor and patriotic, a soldier who had seen service in war and had been decorated for deeds of valor. The intense patriotism of the father was no less a characteristic of the son.

Professor Pasteur's early life gave no indication of his later industry and greatness. His early school days were not marked by industrious application to his studies or interest in them. After a preliminary education under the tutorship of his father, he began his classical studies at Arbois. Afterward he continued his studies at Besancon, where he took the degree of Bachelor of Letters and was appointed a tutor. His capacity and inclination for work had now developed, his ambition was aroused and he studied earnestly to qualify for admission to the Ecole Normale, where on the first examination he was admitted. This stimulated his ambition still more. He went to Paris, began new studies at the Institution Barbet, and on a second examination in 1845 won fourth place. After two years devoted to the study of chemistry at the Ecole, in 1847 he was appointed a doctor, and the year following he accepted the position of Professor of Physics in the College of Dijon. Shortly afterward he held the same position in the Faculty of Sciences at Strassburg. He succeeded in 1854 in perfecting the organization of the Faculty of Sciences at Lille. Three years later he was one of the faculty of the Ecole Normale. Advancement in the world of science followed rapidly. In 1865 he was professor of geology, physics and chemistry at the Ecole des Beaux Arts, and from 1867 to 1875 he was professor of chemistry at the Sarbonne. In 1862 he was elected a member of the Academy of Sciences. The title of Doctor, bestowed on him by the faculty of medicine at Bonn, he declined on account of sentiment relating to the Franco-German war. He was made a foreign member of the Royal Society of London in 1869, and in 1881 a member of the French Academy. Oxford honored him with the title of Doctor of Sciences, and he was made a perpetual secretary of the Academy of Sciences in 1887, a responsibility which his health and scientific labors did not long permit him to assume. He was made honorary perpetual secretary on his resignation after two years' service. The French Government distinguished him with all possible honors. He was made a Senator by royal intervention, and in 1885 became a member of the Legion of Honor.

To the world at large he was best known by his great and valuable discoveries. His first achievement of note in the scientific world was in relation to the properties of fermentation.

In 1849, an epidemic of such destructiveness that it threatened the total destruction of the silk worm and the valuable industries dependent upon its cultivation brought consternation and despair to the silk growers in several departments of France. Pasteur, out of compassion for the people who were suffering so much misery, went to Alais, where the destruction was greatest. His investigations proved that the disease was caused by germs, and that by simply separating the diseased eggs from the healthy ones the destruction could be checked. His success brought him fame and the gratitude of the nation.

But the discoveries which made him most famous were in connection with inoculation for the prevention or modification of diseases other than small-pox. His experiments and discoveries in connection with hydrophobia, and the curative and preventive properties claimed for the attenuated virus of rabies, are well known. The Pasteur treatment for hydrophobia has been earnestly advanced and quite as earnestly opposed as a proper treatment for hydrophobia; yet it has gained ground in so much that a number of Pasteur institutes have been established.

Professor Pasteur had, since the epidemic of 1892, made experiments in vaccination against cholera, in which it is said he had made positive success in his experiments on animals.

Under the disadvantages which come with humble origin and limited means, burdens which overwhelm most men, he deservedly rose from obscurity to the greatest fame and honors by the very force of his industry and genius.

SNAP SHOTS.

AT a meeting held last week in Cheyenne, of representatives of the Government and the State authorities of Wyoming, a plan was agreed upon for determining the right of the Bannock Indians under their treaty to hunt on public unoccupied lands. Two Indians are to be put on trial for test cases, that the courts may decide the question of their hunting privileges. If it shall be shown that the Indians have a right to hunt, Governor Richards will undertake to protect them in the exercise of that right. If it shall be decided that the Indians have no right to hunt in violation of State laws, although their treaty gives them that right, the Government, on its part, will undertake to secure a modification of the existing treaty. At this distance from Wyoming on the one side and Washington on the other, it appears that such a judicial determination of the question might well have been made years ago.

Gov. Culberson, of Texas, who has just convened the Legislature in extraordinary session to take action on a projected prize fight to be held in that State, would have earned the thanks of the community, too, if he had included in the purposes of the session the enactment of a new and improved game law. If Texas is solicitous for the good opinion of the world, and for that reason resents giving harbor to the bruisers, she might with equal foresight mend her fences as to quail and deer.

Having reached the age entitling him to relief from duty, Lieut.-Gen. John M. Schofield was retired last Monday from the command of the Army and from active service; and on Wednesday, no longer being chained to business, he went to Peale Island, Ohio, for a fortnight of fun with rod and gun. Gen. Schofield has earned the right to go fishing; we wish him many an October day crowded to the full of the pleasures of care-free life on the waters.

While the manufacturers of sporting gunpowders have been cudgeling their brains to produce an explosive smokeless and free from noise the Government officials have been looking for the combination that would make the most noise for sunrise and sunset salutes to the orb of day and for occasional salutes to certain gold-braided luminaries who sail the sea and walk the land. For this particular saluting purpose a brand has been adopted which makes a tremendous noise when it goes off, and rolls imposing clouds of glory after it. One charge of it in a woodcock cover would shake the earth and veil the landscape in smoke.

In this country a game killer who should erect a monument to perpetuate an extraordinary record of birds killed would perhaps gain dubious honor from the shaft. It is different in Great Britain, where shooting for a record is prevalent, and where the man who scores the most birds in a given time is held in envied repute. On an English moor some years ago a shooter achieved a performance on birds which he thought worthy of being perpetuated in stone, so he set up a shaft of Aberdeen granite inscribed with his phenomenal score of ninety-six brace of grouse killed in twenty-three minutes, together with the figures of the day's bag of 1,035 brace for six guns. The total for the week for six guns was 4,000 brace; and the monument also gave the total for the season as more than 17,000, or, to be exact, 17,060. The monument was erected on the exact spot occupied by the shooter when he killed his ninety-six brace in twenty-three minutes, but subsequently, as it was found to interfere with the flight of the birds for other record hunters, it was removed to another moor.

If such a memorial erected by an American shooter to record his bag of prairie chickens or quail might not be regarded as particularly creditable, nevertheless it is certain that there would be a vast army of gunners who would envy the man his luck. For talk as we may and write as we may, there are hosts who rejoice in a big bag or a big catch, and who have not much eye for anything else nor thought for anything except number and weight. Very likely there are enough shooters and fishermen animated by such sentiments to make up an army of pilgrims who would journey to a Mecca with such high-hook Caaba.

The man who fishes for count not only misses much that another finds in fishing, but very often makes himself uncomfortable and unhappy because of his unreasonable ambition to outdo some rival fisherman. We have known anglers who were envious, petulant and childish, simply because they had been taken possession of by an overmastering ambition to get ahead of some one else. Your count fisherman will put in a whole season of waking hours and dreams by night, planning to outdo his competitor, and when he fails in this, he is inventing ingenious theories to belittle the luck enjoyed by the one who gets ahead of him. This is not angling, for an angler rejoices in his own good fortune, and though he may look with wistfulness on the more fortunate success of another he does not begrudge it.

At the recent meeting of the American Forestry Association, Prof. Dwight Porter, of the Massachusetts Institute of Technology, read a paper on forests and water supply which went to disprove the accepted theory that cutting off the forests affects the flow of streams. Prof. Porter discussed the flow of the Connecticut River as recorded by figures kept for a quarter century. At two points on the river, at Hartford and Holyoke, continuous observations of the water supply have been made and recorded, and the Hartford records, available for study, run back for fifty years. The Holyoke records date only from 1880.

The commonly accepted principle is that the cutting of the forests is injurious to the flow of the streams whose basins are thus denuded; but the figures recorded at Hartford do not bear this out with respect to the Connecticut; the tributary area there is of 10,200 square miles, and the statistics are given by Prof. Porter as follows: "The average height of the Connecticut at Hartford between 1841 and 1849 was 20.6ft.; between 1850–1859, 20.5ft.; 1860–1869, 21.2ft.; 1870–1879, 21.7ft.; 1880–1889, 18.9ft.; 1890–1895, 19.6ft. These figures disclose no permanent change. The highest freshet was in 1854, the lowest in 1858, and only twice has the height of 21.7ft. attained in 1801 been exceeded. Apparently there was a gradual increase in the average height down to 1880, while there was at the same time a marked and steady decrease from 1854–1880 in the heights of the more extreme freshets. The Holyoke diagram displays a general improvement from 1880 to 1893. This may be due to increased reservoir facilities on the tributaries of the main river. So far as the lower river is concerned there is no change for the worse in twenty-five years."

Sometimes it happens that when a person writes much for FOREST AND STREAM of his days in the field, those who read his stories may come to think of him as always playing and never working, and for the most part, too, such a conclusion is as far from the truth as Greenland from Terra del Fuego. We have always contended and stand up for it against all comers, that they are most deserving of fun afield and enjoy it most heartily whose lives are busiest. They, too, wield the pens which give us the most charming, rollicking and enticing chronicles of their outings. The man who amounts to something in the work-a-day world is the one to whom the pleasures of play days are fresh and stimulating and inspiring, and he is the one to write of them for the edification of those fortunate enough to read the record.

We learn with deep regret of the death of Thaddeus C. Banks, of the Montgomery (Ala.) *Advertiser*. Mr. Banks began his newspaper service with the FOREST AND STREAM years ago, and this office had watched with something of paternal pride his successful career as a journalist. His nature was one that endeared him to his associates, and although the term of his life was not long, it sufficed to demonstrate once anew that true worth of character is the quality that is honored of the world

The Sportsman Tourist.

THE MEN WITH THE LAMP.

THIS fall, at about the time of the coming of the chicken, some men sent one of their number to me saying: "On such a day, at 11:40 A. M., be at the Union Station prepared to start to the land of the Dakotas." Accordingly on the day appointed I approached the rendezvous with a carpet-sack filled with some old clothes and a nightgown, a case containing a shotgun, two more cases containing cartridges, and a pointer dog containing the remains of the family breakfast. The men referred to were the Judge, the Colonel and the Doctor, and they had been intrusted for the chicken season with the Lamp of Aladdin. And they were like the seven wise Virgins in that they had it trimmed and burning, although the likeness was not otherwise apparent. For the Judge had left his pocketbook, the Colonel could not find his gun trunk, and the Doctor's dog was announced to be summering at a quiet resort in Minnesota a hundred miles out of our line of flight. They had invoked their lamp early in the day, and at the rear of the train was a car containing a kitchen, dining-room, parlor sleeping rooms and provision chest, to say nothing of Albert, king of cooks, and Jonas, prince of butlers, whose faculty for discovering cooling beverages and misplaced hats and guns was simply occult. Again the lamp and presto! came the Colonel's trunk just before the train moved out. The Judge, whose pocketbook was left behind, by 2 o'clock the following morning had mine—or was it that the Doctor got it and the Judge only waited to take it from a man of his own size? or did he find his own in his pocket after all when he changed coats at St. Paul the next morning? Anyhow it was the lamp, as it was all the way through. This was especially the case at the last-named city, where we tarried a day, for on that morning I went up town with the Doctor, and every time one of those low-cut or decollette bicycles passed him by he became rooted to the spot he stood on, losing all power of motion except the ability to turn slowly as if on a revolving pedestal; and in the afternoon when I went forth with the Judge it was the same way, excepting a pronounced and broad-minded disregard of the means of locomotion employed by the moving cause of the strange manifestation. Only a car equipped as ours was could have gotten out of St. Paul with those two men, as it did at 8 o'clock, just as we were sitting down to dinner.

When we awoke next morning we were at the summering place of the Doctor's family, where we took aboard his dog Fritz. The Colonel had telegraphed to have his sailboat gotten out, and some of them went for a sail, while two of us went a-fishing. I won't say who was with me, because he couldn't catch anything, and I don't like to expose him to contumely. He is respectably connected. The kind of fish I caught is essentially a pan fish, warranted not to upset in any pan.

We hung our lamp on the hind end of our car that night and by morning we were in the middle of North Dakota! This is a straight tale, but the editor is requested to give my address and the choice of athletic clubs to any small-sized man who doubts it. Others are treated with scorn. P. S.—Just make it scorn all around. In these agnostic times we are tolerant.

When we arrived in North Dakota the Judge proceeded to wipe my eye. We hired a man with a wagon for $19 50 a day or thereabouts to carry us and some iced victuals to the haunts of the chicken and pintail. I think the price was a sort of composite one, made up of the various items of the outfit at a fair valuation, with mileage and insurance added. We had killed a few chickens, when up jumped a curlew, which the Judge promptly shot. But this was not what happened to my eye; for I didn't shoot that time, and the Judge didn't hit him anyway. He only dropped when he shot because that was all the further he was going that way. He made the rest of his journey on foot up a little stream. But we chased him along until his tongue began to hang out, when he again took wing and made straight at me with a calmness born of what I say was despair, but the Judge says was conviction. Whether it was his tongue hanging out that way that disconcerted me, or because he had his claws up to his ears to protect them from the concussion, I cannot say; but at any rate I missed him with both barrels, after which the Judge killed him at long range by a beautiful quartering shot. His gun must have gone off by itself, for I don't see how it could have been fired at the right time any other way. It was really a credible performance on its part, and if it had been the gun that danced on the grass and jeered at me I should not have minded it a bit.

At about this juncture a man approached our wagon and ordered the driver to take us off the earth. Now we did not have to unpack the lamp to enable the driver to tell the man what he thought of him, nor yet to enable the man to enumerate the good qualities of the driver, but getting off the earth was another matter, owing to the scarcity of anything in the way of a platform near there. However, we moved over on to the next section and went to feed our horses and eat our dinner in that man's barn, first asking permission of his innocent and unsuspecting wife and buying milk and coffee from her. When the man came in directly with his men and teams the renewed expressions of esteem that passed between him and the driver were touching. The only people who were not touched were the participants. It is against the law in Dakota to become too personally touching in a matter of this sort.

Our sympathies were rather with the farmer, although the situation was too comic for anything but universal grins on the part of the spectators. A farm hand would take me outside and point to some tree claim where there were chickens, and we would have a little laugh out there. Then we would go inside and have a quiet smile with all hands until, before we were ready to start off, we were carefully instructed as to the whereabouts of every covey of chickens and, I believe, truthfully so. I know the one we went for gave us such chicken shooting as a man seldom gets in this vain world of 20th of Augusts and 1sts of Septembers.

It was along a tree claim where there were just enough puny cottonwoods to make the birds lie well and to make the shooting difficult. They were spread all through it, and we walked along behind the dogs, who were pointing and drawing all the time. Now a bird would rise to the top of the trees with a whir, a crack of the Doctor's gun and a cloud of feathers. Then a bird in front of the Judge would meet a like fate; and again, one would get away from our first barrels through the foliage, and the next instant a stooping hunter would get a glimpse of him as he crossed the stubble, and roll him over away out on the 65yd. boundary. The driver followed us along in the wagon, picking up the birds where we dropped a load of them for him, and when we got to the end of the timber he said he had never seen better shooting nor such long shots as some of them were. It was a mixed bunch of chickens and pintails, and if there are any birds in that tree claim next year they will have a chicken for a mother and a pintail for a father, for that is about the only way it can be arranged now. Supper tasted good that night. We had roast beef, green corn, corn bread, pudding, zinfandel, coffee, Rochefort cheese, cigars and a verse of "Shove it up, shove it up."

It would be tiresome to tell of all the shooting we had. We had enough, although some complained that it was not so good as the preceding year. One day the Judge made a record of not missing a bird. The Doctor likewise. The Colonel killed his first bird out of the wagon as he was bowling over the prairie. Once he and I got on to a slow rising covey and killed seven without moving. Another time one of us waded into a slough and killed thirteen ducks in like manner, the first six being mallards. For all that we didn't kill them to spoil, and sometimes we did not go out for two days running. For it is not all of hunting to hunt. Part of it is to tell about other days and places.

And to enjoy the cheerful companionship of dogs. They soon learned to look upon the car as home. If a town dog chased them that is where they sought refuge; and if they chased the town dog that is where they came trotting back to with satisfaction. In the evening they kindly accompanied one of our number to some butcher's shop and ate until they swelled out, after which they returned to the car and hung around the kitchen, begging from Albert and Jonas. When I came away I shook hands with them all and they all seemed to understand it and, I thought, were more moved at my departure than two or three of the more unregenerate persons who stayed for the Minnesota season. They were always making us laugh. Once Fritz, who slept on the Doctor's steamer trunk to economize floor space, fell off backward in his sleep—all except his head, which was held in place by a chair. He was fearful that his fall was not over yet, so he hung there with a stiff neck and a heroic backbone extended ladder-like from the trunk to the carpet, while his face depicted such awful certainty of impending calamity that we fairly howled, whereupon he "let loose" and took a fresh start on the trunk.

Again a dog called Dakota Jim, subject to some raillery because he never hunted less than a mile from the wagon and because he cautiously wore his left ear on the half-cock, after staying on the car all night and half the morning owing to its being on the move to new hunting grounds, began to feel very uncomfortable without, however, making his feelings known. It was not a matter of good breeding or of ethics with him. It was simply a matter of necessity, and good manners had no more to do with it than with the telling of it, for which latter Dakota Jim is to blame and not me, for I am unable to get the consent of my colleagues to withhold it. The direful three-legged performance began with fear and trepidation on his part, in the parlor; but when a cast-iron cuspidor was frantically insinuated where it was felt to be most useful, his face took on a wrapt and listening expression and his yellow eyes beamed around upon us all in mild benevolence and amnesty while he put his left ear back at the safety notch, as if to indicate returning tranquility.

Toward the last our Minister came up and joined us. It was during a polemical discussion between him and the Judge that a board was kicked out of the dinner table. I mention it in passing not because of its relevancy, but because it shows what polemics come to in the end. One pinched the other, which brought about the kick aimed, of course at the offending party, but as usual striking innocent spectators in their tenderest spots.

We were all glad that our Minister came and fain would have him come always. There is no better hunting companion than one who is a good minister, and no better minister than one who is a good hunting companion. The two things minister to each other. We were together in the rushes and two blue-winged teal came hurtling through the sky.

"You take the one on your side and I'll take the one on mine."

"All right."

And even as we spoke and raised our bodies and our guns they crossed in their flight, for some inexplicable reason. No time for trading birds again, so almost crossing our guns we fire, and as the two ducks double up dead in the air some one calls out from other rushes:

"That's the way to knock them!"

I have reason to believe that the Minister held 10ft. ahead of his duck, and I call that pretty nice shooting for he clergy.

I cannot stop without mention of our last dinner hour on the prairie. We lay there in the shade of some willows beside a slough eating, talking, sleeping and then talking again until the water bottles were empty and everything had been eaten from corks—it seems to me—to crumbs, and until everything was talked about from germs to Jerusalem. Pan Zagloba had arrived the day before, too, and the true stories that man can tell! At length it was over, though, and I have no fonder remembrance of the trip than that dinner hour lengthened out into a lazy half day by the legerdemain of the talkers.

Pan went off at last with his horn to try to charm some sandhill crane from the inaccessible slough, and I went off still further and fell asleep again, that it might never be said that I ever went hunting without getting lost. For they could not find me nor awaken me until they had driven the whole circuit of the slough and almost given me up for lost; for they well knew that a step too far in that fathomless mud not only meant death, but burial. The family doctor confessed that he wondered about my life insurance, and at this I turned to him, in strange sincerity for me, and thanked him for having the best thought he could have for the occasion. He further said he supposed the duty would have fallen on him of telling Elizabeth, and the Minister said he feared that duty also; and all hands agreed, myself included, that that would have been a harder thing to do than to have done what I was supposed to have done—said good-by to her and the children out there in the rushes, the mud and water getting into my throat and choking the unheard farewells.

When I at last awoke at sound of the firing and they saw me from a wagon on the prairie, and I began to walk toward them in answer to their shout, I was conscious of feeling strangely tired and weak, as though the strain of their apprehension had been imparted to me in sleep in some way. I felt very humble and glad to be alive, and when the Minister's back was turned fed them all a little whisky and water to take the taste of the mud out of their dear old mouths.

GEORGE KENNEDY.

ST. LOUIS.

AN ADVENTURE ON THE NIAGARA.

BETWEEN Lake Erie and Lake Ontario there flows one of the most remarkable and wonderful streams in America. It is remarkable from its formation and course, and from the manner it performs its work in discharging the water of the Great Chain of Lakes into old Ontario. Its entire length from lake to lake is but thirty-six miles. No other stream in the world, no matter what its length may be, possesses so many attractive features to the lover and student of strange formations and the beauties of nature. Connecting, as does the Niagara River, for that is the stream referred to, with Lake Erie near Buffalo, it forms the international boundary line between Canada and the United States from Buffalo to Fort Niagara. As the waters of Lake Erie flow into the river's channel their motion is slow; then it becomes more hurried and soon comparatively sluggish again, as the waters surround and kiss the shores of beautiful Grand Island. On all sides of the delightful isle the broad river presents a placid, lake-like appearance, and there is no intimation of the wild beauty seven miles below, where one is impressed with the idea that the waters from the different sources of supply of Lake Erie have again become separated and vie with each other in the race to leap the falls. What a race it is! Over the rocks between the pretty isles above the falls dash the waves, and finally all leap over the precipice into the glorious gorge below. It is more particularly with the portion of the Niagara River which flows between the massive rocky banks of the gorge that this story has to deal.

After the waters of the upper Niagara break on the brink of the American and Horseshoe Falls and are dashed and churned to a milky whiteness below, they flow for a great part of the distance to Lake Ontario between thickly wooded banks fully 200ft. high. The river is quite broad at the foot of the falls, but narrows midway between the Whirlpool Rapids and the falls. The rapids are a little over a mile and a half down the gorge, and many are familiar with their wild beauty. They also know of their death-dealing qualities.

In the eddies between the falls and the rapids the eel fishing is very good during the summer season, and it is exceedingly so in the eddies on the Canadian side, where the foam gathers. One of the best of these eddies is where the little steamer Maid of the Mist makes her landing on the Canadian shore. There are not many evenings during the summer that this eddy is not filled with the dark, yellow-colored foam, and at night, when all is

WHEN WE STARTED.

quiet, the eels gather under it and feed on what they find there.

It was in September, 1885, that my two cousins, Sumner and John Hume, of Kansas, came to visit me for a fortnight on their initial trip to Niagara. During a visit with them the year previous I made the promise that if ever they came to the falls I would take them eel fishing in the gorge at night. The greater part of their visit had been passed in sight-seeing, but one day they called on me to keep my promise to take them fishing. Naturally, I at once took steps to grant their request and keep my promise, and borrowed a punt from a friend who kept it at a point known as the Old Maid of the Mist landing, a short distance above the rapids, but over a mile by water below the falls. On the evening after they had reminded me of my promise we started out from my home for the river and it was not long before we were afloat on the stream and pulling up the gorge. The evening was not an over pleasant one, for it was evident a storm was not far off, but we had no fears that it would break before our return. The pull up the river was not difficult excepting at one place, which, from the remarkable rapidity of the current, has been appropriately named Swift Drift. This point is midway between the falls and the rapids and is just where the stream narrows. Fully thirty miles an hour the water runs at this point and it is one of the most dangerous on the river, which here is on a mass of deep, dangerous whirls and "boilers." In fact some think that an undercurrent from the falls here first breaks its way to the surface. The pull around the drift is a hard one, but we accomplished it safely and it was not long before we

were in the midst of the thick, dirty foam dragging for eels. In this method of fishing a cone of lead, in which, about the large end, are arranged six good, strong hooks, is made fast to a strong line and then swished, by the aid of a pole, back and forth through the gathered foam. It is remarkably exciting sport and especially so when enjoyed between the high banks and at the foot of such a tremendous fall as that of the Niagara. The awful roar of the falling water, the falling spray and the dangerous nature of the stream make it especially attractive. It requires a firm muscle to swing the pole, for when an eel is struck

THE RAPIDS.

there is considerable resistance until he is in the air. We had good luck, however, and as a result of our evening's sport started down the stream with 150lbs. of the slimy, snake-like fish in a bag we had brought along in anticipation of good luck.

We had given our attention so wholly to fishing that we had failed to notice that the sky had become overcast with heavy dark clouds, and that darkness of the deepest kind had settled in the gorge. It was impossible to distinguish the top of the bank from the sky. All about the darkness was deep and terrible. Terrible because could we have seen the top of the bank we could have told where we were and thus avoid floating through the rapids to certain death. On our left we could hear the fall of the water from the mills on the American bank, and I knew that we were approaching Swift Drift, a place which under the circumstances I dreaded much to pass through. It requires nerve and care to ride it safely in a small boat in daylight, when the whirls can be avoided, but at night to escape them I knew would be a matter of pure luck. As I felt we were nearer the Canadian shore, we headed our boat across the stream and pulled for the Canadian side. After reaching it we pulled along down stream until from the points we rounded I knew we were in the eddy immediately above the Drift. We could not drop down close to shore out of this eddy into the one below owing to the roughness of the water and dangerous rocks right at the point. Had we been on the American side it would have been equally as dangerous to pass through the Drift close to shore owing to the rocks, and besides we would have landed in an eddy in which the current, as strange as it may seem, rushes up stream with all the rapidity the main current far outside rushes down stream. Between these two currents the mass of "boilers" and whirls is terrible and very dangerous. Had it been daylight we could have followed the course of the streak of foam down the river, for the route it takes is between the conflicting currents and always noticeably the most quiet part of the Drift. To the credit of my cousins I will say they retained their nerve remarkably well so far—perhaps, if the truth were known, better than I did.

Finally we decided that we would pull boldly out into the stream and float down the river until we thought we had passed through the place we so dreaded. Strong strokes of the oars carried us out from the protecting eddy, and soon we knew we were rushing down through the gorge at a rapid speed, and this with the rapids less than a half mile below. To enter them would be death, that we knew to a certainty. No one had ever passed through them safely except Joel K Robinson and John MacIntyre on the old Maid of the Mist on June 16, 1881: Graham, Potts and Hazlett and Sadie Allen in barrels; C. A. Percy in a boat which gave him the protection of an air compartment, and Walter Campbell protected by a life-preserver and a boat. No open boat could live in those waves; there no human being could survive without protection.

The rapidity of the current was such it seemed as though we were hardly in it before we realized that we were in a big whirl. There was a sudden jerk of the boat, its forward motion was changed to a circular one, and the stern seemed fairly to drop out of it. We knew that the boat was standing almost on end, and then I was thrown out in the river. The boat had been capsized. I heard my cousins yell, and I cried, "Swim for the shore;" but there was no reply. I was in my shirt sleeves, for my coat had been thrown off in the boat, and with hurried strokes I made my way across the current, toward which side I did not then know. I encountered more than one whirl and "boiler," but none of them was very big. At last I felt that I had passed from the down current into the more quiet waters of an eddy, and I, if such a thing were possible, redoubled my efforts to reach shore, and at last succeeded, but not before I had cruelly injured my left hand and forearm in taking a stroke forward, not knowing I was so close to the shore. I crawled out of the water upon a rocky ledge, and while resting nursed my injured arm and wondered if my cousins had been fortunate enough to escape. It was not long before I had suspected, from the thick underbrush, that I had landed on the Canadian side, and started to make my way along the shore as best I could up stream to the narrow Indian path which leads to the top of the bank just above Swift Drift. The Canadian bank of the Niagara is not so easy of access as is the American, and therefore there are no broken paths along it for any great distance. My progress was very slow, and though the distance I accomplished was not long, it took me hours to reach the Drift. By this time it had begun to get a little lighter in the gorge, and standing out on the rock at the Drift I loudly called the names of my cousins until I was hoarse. My climb along the rocky shore had kept me warm until now, when I first commenced to feel cold. This spurred me to hasten to the path and reach the top of the bank, which I soon did. A walk of about half a mile brought me to the railway suspension bridge. I briefly related my experience to the customs officer at the Canadian end. It was the first he had heard of our accident, as it was early morning and but very few were stirring. At the American end I also told the gatekeeper and customs officer my experience, and made inquiry for my cousins, but they had not heard of the accident before. I was well acquainted with the gatekeeper and he lent me an old coat and a hat to wear home. On my way there, as the hour was early, I met no one I knew. When I arrived at the house the only person I found there was my mother. She told me that my father and a couple of the neighbors had gone down to the old landing when the time for our return had long passed. They carried lanterns and called our names at different points. They found Sumner climbing along the shore below the Drift on the American side. He had struck out for shore as soon as he found he was in the water after the boat had capsized. He had reached shore just above what is known as First Point. They had accompanied him to our house, where he secured dry clothing and told them at length of our misfortune, and then they returned to the gorge to make a further search for John and me. My being safe left only John to find. As soon as I got a change of clothing, a bite to eat and something warm to drink, I started to find the searching party to tell them of my safety and aid them in finding John. By this time the news of our experience on the river had spread, and as I made my way to the bank I was joined by several friends, who offered congratulations on my safety and their services in searching for my missing cousin. I soon met my father and Sumner and the party with them, and it was arranged that the line of the shore on both sides of the river should be thoroughly searched. Two men were sent down to the Whirlpool on the Canadian side. Later in the day all the parties returned. Those who had gone along the Canadian shore reported having found nothing, and the same story was told by the parties who had searched the American shore. The two men who had visited the Whirlpool reported having, by the aid of glasses, seen what appeared to be pieces of a boat among the debris floating in the pool, and in the evening news came from Lewiston, a village five miles down the river, that a pair of oars had been picked up in the river there. Night fell, and with the closing day all hope of ever again seeing John alive passed away. There was no doubt that he had been drowned in the Rapids. He was unacquainted with the dangers of the river, and in all probability had managed to get hold of the boat after it was upset and clung to it. In a majority of other streams such a course would mean a rescue and life, but in the treacherous waters of the Niagara it was the worst course to pursue, for the boat, as it drifted toward the Whirlpool Rapids, carried its human freight to certain death in those maddening waters.

Two days passed and no word came from the watchers we had placed at the Whirlpool and Lewiston to keep a sharp lookout for the body. On the morning of the third day, however, word was received that a body supposed to be that of a man had been seen floating in the pool. Well provided with ropes my father, Sumner and I made our way to the Canadian side of the pool, for that is the only place it is possible to catch a body before it is carried further down stream. No bodies are ever recovered on the American shore of the pool. This great pocket in the river is not what many who have not seen it imagine it to be, a great maelstrom, the suction of which is all toward the center; on the contrary it is the result of a remarkable change in the course of the stream, the outlet being at a right angle with the inlet. The main current of the river does not shoot out of the outlet as it comes down the gorge, but crosses the pool and divides, part flowing toward the outlet, while a strong current strikes along the Canadian shore toward the inlet. Bodies and logs which once get in the Canadian side of the current generally remain there tossing about for days, for the water that passes through the outlet is virtually but the overflow of the great and remarkable river pocket.

It was a long climb along the bank from the foot of the inclined railway to the spot on the shore where we decided to await the close approach of the body to shore. All that morning we watched the human form as it was tossed about in the rough waters, and many times it approached so close that we felt we were about to catch it, but just as often did the heartless current swing it out from shore to be carried around the pool again. The afternoon hours were passing away and Sumner expressed a determination that if the body again came as close as it had before that he would risk his life in the dangerous waters and swim out and make an effort to bring it to shore. The suspense of the passing hours had been terrible on us all. There before our eyes was a body, thought to be that of our companion on the fatal trip, being dashed hither and thither among the great quantity of debris always found in this river sack. At one time it was bumping against a log, at another sucked out of sight in one of the many whirls. Others beside our party were there, but they were well acquainted with the treachery of the current of the pool, and would swim out a few feet from

THE WHIRLPOOL.

shore. As one hour followed another and the day was drawing to a close, we realized how helpless we were and longed for a small boat, with which it would have several times been an easy matter to have reached the body.

No longer could Sumner bear the sight of the body, supposed to be his brother's, being dashed about, so when in circling the pool again it approached rather close he leaped into the water and his strong strokes carried him out from the living over on shore to the dead body before him. His progress through the water was marked by firm determination. Before him was the corpse we had watched so many hours. Perhaps he too would be one in a less number of minutes. Anxiously we watched him as his strong arms dashed the water aside and carried him forward to the dead form beyond. A few more strokes and he was by its side, the torn clothing grasped and the return to shore begun. It was made with difficulty, but in safety. The body floated face downward, and when we turned it over we found it was not that of John. It was a sad disappointment to us, and it was turned over to the Canadian coroner, and was afterward identified as that of a man who had been drowned above the falls.

The next day we received news that a body had been found at Lewiston and it proved to be that of my cousin. It was shipped to Kansas for burial. Thus ended one of the saddest experiences of my life, and from that day to this I have never been fishing in the gorge below the falls.

ORRIN E. DUNLAP.

AN OUTING AT OKOBOJI.

OKOBOJI LAKE is situated among a series of high hills that form the watershed of northern Iowa. This lake is 1,700ft. above the Gulf of Mexico, and is the southernmost of a chain of lakes reaching far into Minnesota. The water is clear, blue and deep, and is maintained by springs from the bottom. There are many bays, promontories and points around this lake, making a meandered shore line of thirty-five miles.

From the top of a high hill on the west shore we have a fine view. The topography of the lake is laid out at our feet like a mammoth map. The points, bays and forests of native trees are well defined. The water is a deep blue. The steamers look like toy boats running hither and yon, the sailboats look like birds on the wing, while the rowboats look like mere white specks upon a blue mirror. Little wonder that the Indians fought for this beautiful sheet of water, made doubly dear to them by the fact that the fish, otter, mink and muskrat of the lake, and the deer and larger game that came to the lake timber for shelter, supplied all their wants for food and clothing.

Dixon's Beach is about a half mile long, with high banks, covered with native trees and carpeted with fine blue grass that is kept free from weeds and well trimmed by a flock of sheep. The beach is about 50ft. wide, consisting of fine pebbles in various colors, ranging from the size of a pea to a hickory nut. No sand, no dirt, no dust, nothing but clean pebbles, that will not soil your clothing should you sit down or roll on the beach. It should be called Pebbly Beach.

There are about thirty sloop and cat-rigged yachts on the lake, nearly all of which enter for the season cup races. When fifteen or twenty of these yachts are doing their level best in a stiff whole-sail breeze that lists each craft well over to leeward, with each bow buried in white foam, it makes up a spirited scene that even landsmen and haymakers seem to enjoy and appreciate.

There are about two hundred cottages around this gem of lakes. Of all the bathing beaches our preference is for Gull Point—a wild and isolated place where we can have a schoolboy swim. Bathing at this point is simply luxurious and delightful. The first plunge is cold and disagreeable, but after swimming a few rods the "tonic" has taken effect, the circulation is stimulated, and from that time on it makes one feel like a boy just released from school. We earnestly hope no one will improve Gull Point, but leave it untouched, except by the wild gulls and those wilder bipeds who love to swim and bathe as did our predecessors, the native Americans.

For three months we have slept in a tent. We are delighted with the change from stuffy rooms to inclosed section of pure atmosphere. The air in a tent is constantly changing, but the change is gradual, without a draft, and one can thus have fresh air without taking a cold.

For many years this series of lakes have afforded fine fun for fishermen, but the lawmakers of the last legislature made a law permitting open fishing with hook and line for ten and one-half months of each year. All last winter the pot-fishers slaughtered the pike, pickerel and bass, by cutting long holes through the ice and tying lines to bushes that would tip up when a fish was hooked. One man could tend fifty bushes, each holding a line that the law intended should be held by one man only. If the weather became too cold for "bush fishing," a painted minnow with spear or snare was used in the hole covered by the fish house, and thus the slaughter went on, day in and out, during the past two winters, taking from the lakes tons of game fish which were shipped to numerous cities in Iowa and other States.

Yesterday two expert fishermen, both of whom have been rowing and fishing for the hotel guests, started in on their fall and winter pot-fishing. They came in at night with 260 croppies which they shipped to Des Moines, $4.50 for the day's catch. They know the location of all the croppie beds in the lake, and will soon clean them out.

This class of fishermen and later on the farmers will cover the lakes with temporary fish houses and bush-fish the lakes dry the coming winter.

We are informed that the code of Iowa will be revised next winter, and that a fish law (that will hold water) will be inserted in said code; but what is the use of more laws when it is impossible to convict under any law? How can we convict an illicit fisherman with a jury composed of illegal fishermen? The spear, snare and multiplicity of ice-cut holes per man are clearly illegal, yet the yearly slaughter of game fish seems to be as inevitable as gravitation. We are informed that the member of the Legislature, who drafted the open winter fishing bill, had constituents living around this system of lakes, whose votes were more important to him than any number of game fish, hence the framing of this fish destroying bill.

The natives who inhabit the land around the lake are quaint, inquisitive, impecunious and profane. There are two things the natives freely give us—namely, water and advice. The latter is urged upon us from the time we step from the car up to the day we leave. We are advised to board here and there, to let this and that man do our draying, to "take the only safe steamer on the lake," only to find that we were on the oldest tub on the lake. Do we want a team to drive around the lakes, we are advised to take a certain rig, but before we have taken a dozen steps are advised to steer clear of the same team.

We go a-fishing, and still-fish faithfully in one place for an hour, having been advised as to our locality; but the first native that rows by said, "You won't catch nothing thar. Go fish off that old dead tree in 20ft. of water and you'll catch 'em." As we had caught nothing but small perch, we pulled up our anchor and again anchored off the old dead tree, where we fished persistently for an hour, and getting no bites we went home fishless.

As the nights are cool we build camp-fires, around which the boys assemble to relate their experiences in fishing. They tell of having caught fish so large and heavy that they were lost in landing. Verily, a thousand lies will be told before one large fish is landed.

Several years ago, when we occupied a cabin at the confluence of the East and West Okoboji lakes, the Ananias Club had an informal meeting around our camp-fire. Dr. W., of Sheldon, Ia., was elected president by acclamation. He took the chair (an old canvas camp chair) and lit a long cigar (a gift from a traveling man who had loaded said cigar with a firecracker), and proceeded to reel off fish stories, between which other ambitious members tried to keep up with the procession. This stimulated the old Doctor, who related his experience in catching a shark 30ft. long. Just as the Doctor was "landing his big fish" his cigar exploded, throwing the hot tobacco on top of his bald head. The camp chair gave way and let the Doctor down upon his $500 bird dog. The dog howled with pain and fright, and the boys howled with glee and delight. The chair was feebly repaired, and since that time that chair has had a penchant for letting large story-tellers fall to the earth.

At the final camp-fire (last evening) we resolved that we would abandon Spirit and Okoboji lakes, and seek some lake in northern Minnesota (for future summer resorting) where the fish and game are more plenty than around this system of lakes. We disbanded the club and burned the old "Ananias chair."

R. P. BELL.

EHEU!

I SEE that Dick of Connecticut is having some trouble with himself about the meaning of the above word, and expresses his belief that I have founded a "cult." In the first place, I want to assure him that I never did such a thing in my life. If there's a thing I shy at it's that. In the second place, I would remark that I did not originate the word; and in the third place, I will, with great pleasure, tell him who did, for I always like to help fellow sportsmen over hard trails when I can, and I just think I can now.

However, in the first place, imprimis, I will state, that if this exclamation, which I have resurrected, can be made to do duty in the place of any objectionable swear word, or otherwise relieve the feelings of any correspondent, I shall feel amply repaid for having called attention to it. We all know that at critical moments, such as when the big trout gets away, or the hook gets hopelessly caught on a high limb, or the shell sticks when the ducks are flying just right, vigorous language alone, something of a deep crimson Eheu will fill the aching void or gap, and it may be that if the requisite amount of power and inflection are concentrated on the word in question, the pent-up emotions of the soul may find vent and so disaster be averted. I sincerely hope it may be so, for most of the old cuss-words have been worn to a frazzle by violent use and need a dose of innocuous desuetude. But to the explanation.

Along back in the fifties, or thereabout (450 B. C., I mean), there was a man lived in Athens (not Athens, O., or Athens, Ga., but Greece) who was quite a noted personage and fond, as many noted men are nowadays, of fishing, and was accounted quite a sport in that line. His name was U. Ripides, but his intimates called him Rip for short. In those days all fishing was done with bait. If I remember correctly, flies hadn't been invented, and so, of course, a person wasn't in danger of social ostracism or eternal suffering if he used bait, which was a fortunate thing for fishermen.

Rip was of a social disposition and liked right well to have his friends enjoy sport with him, and on one occasion had planned for a week's outing up in the country and had invited a Mr. S. Kylus and one P. Hidias to accompany him up into Phocis, along the Hylocæ River, which heads way in back of Parnassus somewhere and was a dandy trout stream. Well, Rip had made all arrangements and one fine morning, while the coming day was revealing the magnificent proportions of the Parthenon and ere yet Mars Hill had caught the first gleams of the glinting sun, while the grocers were taking down the front shutters and the servant girls were scrubbing the front steps, after a hearty breakfast of muffins, skewered eggs and peacocks' livers, washed down with the sparkling product of Bœotian vineyards, the trio wheeled out of Rip's barn in a gay old chariot behind three calico nags, the whole outfit being the proceeds of a levy by the sheriff on the defendant, a played-out racing sport, in a case wherein Rip was plaintiff. The chariot wasn't eminently fitted to an expedition of this kind, but by putting in a couple of seats and a tail-board it answered pretty well. The adage that "it is not all of fishing to fish" had gained a footing even in those times, and the part which wasn't fishing in the present instance was riding thirty or forty miles in a springless cart, but it was that or nothing, for the graders on the A. & G. N. R. R. had but just begun operations.

Well, to make short what might be made quite a long story, in the afternoon of the third day they arrived at the chosen spot on the banks of the foaming river and unhitching proceeded to make camp under the spreading branches of some fine old oaks. While Rip and Kylus were busy unpacking and putting things to rights Hidias cut a pole and tying his line to it said to Rip, whose hands were smeared with honey which he was trying to save from a jar that had been jarred too vigorously in transit:

"Now, while you fellows are getting things shipshape, I'll go down to the river and catch a mess of fish for supper, if you'll tell me where the worms are."

"Why," replied Rip, "I forget just where I did put them, but hunt round and you'll find them somewhere."

But hunt as he would, and as they all finally did, turning everything inside out and topsy-turvy, the worms were not to be found, and the conviction finally fastened itself upon the unhappy trio with a grip like that of a bear trap that the worms were peacefully reposing lovingly entwined in the old olive jar in Rip's barn in faraway Athens.

Then it was that Rip, knowing that there were no worms in the mountains, lifted up his rich baritone voice, that erst had held the populace spellbound in the forum, and from the heaving depths of his soul ejaculated, with all that words might, could, would or should imply under the circumstances, Eheu! Eheu! Eheu!

I hope that Dick will find the explanation satisfactory. He surely will see that the word will meet any demand that can be made on it. He says that as a rule he has managed to conjecture my meaning "in the blindest parts." Thanks, Dick. This pleases me. But don't overtax your perspicacity, for it might not pay.

O. O. S.

Natural History.

A DAY WITH A NATURALIST ON A NEW MEXICAN RANCH.

THE journey had been tedious, and it was with difficulty that the snow-covered prairies of Kansas were recognized as the garden of America. The winds had whistled but a cheerless and wintry welcome as we emerged from the Raton tunnel and found ourselves in New Mexico. Then night enveloped us and we were left to imagine the beauties of Las Vegas and the prosperity of Albuquerque. As daylight broke we looked out on one side upon the braided strands of silver upon a golden background which constitute the Rio Grande at low water, and on the other caught distant glimpses of the mountains. With all the necessary accompaniment of noise the train stopped and the brakeman shouted "Socorro!"

Before we could dampen our ardor by a plunge into the the dank sterility of a Western station, a bronzed six-footer gathered up our luggage and we were hustled energetically into a vehicle which might have been an incipient stage or a glorified prairie schooner. It was, in fact, a prospective wagon, with stout wheels and ample cover, mounted on tireless springs. A span of Mexican ponies were soon whisking us past the faded splendors of Socorro. Three bank buildings with officers abscondent and depositors despondent, empty stores with palimpsest signs each a history and epitaph in itself, most of them bearing the name of some member of the Baca family—the dominant gens here—and a beautiful building, once ambitiously posing as the State School of Mines, but now in a state of innocuous desuetude; these and several other evidences of past prosperity were noted during the few minutes which brought us to Park City, as the picturesque suburb developed by the smelter works is called.

These elaborate establishments, which a year before had been affording business to the whole region and labor to hundreds of skilled workmen, were now in that windowless condition which proclaims the rule of anarchy and the small boy. But even this dominion had ceased, for the adobes were all empty and the streets of the village were occupied by stately ravens who flirted about with head and throat puffed out and feathers spread like turkey cocks "of color."

Ten minutes more brought us to the comfortable ranch at the foot of Socorro Mountain. In a moment all previous ideas of a New Mexican ranch were dissipated. We had pictured a broad expanse of prairie with a cluster of half-buried mud hovels and corrals, but what we found was a comfortable five-room house with large windows and modern comforts nestled at the foot of protecting hills from which issued abundant springs of soft sparkling water, in some places distinctly warm. The water, which, like a hunted thing, had originally crept at once to cover beneath the sand, had been cribbed, cabined and confined until it spread out in the clear and placid expanses of two reservoirs, amply adequate to supply irrigation for the orchard and drink for man and beast. I said orchard advisedly, for forty acres of young trees, raspberries and other small fruits certainly deserved the name. Nowhere in the world are grown better apples and pears, grapes and nectarines, than in desert New Mexico. We were glad to plunge at once into the lethe of hospitable entertainment, forgetting the fatigues of the journey and even the strangeness of our surroundings until the morrow, which was to be the "day on a New Mexican ranch."

Long before the sun had obliterated by his greater glory the gorgeous colors he had flung over the eastern range, we were roused by a dismal concert of howls which affected us like the whoop of disembodied savages or the screams of a maniac. Springing out of bed we were at the window in time to see two tawny coyotes trailing their limp bodies sidewise across the barnyard. The coyote, like "zip coon," will "lope all night up de branch wid he nose pint' like he 'guine t' cross," but he puts great stretches of grease-bushed mesa behind him with an ease not to be despised. During the last two years about eighty fowls had been unwillingly sacrificed on the altar of these desert fiends, and the theoretical profit balance of poultry farming was correspondingly disturbed.

After breakfast we sallied out to inspect the springs and reservoirs which made this oasis in a cactus desert possible. Our host, enthusiastically descanting on the possibilities of development of the local water supply, pointed out the evidences of violent erosion in the arroyos and minor watercourses. If this water, which during the short rainy season forms resistless torrents and speedily goes to waste, were but stored and utilized, vast areas of inexhaustible fertility would be reclaimed. The present ranch, however, was supplied by springs which gush from the foot of Socorro Mountains and are collected in small reservoirs, whence water is piped to orchard and buildings. The water sources attract many winter bird residents. Here, for example, we first saw a bird which attracted considerable interest. In general appearance resembling a catbird, as it sat on a greasewood bush, something in its attitude at once suggested a flycatcher. When it rose into the air at our approach we instinctively said, "How like a robin!" but the two oblique bands of salmon color on the wings and white lateral tail feathers

dispelled this idea as quickly. The bird wheeled in airy circles upward until on a level with the foothills, when it made off for a cañon to the westward. But my companion's keener eye caught sight of its fellow near at hand, and we soon were inspecting the curious blending of characteristics it presents. The bill and incipient crest are undoubtedly those of a flycatcher, but the "booted" legs and general aspect are thrush-like. The tail reminds one of a mockingbird. "Well, where will you place it?" asked my companion. "Betwixt and between," I rejoined, "but what is it?" "Townsend's fly-catching thrush, the sole representative of an intermediate subfamily. Strange that naturalists should insist on placing the flycatchers far down the scale when this fellow offers convincing proof that they cannot be separated from their allies, the thrushes." It is not uninteresting to notice that Prof. C. H. Turner deduces from a study of the brain a close relation between the two groups, completely reversing the usual arrangement.

About the bog-like borders of the spring are numerous aquatic plants, and among these a pair of Wilson's snipe have spent the winter. The start you experience when one bustles out of cover and darts in a quick semi-circle to another swale bears witness to the fact that long forgotten experiences have left some sort of a "vestige" in your nervous system. But swamp birds and waterfowl are not characteristic of this region, and their study offers nothing ornithologically new. A single specimen of the Western variety of our song sparrow was noticed, but seemed somewhat out of place in the midst of numerous crown sparrows of the "intermedia" type. This pretty sparrow with its black-bordered white crown and cheery note is common and familiar. Its flocks offer an interesting evidence of evolution, for the last year's birds present so different an appearance as to puzzle us exceedingly until they were placed alongside the mature form. The middle of the head is gray, shading into a Naples yellow on the forehead, while on either side is a broad, distinct rufous band. There is no black anywhere, and we are compelled to believe that this first color pattern is a survival of some primitive race plumage.

On our return to the house a note which sounded strangely familiar apprised me of the presence of a flycatcher. Yonder he sits, with the same easy indifference as to the set of his tail and ruffing up his crown as if forgetting that it possessed neither crest nor gaudy cap. I never see a flycatcher without remembering an old remark of my four-year-old as we passed a Friends' meeting house: "Plain and unpretentious, like the habits of the people." Yet Say's flycatcher has sufficient salmon-brown upon its crissum and under parts to lift him above the inspired monotony of color prevalent in the group. Surely, that was a chickadee. The note was unmistakable and when we catch sight of him, black cap and gorget complete the illusion. Closer observation detects the broad, white line over the eye characteristic of the mountain species. So we constantly make the mistake of greeting effusively a familiar acquaintance only to discover that it is really a distant relative after all.

To me the oddest of these pseudo acquaintances was the crissal thrasher. Instead of the honest, expansive brown of our home bird, he wears colors almost as inconspicuous as those of the catbird, with the same fulvous crissum. The beak is enormous and curved like a bow—altogether a faded parody of H. rufus.

Even as we sat at dinner our attention was frequently diverted to other diners outside. First among these was the shrike, which our friend assured us was a thoroughly domesticated individual. He had learned that, when the lizards retire to their winter quarters and the smaller feathered migrants have passed southward, Dame Nature had spread humbler fare in the shape of crinkly caterpillars concealed beneath the alfalfa leaves and dead flower stalks in the lawn.

We hardly recognized the fierce butcher bird of summer whose larder we had often seen in the thorny shrubs and whose shrill cries had been the terrors of countless smaller birds in this fluffy and dainty beauty, who labored with such zest under our very window to unearth the "vermin," with a half confident half shy glance at us from time to time. On viewing the bird thus at close quarters one is struck with the same impression produced by the raccoon, that the creature is blind. This is evidently due in both cases to the dark band passing through the eyes, which may be of advantage to a predacious animal in masking its alert and concentrated gaze, for animals watch the eyes of their pursuer. How different is a real live bird from the conventional mounted animal! Every feather and contour is expressive. At the present moment our shrike is a mere fluffy ball of white and gray. A sudden noise transforms him into a clean-cut image of watchfulness with feathers closed to produce the fine contour of the powerful supple body, and anon he darts away with intermittent flashes of white, like a firefly.

He is hardly gone when we are aware that there is another applicant at the door. This time it is a dainty gray and white rock wren—a wren surely by every spasmodic, jerky twitch of his wiry little body, fully attested by the slender, curved bill, but tailed in a fashion quite unlike its Eastern congeners. Instead of the ill-balanced and uncontrollable little appendage which our Eastern wrens shoulder like a musket or switch like a baton, all the Western wrens have respectable fan-tails of reasonable size. The rock wren is relatively common about the mountain base, and its shrill, trilling cry may be heard at almost any time. Now, however, she is too busy to vocalize, and is hustling leaves about with swift lateral movements of the bill and uncovering worms and slugs in the most businesslike manner imaginable. Yet the wrens never become so absorbed as to entirely neglect their most characteristic gesture. This consists in a sudden crouching, followed by a jerk, which almost hurls them into the air. It is essentially the movement preliminary to flight, but is repeated incessantly even during meals, when no thought of flight can be assumed. It seems to be simply a habitual method of nervous discharge. Much yet remains to be done in the study of the psychology of birds, and among the problems to be solved is the origin of the expressive motions of various birds. Many of them are at present quite unintelligible, but would doubtless yield interesting results to research. Some one should analyze the expressions of excitement in the various groups, and discover the causes of variation. This constant "bobbing" or courtesying of the wren becomes positively annoying, and we shall not mourn her departure.

We have just finished our meal when we are treated to a pretty sight. Deceived by the quiet, a covey of helmeted or shell quail, which make their home on the ranch, has settled near us, and now, under the guidance of an old bird, is marshalled just beyond the doorstep. It is a sight to make every nerve tingle. The white crests are well up and the rapid route step and quick foraging movements, which seem purely incidental, give a military air to the company. There must be twenty in the covey. But where is the boy? Bang! comes the answer from the woodshed, and with a sudden whirr the animated group disappears as by magic, except for two struggling victims whom neither beauty of plumage nor grace of motion can preserve from the commonplace fate of the pot. This species is the game bird of New Mexico and Arizona, though the plumed species are also found in the mountains.

After dinner we again embarked in the ark and were soon rattling over rocky roads toward one of the picturesque cañons where an irrigation company was planning a dam and an extensive reservoir. As the Magdalenas came into sight we were treated to a rare and curious phenomenon. The sky was clear and cloudless, but a slight haziness toward the north indicated that more humid air was being wafted from that direction. Suddenly above the snow-capped peaks of the highest range there appeared a series of tolerable imitations of these peaks moulded of cloud banks. Over each peak there hung, at a height of perhaps 100ft., such a cloudy coronet, which hovered a few moments above it and was soon wafted beyond the chilling influence and melted again into thin air. It seems fanciful to speak of radiant cold, but the condensation of vapor at such a height by absorption of heat from a column of air seems almost to warrant it and illustrates how concrete an effect the lack of a thing may produce. But this has been often enough illustrated in our own pockets to make it superfluous. These cloudy coronets reappeared at intervals for over an hour until the incoming air had been heated throughout by the radiation from the earth.

The open mesa was enlivened here and there by noisy flocks of sage sparrows which offered much amusement by the peculiar employment of a disproportionately long tail. Although a good runner, this sparrow has not become thoroughly terrestrial, and is withal both inquisitive and impetuous. The first trait impels him to inspect the new-comers from close quarters, and the second sends him off in a short spurt first on the wing and then on foot. The impetus acquired is excessive, and as the body begins to outgo the feet the long, black oar-like tail is whipped up to act as a counterpoise and brake in the oddest manner. He is a companionable little fellow, with a dash of yellow at the shoulder, a single spot on the breast and pale cheeks. The white spot over the eye redeems his countenance from plainness, but the whole dress is modest and inconspicuous. Like many of our smaller birds the outer tail feather has a white stripe to serve as a "recognition mark," but the bird does not display it, as the true migrants do. A curious obsolescent transverse banding of the tail below is also a peculiarity which seems to have escaped observation.

Speaking of recognition marks, no better illustration could be found than that afforded by the snowbird, not distantly related to the sage sparrow. The Western variety, with bright chocolate markings and warm brown back, is abundant, but exceedingly cautious. Contrary to our expectations, the color pattern is remarkably uniform, and we find none of the intermediate forms connecting with the dull, slaty variety of Ohio. The flight of the snowbird is interesting because of the very conspicuous way in which it spreads its tail and exhibits the strongly contrasting white feathers during its jerky progress. There can be no doubt that this habit is of the greatest service during migration in preventing straying from the flock. But fortune favors us to-day, and we bag a couple of much rarer sparrows, which, although placed in the same genus as the sage sparrow, are much more aristocratic in appearance. The black-faced sage sparrow bears a well-defined black escutcheon upon his breast and has very decided white blotches on the tail. The note is searching and peculiar, and, so far as our guide had seen, these birds cling closer to the foothills. There was no mistaking a resemblance to the snowbird, though it is difficult to locate it.

We were now passing through the romantic cañon where it was evident even to the eye of the laity that a retaining wall a few yards long and 20ft. high would form an immense reservoir whence water could be conducted to thousands of acres of fine orchard land. A shrill strident trill caught our ear. There, darting in and out among the rocks, was the image of the wren of the noon hour, but with an apron of warm yellowish brown reaching to the upper breast, while the latter and the throat showed white by contrast. The bill is longer and the bearing more shy. The upper parts are brown and rufous with curious "eye spots" sprinkled over them. The reddish barred tail is fan-like and the wings are also barred. The bird is in incessant motion, uttering at intervals the loud trilling cry which has a metallic resonance as it echoes among the rocks. Curious to know the errand which busies the little fidget among the rocks, we are not long in discovering among the lichens vast numbers of cocoons and larval shells of caterpillars, now mostly despoiled of their contents. This then is the cañon wren, and well named too, for it seems never to leave the shelter afforded by these deep clefts. Perhaps the very peculiarities of color which separate it from the closely allied rock wren grow out of an assimilation to its rocky environs.

At the upper end of the cañon we encountered a flock of conspicuous, loud-voiced birds busy upon the ground as though it were their habitual feeding place. The shrill cry echoed back and forth among the rocks, but awoke no memory of ours. It was not a difficult matter to secure a bag by practicing on the curiosity and temerity of these birds, but it was more difficult to discover why they were called "towhees," and why Coues should have described the particular form—*Pipilo mesoleucus*—as he did in his key. It is an interesting bird, over 8in. long, with very decidedly rufous head and almost black tail, but slightly tipped with salmon at the end (as though the tail had inadvertently dipped in the paint pot). The throat is dingy yellow, marked especially about the margin with black spots. An obscure black blotch on the breast and white shirt front, closely guarded by the dusky gray of the sides and upper parts and very decided tawny on the belly and coverts, complete a sufficiently noteworthy *tout ensemble*. The amount of white varies, but in winter birds the color pattern is otherwise quite constant.

"But can you show me none of the old friends in your far-away land?" "Yes," was the reply, "yonder on the rock near the foot of the cañon is a dove which might just as well have been mourning its soul away at your bedroom window. There seems to be no varietal difference between the extremes in this species. The doves are common along the river bottoms, but, as you see, an occasional one wanders into the mountains." No other pigeon occurs here during winter.

I remarked on the paucity of woodpeckers. "Yes," said my companion, "the tree-loving birds have a bad outlook. Occasionally a red-winged flicker displays his gaudy colors on the ranch, but he does not stay long. A family of Harris's woodpeckers lived in a hole in the cornice of our house, and became quite the household penates to us; but to see what we can do in the way of Picidæ, you should go among the old orchards on the river bottoms. Here both the downy and hairy woodpeckers are represented by less spotted Western varieties, though I see no difference in habits."

As we were speaking there was a swift hurtle of wings, and the graceful, sharp-shinned hawk which I had observed on a rock above us veered away with a screaming sage sparrow in its talons. Hawks of many species are abundant at Socorro.

It was regretfully that I recognized that this day on a New Mexican ranch was drawing to a close. The rattling mountain wagon was bearing us swiftly to the station, but I could catch glimpses of wide, fertile fields, where the weary teams were drawing their last furrow, and great hordes of blackbirds rose, hovered, and sank to their never-ending repast.

In the streets were numbers of lazy plunderers in speckled gray and brown. House sparrows? Yes; but not *Passer domesticus*. It is the crimson-fronted finch (*Carpodacus*). The males, gorgeous in frontlet and gorget of dusky crimson, are vastly fewer than the plain, dusky, streaky females, and we gather that polygamy still prevails in these parts of Mexico and the laws may labor long to extirpate it. At any rate, far better tolerate our own criminals than the transported convicts of Europe. Almost as familiar, too, are the shore larks, whose ventriloquist notes have haunted us during our whole drive. But there is no time to lose, and as the train slowly pulls out for El Paso we lean far out the window to catch the mellow, rich notes of the meadow lark. None of the clear intonations are wanting—they are pure as the gold of his own breast, which seems coined to produce this our vesper and our farewell.

C. L. Herrick.

New Mexico.

MY LADY'S PLUMES.

You observed the hat of the lady who walked in front of you down the fashionable part of the main street the other day—the elegantly dressed lady who looked at people with her eyes half shut to avoid seeing too much of anything not distinguished as herself. My lady is accepted as of the *haute noblesse* of our civilization, but in reality she is a savage, as her head dress, gaudy, flaunting and barbaric as any paint mark or tattoo, testifies beyond a doubt. Pardon my lady for that, for the heritage of her sex, hanging on longer than the other to savage customs, constrains her first of all and at any cost of civilization to attract the attention of the opposite sex. Pardon my lady her hat, and she being what she is, pardon her also for looking with her half-shut eyes clear above the head of this shop girl, prettier, perhaps, than she is, and probably a better woman. You have not distinguished in these matters. You have not noticed, perhaps, that on my lady's hat are some tall, pliant plumes, long as those of the ostrich, but far more beautiful, with delicate filaments as light as frost work on a winter window. The shop girl's hat has none of these. On my lady's hat they rise, cardinal, orange, blue, green or pure white, streaming, dipping and nodding—accomplishing, in short, my lady's barbaric purpose to a nicety, inasmuch as they compel your attention from the humble shop girl who, all things being equal, might be a dangerous rival in the war which all women have against all other women in the world.

These long, filmy plumes on my lady's hat are the plumes of the white egret. Naturally, they are pure white, barring a little stain on the tips where the bird drags them in the muddy water; but pure white not being barbaric enough for the uses of civilization—though it used to serve Southern Indians who wore these plumes—they are dyed any color of the rainbow, losing thereby none of their gracefulness and only some of their beauty.

My lady's hat, if worn too long, will lose its purpose and cease to attract. She must therefore change it. The plumes in the new hat must be of different color. For these new plumes she looks to her milliner. The milliner looks to the great wholesale supply house of the metropolis. The wholesale supply house looks—and with much anxiety, these days—to Thomas Jones, market shooter, or technically speaking, plumage hunter.

Thos. Jones knows where there is an egret roost, or as he will call it, a "white crane roost." Really, he does not mean a roost so much as a nesting ground, where thousands of birds nest in a small tract of the isolated wet forest or "dead-tree swamp." Such rookeries were once common in Florida, but are so no longer. Thomas Jones may know of one in Mississippi, Louisiana or Texas, and holds himself fortunate if he does, for they are scarce enough to-day. Wherever it is, it is sure to be miles from a habitation, in the most desolate and inaccessible part of the wildest country, where moccasins and alligators are sole residents, where the only trails are the endless bayous, and where malaria reeks in every foot of the sodden ground. It would seem that here the egrets would be safe, and that no man would risk his life by pushing into a poison-laden swamp whence he might never emerge alive. This does not deter Thomas Jones, who takes a month's supplies in his boat, and with little else but a .22-cal. rifle or light shotgun, his ammunition and a big bottle of quinine in bulk, boldly pushes into the wilderness after the "roost" which he may have located a year, two years or three years ago, and whose whereabouts he has guarded carefully as a banker guards his gold.

Mind you, the plumage hunter does not go into the roost until spring has well advanced. When he reaches the roost the low trees, bushes and grassy brush clumps are full of nests, and the nests are or soon will be full of young birds. The busy life of the colony goes on. The parents come and go, traveling no one knows how far to get food for the gaping young birds in the nest. Thomas

Jones notes the high, projecting snag of the tallest tree near the edge of the colony. There is a white crane on that limb. It seems to him there always is one there. In short, it is a habit of the bird to alight on the highest branch offering itself.

Out of the thousands of nests in the vast colony, how can the parent egret pick its own nest, since all look so much alike? Thomas Jones often wonders about that, and sometimes laughs a little to himself. The parent egret has been out after food, and returns to the colony. Without a second's hesitation, he picks out his own nest, and pauses for an instant directly above it, high up in the air. Then he lets his long legs drop straight down, and throwing his wings up, just falls down through the air, feet first, in the most comical and awkward-looking way in the world, though he never misses his nest by an inch, but lands just where he wanted to. As he thus backs downstairs out of the air, his long plumes, attached in a little clump at his shoulders and spreading out over his back as far down as the longest tail feathers, flare up in the air, reversed and standing up over his head as he drops, as a white garment would in the resistance of the air.

On these plumes Thomas Jones fixes his eye. He shoots an egret and satisfies himself that the plumes are "ripe," *i. e.*, in their prime condition. Then he builds his camp on the best ground he can find near by, and the next day is ready to go to work.

Surely Thomas Jones is not going to kill these birds right in the nesting season, when the helpless young are in the nest and must die also if their parents die! That cannot be possible! you say. Yet that is precisely what he is going to do. It is not his fault, he will tell you, that the plumes are not good in the fall, winter or early spring, and are not prime until the height of the breeding season. Here are the plumes, found at much labor, reached at much danger, says Thomas Jones, blind and deaf—further than that, and there is the price offered me for them, so much an ounce, perhaps $40 an ounce, or perhaps as low as $140 a pound. Is this right to kill these birds at this time? I am not clear that we should ask this question any more of Thomas Jones than of the wholesale milliners' supply house, or of the retail milliner, or of every lady on the street. Only the fact remains, pitiless, horrible, unspeakable, that the gathering of the plumes is a harvest of death, a harvest untimely, disastrous, because it is reaped at the sowing time of life. Every egret killed for its plumes is killed when it is helpless through its blind natural love for its offspring, and when its death means the death of all its helpless young. Does the wholesale man know this? Does he care? Does anybody know or care? Is it not the one thing to be remembered, that my lady must have her plumes—this modern civilized type of womanhood must—to distinguish her from the shop girl—unless the shop girl marries rich and becomes able also to wear these plumes of death. White—they are white, these plumes. It is mockery. They should be the blackest sable, and they should stain black the white fingers that caress them.

But Thomas Jones cannot stop to argue. The next day he pushes quietly into the edge of the nesting ground. He ties his boat firmly within easy range of the tall snag he saw the day before. He takes out his rifle—the .22 short will make no noise, and it will serve his purpose perfectly. There is an egret on the tall snag. Taking a steady aim, Thomas Jones fires, and the bird whirls down, dead. One or two other birds start on their perches in the same tree, but settle back. One by one they, too, whirl out and lie in a white tangled mass at the foot of the tree. An egret raises herself up above the rim of the nest on which she sits, and the tiny bullet pierces her. She whirls down, lying white and motionless. The little ones gape and cry, but no food comes. The father was killed on the tree near by. One by one, out of the nests, off from the limbs of the trees, here, there, anywhere—for the birds are all about, and so stupid with the breeding fever that they will not leave—the slender white birds meet their doom. That tall snag has yielded twenty victims. Thomas Jones has not moved from his boat. He has over 200 birds down. He can tell by his cartridge boxes, for he rarely misses a shot. It is easy shooting.

After noon Thomas Jones goes out and gathers up his spoils. A cut of the knife and the clump of plumes is off. The carcass of the egret is left lying. Two hundred carcasses of egrets are left lying. That many more to-morrow. Many more than that the next day, for by that time the wailing of the dying young of the first day's victims will have ceased. From then on, day by day, increasing in three-fold ratio, the harvest of death goes on, steadily, pitilessly, on the sowing grounds of life, out in the silent wilderness where the birds have tried to hide their homes.

In less than a month it is over. The long white lines no longer cross the country going to and from the feeding grounds. The white forms no longer appear on the naked trees. Doubly naked the forest stands in silent desolation. Sodden and discolored the once white forms below the trees are sinking into the slime. From beneath the trees and from the nests up in the trees a great stench goes up. Not a bird, young or old, is left alive. The old ones stayed till death came, bound by the great instinct of nature to remain with their young.

Jones, a little yellower, but not sick, for he is a healthy man, packs up his feathers carefully and hies him to the railway for a swift and secret journey out of the country. He wonders where he can find another roost next year. Behind him is desolation.

E. HOUGH.

Does a Deer Challenge?

CARMI, Ill.—Some years since, in company with five besides myself, I was still-hunting deer in Arkansas. On the morning we were to break camp I shouldered my Winchester to take a farewell tramp over the grounds we had hunted for two weeks. I had walked about one and a half miles and was standing near the end of a prairie. Behind me was a briery slough. I had been standing several minutes when I heard three successive sounds or noises that were much louder and coarser than the whistle or snort of any deer I had previously heard. At first I thought it some other animal, but presently he was in sight, and when within about 200yds. of me he ran into a flock of turkeys. He would single one out and chase it away, then another, until he had chased off nine or ten, likely all of the flock, when he returned to the line or track he was following and came on, part of the time trotting and part of the time walking, but all the time traveling as if he were tracking something. When within 80yds. of me he came on my track and stopped, turning half around, giving me a fine shot. He was only a three-point buck, and rather small for a three-pointer, but he seemed to be on the warpath, judging by the way he chased the turkeys, and he seemed to care very little for me. Now, I have frequently heard deer whistle when frightened, and have heard them snort from same cause, but this deer made altogether a louder and different noise from either. BACHELOR.

ORIOLES, GRAPES AND SHOT.

WEST PARK, N. Y., Sept. 28.—*Editor Forest and Stream:* When your Englewood correspondent, Didymus, becomes a grower of Delaware grapes on the banks of the Hudson he will be better qualified to criticise my course in shooting orioles in my vineyard. At present he does not know what he is talking about. The oriole does not "consume enormous quantities" of grapes, but, if left alone, will destroy enormous quantities. The robins will make a clean sweep of the oxheart cherries, leaving only the naked pits adhering to the stems. Not so the oriole in the vineyard. It simply punctures the grape, stabs it to the heart with that stiletto-like beak and leaves it to perish on the cluster. Having got a taste of the juice of the grape it seems seized with the demon of destruction and fairly runs riot amid the clusters. I have sometimes wondered if it did not become intoxicated, and so let itself out in a regular grape juice debauch. One season I was absent from home during the ripening of the grapes, and on my return early in September found that about five tons of Concords, all the grapes I had at the time, had been practically ruined by the orioles. At least their market value had been so impaired that we were compelled to sell them for wine grapes. One side and often both sides of nearly every cluster had been punctured. I found only three or four orioles in the vineyard, but they were working it most industriously. They seemed to have taken each row and each arm in order, and had missed but very few clusters in their depredations. When a grape is punctured its juice slowly oozes out, the bees and wasps come and the whole cluster is presently besmeared. In rainy weather the wounded grapes rot and the cluster is still more besmirched.

The robin often attacks the grapes also, but he will confine himself to one or two bunches, eat his fill and be off. We never trouble him or the catbird.

I would willingly give the orioles half a ton out of my annual eight tons of Delawares if they would make a clean sweep of them as far as they went, but to let them take their half ton by sampling every cluster on the vines, this I will not submit to as long as shot and powder can be had. They seldom puncture more than a dozen berries on a cluster, but this destroys the beauty of the cluster, and makes double and treble work for the trimmers when the fruit comes to be packed.

The birds are very shy while working the vineyard and have the manners of sneak thieves. When disturbed they do not get up and fly away like the harvest robin, but dart under the vines, flying close to the ground and leaving the vineyard by the back door as it were. They are mostly young birds too, or females. Rarely is the brilliant-colored male seen among the vines.

They begin their depredations when the grapes first begin to turn, about the middle of August, and continue them till the first week in September. During this period the birds are slowly moving southward, and they often come in large numbers; this year, larger than ever before, my boy thinks that some days as many as a hundred were hovering about the vineyard. When he drove them out of the Delawares, they would dive down into the Wordens. I have never known them to attack the white grapes.

It is not, therefore, to save a few grapes that I shoot the orioles, or cause them to be shot. It is to save the very small margin of profit on grape growing. When it becomes a struggle for life between man and bird, the bird must go to the wall.

I am happy to report that the bluebirds are not all dead yet. During this month I have seen and heard them on many occasions. The first one appeared about Aug. 20. It sat on the top of a tall elm and called and called a long time, as if trying to find a comrade. Since then my ear has frequently caught the sweet, plaintive note from the air above.

But I fear the note of the oriole will always be an ugly sound to me, so unpleasant are my associations in recent years with that bird. JOHN BURROUGHS.

Game Bag and Gun.

A CAMP ON ROARING RIVER.

VIII.

"Prophet!" said I, "thing of evil!
Prophet still, if bird or devil!"

THE shades of night were settling fast; the waning harvest moon looked calmly down from the eastern sky; crickets chanted their mournful ditties; katydids sang their plaintive songs of love, while the bat and the night hawk flitted overhead. Now and then the sharp bark of the distant coyote and the sepulchral hoot of the nearer owl came in on the chorus, and, all in all, the weird surroundings and ghostly environments were sufficiently romantic to satisfy the most fastidious mountaineer.

Every one of the boys thoroughly enjoyed all this and these, for each and every one of them was blessed with that instinct of the true sportsman that finds pleasure and happiness in communing with nature in the profoundest depths of her own wild solitudes. The gray, gloomy mountains; the dark chasms and silent cañons; the spectral, limbless trunks of dead and decaying pines; the ghastly fissures; the bald peaks, defeated rivals in the battle for supremacy that once raged among these hills, in which old Hood won the robe of eternal white—all made the scene and the occasion so charming, so ravishingly enchanting, that the boys felt that it was well worth all their hardships and toils.

Here nature looks old and gray, dressed in tatters, and the wrinkles of her poor old face seem to deepen even as you look. Her decaying ribs are fleshless and bare; her eyes, once sparkling with living fire, are now but hollow, charred sockets. She sits, deaf to the melodies and blind to the beauties of the living world below, and we ourselves are made to feel that we are sitting at her tomb.

"On such occasions, among such surroundings, if there is any righteousness in a man's soul, any respect for nature in his heart, any of the finer sensibilities or emotions about him, they will find recognition, if not expression."

"Isn't this a wild, weird sort of a scene?" asked the Doctor, soliloquizingly.

"Yes," said Swift, "such conditions as these always admonish me not to forget how small a factor of creation I am."

"I believe," remarked Mead, "that the sad pleasure of such communings with nature, in her varied moods and conditions, leads us to a better understanding of our relation to the great problem of existence."

"Oh, you fellows make me tired," put in Smyth, "let's talk about how we are going to circumvent some of these elk to-morrow." Smyth is a very practical man.

Then there came a sound that stopped all their musings—a sound that fairly froze the blood in their veins, and, as O. O. Smith would say, made the hair on every one of their heads sit straight up.

It was a familiar sound, but that only made it sound the more weird and ghostly, like the familiar voice of one long since dead and buried.

Again it floated out on the soft night air like the wail of some lost spirit: "No more fun!" and the echoes replied: "No more fun!"

What could this mean? Could it be that One Lung was dead and that his sad spirit had returned to earth to haunt his persecutors? Possibly he had been devoured by some varmint and his soul had transmigrated to the locality of their camp and was now present in the form of some beast of the forest or bird of the air. There it is again—a double dose this time: "No more fun! No more fun!"

"You can't fool me," said Smyth as he got up and reached for a Winchester. "That monkey is somewhere hereabout in the flesh and blood, life size; and if I can find him there'll be one less Chinaman for the Irish to howl about in this land of the free. Besides I ain't stuck on this spirit business; I'd rather meet a cougar any day than one of these miserable spirits. They're wretched themselves and want to make everybody else wretched."

"No more fun!" again came wafted on the breath of the night. Smyth was good and mad by this time besides being just a little bit nervous, and even the other boys began to wish in their hearts that they had let the poor heathen come along when he wanted to. It would have been better than to have him come when he didn't want to, so. But then they knew it was he, of course they did, hid somewhere about. But where was he? The boys called, coaxed, argued and cussed, but there was no response to their entreaties and expostulations except that same ghostly wail: "No more fun!" Evidently One Lung was in no immediate danger from Smyth's wrath, for there is no better recognized rule for the regulation of human conduct than that propounded by Uncle Remus: "Catch a rabbit afore you skin 'im!"

However, at last, by the adoption of certain rules of triangulation for the location of the source of sound, he was located in the top of a small fir directly over the camp. Of course it then became only a question of time, patience, inducement and subtle argument to get him down. But Smyth had to keep his fingers out of the business and the other boys had to tender themselves as hostages for his good behavior.

It seems that the Chinaman had kept them in view all the forenoon, while keeping out of sight himself; and when he had reached their camp he had simply partaken of their bountiful lunch, and then, like Elijah of old, ascended upward. Evidently experience had taught him that a good-sized fir was the safest retreat when Smyth was around.

IX.

"The heart is hard in nature, and unfit
For human fellowship, as being void
Of sympathy, and therefore dead alike
To love and friendship both, that is not pleased
With sight of animals enjoying life,
Nor feels their happiness augment his own."

Bright and early next morning the boys were on the war path. Elk they wanted, elk they must have, and elk they proposed to have, if energy, patience and good marksmanship would get him. Smyth and Swift having located quite a large band the previous afternoon, it was agreed that all should go in a body to that locality and work, as near as possible, in harmony. Swift thought that the herd must be about four miles from camp, "in one of the most abominable, God-forsaken pieces of country man had ever looked upon," while Smyth agreed with him in most particulars, except that he thought they "might add another mile or two." Now, distance is something a matter of comparison. All old hunters will readily agree that the old arithmetical rule that eight furlongs make a mile is subject to variations and don't hold exactly good in the rough mountains; or, if it does hold good, some furlongs are vastly more elastic than others. An inch on a man's nose, you know, is quite a distance. So is a furlong in the elk country of the Cascade Range. There's many a good hunter that don't want to hunt elk—in that country.

The sun was perceptibly west of the zenith when Smyth stopped short and pointed silently to something in the trail that made every heart in the crowd quicken. Sure enough, there was the freshest of fresh sign.

Involuntarily every man sat down quietly and without a word. Then Smyth, putting his finger to his lips, silently motioned Mead to follow, and they stole away like two snakes. Time was wearing and Swift and the Doctor were getting a little bit restless, when Smyth reappeared as silently and cautiously as he had disappeared. Again he touched his lips and silently beckoned. Evidently there was business on hand, for he never arose from his snake-like posture, but quietly, noiselessly turned and crawled back up the trail. Less than 200yds. from where he had left them they found Mead lying flat on his belly and gazing intently down into a deep cañon a little to the left of the trail.

Then they all gazed. There they were sure enough: five bulls, a dozen or more cows, and probably half as many calves, not a hundred yards away, apparently unsuspecting, peaceful, happy and contented. Then the boys drew back a little and held a whispered consultation. They were excited. In fact, they trembled just a little. But that was all right, and was nothing to their discredit either as men or sportsmen.

The Doctor thought it would be almost cruel and barbarous to kill, for "they never could possibly get the meat out;" but Swift proposed to take a shot or two at that big fellow with the horns even if the wolves and cougars did get the benefit. So it was agreed that Smyth and Swift should take the big fellow, while Mead and the Doctor should take another bull that was feeding somewhat off to himself; but not a shot should be fired at any of the others. At the word four rifles belched forth their leaden messengers, and again, and the blood of two proud, happy creatures of the forest was staining the soft grass and green leaves which nature had placed there to nourish them. The shooting had been unusally accurate and deadly, and the knife soon finished the work.

The balance of the herd seemed to be dazed and undecided, and loitered around while the boys were skinning the two killed, and some even approached so near that they had to be driven away with clubs. The whole band could have been slaughtered right there, but gratefully let it be recorded that here were four sportsmen that had hearts in their breasts. It was a long way back to camp and was getting late. So it was agreed that just enough meat should be carried back for supper and breakfast, and on the morrow they would return and get the best of the balance, and the antlers if possible.

Late in the night, hungry, footsore and weary, they trudged into their temporary camp, well enough satisfied with their day's work, and duly thankful that One Lung had followed them there, for he had a fine hot supper ready for them. It was among the wee small hours when the other boys went off to sleep, leaving Swift calculating and figuring how in the world he was to get those antlers out.

X.

"'Tis a lucky day, boy."

Mead had a sprained ankle (?) next morning and couldn't go with the boys back into the elk country. One Lung consented to do duty in his stead. Mead is pretty smooth. In view of what he well knew must be in store for those that did go the wonder is that he didn't have two or three sprained ankles instead of one, and possibly an attack of "plumbago" (my friend George Dehardy's favorite complaint), besides.

At any rate, poor Mead was in a pitiable condition that morning—to hear him tell it. The boys started out very early, with Swift in the lead, and in his countenance the close observer or student of human nature might have read a firm determination to bring back that old bull elk's antlers or die in the attempt. Swift is a plucky fellow, anyway. Possibly readers of FOREST AND STREAM may remember his remarkable experience in the Columbia River one dark, stormy night last winter. If it had been anybody else but Swift in that scrape possibly that elk would be alive to-day. Yes, Swift has plenty of grit, even if his judgment is a little defective now and then.

We'll not undertake to follow the boys there and back, for truly it makes some of us fellows just a little bit tired to even think of it.

Let them go in peace and may prosperity attend them.

Mead's ankle improved very rapidly shortly after the boys had turned the first bend in the trail. In fact it got so much better that he concluded to take a little hunt on the quiet and, of course, the other boys would never be any the wiser. It could do no harm and probably a little light exercise might really benefit his ankle, you know.

So he took his shotgun and stole out near camp, hoping to find a few grouse and maybe a ptarmigan. But he kept on walking and someway, sort of instinctively, laid his course over toward the salt lick discovered by the Doctor and himself two days before. And something, he didn't really know just what or why, induced him to approach it carefully.

When within 20ft. of it he saw as fine a pair of antlers as might be found on any buck in the Cascade Range sticking up out of that hole dug into the side of the cañon by the pawing, stamping and licking of the nervous, anxious animals. But Mr. Buck was too intent on his job to observe the intrusion. Mead had nothing but bird shot with him and hardly knew just what to do under the circumstances.

The buck had evidently struck an all day job and didn't seem to care whether school kept or not. So Mead decided to return to camp and get his rifle even if he lost a good opportunity, rather than simply wound the poor fellow without any reasonable probability of getting him.

He hurried back, secured his rifle and returned. There was the same pair of antlers or another pair just like them. The next serious question was how to get at him. He knew that if he walked straight up to the hole he would have to be almost directly over the buck before he could shoot, while to undertake to go around would alarm him and one bound backward toward the cañon would land him in the brush and then—good by. After studying over the situation for some time he concluded to be bold about it and take chances. Holding his gun in perfect readiness he walked straight up to the bank and near enough to the buck that he might have touched him with the muzzle of his gun before the animal even thought of danger, so entirely absorbed was he in that lick.

O, gentle creature, would that thou hadst ere that day learned that

"Death rides on every passing breeze,
He lurks in every flower."

There was a quick, nervous bound, a shot, and the messenger of death had entered his pure heart. A few struggles, a quiver of agony and it was past.

No more grouse or ptarmigan hunting that day for Mead. He felt, and very naturally too, that he had done his share for one day, considering the fact that he had a bad ankle and wasn't feeling very skookum in general. It certainly is a strange, but encouraging, provision of an all-wise Providence that luck should always favor the lazy.

It was away late in the night when the boys returned from the elk country. And what a nice lot of meat, what a nice pair of antlers and what an interesting assortment of cock-and-bull stories they brought back with them. One would think to hear the Doctor and Swift tell about it that it was something of a job to get that elk, or the better part of him, particularly the horns, out of that cañon and down to camp.

Doubtless the boys had good reason to think that a pair of elk antlers had never been carried out of such a country before. The Doctor thought that it would be a good idea to memorialize the legislature on the subject and try to have a law passed requiring the elk to keep out of these deep retreats of the remote Cascades, while Swift declared that he was going to have an elk park of his own where he could kill an elk whenever he felt in the notion without having to depend on their notions and caprices.

But then it takes all this to make camp life really enjoyable, keep a fellow's reputation up and please the other boys.

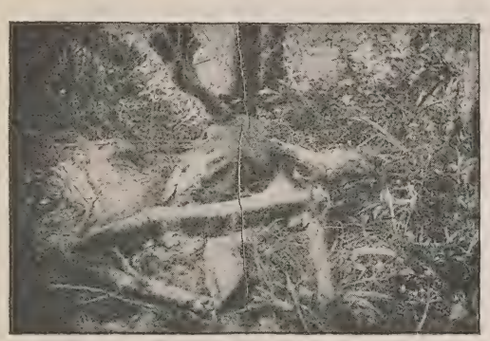
PORTLAND, Oregon.

[TO BE CONCLUDED.]



GAME NOTES WITH PENCIL AND CAMERA.—IV.

[*Continued from page 224.*]

In almost every wild section of our country there is much illegal killing of game, and Maine is no exception. We Americans have curious ideas as to the observance of the game laws, and where local custom permits their infraction there are few men who respect the higher authority of the State. There seems to be a kind of unformulated idea that in this respect each section is a law unto itself, and that the people who live there have the right to interpret the game laws as best suits their interests. As a result we see sportsmen who are desirous of getting a moose going into the woods of Maine in the middle of September and killing in the close season the game that they must wait till the open season to bring out. We see methods of hunting, declared illegal by the laws, carried on with a degree of publicity that only a game warden could fail to notice, and we see game killed for food all the year round.

Maine being a State of vast game resources, has so far been able to stand the drain made upon the supply by both legal and illegal means; but she cannot always continue to do so for various obvious reasons. For one, the number of sportsmen and hunters who visit her woods is bound to increase enormously in the course of the next few years. Good game covers in other parts of the East are on the verge of extinction, having either been shot out, or ruined by settlement or appropriated by clubs, and Maine will each year find herself with a more difficult task upon her hands to properly farm her game supply; for, if I mistake not, this is the idea that has run through recent legislation, and it certainly is one of vital interest to a large part of the population—railroad men, hotel proprietors, guides, etc.

Maine is no better nor any worse than some other States

AN OUT F SEASON MOOSE.

in her observance of the game laws, but there are several snags in her way that will cause increasing trouble if they are not attended to promptly. Of the warden grievance I know nothing except by hearsay, but the State seems to have taken a wise step in this regard in making the wardens give bonds and the action at any rate shows that the legislators are alive to the emergency.

One serious menace to the game supply, however, seems to have escaped notice, namely the legalizing of the possession of certain kinds of game out of season. This is dangerous both on account of its bad moral effect and because it opens up the way for a market for illegal game.

I stopped at the Prebble House in Portland, July 21, and on a bill of fare bearing that date was the item, "Haunch of Venison." Looking up the law I found that possession of such game is not forbidden during the close season provided it can be proved that it was legally killed.

The provision of course amounts to nothing. In our day game may be kept in cold storage for years, and summer and winter are annihilated. How is deer meat killed in January or July to be distinguished from venison killed in the open season? No doubt the Prebble House venison was legally killed, but illegal venison might have been substituted and no one would have been the wiser. A market for game is a menace to the supply under any conditions, but an all the year open market is still more so.

On the other hand the application of this law furnishes a dangerous moral example. If one of the largest and richest hotels in the State can serve its guests with venison in the close season simply on account of its proximity to a cold storage warehouse, why should the backwoodsman who has the game at his door be deprived of the same right? If a man can buy venison at any time, why cannot he kill it at any season?

To be effective a law must be logical and it must be impartial. That the Maine game laws are not effective would be the natural sequence of such a provision.

Following this line of inference and from previous experience in the Pine Tree State, I was not surprised to find public sentiment in Patten very lax regarding the game laws. Every fishing party and every blueberrying party *en route* for the woods carried guns, and it was common rumor that these arms were intended to secure them meat. In fact, the circumstance that we carried no firearms was more than once commented upon. As we were leaving, an old hunter who seems to have noted something amiss in our equipment, came up to me and asked with considerable solicitude: "Where's your gun?" I assured him that I had none. "Well, where's Darling's gun?" I told him that Darling was likewise unprovided. The old gentleman seemed nonplussed and disappointed. "Going back in the woods and ain't got a gun—how on earth do you ever expect to get a deer?"

Said a certain storekeeper: "The laws are all right and a good thing; they have operated to increase our game supply and to prevent wanton slaughter, but if I am back in the woods at any time in need of fresh meat, I am going to kill a deer. It don't stand to reason," he added, "that where there is such an abundance of game it shall not be killed when wanted. I can use game often to a good deal better advantage out of season than in season."

His statements were advanced openly in the presence of a number of citizens and were accepted apparently as trite matters of fact.

It was a hunter who said, and his remarks are significant: "If I wanted to be real smart, when I shot a deer from my canoe, I should aim to put the bullet through his lights. He would run back from the water before he fell and I would paddle along as if nothing had happened. Later, if there was nobody around, I would land quarter of a mile or so from the spot, so that my canoe would not be seen too close to where the deer lay, and I would get what meat I wanted. After I had the skin off I could call my meat bear's meat or anything I pleased and nobody could swear to the contrary or bring forth a particle of evidence that would get me into trouble."

So much for the way the general subject is discussed. One who accepts the evidence of his ears alone, setting aside for the moment eyes and nose, cannot doubt that among a part of the people at least the letter of the game laws is a dead letter.

Later eyes and nose both confirmed this conviction, and part of the evidence then secured is presented in the photograph of the moose killed out of season which accompanies this article.

Incidentally it is interesting to note that the men whom local report has it killed this moose are said to be at the bottom of a warrant issued nearly a year ago for Jock Darling's arrest, but which has not as yet been served.

This warrant, if I am not mistaken, charges Darling with having venison in possession in the close season, and is based upon the fact that a sportsman he had guided is said to have had with him parts of the carcass of a deer the last day of September, though how this incriminates Jock under the old law is hard to see.

That it was prompted by jealousy and not by any desire to serve the interests of the State seems apparent.

Since Jock sold out at Nicotous and came into the Sebois county he has met with much opposition from certain individuals who thought they had a monopoly of the natural gifts of the region and a right to levy upon all sportsmen entering it. These are the men, if report may be believed, whose names appear on the warrant, and who themselves killed the moose out of season. Their names were given me by unprejudiced witnesses, and I heard the story of the illegal killing from several sources. The evidence against them would seem to be conclusive. Attracted by shots fired at high noon upon a certain day early in July, a party haying on Sebois Stream went to the spot where the moose was killed, and saw the game law violators load the carcass on a raft and pole it down stream to the dam where the road crossed. Here it was transferred to a wagon and taken away. The meat afterward, so one of my informants told me, was distributed among three families, whose names, however, he did not mention.

Every one living in the neighborhood knew of the illegal killing, and as a stranger I had no difficulty in getting the facts, yet nothing whatever has been done to bring these men to justice.

Though ready enough to express their disapproval of the action, the native backwoodsmen will not take legal steps, and the game wardens in that part of the woods seem to be an unknown quantity. While the native sentiment condones the killing of deer out of season for food, it draws the line at moose. The natives realize the value of this animal aside from its meat, for they know that a good raw head will sometimes sell for as much as $100, and they know that the outside sportsmen are willing to pay good round figures to obtain such trophies. Such men are always clannish, and many of them are not in a position where they can afford to make enemies, so the part of the fine going to the informer has no attractions for them.

It is the knowledge of this local feeling and the knowledge that there are few such wardens as Collins, of Presque Isle, that emboldens the law-breakers. By and by Maine will wake up to the fact that it will pay to have wardens back in the woods as well as at the principal railroad stations and towns.

Darling is anxious to get his case tried and out of the way. The warden from Patten went down to Lowell for him once last winter, but he was not at home. Jock was so much disappointed to have missed him that the next time he was in Patten, finding the prosecution too busy to attend to the matter, he volunteered to go back himself and round up the witnesses. It is needless to add that his offer was not accepted.

When we were in Patten the warden met Jock on the street, and with a view to the trial asked him how long he was going to be in the neighborhood.

"All summer," Jock replied; "and if you've got a good jail I'll stay all winter too."

The foregoing notes on the Maine game laws are the result of necessarily hurried and superficial observations, and are to be taken for what they are worth.

A great deal has been said lately of the better enforcement of the game laws, but in the section visited it was not apparent. Not only were deer killed with impunity, but also the more noble game, as conclusively shown in the case of the moose, whose illegal killing I have described.

There are plenty of sections in the Adirondacks to-day where deer are as abundant as they are in Maine, but from these sections the moose has forever disappeared. This is true of other parts of the United States and Canada.

The inefficient protection that suffices for deer will not do to protect the moose, and in my opinion, though the deer may remain, it will not be long under the present conditions before the "vanishing moose" has vanished forever from Maine.

Game Laws in Brief.

THE *Game Laws in Brief*, current edition, sold everywhere, has new game and fish laws for more than thirty of the States. It covers the entire country, is carefully prepared, and gives all that shooters and anglers require. See advertisement.

IN VERMONT COVERS.

PUTNEY, Vt.—A successful day with the ruffed grouse—when the frosts of early autumn have painted the leaves of the sumac, maple and witch hazel with the many varied and beautiful tints of red, yellow and russet, and the apple trees, loaded with luscious burdens of fruit seem to remind us that it is now the most delightful time in the whole year to enjoy an outing—is an event which will be long remembered by those who have been fortunate enough to enjoy a tramp over hills, through valleys and along the banks of the numerous small streams that are usually found in the best covers for this noble game bird.

It is of such an event, with three companions and a pair of fine pointers, that I shall endeavor to give an account of, trusting that others may have enjoyed similar occasions during the season just past.

The party consisted of Dr. G. F. Barber, C. A. Harris, C. B. Willard and myself. We had a couple of liver and white pointers, which would have to turn back only a few pages in the records of the past to find the blood of Sensation and Mainspring, and this should be enough to convince any one that as far as the dogs were concerned we were well fixed.

Oct. 12 was the day we planned to invade the haunts of the game, and the evening before the Doctor and his friend arrived with a good supply of ammunition and the Doctor's dog Don, which is almost the exact counterpart of Mr. Willard's dog and bears the same name.

Six o'clock found the four of us comfortably seated in an express wagon, with Willard's broncho to furnish the motive power; luncheon for both man and beast and ammunition stowed away beneath the seats. For some reason or other the "motive power" seemed inclined to act both ways, as we had hardly got started when the broncho decided to go backward a while, which immediately caused the occupants of our carry-all to "come off their perch" for the sake of their personal safety. After a good laugh everything was made shipshape and we proceeded again, this time without mishap, until we reached an alder cover which looked likely to contain a woodcock or two. Hitching our horse beside the road, we jumped the wall and sent the dogs along. It was a pretty picture they made in the early morning sunshine as they moved in and out among the alders, and after a few moments of quartering their careful movements indicated that the long-bill had selected this place as a hiding place for the day, and in a moment the dogs were making a staunch point near a scrub apple tree. As soon as we were all in readiness the bird was flushed, only to drop at the report of my gun. Hardly was bird inside coat pocket before another was found, and this time I failed to connect, although both barrels were discharged at close range. But the poor woodcock was not fated to escape so easily, as Willard, with his little gun, was near at hand, and the stunning report of his 4drs. of soft coal was the cause of this bird's downfall at ten rods' distance, although it required a good piece of work on the part of his dog before the wounded bird was finally placed beside the other. The rest of the cover was drawn blank, and we returned to the team with a pair of exaggerated Jersey mosquitoes as a starter.

After another spell of going backward on the part of the broncho, we arrived at a cover consisting of a sugar orchard, with scattered pines, hemlocks and apple trees surrounding it, which we knew contained a covey of grouse, or, as commonly called here, partridge.

We soon found them, four starting out of the hemlock trees above the Doctor's head and going in as many directions. One poor bird undertook to get past myself, Harris and Willard and succeeded in escaping until Willard's second barrel tipped him over, and even then as soon as the dogs found him he rose from the ground and made a last determined effort, but only succeeded in going about six or eight rods when he took the last tumble and was placed with the two woodcock in our game bag. Four more fine birds were added to our number before we left the cover, some fine work being done by both dogs, while the work of the men could be classed as good, bad and indifferent.

Of course the best work was when the Doctor fixed his eagle eye on a little fellow which had sought concealment in the top of a hemlock tree, and without making enough noise even to disturb his slumber, persuaded him to come down. But we are rather apt to follow the example of the old darky who "shot 'em on de wing, on de tail," or anywhere he could hit them, and rarely take the trouble to exercise our Vermont grouse in order to develop their speed before we shoot them.

On the way to the next cover we brought out our lunch baskets, only to find that the dogs had preceded us and helped themselves, but still we found enough to satisfy hunger, and soon were in an alder swamp, expecting to find woodcock. We beat the cover thoroughly, and succeeded in bagging four more partridges, but no woodcock except one at the extreme edge of the alders. After wasting three or four shots, I turned it over to the tender mercies of the Doctor, but after six ineffectual trials at medium range and not having started even a feather, he began to think this particular bird bore a charmed life. The next opportunity presented itself to Harris, who succeeded in breaking a wing with his second shot, making eleven charges in all that we fired at this one bird. But we had lots of fun just the same, and the poor work that the Doctor did caused him to try his gun for pattern at the first opportunity, which presented itself in the shape of a good-sized barn. At thirty paces he found that he could put the most of the charge into one side of it; but he thought that at ten paces further he could hardly do so well as that. As the Doctor is a first-class shot it will be only fair to state that his gun had just been returned from a gunsmith where he had sent it to have the choke removed, and, as the Doctor said, "I guess that fellow minds pretty well."

We kept at it until we were obliged to stop on account of darkness, when we laid the results of our efforts in a row upon the ground, and gathered together to relate once again just how each bird was brought to bag. Twelve grouse and three woodcock made a fine picture, and we were well satisfied with our day's hunt. We were tired and hungry when we arrived in town that night, but after adjourning to Mr. Willard's dining-room for an hour, where we found a supper of chicken, potatoes, coffee, hot rolls and many other good things awaiting us, which, it is needless to say, we enjoyed as only the true sportsman can after a long tramp, we felt better. The dogs, too, were tired, as they had been on the move from sunrise till dark, and it is not to be wondered at. While the above bag may not appear very large to some sportsmen it ought to satisfy any one who cares to be out in the open air and does not go entirely to see how much game he can kill.

There are many places in southern Vermont where two or three good shots with a good dog can get a dozen or more birds in a day's hunt, and at any time during the open season we are always glad to welcome visiting sportsmen who could be satisfied with a moderate amount of game. During the months of October and November the climate is fine, the mornings being just cool enough to be bracing. As another season rolls around I hope it may be my good fortune to enjoy another day afield with these same companions. W. E. A.

A DAY WITH THE BLUEBILLS.

Editor Forest and Stream:

Sauntering down to our canoe, we were surprised to see a large flock of bluebills come flying low and close to the shore of the ridge on which we were camped, crossing just out of range and dropping out of sight behind the trees to the north. We judged they settled in a slough which makes in from the bay and is accessible from our camp only by water a distance of several miles, or by portage of perhaps 500yds., there being a well worn trail used by the Indians in their journeyings, at the south end of which we had pulled out our canoe.

As the flock passed Doc remarked that they must have feeding grounds in the slough mentioned, and that it was too bad we could not without too great difficulty get over and pay them a visit, to which I replied, "Why not make the portage?" The result of our talk was that in a few moments Doc was leading the way with guns, shell cases and coats, and the writer bringing up the rear with the canoe bottom side up on his head and shoulders.

We accomplished the portage much more quickly and with less difficulty than one unused to such undertakings could imagine, and 3 o'clock saw us again afloat, paddling very quietly, and keeping a sharp lookout into all the branches of the main slough for our victims.

About one-half mile east from where the launch was made we reached the point where the slough we were following branches. One branch continues east a number of miles and finally makes out to the lake; the other branch follows a northerly direction for a short distance and merges into numerous narrow slits of water running up into a sand bank which walls out the main lake.

The wind was blowing a stiff breeze from the northeast, and as we turned into one of the narrow runs and drew up near the bank we could hear the breakers rolling in on the beach across the ridge. The strip of water we were following turned to the east close to the ridge, and a few rods beyond widened out into quite a respectable pond.

As we were about to make the turn which would bring this sheet of water into view there was a sound of wings, fleeting shadows on the water, and a bunch of bluebills passed just ahead of us, and dropped out of sight in the pond.

"We've struck it," says Doc, and he steered for the bank just before making the turn which would bring us in sight of the pond.

Getting on shore we crept cautiously behind a fringe of willows and alders which skirted the bank to a point which we calculated would afford a view of the whole pond; and such a sight as was presented to our gaze as we peered through those bushes! It is perhaps best not to state our estimate of the number of ducks in that pond. Doc says now that there were a million, but he is easily excited and that fact should be considered in passing judgment on his statement. But there they were; feeding, some asleep, some evidently bent on a frolic, chasing, splashing, diving, all in fancied security.

We expected to bag about a dozen each from that bunch of ducks, and set about deliberately to accomplish that end. A whispered consultation ended in our deciding to shoot each one barrel as near together as possible into the thickest bunches and do the best we could with the second barrel when they rose, but in getting into position to shoot we in some way aroused the suspicions of the ducks nearest to us, and they commenced to get up. This rather rattled me; and, thinking they were all going to fly, I jumped up, and as they rose with a swish and roar, cut loose, and one poor little duck fell in the water. Doc was not far behind, but somehow after I had shot both barrels and Doc one, there was still on the water only that one lone victim. I was wondering in a vague sort of way how we could possibly miss that whole cloud of ducks, when up flew the one we had dropped, and but for Doc's left, which he used beautifully and brought the bird down stone dead, we would have been left without a feather.

We got into good cover and waited for them to come back, which they did in bunches of four or five to a dozen, and when it came time to start for camp we felt quite well satisfied with the size of our bag.

Getting back to our tent just as night had closed in, we found a party of hunters from H. camped near us, they having come up that afternoon.

They had several skiffs, and had brought along an Indian to pole and paddle and make himself generally useful, but they seemed in a fair way to meet with disappointment, for it was apparent at first sight that this particular Indian was thoroughly intoxicated. We learned on investigation that in making camp the sight of a jug of whisky had proven too much for his good inclinations. Indian and jug both mysteriously disappeared. Nothing more was seen of him until just as we returned to camp he put in an appearance in the condition described. The whole party were engaged in the endeavor to persuade him to reveal the whereabouts of the jug when he came up, but all to no purpose. He seemed hopelessly stupid and could not seem to comprehend in the least anything that was said. Being thoroughly disgusted, one of the party took him out to the trail—distant from camp about ten rods—which led to the Indian village, and giving him the direction, told him to "git." Doc and myself were interested spectators of the whole proceedings.

The day had been warm, but after sunset it turned suddenly very cold and, as I struck a match to light our fire preparatory to cooking supper, I noticed that frost had formed on our cooking utensils. Doc at the same time remarked that "those fellows must have lots of faith in that Indian's luck if they expected him to reach camp on a dark night a distance several miles over a trail a novice could scarcely follow in daylight, and that he would hate to assume the responsibility of sending him off in that way, especially as he had no coat, and the absence of other warm clothing was very much in evidence. However," he concluded, "it was no concern of us."

We brought out some blankets, spread them before the fire, and reclining thereon just rested and smoked and chatted until about 9:30, when I went into the tent and proceeded to arrange our bed for the night. I had everything fixed when Doc, who had remained outside to finish a final pipe, called out to me to come outside, that some one down on the point was in trouble. Stepping out and listening a moment, there came very faintly, yet distinctly, the unmistakable call of a person in distress. Our first thought was of some belated hunter who had lost his way in the swamps and thickets which covered the ridge between our camp and the bay for a distance of two or three miles, and we hurried over to our neighbors' tent to inquire if any of their party were missing, to which they replied no, and all tumbled out to listen to the call, which came every few moments. We were speculating as to who could be out at that time of night, when some one in their party mentioned the drunken Indian. "That's him!" we all cried in chorus, and it dawned upon us that some one was destined to take a long tramp through thick brush, over cranberry bogs, and in some places in water over the knee, or there would be a dead Indian down on that point before morning.

About this time some one suggested that we ought to answer the call, which we did nearly in chorus, and one need not be surprised to learn that an owl dropped dead from his perch in a nearby jack-pine at the sound when we state that the writer had not been permitted an old-time yell for the space of fifteen years, and judging from the way the rest of the party went about it, their voices had been jugged for the same length of time. However, after the first few trials some of us improved and set up a howl in reply every time that weird, uncanny call came floating to our ears through the tree tops.

Doc was getting excited and declared he would not go to bed with that man lost out there, and in a few moments he, with lantern in hand, myself and one member of our neighbors' party, were picking our way in the direction of the sound.

Once away from camp we found it a difficult matter to keep our course, so dense was the undergrowth taken with scattered windfalls over which we stumbled every few steps. Presently we came to a bog and passed through about 18in. of moss and water, then more brush and windfalls, until with so much tramping after a hard day's work we were tired enough. At last, however, we came to the edge of a marsh, apparently larger than any we had yet encountered, and stopped to yell and listen. The reply came quite near, and in a few moments more we could hear splash, splash, regularly out on the marsh, and judged we had found our man. We kept calling and swinging our lantern, and presently a shadowy form hove in sight and the next moment sank exhausted on the firm ground at our feet. A sorry sight he presented. Hatless, clothing torn to ribbons, moccasins gone from his feet, which were bruised and bleeding, streams of icy water trickling down his bare legs and ankles from the soaked remnant of clothing he still retained, it was a picture of misery sufficient to move the most hardened to pity his forlorn condition.

By dint of much prodding over the smooth places and some help over the rough, we managed to get him back to camp and were preparing to strip him for bed in some warm blankets the members of the party had prepared for him when he seemed suddenly to acquire new life and said: "Hol' on, me get you boys somethin' good," at the same time striking out over the ridge. We followed thinking him gone daft from exposure and purposing to catch him and bring him back by main force if we could not induce him to come without.

He led us a chase to a dense growth of scrub oak about 20 rods from camp and disappeared. A moment later he came out with the jug of whisky and invited us all to take a drink. It is not within the province of this article to state how many of us refused. Our man hunt over, the reader can imagine with what feelings we crept into our blankets and whether or not our sleep was sound that night.

We found good bluebill shooting on our way to meet the Hazel next morning, the noise she made coming into the mouth of the slough stirring them up and giving us several fine flock shots. Arrived at our office at 9 A. M., feeling refreshed and recuperated by our trip despite the hard work and long night tramp to save a poor wretch of humanity from perishing in the wilds of Kakagon.

GEORGE W. MIARS.

TEXAS AND THE SOUTHWEST.

Birds on the Move.

THAT game will be plentiful this winter there can be no doubt, as from every section comes the word that quail are much more plentiful than for years past. Our lakes are filled with water, which insures good snipe and duck shooting, while the deer and turkey are reported in abundance throughout the Southwest.

The Texas Pigeon.

This season marks an epoch in the history of flight shooting. The Texas pigeon, or dove, has swarmed all over the country. For three miles on the Pleasanton road, south of San Antonio, there has been such a flight as never has been seen before, thus affording our local cracks a fine chance for practice at swift-flying feathered targets, which will undoubtedly prove a great benefit to them in the future.

It is the most pleasant shooting of my experience. The usual outfit consists of a strong two-seated, covered wagon (ambulance), a pair of canteens of our fine spring water, a cake of ice, a stool for each man and 100 shells for each shooter, and a more pleasant shoot under these circumstances is hard to find. The bags of course are large when the hunter takes the advantage of picking out a pass where the birds fly slowly. That is generally found near a fresh-water pond. The birds hover over the water, take a drink and, if they are lucky enough to escape the contents of the guns that are hunting them, they are off again on their swift migration to their roost.

But if the hunter, as most of our crack shots do, takes his stand where the Texas pigeon cleaves the air at a 75-mile-an-hour gait, and at a height of 30 to 50yds., th

killing shots are not so frequent, it taking an excellent blade to bring down 50 per cent.

In the immediate neighborhood of Mitchell's Lake I readily believe that a man could easily fire 1,000 shells a day at the birds. Just after sunrise they arise from the bottom, where they have been roosting, and cleave the air on their way to the many sunflower fields, where they feed until evening. They then take the route home about 5 o'clock and from that time until dark the air is filled with them.

Blue-wing Teal.

We had the first taste of blue-wing shooting as early as Sept. 8. The morning flight for about twenty minutes was all that could be desired. The flight in the evening was good, but the mosquito crop did not contribute to the comfort of the gunner. The coast people send word that wherever there is fresh water there may be found good blue-wing shooting.

Deer.

It is perfectly sickening to see the putrifying carcasses of deer coming in. They are generally accompanied with the hunter of pot-hunting proclivities. He proudly stalks into the beer joints clutching a fine pair of antlers in the velvet and, with a feather in his hat and a mouth full of boast, tells how he murdered the noble animal at 350yds., and fired through an impenetrable mass of chaparral and trees. The truth of the matter is that in all probabilities he ambushed his game at some water hole at night with a fire lamp. I don't like the too-early-in-the-season hunter anyhow. Even if we are too poor to have a good law, common decency should teach all hunters that when the deer horns are in the velvet deer ought not to be shot.

A Chapter to Lieut.-Governor Jester.

Both branches of the Legislature of Texas passed a pretty good game bill last winter. The bill was introduced through the efforts of the Texas State Sportsmen's Association and was ably championed by Hons. Perry J. Lewis and R. A. Blair, senator and representative for this district. At the close of the session the Senate, in order to make the engrossment of a number of bills possible, turned back the hands of the official clock in order to have such bills engrossed before the time set for adjournment. Senator Lewis begged the chair to crowd the game bill, but Lieut.-Gov. Jester refused, saying that he did not consider the bill of sufficient importance to the people of Texas as to warrant such proceedings. Thus the game bill was defeated.

Best Tarpon Record.

Messrs. A. W. Houston and Senator Perry Lewis distinguished themselves as fishermen on Sept. 13, 14 and 16. On Friday, Sept. 13, Mr. Lewis landed two tarpon; Saturday, 14th, Lewis landed six and Houston six; Monday, 16th, Lewis captured two and Houston three. Total for two men nineteen tarpon.

This is the largest number of tarpon hooked and landed in the length of time anywhere and marks another epoch in the history of angling in Texas. TEXAS FIELD.

SAN ANTONIO, Sept. 25.

PLATTE RIVER GEESE.

A COLD piercing wind was sweeping across the level expanse of prairie straight from that suburb of Siberia, Dakota, and it found us without a bit of trouble when we alighted on the platform of a little railroad station in western Nebraska, within easy reach of that parody on rivers, the Platte.

We had heard of geese—acres of them—that were only waiting to gracefully do a parachute drop before any shotgun that came into the country, and that was the only excuse we had to offer for being in evidence in that part of the country at that time of the year.

The train soon left, and we got directions from the station agent as to the locality of the town about this way: "See that trail? Well, you follow that over there a ways 'n' you'll soon see a light; then head for that 'n' you'll get there." Shouldering our guns, grips, and extras, we "followed the trail," and in the course of time found the "town," which consisted of a store, post-office, hotel, real estate office and saloon, all in one building, part sod and part frame. This much of the city we discovered by steering straight for the light of a solitary candle, which was evidently set in the window for that very purpose.

When the sun rose in the morning we discovered a livery stable and a hitching rack for cayuses (made of slim cottonwood poles) and a barbed wire fence. We were told that there was also a dug-out, but we didn't see it.

After we got behind the candle we found that there were several people there, in fact, about the whole population of the city was there, and by proceeding according to rules that we had found by previous trips to be parliamentary in like situations, we contrived to get a decidedly substantial supper.

After supper a judicious distribution of cigars started the conversation on geese, and after those honest broncho busters got started I can say candidly that Munchausen and all the rest of his crowd were simply smothered clear out of sight. I never saw men, not even fishermen excepted, who could lie so candidly and with so much apparent truthfulness as did these goose hunters who entertained us that night (I found out they prevaricated afterward). They were the most truthful liars I ever heard because I think they actually believed what they said themselves. The geese were there, or rather right over on the river, by the thousands and tens of thousands; no doubt about that in the least, for Jim So-and-so had been over last week and killed 160 acres or so of them and that hadn't made even a hole in the flock. Similar stories were common property in the town, but the next man that tells me he has killed a goose on the Platte River has got to produce the goose before I'll listen to his story.

By bedtime a common blizzard, of healthy proportions for an infant, was playing hide and seek with the hitching rack and the stovepipe, and the town agreed that we would have a puddin' on the river, as the storm would drive the geese to the stream, sure.

The town was wrong again.

We turned in and "spooned it" to keep warm and took turns at getting up during the night and gently whisking the snow off of the bed when it got too heavy for comfort, and managed to live through it too.

In the morning the sun was shining in that radiant, make-believe August way that it always does after a real good snowstorm out there, and the thermometer was down so low that we thought it was running a bluff on us. That's where our judgment was weak.

After breakfast we hunted up the hostler of the livery stable and got a team to take us to the river, a few miles away. On the way over we saw several million geese flying blithely southward and heard several million more that were so high we couldn't locate them, but they were there all right.

After due deliberation we reached the river and saw several thousand acres more geese, all in the middle of the river and all seemingly content with the situation.

We hired a farmer to feed and keep us for a week and sent the team back with instructions to call for us at the end of that time. Oh, how we regretted it afterward.

We hunted those geese up stream and down, across country and back, ran hurdle races with them across irrigation ditches, and shot at them at long range for four days of that week and then played cards and smoked ourselves out of tobacco.

Those geese have all the advantages in the world and they simply settle in the middle of the river out of cannon range. When they get hungry, they fly up or down the river, always in the middle, and rise at an easy grade until they put about a couple of miles of nice cool atmosphere under them, then they gracefully carom South and eat their breakfast down in Kansas. In the morning there are some fresh geese from Dakota to shoot at if you want to, but you won't want to very long.

They smile at your decoys and laugh right out loud if you try to sneak up on them. We bluffed them until the sixth day and then we chartered our landlord's buckboard and drove to Plum Creek and offered all kinds of money for a few dozen real dead geese. We couldn't get them; then we wanted just one goose that was dead enough to be caressed, but we couldn't buy one. Then we heard of a man who owned a tame one with a broken wing and thought if we could buy that and properly lariat it, maybe we would stand a show to kill a Platte River goose yet. It wasn't for sale.

When our team came, we got the driver to stay until we had just time to get over and catch the train, which, happily for us, left after dark, and made our escape to Lincoln without having to answer any unnecessary questions about geese, a subject we were not familiar enough with to talk intelligently about anyhow. At Lincoln we bought a few geese and sent them to some of our friends at home and after a few days' quail shooting we wended our way hither.

Some people who knew us asked us, "Where are the rest of your geese?" These we referred to those who had received our trophies (from Lincoln) and we answered, kind of off hand like, that "We left them up among the farmers along the river," and that was strictly true.

EL COMANCHO.

MAINE GAME.

BOSTON, Sept. 27.—The Massachusetts season on partridge, or ruffed grouse, opened on Sept. 15. Since that time there has been a good deal of hot weather, with the woods most remarkably dry. The gunners say that such weather is unfavorable, especially to woodcock shooting, on which birds the open season now begins at the same time as on partridge. Several good hands at woodcock have been out the past week with good dogs, but have not obtained a bird. They report the swamps and lowlands, where woodcock are usually found, very dry indeed. But a few partridges were taken on Saturday and Monday. E. M. Gillam, commercial editor of the Boston *Advertiser*, was out early on those days in the woods at Reading. He has good dogs always, and succeeded this time in "nailing," as he terms it, a couple of grouse. He is a good shot, and so is any man who can shoot partridges in Massachusetts.

In Maine the partridge shooting seems to continue good, though the season has been open but about a week. J. Frank Moody, son of Prof. Moody, of the Edward Little High School, Auburn, Me., is teaching school himself this fall, though but 17 years of age. It is sometimes said that a student and a gunner and fisherman are never to be found all in the same person, but Frank likes the gun and fishrod about as well as any boy living. He came home last Friday—his school not being in session on Saturday—with a view of trying the partridges. His success was good, and he is back in school again, all the better pedagogue for his outing.

The weather is so dry in Maine that the question of water for domestic animals is a serious one, and a private letter from the line of the new Portland & Rumford Falls Railroad says that the deer in the mountainous sections are being driven out of the woods for water. They are frequently seen in the fields with the cattle, and they also come out to the ponds and rivers to drink. A couple of deer were shot the other day within a short distance of the village of Buckfield. The legal open season does not begin till Oct. 1, and a gentleman who was cognizant of the deed immediately notified the Fish and Game Commissioners. They sent an officer at once, who collected all the evidence he wanted and swore out warrants for the arrest of the shooters. They pleaded ignorance of the law. The letter suggests that this plea will avail them but little, however.

Later information says that the deer were shot while actually feeding with the cattle in a pasture—a doe and a fawn. There was also a buck with the others, but the gunners allowed him to escape. A cow among the cattle is reported to have set up a tremendous lowing at the fall of the deer, and to have run and licked them in great excitement. It is suggested that deer and domestic cattle are actually friendly in many pastures in Maine.

Mr. Harry Whitmore, real estate editor of the Boston *Herald*, is back from his vacation and hunting and fishing trip to Cape Breton. He is very much pleased with that country for bird shooting and fishing. Still, the country is extremely dry this fall, and the guides and natives told him that the partridges were generally in the vicinity of water and hard to find. But almost every afternoon he was out with shotgun he had the good fortune to "knock over a bird or two." The trout fishing he is much pleased with, though he got only brook trout; the season being too far advanced for the celebrated sea trout of that part of the country.

Sept. 28.—Forest fires are the terror and the distress of the Maine hunting and fishing resorts to-day. The Maine papers are full of accounts of these fires. There are fires very near Phillips, Rangeley. The woods and mountains are lighted up at night in the vicinity of Bemis, the fire being on the line of the new Portland & Rumford Falls Railroad. The way was cut through the forest early in the season, and the fire is said to have caught in the rick of trees thus felled. Fires are reported at the head of Richardson Lake and in the vicinity of Kennebago. At night fires are seen on the mountains in the neighborhood of Parmachenee. There are several fires in the Eustis and Dead River regions. There are numerous fires along the line of the Aroostook Railroad and along the line of the Canadian Pacific. The papers state that these fires are "set by hunters in some cases," and doubtless hunters will have to take a big share of the blame, though the fires may be due almost entirely to the carelessness of settlers and to sparks from locomotives. But set from whatever cause, it is a report that sends terror to the heart of the true lover of the forests; once burned over, his land of day dreams is done forever. Once burned over, the wooded mountain side becomes a barren waste of rock and scrub trees, and the trout streams in the valleys below are dried up. Let us hope that abundant rains may come very soon and stay the flames in the regions we love so well.

N. G. Manson has gone to Camp Leather Stocking, at the head of Richardson Lake, for his fall outing. He has his brother with him, with Oscar W. Cutting for cook and guide, and about October 10 Mr. Luther Little, also of the Boston iron trade, will join Mr. Manson. The hunting is reported fair in that section, but if the forests are on fire no one can tell what the end may be. Mr. James H. Jones loves the gun and fishing rod about as well as any other boy reared in Maine, and that is saying a good deal. He has just returned from his vacation, spent in the town of Buckfield, his native town I believe. He says that partridges are very plenty this year, though he had to come away so soon after the open season began that he scarcely got his share of the sport. Deer are very plenty in that part of the country. Mr. E. H. Noyes, of Clinton Market, is at home again from a hunting and fishing trip in New Brunswick. He does not "give away" the name of the section he visited, but says that the partridge shooting was good, with the trout fishing very fair. His party also got a deer.

Mr. Luther Little, mentioned above, is very fond of shooting over his dogs. He has fair luck even here in Massuchusetts. On the 17th, the second day of the open season, he was out and succeeded in bagging three partridges. In this shooting he finds much better sport than in shooting partridges in Maine, where they are so tame as to sit on the trees in plain sight, or to run on the ground as fearless as chickens almost. This brings to mind the remarkable feat of a Lewiston, Me., gunner, who, if the newspaper accounts are true, has lately succeeded in shooting a young Plymouth Rock rooster that happened to be too near the bushes.

Sept. 30.—There are better reports. The forest fires in the Maine hunting and fishing resorts are generally out or under control. Copious showers in many sections have quenched the flames. These showers were widespread, but did not touch everywhere, though pretty generally there was considerable rain where the fires were the worst. But still the State is very dry with the streams low, and unless heavy rains come very soon there will be still greater danger from the forest fires when the leaves are off the trees. At this time the leaves are falling rapidly and will soon be as dry as powder if the weather continues as dry as September has been. Every hunter and fisherman who goes into the woods should take with him an extra pound of caution, especially if the autumn continues as dry as it has begun. Warnings are being posted at every railway station and camp in the State of Maine. SPECIAL.

THE NIGHT-HAWK CLUB.

EVERYBODY has heard of night-hawks, but not all have heard of the Night-Hawk Club. The name may be suggestive of late hours and perhaps evil doings, but in this case its meaning is innocence itself. Nothing more formidable than a shooting and fishing club bears the title now, and Sugar Island in Moosehead Lake is the stamping ground of this aggregation of sportsmen. It was coming down in the train from Greenville Junction a short time ago that I met A. H. Shaw, of Bath, Me., the President of the club, and he it was who told me all about it. The other officers of the Night-Hawk Club are F. H. Wilson, Brunswick, Me., Vice-President, and Dr. Hiram Hunt, Greenville, Me., Secretary and Treasurer. The directors are A. H. Shaw, F. H. Wilson, Dr. Hunt, Wm. M. Shaw, Greenville, Me., and T. A. Linn, Hartland, Me. The club was incorporated Sept. 2, 1895, and is already a prosperous organization. Sugar Island is about opposite the well-known Deer Island in Moosehead. They have a splendid set of camps on the island, and the club have decided to buy ten acres of land, which will of course insure them permanent occupation. At the time I talked with Mr. Shaw some of the members with their wives were returning from the camp. They had enjoyed good fishing and seen many deer. The whole country around the island is a good region for large game, and in a short time a party of the members will go up for the fall shooting. There was much difficulty and hesitation over the selection of a name for the club, that of Night-Hawk being finally selected by the ladies, being suggested by the fact that when they first began going there some of the gentlemen were so anxious to see a deer that they would go out nearly every night looking them up in the effort to satisfy their ambition. The name is therefore a light punishment inflicted by the ladies for some lonely evenings spent in camp. Four new camps will be built next year and it is the intention to make the entire equipment first class.

While journeying into the Dead River region but a short time ago, it was my good fortune to meet on the train Messrs. F. W. Burditt and F. W. Dana, of Boston. These two very pleasant gentlemen were bound for the Megantic preserve, and it was my privilege to enjoy their company on the long stage ride to Eustis, and a part of the buckboard journey the next day as far as the Chain of Ponds road. My own destination was the King and Bartlett preserve, and although the journey of that day was somewhat tiresome, as buckboards are, I felt amply repaid when at 4:30 P. M. a turn of the road brought us in

view of the camps on the shore of beautiful King Lake, nestling down among heavily wooded hills. It was an impressive and handsome sight, and is hard to duplicate even in Maine. The smiling countenance of mine host, Harry M. Pierce, was the first face to greet me, and in a few moments I was comfortably installed in the finest log camp to be found in that part of Maine. An immense caribou skin covered a good part of the floor, and high up near the peaked ceiling hung the mammoth head of a bull moose, whose eyes seemed to wink and blink in the dancing light of the open grate fire as though once again possessed of all the power of bygone days. The succeeding days were spent in fishing and tramping about the woods until the sad and inevitable day of departure intruded itself upon me. While at these camps I had the pleasure of meeting Mr. W. J. Epting and his father (inseparable companions), of Philadelphia, and go where you will, finer sportsmen and truer gentlemen cannot be found. In company with them I spent many pleasant hours both in fishing and tramping. The fly-fishing during my visit was quite indifferent, it being very windy, with exceedingly rough water. Partridges seemed plentiful everywhere at King and Bartlett, and I prophesy good sport this fall for those who like bird shooting. It is also a great region for large game, and in a few days more the mountains will be echoing out the rifle shots of eager shooters after their quarry, and the open season will be fairly inaugurated.

Reports have been coming to Boston all summer of good fishing at Indian Pond, Maine, and I have seen and talked with several men who have made good scores there this year. Indian Pond is really but a widening out of the upper Kennebec, and is situated but a short distance below Moosehead Station, on the Canadian Pacific, ten miles from Greenville Junction. E. H Wood, of Boston, manager of the gun and sporting goods business of John Wood, Jr., has just returned from that country, and speaks very highly of it. He stopped at the camps of Mike Marrs, which he says make as good a home in the woods as anybody needs. He had pretty fair fishing considering the warm weather and lateness of his trip. Seventy trout and three whitefish, the two largest trout weighing 2½lbs. each, was his record for the last two days of his visit. One immense fish estimated at 6 or 7lbs. was seen in the river just below the dam. A strong effort was made to capture him, but after he had straightened out two Carlisle hooks of large size they concluded it would be a good idea to let him grow until next year, when perhaps some more fortunate angler would effect his capture. Mr. Wood saw five deer on his trip, a great many partridges, and had some good duck shooting.

From the present outlook the Aroostook region will, to say the least, be comfortably filled with expectant gunners this fall. The railroad people say they are fixing up more tickets for that section of Maine than any other part of the State; certainly many sportsmen are passing through Boston en route to that region. Some of the men who have just gone or are about to leave are J. E. Brittain and F. W. Tibbitts, of Boston. They will go in from Ashland and will devote three weeks to shooting. They have been there before and know the country well. Dr. C. L. Hill and John A. Fritz, of Scranton, Pa., passed through the city the other day bound for Millinocket Lake. They have guides engaged and expect to be in the woods for three weeks. I hope to hear of their success on their return. H. K. and E. L. White, of Boston, have left for the Aroostook, going in from Norcross. They will be away two weeks and are after large game.

A. W. Robinson (president of the Megantic Club) and wife and D. C. Pierce (one of the directors) and wife, all of Boston, have gone to the club preserve. They will go in at the club house and out by way of Eustis. The two gentlemen have a camp at Chain of Ponds and hope to get some good shooting. The club will begin operations on hatching trout at their hatchery on Big Island at once. They have engaged Chas. W. Barrett, of Rangeley, who will go there and begin stripping trout very soon. The salmon put in Big Island Pond by the club two years ago and also last year have been taken on the fly this season up to 13in. in length. The members are quite elated over their success, and they deserve to be.

HACKLE.

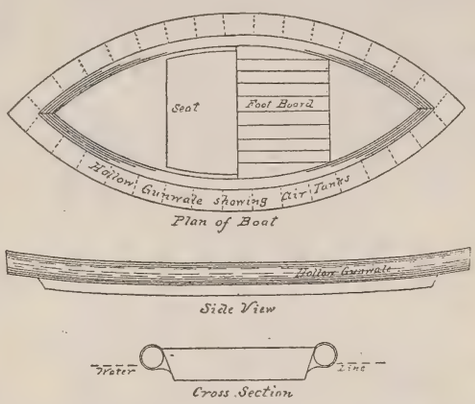
Lend me your Ears.

WASHINGTON, D. C., Sept. 18.—*Editor Forest and Stream:* While your correspondents are busy discussing all sorts of suggested bears and deer, why should not some of them get at the true inwardness of "the lordly buro?" In the *Youth's Companion* of Aug 15 last, in an article headed "On the Desert of Souls," I read, "The lordly buro was to be their game, the great deer of northern Mexico, larger than the elk." And further on, "What antlers—8ft. from tip to tip—had the leader of the buros! He and his mates slowly moved on the plain, seemingly without fear of surprise, quietly feeding on the juicy flower of the nopal cactus." CECIL CLAY.

The Mississippi Bird Crop.

BLUE MOUNTAIN, Miss., Sept. 16.—Our bird crop is fine again. There are lots of bevies full grown now and lots too that can scarcely fly yet. In riding a mile and a quarter last week I saw five large bevies, some fully grown, some just able to fly, all in the same bevies, showing that the same birds had hatched both lots. There are but few squirrels, though we expect our share shortly, for the forest is loaded down with all kinds of mast. The game law has been better observed this season than I ever knew it to be. There have been very few depredations. S. N. A.

Two Birds a Day.



UTICA, N. Y., Sept. 27.—The open season for partridge is too early. The birds in this section were only half grown, and the weather in August and early September was killing for the dogs. Advocate Sept. 15 as the opening day, and give the dogs and birds a chance; the men can take care of themselves. On old birds big bags will be scarce, but who wants big bags anyway? Two birds a day is enough for any man. MODERATION.

The FOREST AND STREAM *is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday, and as much earlier as practicable.*

Design for a Hunting Float.

EVERY sportsman who shoots on the quiet and shallow waters of ponds, rivers or marshes has felt the need of some light draft canoe, one in which he may navigate the shallowest places that ducks frequent or to conceal himself among the reeds or other marsh growth. A design for such a float is herewith submitted, with measurements and description, so that it may be constructed at any tin shop. The material is a light quality of galvanized sheet iron, put together with soft solder.

Extreme length 7ft., extreme breadth 3ft., depth 6in.; the bottom is 2ft. wide amidships. The gunwale is a strip soldered to the upper edge of the boat body and bent over until its free edge touches the sides of the boat, to which it is secured. This leaves a hollow space all around, in which are placed thirty small air tanks, as shown in the diagram. These air tanks are simply so many empty

3lbs. tomato cans soldered up air-tight. They give great buoyancy and stability to the float, and will sustain one man if the boat should be filled with water.

Where the outer edge of the gunwale is bent over to inclose the tin cans it will be necessary to cut a number of slits in the edge, so that the flaring edge may be turned over and so form a space for the air tanks.

The bottom is flat transversely, with a gradual rise of 2in. from the middle to either end.

A short paddle or double-bladed oar is used to propel it, and it may be laid aside at a moment's notice and the gun taken up.

Such a float or canoe with a man of ordinary weight will draw about 3½in. of water and ought to be very light and durable. It should be painted some inconspicuous color to make it less noticeable. Rings or thimbles may be soldered around the edge of the gunwale, in which may be placed bushes to conceal the occupant, and so make a floating blind.

If taken out of the water when not in use, such a boat will last a long time. The galvanized iron does not rust easily. THOS. C. HARRIS.

NORTH CAROLINA.

September and October.

THE finest shooting grounds in the Northwest are on and tributary to the lines of the Chicago, Milwaukee & St. Paul Railway. The crop of prairie chickens promises to be exceptionally good this year; also ducks and geese. In northern Wisconsin and the Peninsula of Michigan splendid deer shooting is to be had.

The game laws will be changed in several of the Western States this year.

Full information furnished free. Address Geo. H. Heafford, General Passenger and Ticket Agent, Chicago, Ill.—*Adv.*

Don't Buy Your Outfit

IN the East if you are going on a hunting trip in the Northwest. We have everything you want in the sporting goods line, and our experience will perhaps keep you from buying a great many things you don't want.

We have all the modern Nitro Loads at Eastern prices. Don't encumber yourself with stuff until you get on your hunting ground. You can depend on us. Wm. R. Burkhard, 57 and 59 East Seventh street, St. Paul, Minn.—*Adv.*

Sea and River Fishing.

THE BASS KNOWS WHAT HE'S ABOUT.

TRAVERSE CITY, Mich.—*Editor Forest and Stream:* I have been greatly interested in the bass that leaps, shakes his head, takes a turn around a root, etc., and I have faith that he does it all knowingly, for I remember standing on a large rock on the left hand side of the lower falls of the Chippewa River, which flows into Batchawaaung Bay, Lake Superior, and having a long tussle with one that was fighting on his own ground and knew just what he was doing.

I had been casting for trout, with poor luck, when an idea occurred to me that proved a success. I knew that the pool contained bass and if I could not get trout I would take the next best obtainable; so I took off the tail fly from my leader and put on in its place a small troller and cast far down stream. The second cast resulted in hooking a 1½-pound trout on the fly above the troller, and while reeling him in a large bass repeatedly jumped out of the water and came down where trout and troller had been, but the nimble trout, like the Irishman's flea, was not there. The bass continued his antics until he was within less than twenty feet of me, when I dawned on his vision, and he suddenly stopped, looked at me a few seconds and left for the depths below. I caught two more trout on the same fly and then hooked a nice bass on the troller. I know he was a big one, because he finally got away; but he knew his business, and as I had trout enough for a meal I did not regret him.

He made several unsuccessful vaults into the air, sometimes shaking his head savagely and at others trying, evidently, to fall on the line or, as I sometimes think, get it foul of his fins or tail; but as I always keep a taught line in such cases he failed. Next he went down and sat on a rock and pondered until a bright idea occurred. Coming up he let me reel him in until he was within a few feet of the rock on which I stood and by which the water flowed in a foaming torrent, when he darted into the current and I had to give him line in a hurry. Nearly 50yds. were taken before the game turned in my favor and the same tactics were repeated several times, until the enemy finally seemed to get discouraged and was reeled in close enough to be "surrounded" with the net.

Lifting his head out of the water until he stood on end, I gently slid the net into the water, when he opened his mouth, spat the hook out and with a derisive shake disappeared in the depths of the pool. How he managed to disengage the hook I do not see, as I was using a light fly-rod and there was very little effort apparent on the part of the bass.

Later in the day I had another experience in the same pool. Taking a Carlisle hook, I scraped a bullet bright, split it and closing it on the shank about half way from the bend to the gut, cast in the swift water, with the result of hooking another immense (he too got away) bass, which jumped out fully two feet and, with a vigorous shake, threw the hook several feet. Two others took the same lure and shook the hook out in the same way, sometimes jumping several times before it was accomplished. I tried lowering my tip, but when I did the hook flew all the further. I lay the shaking the hook out to the weight of the bullet on the shank.

How high they will go I do not know, but I saw one leap so that I saw the whole of him above the shoulder of a companion sitting opposite me; and I don't believe they need much room to get a start in, for I had a small muscalunge, whose head I was holding out of water, jump high enough from that position to hit me in the face as I went to net him.

Old Sam says they jump and jump high, and shake and shake hard, and what Old Sam says is so, goes.

I have fished in some of the waters that have wet his line and driven my tent pegs in the holes left by his tent pegs, and I hope some time to take his hand and have the honor to sit for an evening by his camp-fire.

If the Kingfishers ever pitch their tents in northern Michigan again I shall rise and go on a pilgrimage, and rest not by the way until my eyes have been gladdened by a sight of the old bird perched on a broken limb of a blasted pine, and will then be content to sit far beneath him and learn wisdom. VICTOR E. MONTAGUE.

JUMPING BASS.

GRAND RAPIDS, Mich.—*Editor Forest and Stream:* I have read with pleasure the articles published in your excellent paper relative to the jumping bass and the reasons assigned for his so doing. I have resolved to add a little to the subject by relating an incident of which I was a witness.

About the middle of July I decided that work was no longer essential to my well being and happiness, and hied myself to a beautiful spot on Lake Michigan, located about forty miles north from Grand Rapids, to rusticate and drink in the beauties of nature undisturbed by the telephone and the busy hum of city life. The particular spot was Sylvan Beach, at the mouth of White Lake, where it joins Lake Michigan. White Lake is an arm of Lake Michigan, and is about six miles long by one wide, and is a beautiful body of water.

A number of people from Grand Rapids, Chicago and other cities have erected cottages at Sylvan Beach, and have this year organized a resort company to control it, and intend to add to its beauty modestly. There are no splendid hotels or expensive cottages at this quiet and picturesque place. Modesty reigns supreme. Every one there seemed to be trying to have a good time without "frills." Fishing was indulged in by all who enjoyed it, and successful catches were usual to those who were artists. As for myself, I confess to have a drawing to the rod, and during my stay at the beach I was fishing most of the time.

One evening after a day's fishing, as I was returning home accompanied by my dog, an Irish setter, skirting close to the bulrushes which grow near the shore, I was startled by a noise like that made by a fish as it leaps out of the water with a spoon hook in its mouth, accompanied with a splash in the water. The sound came from my rear in the direction which the boat was going. I stood up and looked in the direction of the noise and tried to make out the cause of the strange commotion. It was a perfect calm and the lake was as clear and placid as a crystal, every movement could be detected distinctly. My dog had risen also and was sniffing the air consciously and growling in a low tone of voice, and as the boat neared the spot from whence the watery rings are ever widening, he peered into the depths inquiringly.

Our curiosity was soon rewarded; about 30ft. ahead of the boat a large-mouthed bass broke the water, weighing I should judge about 4lbs., and shook a spoon hook which I could plainly see hanging from its mouth and disappeared. I pushed the boat to where he went down and looked for him, but in vain. I remarked to my dog that if that fish was so anxious to have that hook removed we would accommodate him. A wag of the tail was the answer. I sat in the boat for some minutes watching for a repetition of the affair, but the fish did not put in an appearance again. I am convinced that the object of that fish in rising out of the water was to dislodge the hook from its mouth, and believe that the fish "reasoned" that he could give more power to his shake out of water than in, where the pressure on its sides prevented its accomplishment.

C. B. K.

Big Nepigon Trout.

PORT ARTHUR, Canada.—*Editor Forest and Stream:* On Aug. 23 Mr. Eugene Stevenson and Dr. E. J. Marsh, of Paterson, N. J., went up the Nepigon River to fish and returned Sept. 15. On Sept. 4 Mr. Stevenson caught a speckled trout that weighed 8lbs. 2oz. It was a female in excellent condition and was weighed just after being taken from the water by Dr. Marsh; it measured 24in. in length and 16½in. around.

On the evening of Sept. 9, in one hour, Mr. Stevenson caught four trout with the fly that weighed 18lbs. 14oz.; two of these weighed over 6lbs. each. Twenty-one of the largest trout caught weighed 108lbs. 9oz.

Dr. Marsh caught a large number of fine trout, the largest weighing 6½lbs. They had very fine weather and the fishing was excellent. These gentlemen returned home very much pleased with the sport they had.

I had a few minutes' conversation with the veteran angler Mr. Dabney Carr, of St. Louis, who has followed the sport for half a century. He fished most of the

streams along the north shore of Lake Superior last season in company with Mr. W. Arnold, of Port Arthur. This season Mr. Carr returned to spend a month on the Nepigon, which he says is the finest trout stream in the world—and he has fished in all parts of Europe and America. Mr. Carr strongly condemns those who fish for trout with a spoon, bait or artificial minnow; he terms them anything but sportsmen. This is about the seventh time he has fished the Nepigon. He does not care to catch the much coveted 6 or 7 pound trout, so much sought after by other anglers; he prefers the 3 or 4-pound trout, that will fight longer and stronger than the larger ones. He usually preserves a few fine specimens to take home to show his friends, but the trout always fade and lose that beautiful color which they have when taken from the water. This year he brought some chemicals with him to try and preserve the luster of those colored spots which the speckled trout are noted for. This season Mr. Carr had excellent sport and returned home rejoicing; he hopes to be spared to have the pleasure of another season's fishing on the Nepigon.

A Large Tarpon Catch.

SAN ANTONIO, Texas, Sept. 19.—*Editor Forest and Stream:* This is to certify that the undersigned, A. W. Houston and P. J. Lewis, of San Antonio, arrived at Aransas Pass on the afternoon of the 12th inst. to fish for tarpon with rod and reel. On the 13th Lewis landed two tarpon; on the 14th Houston landed six and Lewis six (fishing about seven hours of the day); on the 15th, in the afternoon, Houston landed three and Lewis two, making total number landed nineteen in two and one-half days' fishing.

The remarkable catch on the 14th of twelve in one day (six by each) is the largest catch of tarpon with rod and reel ever made in one day, so far as we can learn. Before this Mr. Wallace, of Racine, Wisconsin, on Nov. 3, 1894, landed five tarpon in one day; he and two associates landing together twelve in one day. This catch gave the championship to Mr. Wallace until our catches on the 14th, in which we both beat him by one fish. Who will raise the record? Respectfully,

(Signed) A. W. HOUSTON.
PERRY J. LEWIS.

Dr. Morris's Salmon Story.

LANSINGBURGH, N. Y.—*Editor Forest and Stream:* The article in FOREST AND STREAM of Sept. 14, written by Robert J. Morris, ought to make every reader a life subscriber to your most excellent paper.

DR. F. J. TOMPKINS.

Striped Bass at New Berne.

NEW BERNE, Sept. 24.—Rock in Brice's Creek are just splendid. I heard a Mr. Pope say yesterday that he was up Brice's Creek a few days ago fishing and that he saw large numbers of rock up there. J. J. W.

The North Woods Club.

THE name of the Adirondack Preserve Association has been changed to the North Woods Club.

Camp-Fire Flickerings.

Manistee County Fish and Game Protective Association.

MANISTEE, Mich.—*Editor Forest and Stream;* Some time since you asked me to report as to the work which was being accomplished by the above-named Association. Same was formed less than a year ago, and I am sorry to say that it has not been a success. As its president, I have done all I could to make it so, but my efforts and the efforts of the few who felt the need of such an Association and were heartily in sympathy with its objects, have not availed. It is practically dead.

The great reason why the Association has proved itself a failure is that most of its members were not in sympathy with it, having joined it apparently for the purpose of using it as a cover for their own violations of the fish and game laws. Defeated in their attempt to make laws for themselves which were in open defiance of the State laws, they then revolted, and, some openly, some secretly, worked against it. Unfortunately the malcontents were in the majority.

The Association raised quite a sum of money in the beginning, and with the aid of an appropriation from the county had a game warden of its own. The first selection for the office proved himself a rank traitor, accomplishing nothing in the way of prosecutions, and actually conniving at offenses against the law.

The next selection was a decided improvement, but came into office at the time when the disaffection among the club members was at its height, and had little backing.

Another great drawback has been the fact that justices of the peace before whom violators of the law were brought were clearly in sympathy with the culprits, assessing only the most ridiculous fines. One dollar and costs is not much for a pot-hunter or market-fisherman to pay once in a very great while, and such a fine only leads to contempt of the law. As a matter of fact, the fish and game laws have been a dead letter in this county for so long that any attempt to enforce them was doubly irksome to the people.

One game warden can do but little in a county which is as wild and sparsely settled as Manistee county is, in the main. It would take one man for each township to guard it properly. The result is that while the laws have constantly been broken we have not made many arrests.

This is a bad state of things, because Jones sees Smith and Thompson violating the laws with impunity, and naturally concludes that there is no reason why they should have all the fun to themselves, so falls into line. The Association posted notices all through the county offering a reward of $15 for information of violations sufficient to convict. In ten months' time only one such reward has been paid and only one information given. No comment is necessary. One farmer told me that he would not dare to inform because he knew that his stock would be poisoned or some such revenge would be wreaked upon him.

Mr. Chas. S. Hampton, late State game warden, tells me that Manistee county is the worst in the Lower Peninsula for violations of the fish and game laws. This being so, it is particularly unfortunate that our Association should be able to accomplish nothing, or nothing worth mentioning.

Unless the new State game warden pays this district special attention the fish and game will suffer more than ever this year, as the appropriation for our Association's warden expires May 1, and so little has been accomplished that the county will probably refuse to allow us an appropriation for the succeeding year, and our man will withdraw.

This, in brief is the history of the Manistee County Fish and Game Protective Association. Speaking for myself and the few members who have remained loyal to it from the beginning, I am exceedingly sorry that it is a failure. Certainly, if the vandals get in their work as thoroughly for the next five years as they have in the last five, there will be no hunting or fishing worthy of the name in this county. Streams on which it was easy to fill one's basket with grayling a very few years ago, are now almost entirely depleted. Spear, net, line and dynamite, to say nothing about fishing out of season, have accomplished their deadly work. The trout suffer also, but in a less degree, as they are less accessible and are better able to take care of themselves.

The only game we have worth mentioning are the deer, which know no rest, in season or out.

There is no reason why we should not have good deer shooting for another half century at least with proper enforcement of the game laws, but they cannot last long while such persecution as they are now suffering goes on.

The day is not far distant when even those who are now so impatient of the laws will wish that they had stayed their hands. The mourning always comes after the goose that lays the golden eggs is dead. That is the pity of it. Good advice and warnings of what is to come are all wasted on such people who cannot be made to see beyond the end of their noses. *Experientia docet!* unfortunately there will be nothing left in this case but the experience.

F. A. MITCHELL.

"The Crack Train of the World."

A PROMINENT New York merchant and importer of leather goods said in our hearing the other day, "I have traveled all over Europe and America, and I consider the train which leaves Chicago every day at 6:30 P. M. for St. Paul and Minneapolis, via the Chicago, Milwaukee & St. Paul Railway, 'The Crack Train of the World.'" In which statement thousands of others heartily concur.—*Adv.*

"Hunting and Fishing along the Northwestern Line"

is the title of a booklet recently issued by the Chicago & Northwestern Railway. It is profusely illustrated, and gives information in detail concerning the best hunting and fishing grounds in the West and Northwest. Copies will be mailed free to any address upon application to W. B. Kniskern, General Passenger and Ticket Agent, Chicago & Northwestern Railway, Chicago, Ill.—*Adv.*

Reduced Rates.

THE first-class fare from New York to Boston, via the Fall River Line, has just been reduced from $4 to $3. A corresponding reduction has been made to all points East.—*Adv.*

Oct. 28.—Goodland, Kan.—Kenmore Coursing Club's meeting. C. F. Weber, Sec'y.

The Montreal Bench Show.

THE entry, presumably on account of the Providence and Orange county shows being held on the same dates, was very small, only some 235. There was a large entry from parties in Providence, R. I., and reserved numbers for them, but they failed to reach here, as also the amount for their entry fees, which I presume the association will lose.

The exhibits as a whole were above the average; the judging satisfactory.

The committee did all in their power to have the exhibitors go away pleased, and, speaking personally, I can say that most of them from your side of the fence would like to see Montreal again; at least, so they told me. The weather was very cold, which had a depressing effect on the attendance, which only numbered some 12,500 during the four days, and probably make a loss to the association.

LIST OF AWARDS.

MASTIFFS.—CHALLENGE—*Bitches:* 1st, B F. Lewis, Jr.'s, Ethel.—OPEN—*Dogs:* 1st, O. Bruno's Nero. *Bitches:* 1st, O. J. Latimer's Jessie.

ST. BERNARDS.—ROUGH-COATED—*Dogs:* 1st, Belle Isle Kennels' Eooracum; 2d, T. S. Vipond's Duke of Wellington; 3d, M. M. Fenwick's Don Phyllis. Vhc., G. R. Smith's Faust. *Bitches:* 1st, Belle Isle Kennels' Artilla; 2d, Rev. J. M. Crombie's Lady Nora; 3d, T. J. Tilley's Lady Melrose. Hc., Osborne Kennels' Lalla Rookh.—SMOOTH-COATED—*Dogs:* 1st, Belle Isle Kennels' Clovis. *Bitches:* 1st, Belle Isle Kennels' Sunol.

NEWFOUNDLANDS.—*Dogs:* 1st, J. Seagram's Sir Edwin Landseer. *Bitches:* 1st, J. Campbell's Topsy.

GREAT DANES.—*Dogs:* 1st, Dr. L. Peine's Ralph the Great; 2d, 3d and hc., T. & B. Kennels' Beelzebub, Myrtle Navy and Orinoco. Vhc., Rockwood Kennels' Royal Minor. Hc., A. Pleau's Brutus. C., Stewart & Johnson's Julius Cæsar. *Bitches:* 1st, Dr. L. Peine's Dina; 2d and vhc., T. & B. Kennels' Ruth and Jezabel; 3d, Stewart & Johnson's Ouida. Hc., A. Pleau's Dora.

DEERHOUNDS.—*Dogs:* 1st, T. W. Redpath's Fife; 2d, Imperial Kennels' General Gordon.

GREYHOUNDS.—CHALLENGE—*Bitches:* 1st, H. Barker's Maud Torrington.—OPEN—*Dogs:* 1st, H. Barker's Lord Torrington; 2d, O. Bruneau's Prince; 3d, J. W. Wurtele's Justinian II. *Bitches:* 1st, H. Mercier's Dolly; 2d, R. Marois's White Rose; 3d, C. Austin's Fly.

RUSSIAN WOLFHOUNDS.—*Dogs:* 1st, W. T. Virtue's Adrooski.

ENGLISH FOXHOUNDS.—*Dogs;* 1st and 2d, Typical Kennels Bugler and Grafton; 3d and hc., St. Lambert Kennels' St. Lambert Cromwell and St. Lambert Trueman. *Bitches:* 1st and 3d, Typical Kennels' Heroine and Rompish; 2d, J. Smith's Vexation.

POINTERS.—CHALLENGE—*Bitches* (under 50lbs.): 1st, G. Lovell's Wild Lily.—OPEN—*Dogs* (55lbs and over): 1st, F. H. Fleet's Gamester; 2d, R. Bennett's Drake. *Bitches* (50lbs. and over): 1st, C. H. Clark's Emblem. *Bitches* (under 50lbs.): 1st, Mount Royal Kennels' Chaira.

ENGLISH SETTERS.—CHALLENGE—*Dogs:* 1st, H. Pope's Cactus. *Bitches:* 1st, J. Britt's Maid Marion.—OPEN—*Dogs:* 1st, Dr. J. Hair's Albertis Ranger. Vhc., A. H. Hersey's Westminster Duke. Hc., A. Bryce's Ponto. *Bitches:* 1st, J. Britt's Flour of Sulphur; 2d, Typical Kennels' May; 3d, T. G. Taylor's Vandalia.

IRISH SETTERS.—CHALLENGE—*Dogs:* 1st, Z. F. Bartleson's Rob, Jr.—OPEN—*Dogs:* 1st, Muckross Kennels' Herman Shamrock; 2d, Jno. Ryan's King Echo; 3d, Mrs. Jno. Ryan's Red Kern. Vhc., S. Coulson's Shawn Roue III., A. A. Allen's Ranger. Hc., P. O. Giroux's Pat. L. H. G. Tarrant's Patrick, J. Cavanagh's Wild. C., G. S. Cantlie's Derry, J. Tremblay's Jackanapes. *Bitches:* 1st, Douglas & Chambers's Toronto Mollie; 2d, H. Jarrett's Seminole Fly; 3d, Alice E. McClatchie's Ros Elcho. Vhc., J. H. Farrar's Madge.

GORDON SETTERS.—CHALLENGE—*Dogs:* 1st, Dr. S. G. Dixon's Leo B. *Bitches:* 1st, Dr. S. G. Dixon's Princess Louise.—OPEN—*Dogs:* 1st, G. T. Schafer's Wang Ivanhoe; 2d, J. R. Kennedy's Mount Royal Rusu; 3d, Emile Bourret's Rover. *Bitches:* 1st, ——'s Princess Bonnie; 2d, Rockwood Kennels' Gunhilda; 3d, S. G. Dixon's Santa Marie.

COLLIES.—*Dogs:* 1st and 2d, J. Saunders's Finsbury Hero and Canadian Monarch; 3d, Braehead Kennels' Braehead Criss. Res., Jas G. Reid's Wyves. Vhc., C. E. Short's Auchcairnie Fly and Rev. J. M. Crombie's Stracathro Hero. Hc., A. W. Shearwood's Rex and Rev. J. M. Crombie's Stracathro Bennie. C., R. G. Steacy's Yardley Hero and ——'s Bisley Hero. *Bitches:* 1st, Braehead Kennels' Beauty; 2d, Chas. Thompson's Balmoral Victoria; 3d, ——'s Old Hall Perfect. Hc., Rev. J. M. Crombie's Stracathro Lassie. C., ——'s Spray and Lustre.

FIELD SPANIELS.—CHALLENGE—*Dogs:* 1st, Typical Kennels' Sampson.—OPEN—*Dogs:* 1st, C. E. R. Boswell's Sweep B.; 2d, Typical Kennels' Napoleon.

COCKER SPANIELS.—CHALLENGE—*Dogs:* 1st, Thos. McKean Robertson's Red Obo.—OPEN—BLACK—*Dogs:* 1st, John G. Strauss's Royal; 2d, Belle Isle Kennels' King Raven, Jr. *Bitches:* 1st, Ethelred Kennels' Lady Garfield; 2d and 3d, Thos. McKean Robertson's Floss Obo II and and Lili Obo.—OTHER THAN BLACK—*Dogs:* 1st, Ethelred Kennels' Hamilton Jack; 2d, H. H. Curtis's Brown Jacket. *Bitches:* 1st, Thos. McKean Robertson's Red Dolly; 2d, 3d and vhc., Ethelred Kennels' Ethelred Bonnie, Jeane and Ethelred Queen. Vhc. res., Belle Isle Kennels' Gaiety Girl.

IRISH WATER SPANIELS.—CHALLENGE—*Bitches:* 1st, T. A. Carson's Marguerite.—OPEN—*Dogs:* T. A. Carson's Mike. *Bitches:* 1st, T. A. Carson's Biddy Malone.

POODLES.—*Bitches:* 1st and 2d, Dr. S. G. Dixon's Paris and Venus.

BEAGLES.—*Bitches:* 1st, Venio Farm Kennels' Loom; 2d, Klein & Wetherell's Lill; 3d, C. H. Corbett's Melody C. Res. and hc., Ray Baldwin's Bilie Hoosier and Little Nell.

DACHSHUNDS.—ENGLISH TYPE—*Dogs:* 1st, L. S Page's Valdemar. *Bitches:* 1st, Bay View Kennels' Lena.—GERMAN TYPE *Dogs:* 1st withheld; 2d, John Early's Lump II.; 3d, Typical Kennels' Music.

BULLDOGS.—*Dogs:* 2d, Imperial Kennels' Juno II. *Bitches:* 1st, J. A. Stovell's Queen Dud.

BULL-TERRIERS.—CHALLENGE—*Dogs:* 1st, Bay View Kennels' Principio. *Bitches:* 1st, W. Hammall's Vesper Bell.—OPEN—*Dogs* (30lbs. and over): 1st, Bay View Kennels' Chatham Bob; 2d, J. H. Smith's Nelson C.; 3d, E. P Guy's Common. Hc., F. Boucher's Brownie. *Bitches:* 1st, Mount Royal Kennels' Newmarket Syren; 2d and hc., Bay View Kennels' White Rose and Edgwood Robin; 3d, Dr. G. Darby's Thelma. *Dogs* (under 30lbs.): 1st, G. Jordan's Primer; 2d, M. O'Rourke's Jack Welsh. *Bitches:* 1st, Bay View Kennels' Star.

FOX-TERRIERS.—SMOOTH—*Dogs:* 1st, H. P. Thomas' Vice Doge; 2d, C. H. Corbett's Guardian; 3d, Dr. G. Darby's Poverina. Vhc., G. K. Lanigan's Belvoir Jim. *Bitches:* 1st, J. F. Belt's Wanasset; 2d, Mount Royal Kennels' Warren Faithful; 3d, H. P. Thomas's Lady Domino.—WIRE-HAIRED—CHALLENGE—*Dogs:* 1st, G. T. Davis's Undercliff Coonet.—OPEN—*Dogs:* 1st, G. T. Davis's Lance; 2d and 3d, J. Stanford's Brock and Gorse. Hc., Braehead Kennels' Braehead Razzle. *Bitches:* 1st, Mrs. T. J. Wheble's Lady Grace; 2d, J. F. Belt's Hill Hurst Pansy; 3d, W. J. Wheble's Lady Vestas. C., J. Stanford's Nellie I. and Nellie II.

IRISH TERRIERS.—CHALLENGE—*Dogs:* 1st, W. B. Palmer's Brickbat, Jr.—OPEN—*Dogs:* 1st, C. McClatchie's Cousin Claude; 2d, H. G. Johnson's Hulton Majestic; 3d, Kinkora Kennels' Canadian Ambassador. Hc., H. G. Johnson's Woodsiee Tartar and Kinkora Kennels' Red Inquisitor and Commissariat. *Bitches:* 1st, Kinkora Kennels' Deramore Biddy; 2d, Dr. Kirk's Kathleen; 2d, Osborne Kennels' Nora Creena.

BLACK AND TAN TERRIERS.—OVER 7LBS.—*Dogs:* 1st, D. S. Gillies's Darkie; 2d and res., F. C. McLean's Roche Sultan and Roche Trump; 3d, C. Wilson's Chicago Spider. Vhc., G. A. Mac's Dan. *Bitches:* 1st and 2d, F. C. McLean's Roche Tulip and Rochelle Majestic; 3d, J. H. Smith's Bandy C.

YORKSHIRE TERRIERS.—*Dogs:* 1st, J. Lane's Halifax Duke II.; 2d, Sir Donald Smith's Teddie; 3d, L. Cullen's Actor. Vhc., C. T. Smith's Tommy. C., Mrs. F. Dion's Friday. *Bitches;* 2d, W. D. Simpson's Frixey S.

DANDIE DINMONT TERRIERS.—*Dogs:* 1st, George Caverhill's Coffee.

BEDLINGTON TERRIERS.—*Dogs:* 1st, C. A. Shinn's Hard Tack. *Bitches:* 1st, J. H. Patterson's Miss Tick.

SCOTTISH TERRIERS.—*Dogs:* 1st, Mrs. J. J. Dean's General Coxey.

SKYE TERRIERS.—CHALLENGE—*Dogs:* 1st, C. A. Shinn's Elphin stone. *Bitches:* 1s t, C. A. Shinn's Endcliff Maggie.—OPEN—*Dogs:* 1st, W. Hall's Gleniffer. *Bitches:* 1st, W. Hall's Thrums.

WELSH, CLYDESDALE, AIREDALE, WHITE ENGLISH AND PAISLEY TERRIERS.—*Dogs:* 1st, I. Stewart's Barney.

PUGS.—*Dogs;* 1st, C. Y. Ford's Otterburn Treasure; 2d and 3d, Miss E. Cryer's Bob Ivy and Charley. Vhc., Mrs. P. A. Crosby's Dandy. C., G. R. Smith's Pat. *Bitches:* 1st, C. Y. Ford's Otterburn Pearl.

BLENHEIM SPANIELS.—*Dogs:* 1st, 2d and 3d, E. Bradford's Commodore Nut, Blen II. and Bijou II. *Bitches:* 1st, Osborne Kennels' Little Nell; 2d, E. Bradford's Yum Yum.

ANY OTHER VARIETY OF TOY SPANIELS.—*Dogs:* 1st, Mrs. D. Hatton's Frisk. *Bitches:* 3d, Mrs. D. Hatton's Flossie.

TOY TERRIERS.—1st, Miss Taylor's Tiny; 2d, H. Bougeant's Petit Loup.

X.

The Late J. M. Freeman's Kennel.

INDIANAPOLIS, Ind., Sept. 28.—*Editor Forest and Stream:* I desire to say that all of the dogs of the late J. M. Freeman have been placed in my hands for sale. They consist of the English setter bitch Nellie Hope, five years old, by Gath's Hope—Lady May, she a litter sister to the late great Hope's Mark, and her litter of three dogs and three bitches, now three and one-half months old, by champion Antonio. These puppies are full brothers and sisters to Redfield, and as they are all good individuals they should command ready sale at the prices for which they will be sold. Sportsmen who are willing to assist a worthy family of a true brother sportsman, and at the same time secure for themselves a dog to be proud of at about half its true value, will learn full particulars by writing to me. P. T. MADISON.

Continental Club's Trials, 1896.

INDIANAPOLIS, Ind., Sept. 28.—*Editor Forest and Stream:* The members present of the Continental Field Trials Club held a meeting at Morris, Man., during the series of trials held there, and decided to hold trials on quail early in November of next year, either at Bicknell or Carlisle, Ind. P. T. MADISON, Sec'y-Treas.

National Greyhound Club.

NEW YORK, Sept. 26.—A meeting of the National Greyhound Club will be held at Huron, 8 P. M., Oct. 8, for election of officers and other business.

H. W. HUNTINGTON, Sec'y.

PROVIDENCE DOG SHOW.

THE Rhode Island State Fair Association held their third annual show Sept. 17 to 20, at Narragansett Park. Excepting on Wednesday the weather conditions were all that could be desired. The attendance was very satisfactory, although this year an admission fee of ten cents was charged. The arrangement of the show, which had been intrusted to the experienced management of Spratts Co., was a great improvement over former shows held in the same building, when the old-fashioned wooden benching was in vogue.

The trick dog circus gave frequent performances daily under Prof. Burton's direction. The whole show had a very neat and prim appearance.

Judging commenced promptly on Tuesday morning, and with the exception of spaniels was completed by evening. Owing to the late arrival of some of the entries in the breed mentioned, Mr. Oldham did not get to work until Wednesday morning.

With four other shows taking place the same week in different parts of the country, the entry was not expected to be as large as that of last year, but there was no questioning the quality of the exhibits. In fact it was one of the best shows of the year in this respect. Many prominent kennels were represented both by their dogs and the owners in person. Among the latter were: Mrs. F. J. Smyth, Germantown, Pa.; Winthrop Rutherfurd, H. L. Kreuder, Edward Knierem, J. F. Lutz, Dr. H. S. Huidekoper, Dr. S. J. Bradbury. John Wheelan, New York; John Hopkinson, Nutley, N. J.; Dr. H. T. Foote, G. W. H. Ritchie, New Rochelle, N. Y.; Phelps & Davies, Boston; L. A. Burrett, Bayonne, N. J.; H. H. Hunnewell, Jr., Wellesley, Mass.; C. T. Brownell, New Bedford, Mass.; O. W. Donner, Dr. C. A. Lougest, A. C. Lougest, T. S. Bellin, Albany, N. Y.; Robert Leslie, Lynn, Mass.; C. N. Symonds, G. Thomas, Salem, Mass.; Jos. Lewis and wife, Moodus, Conn.; N. Q. Pope, Poland, Me. (by A. McGregor); S. D. Parker, Readville; J. P. Willey, Salmon Falls, N. H.; Mr. Brierly, Concord, N. H.; F. G. Johnson, Tarrytown, N. Y.; F. F. Dole, New Haven, Conn.; J. W. Comey, Newton, Mass.; W. C. Baylies, Arthur Sharp, Taunton, Mass.; Henry Hanson, Fall River, Mass.; O. E. Cornforth, Slatersville, R. I.; G. L. Tarr, Foxboro, Mass.; Alfred Heald, Lancaster, Mass.; H. B. Tallman, Greene, R. I.; F. B. Zimmer, Gloversville, N. Y.; Lambert Stansfield, Sandford, Me.; B. Alton Smith, North Attleboro, Mass.; F. E. Perkins, Johnston, R. I.; Charles Bartels (Blemton Kennels), Hempstead, L. I.; Howard Olney, Donald Monroe, Allamuchy, N. J.; R. L. Keach. W. J. Comstock, W. C. Codman, Johns H. Congdon, S. Bennett and other Providence fanciers. The judging took place in rings placed outside the building. The feeding arrangements under Spratts care were admirably carried out by the "chef," Mr. Murphy.

A word of praise is due to Mr. Oldham for his thoughtful management; he is ever on the lookout for the comfort of the dogs intrusted to his care and the interests of the show generally. He is a man with ideas and loses no time in putting them into effect.

The judging seemed to give satisfaction with very few exceptions and nothing occurred during the show to mar the general good feeling that prevailed.

The Hygenique Fluid Company kept the air pure and sweet by the aid of their very effective and agreeable disinfectant. Before turning to a consideration of the dogs present, it may be said that the show was remarkable for the excellent condition in which nearly all the dogs were shown. Dr. W. L. Burt was veterinarian.

A word of praise must be accorded to Mr. R. L. Keach, of the bench show committee, for the excellent manner in which he fulfilled his duties as ring steward. Three foils were provided, one each for the judge, secretary and press, the latter foils being tacked up in regular order near the entrance; a bit of timely work worthy of emulation by other shows.

The judges of the different breeds were: Mastiffs, bloodhounds, great Danes, Russian wolfhounds, pointers, Chesapeake Bay dogs, dachshunds, poodles, bull, Scottish, Bedlington, Skye, Dandie Dinmont and Yorkshire terriers, pugs and miscellaneous classes, James Mortimer, Esq., Hempstead, L. I. English, Irish and Gordon setters, Louis Contoit, Esq., Valley Stream, L. I. St. Bernards, deerhounds, greyhounds, Newfoundlands, foxhounds, beagles, collies, bulldogs, black and tan and Irish terriers, Italian greyhounds, H. W. Lacy, Esq., Chicago, Ill. Clumber, Irish water, field, cocker and all toy spaniels, E. M. Oldham, Esq., New York. Fox-terriers, German Hopkins, Esq., Hempstead, L. I. Boston terriers, William Ellery Bright, Esq., Waltham, Mass.

Mastiffs, Dr. Lougest's team furnishing all the competitors, were choice. Emperor William and Lady Diana furnished the challenge winners, and Hans Sachs had all the glory in open dogs. Open bitches, however, produced three. The Toronto winner, Lady Vere, repeated her performance. Lady Cameron second; she was not in good shape, thin, and her head, being too wrinkled and small, has not the correct expression. Roselyn, third, is rather straight in face, but was well shown.

St. Bernards in quality all round were exceptionally good, considering that all the exhibits were American-bred. Good square, deep heads and proper markings prevailed, and the judge seemed to require type and good movement above everything. Open rough dogs brought out eight. Jim Blaine, Jr., proved the winner; a nice little dog with a good head, well-formed legs and excellently shown. The well-known Wach Erdman, rather coarse in comparison, came next. His deep, massive head and bone could not be overlooked, though a wide blaze mars his face to some extent. Kingstonian Guide, rather short-bodied, but a good mover, shows plenty of quality. Dictator, reserve, with a deeper muzzle and more rib, if not so straight behind, would be a good dog. East River Prince is coarse in type, is faulty behind, but massively built all over. Columbus, but for hind action, would have been better treated, as he has a very nice head, though somewhat narrow. The bitch class showed up well too. Miss Amanda, though a little small, is brimful of the right type and quality. Another good one is Lady Elspeth by Kingston Regent; she should be broader in skull and muzzle. M'Liss should have a deeper stop, and Dorothy, a daughter of champion Pouf, shows too much haw and is not straight in front. The smooth challenge classes did not fill, but a capital dog, Counch, much improved, made a spectacle of the other entry—a foxy-headed, wild-eyed sort that was lucky to get two letters. The kennel prize went to J. W. Comey, who is getting a nice typical kennel together.

Newfoundlands were very poor.

Great Danes, only one, Major McKinley II., who has stopped short in head, but is a good all-round dog that takes after his dad.

Bloodhounds were confined to two entries from Dr. Lougest's kennel, as choice as they can be made.

Russian wolfhounds had empty benches.

Greyhounds proved one of the features of the show, as far as quality is concerned. Southern Rhymes and Bestwood Daisy were the challenge winners. Southern Charm was the only dog, and the poorest of the lot. Four bitches came out that gave the judge something to do, but this time Southern Belle redeemed her Boston defeat and with her kennel mate, Southern Gay Girl, took first and second. Best of Fashion, reserve, beat the other, Silk, in loin, ribs and quarters.

Foxhounds.—Winsome was the only English foxhound. Ranger II. was the challenge American hound, and looked extremely well. Four came out in open dogs, and to Mr. Pope fell the ribbons, with the New York winner, Duke, a good headed dog, well put together, but a little English, you know. Pope's Samson, a similarly built one, fails in head to the other. Ring is one of the old sort, but beats Glider in front and head. Flirt and Speedy were two more of the English sort with some American characteristics, well shown, but Speedy's muzzle is very snipy.

Beagles turned out pretty well, the challenge class bringing out Ringleader and Roy K.; the issue seemed not long in doubt, the winner being so much better behind. Old champion Lou is one of the sort that cannot be denied, aged though she is. Ten years old this month, she moved and looked almost like a five-year-old. Open dogs were a bad lot to judge, seemingly several types and not a really good one. Lee III., though very snipy, scores so in body and legs that the ribbon went to him; but had Raffler been in better shape he must have won, as he is so well off for bone, with a good head and ribs, though slackly put together. Directum, third, is rather plain. Punch loses in front and quality. King Bannerman would have been higher up were he not so "dicky" behind. Lady of Denmark scored well in type over Modesty II. and has more substance as well. Silverina would not show and is rather plain, but counting bone and movement and body, should have scored. In open dogs under 13in. nothing touched a new one, Tariff, who comes out of the woods; but his type and general build are excellent; outside of his open, rough coat he is one of the best little dogs out. Little Corporal, well known, came next, followed by Lucifer, who is weedy. Topsy K., looking very well, scored in head over Lonely II., but Snap was not in their class. The puppies were very poor and did not deserve anything. The Rockland Beagle Kennels took the kennel prize.

Pointers, though not numerically strong, were a very even lot, and without exception all in good condition. There were no challenge entries. Open heavy dogs had only three, first going to King of Lynn, well known, with Roswell second, a trifle short in head. More swell of rib would improve him and his tail is not well carried. Urada won nicely in bitches. More stop and a darker eye would help her. Lady Reveller is plain in quarters and throaty, outside of that she is a good one. Alice Leslie is a good-bodied bitch, but down in quarters. Light-weight dogs brought out two, the well-known Spendthrift and Kentwood, placed as named; the winner scores in muzzle and ribs and hind legs. The bitch class had four. Hempstead Kit won well in hand, but she could be improved in front of stop. Brackette, also one of the Rinada's, is a good-bodied bitch, plain in muzzle. Dame Fortune is too straight behind.

English setters turned out some good quality, but entries were not large. Ch. Spectre was the only challenge entry. Five were in open dogs. Harry L., gone off considerably in head, took the blue, but was not entitled to it, as either Albert's Ranger or Dick can beat him both in body and head. Drake, third, should be flatter in coat and is rather plain in head.

The judge was abroad in the bitch class too, as there were better-headed ones than Monk's Nun; the same kennel's Countess is of better type, deeper and better in muzzle, but got nothing. Clara has a plain straight back and sharp muzzle. Nellie F., third, is a better built bitch all round, but out of coat; Reverdy's Leah, also unmentioned, has a head of Laverack type and should have been well up with the ribbons.

Irish setters were confined to the Oak Grove entries and the prize list shows they are all well known excepting Bostal Norna, a small one, weak in muzzle, but in other respects well made. All the Oak Grove dogs were put down in good condition, although out of coat.

Gordon setters made a pretty exhibit, some well-known winners being among them; but the entry was not so large as we expected to see. Heather York and Flomont, looking as if just out of a bandbox, were the challenge winners. Fan, losing in head to the latter, was reserve in the bitch class. Open dogs had six entries, Mr. Blossom scoring again; Heather Bruce, a son of Heather York, shown lame, but with a very fair head, coming second. Doc, third, loses to both with his plain head and lack of pencilings. Sally Beaumont and Norah were the only bitches shown, and were correctly placed, as Sally gets it so much in head and general quality and condition.

Spaniels were well represented. In challenge class, over 28lbs., Drayton the Shrew won handily from Colehill Rufus, who lost to the winner in head and front. Drayton Warwick, in excellent condition, was alone in field spaniels, open dogs; and Endcliffe Myrtle had the same easy honors in corresponding bitch class. Moonlight Belle had a walkover in the other-color class; she is a good-bodied bitch, plain in head. Cocker spaniels were a good entry, Middy winning in challenge dogs, black or liver, and Bim in corresponding any-other-color class. In open class, Little Tim, a very typical cocker with a good head, body, coat and fair front, won, with King S. second and Reno third. King S. is a very fair dog, but lacked the winner's type and character. In open bitch class, Swiss Mountain Kennels showed a good bitch in Dart, winner of first. She is a good-bodied bitch, with plenty of cocker character and nice type of head. Flossie Butler, second, was beaten in head and condition by the winner. Ned W. won in class for dogs (red or liver), beating Cherry Punch, second, in head and action. In corresponding bitch class, Daisy Bell had an easy win over Zuleika and Miss Tommy, placed second and third.

Only two Clumbers were shown, both good ones. Each took first.

Collies were poorly represented, the absence of the Woodlawn Kennels being felt this year. Chestnut Hill Kennels entered Goldfinder, but did not send. Highland Flossy, in excellent coat and condition, was the only challenge entry; and the open dog, Roy, big in ear and open-coated, took first for lack of competition; the other entry, Rob Roy, being absent. He was lost on the previous Sunday. Merry Belle is a rather cloddy sort, but good enough for a ribbon when without competition. Otterburn Olive, a very nice pup by Christopher, with a sweet head, was alone in her class.

Bulldogs did not show up well, the classes feeling the effect of competition. A smart little red dog, Sheffield, was the only dog shown, and Lady Nan had no difficulty, long-muzzled though she is, in disposing of Sybil and Robin Pelagia. The latter loses to Sybil in depth of muzzle and movement, though shorter-faced and more broken up.

Bull-terriers made a capital display, the kennels of Frank Dole, Dr. Huidekoper and Fred. Church being out in full strength.

Fox-terriers came out in strength, the best kennels being well represented. Blemton Victor II. had no difficulty in winning in challenge dogs. Captious was alone in the corresponding class. Open dogs was a hot class of twelve, with two absent. Blemton Stickler, though shown light, proved the winner, followed by Warren Sage, who is a little light in rib and loin and pinched in muzzle. Charlton Nigger showed well and his drooping loin was not noticed. Hillside Domino was not looking his best. Mere Dominie, among the mentioned, took our fancy; a grand-fronted terrier, but a little strong in head. Raby Reckon could do no better than vhc.; should be better in feet and skull. The bitch class had eight and the blue and red fell to the Rutherfurd Kennel by the aid of Warren Capture and Warren Dusky, both by Safeguard, and well known as good bitches. Spinster, the Toronto winner, had to be content with second in this company; she would be better if flatter in skull, but she well deserved her position. Blemton Flush is small; should be darker in eye and her skull is too round and full. Twelve puppies were shown; and a nice-headed dog, Warren Rector, won, with Mere Dominie second, who can beat it well in everything but head. Mere Grisette was the only bitch pup, the class being divided. In wires the old winners, Cribbage and Surrey Janet, took the challenge ribbons. In open dogs Endcliffe Banker beat his kennel mate Endcliffe Brisk, the latter losing at both ends. Brittle Boy got the drop on Mister Great Snap once again. Hill Hurst Trick should be better behind, but is good in head. Mr. Palmer came to the front again in bitches with Endcliffe Fidget; her good head cannot be denied. Bushy Bramble, well shown, came next. A nice lot of very fair terriers followed these.

Irish Terriers.—Several new importations were exhibited. Dunmurry upheld the honor of the breed in his class. Open dogs had six entries. Briggs's Best won rightly over Brian O'K. His head is cleaner and better shaped, and he is more racily built. The others did not come near these two. In bitches Gessela III. and Kathleen seemed to have a close finish, the former being a little better in head, eye and body. Blackburn Brackett has too much hair on face and her ears are too large; she is also coarse throughout. The judge should have given first to Eileen in puppies, as a better made bitch all round than the two winners, though she is rather chunkily built and short in head. The winners are built on racy lines, but are too slack looking.

The Boston terriers were rather a mixed lot, though the principal winners from the Phelps & Davies Kennel were very even in type. The judging did not appear to give entire satisfaction, as might be expected.

Black and tans were few, but choice.

Skye terriers did not fill, and Scottish terriers were few and mostly old winners.

Mr. Ed. Brooks showed all his old winners in Dandie Dinmonts, but Ainsty Daisy was beaten in challenge class by Lothian Judy, who gets it in coat and front.

Competition was active in Bedlingtons, the winning dog, George W., being about as good as we have them, and beat Mount Vernon Wonder in head and coat. Mount Vernon Tibbie revenged her kennel mate's defeat by scoring in the next class.

Dachshunds were fairly good.

Pugs had one entry, the Boston winner, Belle D.

Toy spaniel classes did not fill.

The Chesapeake winners are all well known, but were out of coat.

Poodles, while not numerous, were of excellent quality. Diamont won in challenge class. The open dog poodle is a very fair one. In bitches there was keener competition, first going to big bitch Leah with an excellent head. Cigarette, second, is tighter in curl. Black Maria, reserve, is slack in back and her muzzle is rather short. Mr. Hunnewell showed a very nice one in Jocko, who has a capital head, especially muzzle, and he showed three very smart browns in the bitch class. A new one, Hill Hurst Fluff, scored well in curl, clear color and head properties.

Champion Spring had no difficulty in winning first in Italian greyhounds from one that was of another breed, hairless and the size of a whippet; and Tinnie was the only real one in her class.

The winning dog in miscellaneous class was a very fair black and tan toy. The bitch class was also one of the same breed, while equal seconds were given to Lotze II., a Schipperke, and Bourdo, a Maltese terrier.

Brunswick Fur Club Trials.

MR. A. B. F. KINNEY, of Worcester, Mass., offers a special prize of $50 for each fox caught by the hounds at the forthcoming field trials of the Brunswick Fur Club, to be held at Barre, Mass., during the week of Oct. 28. Hounds owned in New England are barred. Every kill will be credited to the entries from outside the New England States.

Mr. Kinney offers this prize in the belief that many of the hounds of the South and West are faster than most of the New England hounds, and in the hope that owners of fox-killing packs will enter their best hounds.

Hounds unaccompanied by their owners will be properly cared for, hunted and returned as soon as the trials are completed. Entry fee in the Derby $2, in the All-Age stake $3.

These trials are open to the world and all sportsmen are cordially invited to be present.

BRADFORD S. TURPIN, Sec'y.

NEWBURGH DOG SHOW.

LAST year there was an effort made to make out of a local event, held in connection with the Orange County Fair, one of a series of shows forming the long looked for fall circuit. Some trifling additions were made this year, and the influence of some, with large kennel interests, was secured, resulting in one of the greatest shows ever given outside of the large American cities. Many entries had to be sent back for want of room, and yet 438 remained, and among these were some of the best specimens of the different breeds, including Judge Hilton's collies and bulldogs, Miss Anabel Green's Irish water and field spaniels, Dr. Kitchell's cockers, J. Blackburn Miller's Great Danes, St. Bernards from Danbury, Conn., Sam'l Stewart's collies, Castle Pointer Kennels' bull-terriers, Toronto Black and Tan Kennels' Manchesters, a fine array of sporting dogs, and an even finer display of pets.

In some classes the New York show was eclipsed, for there were thirty pugs at Newburgh and ten at New York. There were also more Blenheims, and equal displays elsewhere, so it may be presumed that the other shows held the same week were totally eclipsed.

Poodles were conspicuous by their absence, but, the judge had declined to award $2 and $1 prizes, and exhibitors were so informed.

There was such a general tendency on the part of the good folks of Orange County to go to the dogs that notices had to be placed in the building asking them to keep moving.

Robt. Johnson, the superintendent, had two able assistants in Benj. McClung and Francis Lynch, and the supper given by them to the exhibitors and judges, at the Palatine Hotel, was most hospitable and harmonious.

It will be but right to mention that John Brett was announced as the judge of setters, but that Robt. Armstrong induced the superintendent to allow him to take the class, although it was most positively stated, and it was beyond dispute, that three-fourths of the dogs were entered because of the former's choice.

The classes John Brett did take were gone through with great precision, and we cannot do better than refer to the list of awards, instead of offering any criticisms.

It was not so with Robt. Armstrong, for even in the collies, that he should have some knowledge of, there were errors of judgment. In the open bitches, Hempstead Dorothy was placed over Ormskirk Susie, and now that the latter is going in head and feet, and Dorothy was in good coat, this was not out of the way; but for Sunset to take third place, even when showing evidence of being in whelp, was a mistake.

In bulldogs things were worse, for Rustic Sovereign beat Reve Royal, and the latter was put down in good form. Other errors must be passed, for I wish to call attention to the dog Facey Romford, a son of King Orry, that is equal to him in head generally, in chops, wrinkle, jaw, skull, stop and expression, according to order, and superior in nearness to ground, front and swing, if not in bone, barrel and general character; hence he is so far better than his sire that the dog that defeated King Orry at the last New York show needs to look to his laurels. Hucknell Gypsey is also a good one with plenty of substance, good front, head with nice skull, chops, wrinkle, and the correct bulldog swing in carriage.

The best I can say for Robt. Armstrong's maiden attempt is that he got the strong class of Gordon setters right.

The class of Skye terriers was one of the best seen in America, and they were handled well.

Fernwood Bruce, the St. Bernard, with Spec Lomond, from Danbury, were really good specimens, shown in excellent condition, and such conditions make it clear that A. K. C. regulations may be of benefit, and should also impress upon the managers the necessity of selecting judges who know the different breeds, and of the folly of permitting another judge to act in the place of the one announced.

There was a good lot of beagles, especially those owned by the Columbia Kennels, that looked very fit, and yet had plenty of character.

Foxhounds were also well represented, but some were very heavy, and in head and leather somewhat resembled the bloodhound.

Thesmo Kennels had lots of greyhounds, not of the highest order of merit, and they were rightly beaten in some instances.

There were over twenty Irish setters, many from the Thesmo Kennels, and of a little better sort; but it was difficult to find an excuse for Mr. Armstrong's dividing two $5 specials between the first prize dog and the first prize bitch.

Chas. D. Purroy had about fifty terriers to come before him, and handled them in the manner of an expert. In dogs the class was so good that Brockenhurst Quick, which he formerly owned, only got reserve; Sentinel, the first prize winner, being better in front and muzzle, the old dog having become coarse with age. Hillside Royal, second, is of a good stamp, showing character and capital form, and Mere Growler, third, is quite above the average merit. In bitches, Rose Hill Madge, first, was worthy of her place, and secured the special.

Edwin H. Morris has never before accepted an invitation to judge spaniels. The sporting spaniels, as well as the pet spaniels, were features of the exhibition; and the pugs, which were also taken by Mr. Morris, outnumbered New York entries three to one.

The Woodlawn Park Kennels took most of the special prizes with a grand array of typical specimens; but Mr. Morris easily secured the $20 gold piece offered by Spratts for the best kennel. Sam'l Stewart won the special for the best Orange county team of collies.

Spratts Patent benched and fed in their usual excellent manner.

The exercising space had to be used for extra benches, and I hope that some better provision will be made in the event of wet weather for judges' ring and for exercising before the next event.

Mr. John Brett judged mastiffs, St. Bernards, great Danes, Newfoundlands, Russian wolfhounds, Dalmatians, foxhounds, beagles, dachshunds, pointers, King Charles spaniels, Yorkshire terriers. Mr. R. K. Armstrong judged greyhounds, bulldogs, setters, bull-terriers, collies and miscellaneous. C. D. Purroy judged fox-terriers. E. H. Morris judged black and tan terriers, water spaniels, pugs and Mexican hairless.

LIST OF AWARDS.

MASTIFFS.—1st, H. L. Van Schver's Duke; 2d, H. R. Lydecker's Jack; 3d, C. P. Stanbrough's Colonel.

ROUGH-COATED ST. BERNARDS.—*Dogs:* 1st, McCarl & Cattaneo's Fernwood Bruce; 2d, J. Blackburn Miller's Vindex. Vhc., Jno. J. Delaney's Nero. *Bitches:* 1st, McCarl & Cattaneo's Spec Lomond; 2d, withheld; 3d, J. Blackburn Miller's Myrtle B. *Puppies:* 1st and vhc., McCarl & Cattaneo's Becky and Beatrix; 2d, 3d and res., Edwin H. Morris's Lulu, Nell and Martha.

SMOOTH-COATED ST. BERNARDS.—*Dogs:* 1st, 2d and 3d withheld. Hc., Roger Tileson's Medor. *Bitches:* 1st, 2d and 3d withheld. Hc., Mrs. Wm. Sutton's Dutchess.

GREAT DANES.—1st, 2d and 3d, J. Blackburn Miller's Princess Mary, Queen and Tigress. *Puppies:* 1st and 2d, J. Blackburn Miller's Pluto and Juno.

NEWFOUNDLANDS.—1st and 2d withheld; 3d, Thomas Rea's Tyras.

RUSSIAN WOLFHOUNDS —1st, withheld; 2d, J. Blackburn Miller's Countess. *Puppies:* 1st, 2d and 3d withheld.

GREYHOUNDS.—*Dogs:* 1st, E. H. Morris's Sir Launcelot II.; 2d and 3d, Thesmo Kennels' Lineman and Duke. *Bitches:* 1st and 2d, Mrs. Howdery's Daisy and Fanny; 3d, Thesmo Kennels' Irene. Hc., A. M. Ide's Phillies.

DALMATIANS.—*Dogs:* 1st and 2d withheld; 3d, Thesmo Kennels' Spot. *Bitches:* 1st, E. H. Morris's Flora. Hc., Thesmo Kennels' Spotless.

FOXHOUNDS.—*Dogs:* 1st, Jack Wilson's Jacks; 2d, P. D. Donoghue's Jack; 3d, George Mould's Driver. *Bitches:* 1st, Andrew Horning, Jr.'s, Nell; 2d, P. D. Donoghue's Fly; 3d, Thesmo Kennels' Thesmo Girl. *Puppies:* 1st withheld; 2d, Wm. H. Turner's Girl; 3d, Thesmo Kennels' Thesmo Loud.

BEAGLES —*Dogs:* 1st, 2d, and res., Columbia Kennels' Sam B., Fippe and Prince; 3d, Edwin H. Morris's Frank K. *Bitches:* 1st, Hornell-Harmony Kennels' Lilla of Glenerose; 2d, 3d and hc., Columbia Kennels' Durene, Tessie and Miss Small.

DACHSHUNDS.—*Dogs:* 1st, Castle Point Kennels' Brownie. Res., E. Y. Barker's Toby.

BULLDOGS.—*Dogs:* 1st and 2d, Woodlawn Park Kennels' Facey Romford and Rustic Sovereign; 3d, J. H. Matthews's Reve Royal. Vhc., J. Blackburn Miller's Duke II. *Bitches:* 1st, 3d and res., Woodlawn Park Kennels' Hucknell Gipsy, Venus VII. and Iolanthe; 2d, J. H. Matthews's Dolly Tester.

POINTERS.—*Dogs:* 1st, Mrs. C. L. Wiggins's Reuben; 2d, Thesmo Kennels' Thesmo Fortunatus; 3d, George Mould's Juno. Vhc., Dr. F. A. Jacobson's Dandy. Hc., J. Blackburn Miller's Shot. *Bitches:* 1st, Edwin H. Morris's Lillian; 2d, C. P. Stansbrough's Beauty. *Puppies:* 1st, W. C. Gib's Rex; 3d, Geo. Mould's Ted.

ENGLISH SETTERS.—*Dogs:* 1st, J. Carver's Bald Rock; 2d, Edwin H. Morris's Reality; 3d, J. H. Finlayson's Ponto. Res., E. N. Barker's Major Monsoon. *Bitches:* 1st, W. J. Maggs's Flirt; 2 i, Jas. H. Dubois's Flirt; 3d, E. N. Barker's Beaton Leda. *Puppies:* 1st, Edwin H. Morris's Realistic. Other awards withheld.

GORDON SETTERS.—*Dogs:* 1st, E. H. Morris's Brillmont; 2d, J. H. Strube's Can; 3d and vhc., P. Peasso's Roy and Rexmont, Jr. *Bitches:* 1st, 2d and res., E. H. Morris's Salmont, Faymont and Jaymont; 3d and vhc., P. Prasso's Bulmont and Glenmont. *Puppies:* 1st, 2d, 3d, res. and vhc., E. H. Morris's Eadmont, Clarmont, Dalmont, Frullmont and Lamont.

IRISH SETTERS.—*Dogs:* 1st, E. H. Morris's Don; 2d and 3d, Thesmo Kennels' Thesmo and Thesmo II. *Bitches:* 1s, 2d and 3d, Thesmo Kennels' Lady Vic, Miss and Victress. Res., E. H. Morris's Lucy. *Puppies:* 1st and 2d, Thesmo Kennels' Miss Mc and Thesmo Victress; 3d, T. Dolen's Daisy.

BOSTON TERRIERS.—*Dogs:* 1st, J. B. Miller's Jack Dempsey. *Bitches;* 1st, Thesmo Kennels' Christie; 2d, J. B. Miller's Rose; 3d, Mrs. W. Mc Clung's Kit.

BULL-TERRIERS.—*Dogs:* 1st and 3d, Castle Point Kennels' Tarquin and Lord Blandford; 2d, Hornell-Harmony Kennels' Harper Whisky. Vhc., T. S. Marvel, Jr.'s, Bill. *Bitches:* 1st, Castle Point Kennels' Wild Rosa; 2d, Hornell-Harmony Kennels' Daisy Bell. *Puppies:* 1st and 2d, Castle Point Kennels' Castle's Lass and Lassie; 3d, Hornell-Harmony Kennels' Harper Joe.

FOX-TERRIERS.—*Dogs:* 1st, E. Bird's Sentinal; 2d, Dr. J. Belt's Hillside Royal; 3d and hc., Mere Kennels' Mere Growler and Mere Dusky. Res., Storm King Kennels' Brockenhurst Quick. C., Mrs. Sheldon's Spot. *Bitches:* 1st, J. A. Finlayson's Rose Hill Madgy; 2d, 3d and hc., Mere Kennels' Mere Cleo, Mere Tansy and Mere Primrose. C., J. B. Miller's Mrs. Domono. *Puppies:* 1st and 2d, Mere Kennels' Mere Bunco and Mere Tansy; 3d, vhc. and c., Thesmo Kennels' Thesmo Marion, Thesmo Flora and Thesmo Boy. Hc., C. E. Leicht's Trilby.—WIRE-HAIRED —1st, J. B. Miller's David B.

SKYE TERRIERS.—*Dogs:* 1st and 2d, G. Heritage's Dirk and Sam. *Bitches;* 1st and 2d, G. Heritage's Princess May and Net.

BLACK AND TAN TERRIERS.—*Dogs:* 1st, Castle Point Kennels' Romeo; 2d and 3d, New Windsor Kennels' Jack and Jill. *Bitches:* 1st and res., Castle Point Kennels' Mollie and Judy; 2d, J. Riker's Nellie Bly. Vhc., F. Knapp's Job.

MANCHESTERS.—1st, 2d and 3d, Black and Tan Kennels' Dandy, Tony and Flash. C., E. A. Palmer's Prince.

COLLIES.—*Dogs:* 1st and 2d, Woodlawn Kennels' Hempstead Chief and Woodmanston Trefoil; 3d, Wilford Kennels' Wilford Duffy. Res. and hc., S. L. Stewart's Doctor David and Robie Burns. *Bitches:* 1st, 2d and 3d, Woodlawn Kennels' Hempstead Dorothy, Ormskirk Susie and Woodlawn Sunset. Res., S. L. Stewart's Newburgh Queen. Vhc., J. A. Finlayson's Lista. Hc., R. Buckle's Valron. *Puppies:* 1st and vhc., R. Buckle's Victoria and Albert; 2d and c., S. L. Stewart's Clyde Alexander and Newburgh Fan; 3d and hc., Wilford Kennels' Wilford Laddy and Wilford Scot.

WATER SPANIELS.—*Dogs:* 1st, Miss Anabel Green's Dennis; other awards withheld. *Bitches:* 1st, Miss Anabel Green's Hogan's Nell.

FIELD SPANIELS.—*Dogs:* 1st and 2d, Miss Anabel Green's Fashion and Music; 3d, J. A. Delaney's Bob. Res., Storm King Kennels' Kaiser. *Bitches:* 1st, Miss Anabel Green's Meg. *Puppies:* 1st, Hornell-Harmony Kennels' Worker.

COCKER SPANIELS —*Dogs:* 1st, F. M. Kitchel's Jasper; 2d, G. Green's Bambo; 3d, F. W. Kitchel's Jinks. Vhc., Hornell-Harmony Kennels' Got in Now. *Bitches:* 1st, Miss Whitehill's Bebe; 2d and 3d, F. W. Kitchel's Dorothy Parsons and Susannah Herrick. Res., G. Greer's Corrie. Vhc., J. Descroft's Nell, G. Greer's Marjory G. Hc., J. Descroft's Flora. C., J. M. Meillisker's Trilby.

The special for the best kennel of spaniels used for sport was won by Miss Anabel Green.

KING CHARLES SPANIELS.—*Dogs:* 1st, 2d and 3d, E. H. Morris's Dixie, Trip and Trot. *Bitches:* 1st and 3d, E. H. Morris's Union Nell and Union Till; 2d, Mrs. F. R. Jones's Molly. *Puppies:* 1st, E. H. Morris's Union Trilby.

BLENHEIM SPANIELS.—*Dogs:* 1st, E. H. Morris's Chiselhurst Hero. *Bitches:* 1st, Mrs. F. R. Jones's Dorothy; 2d, E. H. Morris's Lady Pippin. *Puppies:* 1st and 2d, Mrs. F. R. Jones's Neddy and Daisy.

PRINCE CHARLES SPANIELS.—1st, Miss Mary Oakley's Punch.

RUBY SPANIELS.—1st, withheld; 2d, R. Herman's Sally.

JAPANESE SPANIELS.—*Dogs:* 1st, Mrs. F. R Jones's Myoji. *Bitches:* 1st and 2d, Mrs. F. R. Jones's Pansese and Shibati. *Puppies:* 1st, Mrs. F. R Jones's Ko Ko.

YORKSHIRE TERRIERS.—*Dogs:* 1st, Edwin H. Morris's Union Jim. *Bitches:* 1st, George Heritage's Princess; 2d, Edwin H. Morris's Union Belle.

PUGS —*Dogs:* 1st, Hornell-Harmony Kennels' Tom Ballantine; 2d, Fred Harrison's Timker. Res., J. Duscroft's Bismarck. Vhc., Thesmo Kennels' Baby Thesmo and Thesmo Trix. *Bitches:* 1st, 2d and c., Thesmo Kennels' Thesmo Midget, Thesmo Linnie and Thesmo Hattie; 3d, J. J. Lahay's Gift. Res., H. E Clark's Beauty. Vhc., Frank Lynch's Nellie. *Puppies:* 1st, H. E. Clark's Kug; 2d, 3d, hc. and c., Thesmo Kennels' Mc's Gift, Hattie, Beauty, Billie and Babe.

MEXICAN HAIRLESS.—*Dogs:* 1st, Thesmo Kennels' Thesmo Mexico; 2d and 3d, Anna Hyde's Shoestrings and Brownie.

MISCELLANEOUS.—Equal 1st, Dr. Stansbury's Bycroft Paddy (Welsh terrier), Castle Point Kennels' Blackey (Pomeranian), Joe Carver's Ben (smooth collie), Woodlawn Park Kennels Dewr (Welsh terrier) and Boxer II. (bobtail); 2d, Hornell-Harmony Kennels' Mephisto Dick (Welsh terrier).

HANOVER.

Omaha Awards.

MASTIFFS.—CHALLENGE—*Bitches:* 1st, C. E. Bunn's Sinaloa.—OPEN —*Dogs:* 1st and 2d, C. E Bunn's Marquis and Rossington. Vhc. res., J. P. Davenport's Sraosha. Vhc., E. Ganster's Ganster's Bruno. *Bitches:* 1st and 2d, C. E Bunn's Maides and Jean. Vhc. res., E. L. Marston's Bonnie Comedy.—PUPPIES —*Bitches:* 1st, J. P. Davenport's Braska's Jap; 2d, F. E. Smith's Jule K.

ST. BERNARDS.—ROUGH-COATED—*Dogs:* 1st, C. A. Pratt's Le Prince; 2d, C. D. Sutphen's Alton III. Vhc. res., J. R. Hurlbut's Alton Boy. Vhc., M. Yost's Saffo, T. Hoctor's So. Omaha Chief. Hc., W Cattin's Duke of Omaha, D. E. May's Grover May. C., E. S Mitchell's Claudio M. *Bitches:* 1st and 2d, A. C. Shallenberger's Alta Berna and Flora Lomond. Vhc. res., Orchard Kennels' Topeka Belle.—PUPPIES—*Dogs:* 1st, H. T. McCormick's Prince McC. *Bitches:* 1st and vhc., E. S. Mitchell's Melro-Sylvia and Sylvia's Lola; 2d, T. Hoctor's Queen Irene.

ST. BERNARDS—SMOOTH-COATED.—CHALLENGE—*Dogs;* 1st, A. C. Shallenberger's ch Melrose. *Bitches;* 1st, A. C. Shallenberger's Pratt's Belle.—OPEN—*Dogs:* 1st, H. L. Robinson's Barre; 2d, A. F. Kramer's Patrician. Vhc., res., H. M. Jones's Melkyrie. Vhc., J. J. Galligan's Ponca. Hc., Orchard Kennels' Franald. *Bitches:* 1st, E. S. Mitchell's Lady Sylvia; 2d, A. C. Shallenberger's Melba.—PUPPIES —*Dogs:* Withheld, A. C. Shallenberger's Navarre. *Bitches:* 1st, A. C. Shallenberger's Melba; 2d, E. S Mitchell's Lady Fernmore.

GREAT DANES.—*Dogs;* 1st, H E. Wright's Prince Victor; 2d, Orchard Kennels' Osceola Boy. Vhc. res., and com., H. L. Robinson's Julius Cæsar and Kansas Boy Vhc., J. C. Ford's Kaiser. Hc; A. Rhys's Pluto. *Bitches:* 1st, Kansas City Kennels' Kitsie; 2d and c., H. L. Robinson's Heroine and Irene W. Vhc., res. and hc., J. C. Ford's Ina and Lolo. Vhc., G. W. Schenk's Alexandra and A. K. Wolfe's Princess Lucile.—PUPPIES—*Dogs:* 1st and 2d, A. K. Wolfe's Judge D. and Colonel Cody. *Bitches:* 1st, A. K. Wolfe's Trilby; 2d, J. C. Ford's Olga. Res., Orchard Kennels' Santa.

NEWFOUNDLANDS.—1st and vhc., J. P. Jackson's Duke II. and Bessie; 2d, F. Lobberg's Grover. Hc., Dr. E. Holovtchiner's Jack Muff.

BLOODHOUNDS.—CHALLENGE—*Dogs:* 1st, R. Williams's Jack Shepard. *Bitches;* 1st, R. Williams's Vigilant.—OPEN—*Bitches:* 1st and 2d, R. Williams's Lady Marjorie and Cymbeline. *Puppies:* 1st, R. Williams's Cymbeline.

DEERHOUNDS.—*Dogs:* 1st, C. H. Ballinger's Hiland Maxey.

GREYHOUNDS.—*Bitches:* 1st, G. H. and F. C. Moore's Princess.

RUSSIAN WOLFHOUNDS.—*Dogs:* 1st, C. H. Ballinger's Osmaday.

CHESAPEAKE BAY DOGS.—*Puppies:* 1st, R. Costello's Dick's Barney.

POINTERS.—CHALLENGE—*Dogs* (under 55lbs.): 1st, Eldridge Kennels' Rush of Lad.—OPEN—*Dogs* (over 55lbs.): 1st, I. Coe's Bob; 2d, W. A. Predhomme's Royal Flush. Res., J. J. Rooney's Master Kent. Vhc., J. C. Mahoney's Sickles. *Bitches:* 1st, T. A. Case's Dido II.; 2d, Eldridge Kennels' Molton Bee. *Dogs* (under 55lbs.): 1st, Eldridge Kennels' Springside Faust. *Bitches:* 1st and 2d, W. B McCloud's Kate Nasoand Speckle Gown. Vhc. res., Eldridge Kennels' Eldridge Nell. Vhc., W. W. Watt's Bird.—PUPPIES—*Dogs;* 1st, L. Young's Max.

ENGLISH SETTERS.—*Dogs;* 1st, C. E. Johannes's Smoke II; 2d, J. B. Hungate's Dixie Val Jean. Vhc. res. and vhc., Nebraska Kennels' Rustler and Saxon King. *Bitches:* 1st, Kansas City Kennels' Sue II.; 2d, L. P Utterback's Zeno Gladstone. Vhc. res., Nebraska Kennels' Easter Lily.—PUPPIES—*Dogs:* 1st, Nebraska Kennels' Dave; 2d, R. B. Cottrill's Cottrill's Dan.

IRISH SETTERS.—CHALLENGE—*Dogs:* 1st, W. L. Washington's Finglas. *Bitches:* 1st, W. H Eakins's Bessie Finmore.—OPEN—*Dogs:* 1st, Kansas City Kennels' Winnebago Jap; 2d, T. Brennan's Jack B. Vhc. res., W. L. Washington's Dick Finglas. Vhc., W. Harte's Red Duke. *Bitches:* 1st, Claremont Kennels' Pride's Beauty; 2d and vhc. res., W. L. Washington's Ruby Glenmore II. and Nancy Finglas.

FIELD SPANIELS.—*Dogs:* 1st, J. D. & D. M. Chamberlin's Omaha Black Duke; 2d, W. R. Morris's Corker. Vhc., D. W. Haynes's Bob Ingersol.

COCKER SPANIELS.—CHALLENGE—ANY COLOR—*Dogs:* 1st, Concord Cocker Kennels' champion Pickpania.—OPEN—BLACK—*Dogs:* 1st, Concord Cocker Kennels' Woodland Mack; 2d, Mrs. Frank L. Kemp's Master Waggles. Vhc. res., J. J. Pailbin's Skalper. Vhc., D. W. Haynes's Bob Ingersol. Hc., C. R. Courtney's Courtney's Fancy. *Bitches;* 1st, George Douglas's Woodland Princess; 2d, Concord Cocker Kennels' Miss Mae. Vhc. res., J. D. & J. M. Chamberlin's Flossie Wilkshire. Vhc., W. F. Carson's Dinah C. Hc., Howard Kennels' Black Belle.—ANY COLOR—OPEN—*Dogs;* 1st, Kansas City Kennels' Puck; 2d, Concord Cocker Kennels' Red Justice. Vhc. res., J. H. McTague's McTague's Cherry. Vhc., W. J. Robinson's Obo. *Bitches:* 1st, J. H. McTague's Tick 2d; 2d, W. J. Robinson's Nancy Belle.

BEAGLES.—*Bitches:* 1st, Guy D. Welton's Kittie Clover.

DACHSHUNDS.—*Dogs:* 1st, L. O. Seidel's Jay S.; 2d, D. W. Haynes's Pincher. Vhc. res., A. Nelson's Rolf Krage. *Bitches:* 1st, L. O. Seidel's Nellie S.; 2d, J. Wedekind's Red Tatzi Zur Horst.

COLLIES.—*Dogs:* 1st, J. Purse, Jr.'s, Rab Thompson; 2d, R. P. Slattery's Clifford. Vhc. res., W. A. Paxton's Programme. Vhc., G. H. & F. C. Moore's Omaha Gideon and R. Costello's Dick's Sport. C., J. N. H. Patrick's Muff. *Bitches:* 1st, S. B. Stannard's Lady Gay; 2d and vhc. res., J. Purse, Jr.'s, Rosanna and Prairie Maid. Vhc., G. H. & F. C. Moore's Omaha Baby.—PUPPIES—*Dogs:* 1st, S. B. Stannard's Bob Bruce; 2d, C. E. Clark's The King. Vhc. res., J. H. Vance's Hugo. *Bitches:* 1st, J. Purse, Jr.'s, Nellie R.; 2d, G. H. & F. C. Moore's Omaha Queen. Vhc. res., J. H. Vance's Hilda.

BULL DOGS —*Dogs:* 1st, H. E. Moore's Wabash Cinders.

BULL TERRIERS.—*Bitches* (35LBS. AND OVER): 1st, Kansas City Kennels' White Rose; 2d, J. T. Evans's Gem.—(UNDER 30LBS.): 1st, Chautauqua Kennels' Chautauqua Nellie.

FOX-TERRIERS.—*Dogs;* 1st, F. C. Ouellette's Dux; 2d and vhc. res., C. E. Bunn's Piper and Streak of Luck. Vhc., R. B Cottrill's Von K. Parr, C. F. Frenzer's Belmont Democrat. Hc., Mrs. F. L. Kemp's Boxer, T. D. May's Wanaset Baron, A. Rhys's Woodbury Tom Tom. *Bitches:* 1st, F. W. D'Evelyn's Langtry B.; 2d, F. C. Ouellette's Versus. Vhc. res., C. E. Bunn's Judgment's Reward. Vhc., C. F. Frenzer's Lizzie and Finchley Minx, A. Rhys's Woodbury Raffle. Hc., C. F. Frenzer's Finchley Rosa. C., A. Rhys's Woodbury Baggage.—WIRE-HAIRED —*Puppies:* 1st and 2d, F. C. Ouellette's Dux and Versus. Vhc. res., C. E. Bunn's Miss Pitcher. Vhc., H. E. Moore's Beau.

SCOTCH TERRIERS.—CHALLENGE —1st, R. McDonald's Merry Coll. Vhc. res., A. F. Hertzler's Bessie.—OPEN—*Dogs:* 1st and 2d, A. F. Hertzler's Kiltib and Rattler. *Bitches:* 1st, R. McDonald's Ooloo; 2d, A. F. Hertzler's Blossom.

IRISH TERRIERS.—*Bitches:* 1st, American Kennel Exchange's Briggs Breeze.

BLACK AND TAN TERRIERS.—CHALLENGE—1st, C. Wilson's Queen III.—OPEN—*Dogs:* 1st, C. S. Stewart's Play Boy. *Bitches:* 1st and vhc., F. H. Hoyt's Mab and Betsy; 2d, Kansas City Kennels' Rosette. Vhc. res., R B. Cottrill's Des Moines Girl. Hc., C. S. Stewart's Flossy S. II

SKYE TERRIERS.—1st, W. B. Rutherford's Bruce.

YORKSHIRE TERRIERS.—*Dogs:* 1st, S. B. Stannard's Charlie.

TOY TERRIERS.—*Dogs:* 1st, T. Briardy's Grover B. *Bitches:* 1st and 2d, G. H. & F. C. Moore's Topsey Bird and Dotty Dimple.

PUGS.—CHALLENGE—*Dogs:* 1st, Howard Pug Kennels' Drummer.—OPEN—*Dogs:* 1st, Howard Pug Kennels' Young Penrice; 2d, Major Jno. H. Cryer's Cremora King. Vhc. res., Mrs. Jerome Seibert's Duke Seibert. *Bitches;* 1st, vhc. res., Howard Pug Kennels' Hooker and Madia; 2d, Major Jno. H. Cryer's Cremona Queen. *Puppies:* 1st, vhc. res., Howard Pug Kennels' Young Drummer and Perfection; 2d, J. C. Whinnery's Bob.

KING CHARLES AND OTHER TOY SPANIELS.—*Dogs:* 1st, A. M. Goldsmith's Calumet St. Cyd.

BLENHEIM SPANIELS.—*Dogs:* 1st, Kansas City Kennels' Bobby Burns; 2d, vhc. res., G. H. & F. C. Moore's King of Diamonds and Omaha Duke. *Bitches:* 1st and 2d, G. H. & F. C. Moore's Omaha Beauty and Omaha Ruby.

ITALIAN GREYHOUNDS.—CHALLENGE—1st, F. H. Hoyt's Byron.—OPEN—*Dogs:* F. H. Hoyt's Tee Bee. *Bitches;* F. H. Hoyt's Trixie. *Puppies:* 1st, F. H. Hoyt's Io.

CHIHUAHUA TERRIERS.—1st, Dr. E. Holovtchiner's Nip.

Monmouth Fur Club.

THE members of the Monmouth Fur Club will gather at the town of Buckfield, Oxford county, Me., to participate in the third annual autumn meet of the club beginning Oct. 15 and continuing to the following Friday. The election of officers will take place on the evening of Oct. 14 at Grand Army Hall. The members of the Brunswick Fur Club have been invited, and these, added to the crowds of hunters expected, have induced the club to make arrangements for a large number of visitors. The low rate of $1.50 per day for man and dog has been secured. Notices of arrangements will soon be ready to send out by the secretary. Wednesday night will be devoted to a game supper with covers set for 100 hunters. Ten new members will be added on Monday. Mr. George Mitchell, Chase's Mills, will act as master of hounds. The members of the pedigree committee are C. R. Chandler, Turner; T. Gledhill, Lewiston, and Mr. Mitchell. President Fred. C. Mower at the October meeting will report on Dixfield relative to it as a place for the midwinter hunt in February. All the arrangements are progressing favorably and rapidly for the forthcoming meet.

The Bloodhound.

CONCORD, N. H.—*Editor Forest and Stream:* It is a matter of tradition among men who have fancied, cherished, and bred dogs in England and America that the bloodhound is the ancient hound of England and the progenitor of all hounds which hunt by scent. The ancient dog was a slow mover, and was doubtlessly selected generation after generation, and bred for the pre-eminent powers which he exhibited in the pursuit of human beings, in following their trails closely and enduringly, and in his courage when aroused to battle. The abilities and instincts of the animal without doubt were what suggested and established the name bloodhound which the dog now bears. Unfortunate it is that the name is suggestive of a ferocity which the dog does not possess constantly. Only when aroused in the pursuit or when battle is offered does he show the desperate resolution and formidable powers which he holds dormant in time of peace or about the home of his master.

In ancient times in England the bloodhound had an extensive and common use in the pursuit of poachers, sheep thieves, murderers and other malefactors, many crimes then being capital offences which now are treated as misdemeanors. His precision in following wounded game also won him the consideration of the hunter. Hounds then were valued both for the spirit and rejoicefulness of their voices, their clarion notes infusing life into the chase, and for the success in bringing down the game, be the same small or great.

In the old times there is little room for difference of opinion as to the speed of the bloodhound. It is certain that he was a slow dog, deliberate, relentless, vindictive. Those of our time are not fast, but they are a great improvement on the ancient hound. His temper at times was sharp, vindictive, held in check by awe of his master, yet often surlily manifested toward strangers. He was a most formidable agent in keeping the negro in subjection in slavery days, as once a pack was on a runaway's trail his escape was hopeless. Swamps, open fields, switch cane, rivers, all failed in any way to check the pursuit of the noisy pursuit. The negro's flight was on foot, his scent was strong, and his final escape from the vengeful furies was to climb a tree where the pack he'd him at bay till the overseers arrived, when he was taken back to bondage. The common use to which the bloodhound was put in the capture of slaves in *ante bellum* days brought the bloodhound into undeserved disrepute and brought a stigma on him which he has carried even to this day.

In war the bloodhound has a small place in the history of tumultuous times in Florida. During the Seminole war, President Van Buren, through persuasion and advice, consented to the use of bloodhounds in tracking the Indians through the almost inaccessible everglades of Florida, and for this purpose many were imported from the isle of Cuba, where bloodhounds were valued highly for the pursuit of slaves. The experiment was an entire failure, the dogs absolutely refusing to pursue the Indians. Seemingly, the special breeding for negro hunting had been so firmly established that the dogs knew nothing of the chasing of Indians.

The bloodhound is sedate and majestic in his deportment, with a pervading tincture of sadness in his demeanor. In olden times he was spotted and white, but now the recognized color is black and tan.

The dog is strongly built, head large and domed, ears generously large and flexible, so large that sometimes they are an incumbrance. The red and bleary eyes of the bloodhound, with the raw surfaces of the eyelids exposed, give him a most truculent appearance, almost a look of ferocity. It is doubtful if there are any of the genuine bloodhounds in this country, as the purity of the Southern hounds has been disputed, I have been told.

H. L. W.

POINTS AND FLUSHES.

A correspondent has consulted us on a case which is no doubt of great scientific importance, and also, to a certain extent, of interest to breeders. It seems that our correspondent's dog was bitten by a stray dog. The wound healed up, and he seemed to have not suffered any ill effects from the bite. He was shortly afterward visited by a bitch, and appeared to be in the best form, but in a few days signs of ill health were noticed, and he ultimately died of rabies. When the dog served the bitch his blood was beyond doubt already tainted with the virus of rabies, and the question has been asked if that would detrimentally affect the puppies and possibly also the bitch. We submitted the case to Mr. Alfred Sewell, M. R. C. V. S., and his reply is, "So long as the dog did not bite the bitch she is perfectly safe, and so the puppies will be if there are any the result of the service, and I see no reason why there should not be."—*Stock-Keeper (England).*

Mr. Z. T. Baker, agent for the Meadowmere Kennels, Southampton, L. I., reports that he has made a number of sales during the past summer at good prices, and that he has received many inquiries for fine poodles. He adds that their prize dogs are in excellent condition. The prize list for October can be obtained by addressing Mr. Baker, 13 William St., Room 1006.

To those who mistakenly favor us with anonymous queries, it may be proper to mildly hint that answers may not be promptly forthcoming. It is not unreasonable to assume that a gentleman would hardly expect an answer to a query to which he is ashamed to affix his signature, or one which he values so lightly that he sends it forth from vacuity, or even one which he is too tired to sign.

We are informed that Mr. Alfred F. L. Geddes, Ottawa, Can., a well-known dog and poultry fancier, died on Sept. 22, of appendicitis and tumor, at the age of 33 years. He was conspicuous in show circles in Canada in an official executive capacity, and judged both at poultry and dog shows. In the dog world he was chiefly identified with cocker spaniels, though he has given attention to Irish setters, Irish terriers, black and tan terriers, beagles and English setters.

We are indebted to Mr. John G. Barker, San Francisco, Cal., for a portrait of his St. Bernard dog California Bernardo, a noted winner on the Pacific coast.

As showing the spirit which some men have when others win, the following excerpt is taken from a personal letter received from Mr. W. W. Titus: "I had hoped that Minnie might be able to win the "Champion", but a letter informs me that Nesbitt won it with Jingo. Well, hurrah for Nesbitt and Jingo. I am certain they would not have got it if they had not won it, and believing in the spirit of doing to others as I would be done by, I am glad that Nat won if I could not, which it seems I couldn't. I am glad above all things that a pointer won, for I like fair play and like to see the honors divided. I am above all glad that Jingo won, because Mr. Dexter bred him, and a fairer man never lived, nor a man who is better entitled to all the honors the pointers are winning, for at great expense he fought with them until he made the pointer men regain confidence by his success, and saved them from obscurity. Hurrah for Uncle Edward, say I; may his shadow never grow less."

We are informed that the arrangements attempted by the New Jersey Kennel League for the holding of a bench show at Newark this fall have fallen through, and that therefore the League will not make any further attempt toward holding a show this year.

St. Cloud Kennels, Valley Stream, L. I., offer Irish setters. Oak Grove Kennels, Moodus, Conn., offer Irish and English setters and Chesapeake Bay dogs. Box 204, Cookstown, Ont., offers beagle. Geo. Douglas, Woodstock, Ont., offers cockers. P. Spahn, Bloomington, Ill., offers English setter. Republican, Perth Amboy, N. J., offers pointer. Rochdale Kennels, Newton, Mass., offers fox-terriers. M. M. Lamb, Branchport, N. Y., offers English setter. J. Curly, Fitchburg, Mass., offers coon dog. Box 63, Cincinnati, O., offers broken setter and pointer. Chas. E. Lewis, Niagara Falls, N. Y., offers Japanese spaniel. S. Berry, Brooklyn, N. Y., offers broken pointers. J. H. Miller, Christiana, Pa., offers rabbit dogs.

Mr. W. Tallman, Plainfield, N. J., intends to go South to train a string of dogs, some for competition in the trials. He informs us that he desires three or four more to train. Every one will be glad to welcome "Billy" back to the guild.

In respect to the purchase of a dog and the business procedure necessary to observe in that relation, we recently advised a correspondent to deposit the purchase money with the express company which would have charge of the carriage of the dog, and in the event of the dog proving satisfactory the money would be paid to the seller, otherwise the money would be returned less the express charges. Our correspondent replied as follows: "I thank you most kindly for your suggestions about depositing money with express company. That's what I have been doing all summer, but no one seems to want to do business that way, for it is generally the last I hear of it. I have been bit once and I have had enough. If these people have what they claim, I can see no reason why they should object." When an owner will not ship a dog on approval with all the purchase money deposited for security, it is an excellent juncture at which the would-be purchaser can stop all negotiations. It is better to have loved a dog and lost him by keeping one's money than never to have loved at all.

Toronto Show.

Editor Forest and Stream:

I beg to call attention to an error in your report of the Toronto dog show, when you state the judging was rather late in commencing on Monday. This is not so, as our advertised time was 3 o'clock, and the judging commenced sharp on time, in fact, we were ready at ten minutes before and I had to request Mr. Mortimer to wait till time was up before starting. C. A. STONE, Sec'y.

Mascoutah Kennel Club's Dates.

CHICAGO, Sept. 28.—*Editor Forest and Stream:* We have selected the dates March 10 to 13, 1896, for our next bench show. JOHN L. LINCOLN, Sec'y.

Coursing.

SHEYENNE VALLEY COURSING MEET.

THE first coursing meet of the fall circuit was held at Sheldon, N. D., Sept. 24, 25 and 26, by the young association of greyhound lovers organized under the name of the Sheyenne Valley Coursing Club. The meet was so pleasant and successful that it is fair to hope that another interesting fixture has been established. Of late the coursing scene has in some measure shifted from Kansas to Dakota, or at least has included Dakota. When one can, as is the case this fall, go to Sheldon meet, then drop over to Aberdeen the following week, and the week after go to Huron, all points not far apart, he has more inducement to take a long journey for himself and string of dogs than could exist at any one meet, however good. The Sheyenne Valley Club has about 100 members of a hustling sort, and there is no reason to suppose that they will rest contented with one meeting. On the contrary, the greyhound idea is growing in Dakota, and we may rather expect more meetings than fewer. A club is to be organized at Buffalo, near Casselton, N. D., and these gentlemen hold a meet before another year has passed. Perhaps next year will see a month of fall coursing in the Dakotas.

The Sheyenne Valley Club expected to fill a stake of 32 greyhounds, and offered on that basis a card of $312 to be divided, $100 to be added to the filled stake, and $20 to be added to a consolation stake for dogs thrown out in the first round, the re-entry to be $2, the All-Age entry $5. Only 22 dogs were entered, however, so that the winner of first, instead of taking $104, drew down somewhat less. It was intended to divide the purse, 40 and 25 per cent. for the first and second, 12½ per cent. each for third and fourth, the next four dogs to divide balance equally, the club retaining 10 per cent. for expenses out of all prizes. The scale followed was similar to above, so that several dogs got a bit of the purse.

Sheldon is a typical and pleasant Dakota prairie town. The country about is quite level, except for a ridge of sand hills six or eight miles distant. The grounds are unlimited and are ideal for coursing and riding, with the advantage that the sport begins right at the edge of town, with no tedious drive night and morning. In fact the best sport was had quite near town, within two or three miles. The reason for this is perhaps to be found in the fact that the prairie chicken shooters of that region have formed the habit, perhaps cruel and useless, of killing all the jack rabbits they see, and naturally they do not hunt for the chickens so close to town. It can not be said that the hares were found in an abundance such as a coursing meet demands, and this fact is the only thing that marred the pleasure of the occasion. On several different courses the slipper was obliged to tramp over two hours without a hare being started, and at times this made the sport very dismal. Again, on two different days, near town, a little strip of country was found near the crops, where the jacks were started almost at will and a number of courses rapidly run off. If the shooters who hunt out at Sheldon will cease shooting jacks for one season, there need be not the slightest fear that the supply will be abundant for next year's meet. The hares seemed to be lying near the stubble and were not found in numbers far out on the prairie lands.

For work such as this the line of beaters needed to be well ordered and careful, and this I am sure all the spectators tried to be. It was the best natured and most orderly crowd one has ever seen at an initial coursing meet, and next year will be better yet. On the first day a couple of would-be sports from Lisbon caused much annoyance by their drunken uproariousness, but there was none of that thereafter. A larger line of beaters would have been desirable, especially on the third day. On that day a terrific windstorm was in progress, and it was so very cold and disagreeable that it is a wonder any spectators at all came out. For the first two days the weather was perfect—not chilly, but cool and overcast.

The club was fortunate in securing the services of a good judge and a good slipper. Mr. Wm Stephenson, of Traer, Iowa, is a coursing judge and a son of a judge. He is a good rider and has a level head, and can see both sides in a competition, a very useful qualification for a judge. With his decisions there was no fault found by any man able to see both sides of the competition, and one has no criticism whatever to offer. If he always does so well, we have no better judge in the saddle. As much, too, can be said for the slipper, Jos. Dodd, of Farwell, S. D., who has evidently been with the greyhounds before. He was cool and laid his dogs on well and deliberately, and above all was able to do the incessant walking after scarce hares, the hardest and longest tramping one has ever seen asked of a slipper at a coursing meet. Two hours and a half of rapid walking, without seeing a hare, is rather heart-breaking work.

Sheldon has good water and good society, which not all Western towns can claim. Her people are above all kind and hospitable, and visiting sportsmen are unanimous in the wish to go there again. The single hotel did not accommodate many of the crowd, and private houses were called into liberal requisition, an arrangement found very pleasant by those so billeted.

Quality of the Entry.

It was impossible to help noting the improvement in greyhound quality the Sheldon entry showed over those of the early meets of six or eight years ago. The Dakotas are full of good greyhounds now, and of men who know what a greyhound should be. Mr. A. P. Slocum, of Oakes, N. D., had in five dogs, how good the synopsis of the racing will show. Mr. H. C. Waterhouse, of Lisbon, N. D., was on hand with two. Mr R. Strachan with three. Dr. Van Hummel three good-looking and good-running ones in, and Mr. Charlton, handling for Mr. N. Whiting, of Minneapolis, had two clinkers in Chartist and Minnehaha, the former belonging to Mr. A. McElrath, of St. Louis, to whom Mr. Whiting recently sold him. In Marello Dr. Aylen has a good hound worth watching.

The Club has Prospects.

The Sheyenne Valley Club has good prospects. What with its environments and its personnel, one would rather bestow a general praise, but cannot help saying that the club would be a success if it had only one man in it, to wit, its president, Dr. Jas. P. Aylen, who was all things and everywhere, always active and unruffled. Each club needs such a man, and is safe when it has him. For Mr. Waterhouse, secretary, and all the members of the active committee, only unqualified approval can be extended for their hard and unselfish labors. Now if these gentlemen will only save their jack rabbits by local exhortations, and if they will please have their sand storm come one day later next year, it is safe to say that Sheldon will hereafter rank in the front among the coursing towns in every pleasant way.

The Runnings.

The drawing was as follows:

Championship Stake.

Marello, r. d. (Rendezvous—Roy's Canary).....Dr. Jas. P. Aylen.
Van Otjen, w. and br. d. (Lord Neversettle—Verdure Clad).....Van Hummel.
Crooked Jim, r. d. (Jim of the Hill—Roy's Canary).....A. P. Slocum.
Skip, b. and w. d. (Fitz Rowland—Fleetfoot).....Robt. Strachan.
Chit Chat, br. d. (Fitz Trife—Chatter).....Dr. Van Hummel.
Ravolt, bl. b. (Voltaire—Raven).....A. P. Slocum.
Chartist, r. d. (Glenkirk—Innocence) N. P. Whiting vs. for A. McElrath.
Roy F., f. d. (Unknown).....Lou Grange.
Jack, w. d. (Unknown).....Larry Voisen.
Fritz Rowland, w. and r. d. (Lord Neversettle—Partera) .R. Strachan.
Oakes, b. and w. d. (Voltaire—Raven).....A. C. Waterhouse.
Volucia, bl b. (Voltaire—Raven).....A. P. Slocum.
Caliph, w. and b. (Voltaire—Raven).....A. P. Slocum.
Blizzard, r. d. (Unknown).....Dr. Davis.
Lady Misterton, bl b (Millers Rob—Scandal).....A. P. Slocum.
Gip, w. and b d. (Fritz Rowland—Fleetfoot).....R Strachan.
Minnehaha, r. b. (Glenkirk—Innocence).....N. P. Whiting.
Venture, b. b. (Voltaire—Raven).....A. P. Slocum.
Rendezvous, w. and b. d. (Misty Glendyne—Daisy Dublin) A. P. Slocum.
Revenue, blue b. (Rendezvous—Mayflower Queen)..H. C. Waterhouse.
Flora, f. b. (Jim—Flo).....Wm. McMurchee.
Van Ollie, b. and w. b. (Gem of Season—Wild Rose) Dr. Van Hummel.

First Series.

MARELLO—VAN OTJEN.—Marello won handily.

CROOKED JIM—SKIP.—The white collar showed ahead for 60yds. only, Jim winning after the best of exchanges in a long course. No kill.

CHIT CHAT—RAVOLT.—An evenish course, with plenty of scoring, but little speed asked of either. Chit Chat won.

CHARTIST—ROY.—The Minneapolis dog, Chartist, was quite too fast for the unknown that wore the white collar. The latter was small company in a long course over plow and grass. No kill. Chartist won.

JACK—FRITZ ROWLAND.—Jack shows much of the bulldog, and was called the "bulldog" as they went to slips. He fought Fritz and bit him badly. They were led in singles. Jack is a good killer and can perhaps get to a hare once in a way, but he was not asked to do much in the short course except to kill to Fritz's trip of the hare. Fritz Rowland won.

OAKES—VOLUCIA.—A long and pumping course over all sorts of country, grass, plow and road, with plenty of work. There was no kill, though two loose greyhounds joined in. Each dog scored and exchanged, the staying power of Volucia carrying her to the front at close. Volucia won.

CALIPH—BLIZZARD.—It was all Caliph, which did all and killed in his stride handsomely in a brief course, showing himself much a courser. Caliph won.

LADY MISTERTON—GIP.—Lady Misterton was all the clever, and was at her hare all the time. Gip falling out of it when placed. A long, hard course. No kill.

MINNEHAHA—VENTURE.—These ran a red hot even course, which was rightly given undecided. It was then toward

evening and they did not go in again till the following morning. They again proved very evenly matched then. Venture was first up and there was even trading. The kill won. Minnehaha killed and won.

RENDEZVOUS—REVENUE.—This race was by no means for Revenue only. Rendezvous led up handsomely and showed better at the turns. Revenue was placed to score and there was a pretty bit of coursing over some low rolling ground, the dogs drawing well away from the judge. All at once the dogs stopped and threw up their heads, the hare having gone to earth. On riding up the owner of Rendezvous discovered that the dog had broken his hind leg, probably in the reach for the hare at the earth, though he sprang up eagerly as if he did not know he was hurt. Rendezvous has won and divided in stakes before, and had he never run a race but this one would have showed himself a great one. It was bad fortune for Mr. Slocum to have to take him out, crippled in his first course. The same leg had been broken once before this. It was carefully set, and the dog will no doubt win other courses yet with it. It is a curious fact, but in spite of his injury he won the course in which he ran.

FLORA—VAN OLLIE.—A stiff run, late in the twilight. Ollie was faster and won.

Second Series.

MARELLO—CROOKED JIM.—A long and punishing course. Jim ran game, but was too young a dog to help Marello as he needed on the grass, plow and hard road. Marello was all the faster, and crowded the hare. Marello got a nasty fall on hard ground. This placed Jim. Marello recovered and coursed the hare ahead and on a hard road, where a jack travels best, Marello tossed up his hare high in the air and killed. Both dogs were much distressed. Marello won.

CHIT CHAT—CHARTIST.—Chartist again showed a good one. He led up and was better and faster than Chit Chat, which could not steady to his turns quite so cleverly, though he killed with merit. Chartist won.

FRITZ ROWLAND—VOLUCIA.—This showed the luck of coursing. Fritz proved unable to be of any assistance to the little black bitch, which coursed the hare hard and fast, taking a lot of work out of her. Fritz drew by once on heavy plow, but at once on the pass Volucia took away the hare and drove it off a great way alone. This bitch had had a hard, long course the day previous, and was now unlucky to get another such for herself. She seemed fast enough and good to stay, but not possessed of the last degree of reserve energy to drive in and kill when close up. There was no kill. Volucia won.

CALIPH—MINNEHAHA.—Perhaps the prettiest course of the meet. Both took plenty of points and traded very evenly over an exceptionally long, doubling course. At the close, Caliph was faring better, and was leading when the hare went to earth. Caliph won, though victory was by no means a hollow one.

LADY MISTERTON AND VAN OLLIE a bye.

As the card now stood, Rendezvous being withdrawn, Mr. Slocum's Lady Misterton had a bye and Van Ollie also had a (natural) bye. It was agreed by the owners to run these two together for their bye, thus saving one course. This was done.

Third Series.

MARELLO—CHARTIST.—Marello had had little care since his fall in the morning, and went into the slips limping with a strained shoulder. It was all Chartist, over a short and swift course, he killing.

VOLUCIA—VAN OLLIE.—Volucia's hard and bruising courses in the morning may doubtless have been too much for her, though Mr. Slocum says she is not his best one. At any rate, though she took a go-by and led at the close, Van Ollie was quite the better over a long course, and won decisively.

CALIPH AND LADY MISTERTON a bye.

There now occurred a complication which is said to have arisen only once before in the American meets, and on which no precedent was at hand. Mr. Slocum's entry of several dogs had reached a point where he had two dogs in, each entitled to the owner's guard, and therefore to each a bye. This would pass both these dogs up to the next series without a contest. The thought of this broke the heart of Van Hummel, who began one of his series of expostulations, which are familiar on all fields where he has ever appeared. Mr. Slocum, who had at the request of the club entered several dogs, not to gobble the purses, but to fill the stakes, did not like to be asked to draw one of his dogs after paying his entry for it, and after seeing it run so near down to a winning, and it would seem he was clearly right in this, as the rules say that when an owner has two or more dogs entered they "shall be guarded throughout." The matter was referred to the committee, who referred it to common sense, and decided that while Mr Slocum had certain advantage in this guarding, his money was in the purse, and therefore paid for such advantage. The matter was decided on the American principle of fair play, that a man shall get a run for his money, and Mr. Slocum was awarded his byes. He saved one course by running the two dogs together for their bye. The beat for this course lasted two hours and a half. It was moonlight when at last a hare was started, and much a wonder how the dogs were sighted, but they took a lot of work out of the hare and Caliph killed, almost in the dark.

After return to town Van Hummel renewed the discussion over these byes, and announced his intention to protest the decision. American admiration goes out most readily to the man who casts aside quibbles and technicalities, and wants to get down to the sporting issue. John L. Sullivan is admired to-day more than his successor because he cared nothing for conditions and didn't know anything but fight. The American boat Defender would be more admired to-day had she never hoisted her protest flag. It is better to be beaten as a sportsman than to win as a quibbler and kicker. As the owner of Van Ollie had still a good dog in, it would have been far handsomer of him to say, "Go ahead; you paid your money in for both your dogs, and I'll beat you anyhow with mine." Yet this is just what he did not say, and in consequence Mr. Slocum, whose attitude throughout was fair and courteous, at length gave up the advantage of his bye and drew Lady Misterton from the stakes. In this he was perhaps not wise, but his motive was a good one. "I'll chance it with Caliph alone," he said, "and that will end the talk." He thought Lady Misterton the better of the two, but she was sick and not so fit at the time.

Fourth Series.

CHARTIST—VAN OLLIE.—These had a most dismal walk of it for over three hours without seeing a hare except one, which went away unsighted. On this one the dogs were not slipped, but Chartist broke away and for a moment ran looking for the hare. He was fortunately taken up. When finally, after the most tiresome waiting and walking, they were slipped on a good hare, Chartist stood for the run-up, but was unsighted for a moment, and they closed near at the first turn. They then made a lovely course of it with a beautiful lot of work, each going by and taking up the hare more than once, and both scoring rapidly and cleverly. After a lot of this the hare started for a hard road, Chartist now seeming to last better than his handsome, light-brindle mate. On the road it was a procession, with Chartist leading and gaining on Van Ollie, but not scoring. The hare escaped. Van Ollie made a grand showing in this course. She ran very fit. So much could not be said for Chartist, who in slips was evidently a sick dog, as he had been for two days. His showing was a good one. Chartist won, with 7 points to the good.

At this stage of the proceedings the FOREST AND STREAM representative was obliged to leave the field in order to catch the train out of town, there being only one train each day. At the time of leaving Caliph was in the slips for his bye, which would bring him in for the final with Chartist. There remained still the final course between Blizzard and Oakes in the Consolation stakes. The day had been a most discouraging one, only four hares having been found as so late an hour as 4 P. M. The line of beaters had dwindled to a few straggling vehicles, the cold, raw wind having proved too much for most of the spectators.

All-Age.

Fifth and Final Series.

SHELDON, N. D., Sept. 27.—*Special to Forest and Stream:* Chartist and Caliph divided the All-Age Stakes.—Wm. Stephenson, judge.

The Consolation Stakes.

For dogs thrown out in the first round. Six entries. This event was run off series for series with the All-Age Stakes, the fourth and final series of the Consolation, of course, falling as against the fifth and final in the All-Age.

First Series.

BLIZZARD—GIP.—Much of an exhibition of what coursing should not be, as the dogs could not close. Passing a farmyard Gip went in to get a drink at the well trough. Blizzard worked the hare down the road and turned it back. Having calmly finished his drink, Gip then went out and killed the hare. Yet this sagacity was not rewarded by the judge. Blizzard won.

FLORA—REVENUE.—Flora only led Revenue in once. Killed to merit. Flora won.

OAKES—SKIP.—A third dog joined in. Skip was passing wise and waited to see what was going to happen if he did not run quite so hard. Oakes had done plenty to win before the loose greyhound joined.

Second Series.

BLIZZARD—FLORA.—These got a poor hare—a small one—but though they scored constantly they were unable to close and kill until they had been at it apparently a quarter of an hour. On plowed ground they each scored a trip and were often in shape to kill, but could neither drive in nor steady for a pick-up. At length Blizzard killed and won.

OAKES, A BYE.—This was run with Van Otjen, not entered for the Consolation, but which was drawn out in the All-Age first series. They got a merry course.

Third and Final Series.

Special to Forest and Stream: Blizzard and Oakes divided the Consolation Stakes.—Wm. Stephenson, judge.

Blizzard is a rangy red dog, unknown, property of Dr. E. C. Davis, of Castleton, N. D. Oakes (Voltaire—Raven) is the property of Mr. H. C. Waterhouse, of Lisbon, N. D. He is a goodish-sized black and white and a strong finisher.

E. HOUGH.

909 SECURITY BUILDING, Chicago.

Yachting.

Seawanhaka Corinthian International Challenge Cup.

SPRUCE—ETHELWYNN.

THE series of international races which ended on Saturday last is a remarkable one in the history of international sport, and especially in international yachting, and it has on its merits attracted an amount of attention on both sides of the Atlantic that is in almost inverse ratio to the size of the contestants. The keen hard fighting and the interest with which it has been watched by yachtsmen and outsiders give every corroboration to two points which we have frequently insisted on in connection with the America's Cup contests, that maximum size and absolute speed are in no way essential, but that the true requisites are that the contending yachts shall be as nearly as possible equal in measurement—and fast in their own class. To divert for a moment from the main story and taking up the old argument against the 70-footers and for the 90-footers in Cup racing—that the Cup should be raced for only by the fastest yachts in the world—the interest in the present series of races has been in no way diminished by the fact that while the maximum speed for a 90ft. yacht is 13 to 14 knots, that of the 15-footers is nearer 7, and that a slow tub of a 30-footer would sail circles around the little racers in actual time.

In international sport at large the record made by the British challenger in this series of races, in winning two out of a series of five, is a remarkable exception to the rule, as shown in the present athletic contests, and particularly in the America's Cup racing, while in the yachting record one has to go back twenty-four years, to the second contest for the America's Cup, in which Livonia was the challenger, to find anything approaching the present long and obstinate battle, in which the honors were equally divided up to the last of seven races. Unlike so many contests of far larger yachts, the present races have shown not only the bare fact of the superiority of the American boat, but the actual differences between the two on all points of sailing and in a wide range of weather conditions, thus giving results which are of absolute technical value, something which cannot be said of either of the last two Cup races.

To sum up briefly the results, the American boat has, in the end, fully justified the very favorable opinions of many who saw her in the trial races, as well as of Messrs Brand and Sturdee after the first two days' sailing; she has proved herself by far the faster and better boat, and has completely upset the verdict of many critics after the trial races, that she was a fair light-weather boat, but nothing more. She has been at a disadvantage in that she was hastily built, and sailed with but small opportunity for trial and alteration, having been in the water just six weeks up to the day of the first cup race, both of her crew being busy men and unable to devote much time to trial sailing. Taken just as she is to-day, she is capable of material improvement in details; the surface of her hull is by no means perfect, she was first tried with a jury rudder, rather roughly made and very much buckled, taken from a Scarecrow, and when her new rudder was completed it could not be used owing to some bad mistakes in construction. Her centerplate, while apparently excellent in the light weather of the trial races, proved entirely too flexible in heavy weather, and as the metal company was unable to furnish another in time, she was obliged to sail with it, though it finally buckled badly on the fifth trial and could not be straightened. In the matter of sails and spars she was well fitted, though only after many trials of various sails and some changes from the original sail plan. In the matter of crew, though one was an experienced sailor, the other was a novice; and apart from lack of practice in this particular boat, neither had had any experience in similar small craft, Mr. Ball having done all his early yachting in sandbag centerboard boats and ice yachts; the latter experience by the way helping him very much in going from the hard helm of a sandbag sloop to the light balance rudder and the saucer-like hull with no deadwood of Ethelwynn. Neither of the crew was in any way familiar with the waters off Oyster Bay, save for the three days' experience of the trial races; nor was Mr. Ball familiar with tides or salt water, his sailing having been done on Lake Erie.

On the part of the challenger, she was subject to the many natural handicaps attending a race in strange and distant waters, new surroundings, different climate and conditions, and other unfavorable influences. These, however, were reduced to a minimum in the present case through the care and courtesy of the Seawanhaka Cor. Y. C., whose generous hospitality, it is gratifying to say, has been most fully appreciated by Mr. Brand and his representative, Mr. Sturdee. Since the Fulda touched her dock, Spruce and all connected with her have been the guests of the club; the tedious Custom House business was attended to, as far as possible, by the secretary of the race committee, the duty being paid by the club; and during the racing Messrs. Brand and Sturdee, with Messrs. Field and Ball, have been entertained as guests at the club house. While Mr. Brand was entirely ignorant of the locality and its peculiarities, he has been coached, as far as possible, by Mr. Irving Cox, an Oyster Bay yachtsman, on the tides, currents and winds; and his sailing under the very fluky conditions of several drifting races has shown him to be a skilful yachtsman, quick to appreciate and make the most of local conditions. In the matter of course, pilotage and local knowledge, both parties have been on an equality. Mr. Brand's physique, he being very tall and fairly heavy, and his long experience in this class of boat or even smaller, have gone a long way to offset the obvious deficiencies of his boat; and he has been materially helped by his nimble and skilful crew, Tom Wade, the two working together with that perfection only attained by long experience.

The inferiority of Spruce IV. to the defending yacht is generally conceded, but it is interesting to compare them: Spruce profited by 8in. more length of waterline for the same sail area, she being just up to the limit of measurement, while Ethelwynn is below. She has a little more depth of body and 3in. less beam. Her under-water body, while full, is of a fair and easy form; and the ends above water are carried out so as to give the longest possible lines for reaching. Her main centerplate is not only 1ft. deeper than Ethelwynn's, but far stiffer and stronger, weighing in itself about 75lbs. more, with 50lbs. of lead on the lower end. The construction is unnecessarily strong, the main centerboard trunk is larger, there is a second smaller trunk and a tabernacle, and more weight throughout. In ordinary sailing weather this weight was a disadvantage as compared with the lighter construction of Ethelwynn; but in a drift, as in the earlier races, it helped her; and in the wind and sea of the fifth and sixth days it was a great advantage; in hammering into wind and sea she had 8in. more in length, much greater weight, a stiff and heavy centerplate with lead bulb, all of unquestioned advantage in this weather.

It is under the normal conditions of summer racing with a time limit, when a high speed must be attained with a limited sail area and light to moderate winds, that refinement of form and light construction are most essential; in a drift a boat of full and crude model and considerable weight will carry her way, and the water is displaced and replaced so slowly that form is of comparatively small account; and on the other hand, in a hard breeze, with an excess of driving power, the form is again of less importance than in moderate weather, and the weight a positive advantage. In one respect Spruce suffered deservedly in rough water, or even a moderate sea, the full snub nose hammered and smashed the water as though it would knock itself into fragments, while the easier and cleaner bow of the other boat went along lightly and easily. Spruce had a very small cockpit, only 2ft. wide, while that of Ethelwynn was 3ft. 6in. wide, giving good room to work in ordinary weather, but rather large for a sea. At the same time one took little more water aboard than the other.

Spruce had evidently a good rig of the kind, but the lug rig is not equal to the simple leg o' mutton of Scarecrow. The reefing batten and hand gear was an advantage in the heavy weather, a reef being turned in or shaken out quickly and easily; but we question on the whole whether it pays to carry the gear in England; it certainly does not here, though on Friday morning we wished most heartily that Ethelwynn had one. While Ethelwynn would not carry the 50ft. jib designed for her, and worked well to windward under one even smaller than that with which she was measured, Spruce carried to windward under all conditions a jib that filled the whole forward triangle, and yet she had not enough. The difference between the Y. R. A. and Seawanhaka rules permitted her to use a larger jib here than in England, and she was improved thereby.

In the matter of gear and fittings she was in good condition, and as she had already sailed a number of races at home, her crew were fully familiar with her; one important change was made some time prior to her leaving England, the lifting bulb fin being replaced by the solid board already described. During the racing she was towed over to Cold Spring Harbor every night and hoisted out on davits by means of two canvas slings. Ethelwynn was left at anchor, usually being taken out in the morning and scrubbed.

The first two days' work was described last week, on Saturday a drift over the windward and leeward course, the first round being unfinished and the race given up. On Monday the same course was sailed, the wind being light, but hardening at one time on the windward work, Ethelwynn winning by 7m. 41s.

Third Day—Tuesday, Sept. 24.

TRIANGULAR COURSE.

There was a good breeze on Tuesday morning, but at noon it was light from N.W., soon after shifting to S. by W. The same triangle was laid out as for the trial races—E. by ½ N., N.W., S. by W. ½ W. The preliminary signal was given at 12:45 and the preparatory at 12:55, the start being 5m. later. The two came for the south end of the line, marked by a buoy and flag, the Oneida lying just clear of it, they were close together, Spruce to windward and inside. Ethelwynn had her spinaker boom ready to set to starboard; but neither she nor Spruce had the poles out on the line. Ethelwynn kept off to give room for Spruce at the mark, but Spruce bore down on her and touched her. The foul amounted to nothing, no protest flag was shown, and the incident is worth noting only in view of the two protests by Spruce. The boats were almost under the bridge of the Oneida, where they could be plainly seen, Ethelwynn was keeping off, and Spruce, with room to have set her spinaker boom and yet to have cleared the mark, bore down on Ethelwynn and touched her. No harm resulted save that Ethelwynn was delayed in setting spinaker until they had cleared, while Spruce was able to set hers at once.

Spruce had a good start, but Ethelwynn soon ran ahead and had a lead of 20yds within five minutes of the start. Spinakers were braced well forward, but still could be carried to advantage. Spruce managed to blanket Ethelwynn, but, as in all of the close down-wind work of the series Ethelwynn was the better maneuvered, and this time, as in the other cases, she dodged and twisted until she got away clear. With a light wind and smooth water she ran away until there was some 20 yds. of clear water between them at the lee mark, the turn being timed:

	Actual.	Elapsed.	Gain.
Ethelwynn	1 42 31	0 42 31	0 02 11
Spruce	1 44 42	0 44 42	

Ethelwynn had carried no reaching jib on Monday, the sail being in poor shape, but before the start on Tuesday the luff rope had been stretched as much as it would stand, and the sail was used during the day when required. Spruce set her balloon jib and carried it over the leg. The run was without incident, the difference in time being but 11s. Ethelwynn took in her reaching jib just before she came to the mark and luffed round, starting to windward on starboard tack. The times were:

	Actual.	Elapsed.	Gain.
Ethelwynn	2 05 13	0 23 41	
Spruce	2 07 09	0 25 27	0 00 14

On her best point, reaching, Spruce had made but an immaterial gain. She followed the leader and in a lighter wind they stood for half an hour on starboard tack, Ethelwynn gaining a little. There was still a south wind ahead, coming out of Cold Spring Harbor, and Ethelwynn was working for it; at 2:40 it was almost calm, both moving slowly. Ethelwynn went on port tack at 2:48 with a long lead on Spruce, but a moment later the wind from off the Sound struck them, from the west, a shift of about 3½ points, and put Spruce well out to windward of Ethelwynn. What was worse was that while Spruce had a very light breeze, the other was becalmed at short intervals in the doldrums between the harbor breeze and the Sound breeze; they went on slowly, Spruce crossing Ethelwynn's bows by 150yds. about 3:05.

The young ebb was carrying both down, but Spruce had enough wind to breast it and turned the buoy at 3:39:08, setting her spinaker to port and also her balloon jib and running away gayly with a strengthening tide and a light west wind. Ethelwynn's case looked hopeless, as she did not weather the buoy until 3:36:10, the full times of the turn being:

	Actual.	Elapsed.	Gain.
Spruce	3 29 08	1 21 59	0 08 59
Ethelwynn	3 36 10	1 30 58	

The two miles of windward work had taken 1h. 22m., Spruce gaining 9m. Very little has been said in the daily papers about the shift of wind, but it was plainly visible in its immediate and marked effect. At 4 o'clock both jibed and reset spinakers to starboard. The first mark was timed:

	Actual.	Elapsed.	Gain.
Spruce	4 17 48	0 48 40	1 49 00
Ethelwynn	4 26 39	0 50 29	

The wind was well abeam, about S.W., again a reach for Spruce; she set her balloon jib and Ethelwynn did the same. They ran across and were timed:

	Actual.	Elapsed.	Gain.
Spruce	4 55 12	0 37 24	
Ethelwynn	5 00 25	0 33 46	3 38 00

This was a very good showing for the following boat, and with her little jib set she started on starboard tack in the wake of Spruce, the wind now failing. A big three-master came lumbering along from the westward in the course of Spruce and Mr. Brand made a serious miscalculation in attempting to cross her bows; when a mast under her he had to go on port tack and stand along beside her, finally tacking and crossing under her stern; the loss was not much, but it might have been avoided by an earlier tack. Now came the big Sound steamer Richard Peck, at speed, and running between the yachts, her wash catching Ethelwynn on the bows and Spruce astern and shaking both up. They tacked slowly in, the wind falling; Ethelwynn had no wish to make a race, and tried to coax Spruce inshore where the tide was strongest. When six o'clock came she lowered her jib and took a line from her tender. Spruce was then ahead, but becalmed in a strong tide half a mile from the line.

Fourth Day—Second Race—Wednesday, Sept. 25.

TRIANGULAR COURSE.

Wednesday broke with a fresh S.E. breeze, which held fairly strong through the morning. At 11:50 the Oneida was at the line, but Spruce was late, one piece of her bulb had become loosened and it was necessary to head up the bolts anew. Ethelwynn had just received from Wilson & Griffin a new silk jib of 36sq. ft. for reaching. The start was given at 12:30, Spruce, to leeward of Ethelwynn, coming to the line so

soon and having to luff and lose way, while Ethelwynn went over with a good full. With her new jib sheeted home she reached by Spruce, the latter setting her balloon jib, but taking it in, the wind being too far forward. At 12:45 she set it again, but took it in five minutes later, the wind heading them off more than ever, until sheets were hardened for a beat. As they worked short tacks under the shore Ethelwynn gained, but she finally tacked off for the buoy, Spruce standing longer inshore before her last tack, and picking up a little. The times were:

	Actual.	Elapsed.	Gain.
Ethelwynn	1 15 15	0 45 15	0 03 17
Spruce	1 18 32	0 48 32	

There was now a reach to second mark with booms to port, the times showing a gain of 47s. for Ethelwynn.

	Actual.	Elapsed.	Gain.
Ethelwynn	1 36 37	0 21 22	0 00 47
Spruce	1 40 41	0 23 09	

Jibing over with a moderate breeze, they reached in and were timed at the line:

	Actual.	Elapsed.	Gain.
Ethelwynn	2 02 55	0 26 18	
Spruce	2 06 53	0 26 12	0 00 06

Ethelwynn started to round with a lead of 3m. 58s., but within four minutes after she passed the mark, standing inshore on port tack, a fresh easterly puff broke her off and then she caught the wind on the other side from the south, and had to go on starboard tack. While she lay between the two winds Spruce came up and stopped very close to her, then the southerly breeze prevailed and both started on again, but very slowly. Out in the Sound yachts and coasters were visible with sheets trimmed to a moderate N.E. wind, and up Cold Spring Harbor was a light south wind, but the two racers caught only the end of it. Spruce set her balloon jib while Ethelwynn set her new reaching jib under the working jib. At the end of the first twenty minutes Spruce was not only well up to Ethelwynn through the fluke at the turn, but was gaining fast, and at 2:30 they were in very close company under Lloyd's Neck shore. Spruce almost caught Ethelwynn a few minutes later, and finally got on her weather, but the other managed to run out under her lee, then set balloon jib and jibed over at the mark, the times being:

	Actual.	Elapsed.	Gain.
Ethelwynn	2 39 38	0 36 38	
Spruce	2 39 48	0 32 55	0 03 58

The next leg was tedious and fluky, but full of pretty maneuvering, in which Ethelwynn came out ahead. With booms eased off to starboard for the southerly wind and sheets well slacked they reached along, Ethelwynn gaining at first, but when ten minutes away Spruce lapped her weather quarter and then ran clear ahead. In a little while Ethelwynn took a spurt and ran ahead through Spruce's lee. They passed and repassed, and then began a series of hot luffing matches, Ethelwynn being the leader; she would luff and Spruce would follow, then Ethelwynn would keep off with a rush. Finally she got well clear after forcing herself and Spruce so far to windward that spinakers would draw, and they were set to port before the same old southerly breeze. Ethelwynn was perhaps 30yds. ahead at 3 o'clock, both nearing the second mark; the wind was very light now and both were rolling to a beam sea. At 3:17 Ethelwynn caught the long-promised N.E. wind, over went boom and jib, in came spinaker and she trimmed down for the mark, Spruce getting the same wind just 30s. later. Ethelwynn had her reaching jib, while Spruce carried the one big working jib that she used on the wind and when her balloooner was not set. Soon Spruce set her balloooner, but Ethelwynn held her own, the times being:

	Actual.	Elapsed.	Gain.
Ethelwynn	3 26 59	0 47 21	0 00 30
Spruce	3 27 39	0 47 51	

On rounding, Ethelwynn luffed and then headed off a little for a reach to the line, her new jib being set to windward of the working jib, and girted by the latter. She did very poorly under these sails at first, and before long Spruce, under working jib, was under her lee and out clear ahead. The small jib was taken in on Ethelwynn, but still the large one was too much for her to windward, the wind now heading both, and she fell astern. When 20 minutes out from the mark they both trimmed down against the south wind for a beat to the finish. Spruce went ahead now and her lead increased, while Ethelwynn tried to carry the 36ft jib to windward and still more when her crew was out on deck working to shift jibs. When this was finally accomplished and the best working jib set and trimmed, she began to go to windward in the form of previous days, but Spruce now had a long lead. They went ahead slowly in a light air, Ethelwynn standing in toward Lloyd's Neck while Spruce made shorter tacks out in the Sound.

Ethelwynn's last tack was made at 4:05, over a mile from the mark, and though she came on very fast with a little more wind out of the harbor, she had overstood by a few yards and came to the finish with sheets a little lifted. Spruce was working up toward the lee end of the line, and when she neared the mark it was apparent from the Oneida that what had a few minutes before seemed an absolute certainty for her was now at best a very doubtful thing. Ethelwynn rushed down on the line very fast, cutting it at the middle, while Spruce, making two tacks within the last five minutes, was pointed as high as possible, in hopes of weathering the lee buoy. The excitement was intense as they reached the line, and at the last moment it was seen that Spruce could squeeze by the buoy without tacking, and that she would cross before Ethelwynn; on they came and the times showed just 23s. in favor of Spruce. The times for the last leg and for the whole course were:

	Actual.	Elapsed.	Gain.	Elapsed.	Gain.
Spruce	4 25 44	0 58 05	1 03 00	3 55 44	0 23 00
Ethelwynn	4 26 07	0 59 08		3 56 07	

Fifth Day—Third Race—Thursday, Sept. 26.

WINDWARD AND LEEWARD COURSE.

By Thursday morning the hot weather was well over, and though the threatened cold wave did not reach the coast there was a decided difference in the temperature and also in the force of the wind, a rattling breeze from S.W. kicking up a bobbery in the inner harbor of Oyster Bay. The question of sailing the race inside Oyster Bay or Cold Spring Harbor was discussed by the committee, there being every opportunity to lay off a clear course in rough water and with a strong breeze without exposing the boats so much as could be the case if they went outside on the Sound. The committee was divided, but finally the outside course was decided on and the yachts were towed out. The conditions outside were little or no worse than inside, the course being rather under the lee of the high land on Center Island. The wind proved to be S.W. by W., and the course was laid off N.E. by E., 3 miles. After the preliminary signal was given at 12:15, on the last of the ebb, Ethelwynn sailed up to the Oneida and hailed that both parties were desirous of sailing inside. When Spruce came up she was hailed by the committee and Mr. Brand said that he wanted to race outside or to postpone the race until next day. The latter was out of the question after waiting so long for wind, and the preparatory signal was given at the proper time, followed by the start at 12:30. Spruce had her reefing batten down, for the first time, and her jib set; Ethelwynn was working about under a double-reefed mainsail and no jib. The maneuvering was done about 100yds. short of the starting line, the two working around in complicated curves very close together. At one time both actually collided, but it was done so quickly and unexpectedly that few on the Oneida grasped all the details of the collision. No harm was done, but Spruce went over the line with a red flag flying. As it proved Mr. Brand claimed that Ethelwynn luffed and touched him while on parallel courses, but Mr. Ball claimed that Spruce failed to give way as they came together, Ethelwynn on starboard and Spruce on port. No protest flag was shown by Ethelwynn. Once over the line, Spruce set spinaker to starboard while Ethelwynn ran up a baby jib of about 8sq. ft., and also a spinaker. Spruce soon took the lead, at 12:36 Ethelwynn took in her spinaker. At 12:53 Spruce jibed boom to starboard and set spinaker to port, Ethelwynn now having her spinaker set to starboard. At 1:01 Ethelwynn took in her spinaker, and soon after, Spruce, now well ahead, took in hers and jibed to leave the mark on starboard hand, the times being:

	Actual.	Elapsed.	Gain.
Spruce	1 02 08	0 32 08	0 00 08
Ethelwynn	1 02 16	0 32 16	

Spruce went by the mark with sheets trimmed and sail's full and at once danced out to windward. It was very clear that something was wrong with Ethelwynn, as she luffed up and stopped when by the mark, losing steerage way; her jib was taken in and then one reef was shaken out, and she slowly forged ahead under single-reefed mainsail only, in pursuit of Spruce, now a good four minutes away. After some time a small jib was set, but the boat was dead, Spruce leaving her faster each minute. Both made several short tacks to avoid a long tow of empty barges. Spruce continued to gain until she was timed at the end of the round with a lead of nearly 9m., at 2:03:00. As Ethelwynn neared the home buoy it was clear that something was wrong, and no one was surprised when she made no attempt to round, but sailed up to the Oneida. In answer to a hail, Mr. Field replied that they had no chance of winning and the weather was too bad for them to sail the second round needlessly. Spruce had already shaken out her reef, and under full sail, including spinaker, was far down the course, Ethelwynn sailed in, while the Oneida followed Spruce, timing her at the turn at 2:34:01, and at the finish, after a comparatively easy beat home in a lighter wind and smoother water, at 3:27:27. As later events proved, the wind and sea, even at the start, would have permitted Ethelwynn to have carried at least a single reef on the wind, and in such wind and weather she might easily have beaten Spruce. She was badly sailed from before the start, at no time having enough canvas or her sheets trimmed in. What she is capable of in a good wind and sea was fully proved next day. After the race Mr. Brand humorously bewailed the fact that at the outset of the negotiations he might have asked for a series of two out of three races in place of three out of five. Under the circumstances, nothing more was said about the collision and Spruce's protest, and the exact merits of the case were left unsettled.

Sixth Day—Fourth Race, Friday, Sept. 27.

During the night, Mr. Ball, the helmsman of Ethelwynn, was very ill; for several days he had been unwell, and the wetting and nervous strain of the withdrawal of the boat against his will on the previous day had completely upset him. As it happened his younger brother had already arranged to sail with him in case of Mr. Field being called to business on Friday. Though the two have sailed together all their lives, Mr. Fred Ball had been aboard Ethelwynn on but one occasion, and was entirely unfamiliar with this class of boat. In the morning a doctor was summoned by telephone from Oyster Bay and prescribed for Mr. Ball, but the arrival of his brother on the early boat proved the best possible stimulant. At 6 o'clock a strong N.W. wind was blowing across the Sound, and from the roof of the club house the whitecaps could be seen in all directions, while even inside the two harbors there was enough sea for a good wetting. When Commodore Bendict reached the club float, having come across from the Oneida, his first words were that the small craft should not go outside in such weather, and Mr. Cromwell, chairman of the race committee, who came over from Mamaroneck in the powerful 35ft. naphtha launch Titania, once so familiar as a tender to the 70-footer of the same name, expressed very strongly the same opinion. Mr. Brand and Mr. Sturdee wished to sail on the former course, outside the harbor, but Mr. Stephens, Mr. Ball's representative, Mr. Field having returned to town, objected to the outside course. There was no question that the weather outside at 10 o'clock was quite as heavy as such boats should race in, nor that a perfectly fair course, with a very strong wind and a good lump of a sea, could be laid inside. Mr. Ball had never sailed in the harbor and had no advantage over Mr. Brand in the matter of local knowledge. The crew of Spruce were both thoroughly used to such conditions, and were physically superior to the crew of the other boat, both light men and one of them still ill and the other strange to the boat, neither having tried her in heavy weather. While it was not particularly pleasant to decline to follow the English boat into any water she would sail in, the manifest physical superiority of her crew and the general opinion of all who had crossed the Sound that morning seemed to warrant every fair effort for the inside course.

After much fruitless discussion Mr. Colgate Hoyt kindly offered to run the party outside in his cabin naphtha launch, a staunch craft of 35ft., and the principals, with their representatives and four members of the race committee—Mr. Wetmore having been called to town—boarded her. As they passed out of the harbor she strongly took the seas over her bows, the Titania an eighth of a mile ahead fairly standing on end at times and throwing the seas in all directions. Messrs. Brand and Sturdee, with some of the committee, were by no means satisfied, and still desired to go outside. Mr. Stephens objected to going outside, but he and Mr. Ball stated that Ethelwynn would start over any course that the committee laid out, and would sail the race to a finish. It was finally decided, as the launch came in, that a triangle should be laid out just inside the bar and lighthouse in the outer harbor, Mr. Brand consenting and Mr. Sturdee still holding out for the outside course. This much being settled, the committee came ashore and adjourned to the roof of the club house for a meeting, the big club telescope being taken up for a look over the Sound. There being only four they were divided, two holding out strongly for the outside course. When they finally returned to the float, they announced that they could reach no decision and would leave the matter to the two representatives, Mr. Ball being already under way in his boat to break his crew in a little. This left the question where it was, and to save valuable time the proposal to toss for choice was made, a penny was thrown and Mr. Sturdee called heads and won; all hands hurried aboard the Oneida's launch except Mr. Brand, who boarded his boat, and they started for the Center Island buoy. On the way out Ethelwynn was hailed and ordered to go outside, and both she and Spruce sailed the entire distance, the former under whole sail and the latter with one reef down.

So much time had been wasted in the discussion that when the Oneida reached the line at 1:45 the wind and sea were much less violent than in the early morning, and as she beat out to the line half an hour later it was seen that Ethelwynn was carrying full sail very well in spite of the light weight of both of her men.

The start was given at 2:25, Ethelwynn making the worst start of the series, 30s. astern of Spruce. The same triangle was sailed, the first leg with booms well off the starboard quarter and the second almost dead to windward. With whole mainsail and working jib Ethelwynn danced merrily along from the start and was soon even with Spruce, the latter under a single reef and her working jib. When ten minutes out Ethelwynn began to luff and soon had Spruce far above her course, keeping in a position to maneuver as she pleased when the mark was reached. As they came down Spruce, having shaken out her reef, was compelled to stand by the mark before she luffed and made her turn, thus leaving room inside for Ethelwynn, who, after making her turn short of the mark, easily passed inside and to windward of Spruce. The times were:

	Actual.	Elapsed.	Gain.
Spruce	2 48 03	0 23 03	0 00 05
Ethelwynn	2 28 08	0 23 08	

Ethelwynn was hardly on Spruce's beam before the latter whirled about, and being on starboard tack could claim right of way. Ethelwynn tacked at once and trimmed down, eating out very fast from under the other's lee, and soon having a clear lead to windward. Her crew were not over hiking, but lay flat on the weather deck, the sheets were flowed and the boat was fairly jumping out to windward in a good sea, nearly or quite as hard weather as on the preceding day. In the first twenty minutes she opened a fine lead, then Spruce caught a favoring puff and came up on her until in almost a moment, as it seemed to the spectators on the Oneida, they were close together. Then, both being trimmed down on the same course, Ethelwynn again walked clear out to windward. As it afterward proved, it was at this point of the race that the alleged foul on which Mr. Brand protested occurred. According to him, as he came down fast on starboard tack, Ethelwynn, on port tack, was approaching him, standing on until he was obliged to luff to avoid a collision. Ethelwynn at once came about on starboard tack, and Mr. Brand having, as he claimed, an overlap, she luffed out to windward of him.

The whole incident was watched by those on the Oneida. After the previous day's fiasco there was the keenest interest on the part of everyone in the possibility of Ethelwynn redeeming herself, and there was not a moment, especially during this first windward play, when the boats were unnoticed. This particular detail of Spruce's rapid gain was of course most carefully watched, and yet no one saw the luffing and alleged violation of the rules. When the protest flag was shown as Spruce rounded the mark 20m. later, not even Mr. Sturdee could guess what the grounds were.

When straightened away under Spruce's lee bow, Ethelwynn, as in the first part of the beat, held a better wind and made less leeway, soon going well clear ahead; they tacked at 3:20, Spruce first; as they stood away from the steamer it was plain that Ethelwynn was already a safe distance to windward again. At 3:21 she tacked clear of Spruce, the other following. They made several more tacks, the distance constantly widening; Ethelwynn fetched the mark easily, but Spruce failed to weather it and was forced to make a short tack to round, setting her red flag as she did so. The times were:

	Actual.	Elapsed.	Gain.
Ethelwynn	3 32 36	0 45 28	0 02 15
Spruce	3 45 46	0 47 45	

The last leg was an easy reach, the end of the round being timed:

	Actual.	Elapsed.	Gain.
Ethelwynn	3 54 39	0 21 03	
Spruce	3 56 24	0 20 38	0 00 25

Ethelwynn had now a lead of 1m. 45s., but wind and sea were both lighter inshore, and two of the remaining three legs were reaching. She set her balloon jib and eased sheets, making good speed against the tide. The first mark had capsized in the sea, but the float was plainly visible, and the Oneida ran up to aid them in locating it. The turn was timed:

	Actual.	Elapsed.	Gain.
Ethelwynn	4 15 05	0 20 26	
Spruce	4 16 13	0 19 49	0 37 00

There was much more wind and sea out in the Sound, as was testified to by the larger yachts coming in from various directions for Seawanhaka Harbor and the annual club dinner. Ethelwynn had the race safely in hand if no accident happened, and she was sailed boldly but carefully, her crew laid flat on deck and her sheets were slacked off, letting her take the big seas easily. Spruce was making harder weather of it, her bow smashed the seas and at times she jumped out until one could see the keel under her mast. Her crew was obliged to hike out in order to hold her up. At one time Ethelwynn hardened sheets a little too much and Spruce seemed to gain, but soon she was dancing away again as her sheets were better trimmed. The times at the last turn were:

	Actual.	Elapsed.	Gain.
Ethelwynn	4 54 20	0 39 15	0 00 24
Spruce	4 55 52	0 39 39	

There was plenty of wind and some sea on the reach in, and both sailed very fast, Spruce picking up 24s. The finish was timed:

	Actual.	Elapsed.	Gain.
Ethelwynn	5 11 36	0 17 16	
Spruce	5 12 46	0 16 54	0 00 24

Ethelwynn won by 1m. 10s.

Immediately after coming ashore Mr. Brand conferred with Mr. Sturdee and the latter wrote out the following protest:

OYSTER BAY, Sept. 27, 1895.—Sir: I have the honor to protest Ethelwynn's being awarded to-day's race on the ground of violating sections 3 and 7 of rule 34 of the Seawanhaka Yacht Club's regulations. I am, sir, your obedient servant,

H. KING STURDEE, representing J. Arthur Brand.

TO C. A. SHERMAN, Esq., Secretary.

The sections referred to are:

Sec. 3. When both yachts are close hauled or both free, or both have the wind aft and have the wind on opposite sides, the yacht with the wind on the port side shall keep clear.

Sec. 7. An overlap is established when an overtaking yacht has no longer a free choice on which side she will pass, and continues to exist as long as the leeward yacht by luffing or weather yacht by bearing away is in danger of fouling.

The committee at once summoned Messrs. Brand and Ball and heard the evidence on both sides. Mr. Brand's claim was that as Spruce was on starboard tack, Ethelwynn on port came so close that he was obliged to luff to avoid her. It is admitted that Ethelwynn tacked, and Spruce was not forced about. The second claim was made that as soon as Ethelwynn tacked Spruce had an overlap, and yet Ethelwynn luffed to prevent her passing to windward. Mr. Brand also claimed that the foul was more than technical, and cost him more than the difference of 1m. 10s. at the finish.

Besides a certain amount of negative evidence in the fact that none of those on the Oneida, though watching the boats intently, noticed any semblance of a foul, Mr. Brand was in the position of being compelled to prove the nearness of the boats. Mr. Ball stated that at no time after Spruce made her first tack at the mark were the two near enough to have touched, and that he went on starboard tack in good time and was so far ahead that Spruce had no overlap. In all such cases the protestant, whether right or wrong, is in a necessarily weak position, provided that no contact occurs, the onus of proof that a contact would have occurred resting with him, as in the first Vigilant-Defender dispute. We have no doubt that Mr. Brand was perfectly honest in his contention, but the circumstances were such that he might easily be mistaken as to the exact distance. He was sailing in a wind and sea, biking out on starboard side, the boat well heeled, and his own mainsail shutting out the view of the other boat save for hasty glimpses under the boom. If, as he contends, Ethelwynn was heading directly for him, her crew, on the port gunwale, would in all probability be able to see Spruce directly ahead; they were in a position to measure distance more accurately than he, and they were too experienced to risk disqualification by forcing him about right under the eyes of the committee. The only evidence before the committee was the opposite statements of the two parties, and under the circumstances they could hardly decide otherwise than against Mr. Brand. The decision was reached late on Friday night, but was not announced. During the dinner several Englishmen present urged Mr. Brand to withdraw the protest, and Mr. Sturdee favored this course, and the decision was not announced until, at 8 o'clock next morning, Mr. Brand still declined to withdraw it.

No one who saw the race had any idea save that it was won solely on its merits. The challenger, with a boat fitted for rough water, and in fine physical condition, elated over the almost certain chance of a third and final victory, was matched by two men of light weight, one seriously ill and the other new to the boat, depressed by the defeat of the preceding day and ignorant of the boat's capability in hard weather. With a grit and determination worthy of the highest recognition, they followed the Englishman out just where he wanted to go and led him in. While Mr. Ball naturally had no special desire to sail outside, he at no time declined to do so, the objection coming from Mr. Stephens, backed by the opinions of practical yachtsmen who had crossed the Sound in the morning. As it turned out, the sea and wind outside at 2 P. M. were no worse than inside at 10 A. M.; the boats could have stood more; but the chief topic of conversation during the dinner in the evening was the wonderful performance of the two 15ft. boats in a wind and sea many present had sailed in during the afternoon, following the latter part of the race and witnessing the last windward leg, where the wind and sea were worst, and all were loud in their praise of both boats and men.

Seventh Day—Fifth Race—Saturday, Sept. 28.

TRIANGULAR COURSE.

Saturday morning was a fine day, a little cool for summer and warm for fall, the wind being N.E. moderate, with smooth water outside. The agreement was that in the event of a fifth race being necessary the two parties should toss for choice of course, windward and leeward or triangular. The decision of the committee on Mr. Brand's protest was announced about 8 o'clock, and while all were at breakfast the course was decided. Mr. Kerr tossed a quarter, Mr. Sturdee called tails and won, as on the preceding day, the American eagle on the coin coming up on top. As a matter of course Mr. Brand chose the triangle. Prior to the arrival of Mr. Field, Mr. Stephens took charge of the boat, she was beached at high water and turned on edge. The centerplate was found to be badly buckled, being entirely too light for rough water, and the rudder, a clumsily made affair, was also bent. Some unsuccessful attempts were made to improve both, then while the topsides were sandpapered and the bottom polished, Mr. Stephens went over all the brasswork with file and sandpaper, putting the stem and keel band, the plate and rudder into the best possible condition. When she was again floated the immersed surface had been improved, but was still by no means perfect.

After the special races of the club were started at 11 A. M., the Oneida ran out to Center Island Buoy and the launch was sent out with the two mark floats. The yachts came out under full sail, but with poorer canvas than in any previous trial; Ethelwynn's mainsail rolled and flapped in the leech, and Spruce's was in poor shape.

The start was given at 12:45, Ethelwynn over about 8s. ahead. The wind was moderate from N.E., with a comparatively smooth sea, when Ethelwynn luffed around the lee mark. It was a beat to the first mark, Ethelwynn gaining very fast at first, then losing a little and picking up at the end of the leg. Once both had to keep clear of a coaster winged out. After ten tacks Ethelwynn rounded the mark, the times being:

	Actual.	Elapsed.	Gain.
Ethelwynn	1 37 37	0 52 30	0 02 15
Spruce	1 39 52	0 54 52	

When Ethelwynn passed the mark her crew started to set the balloon jib, but the gear fouled and it was five minutes before the sail was drawing. Spruce was very quick with her balloon jib, the sail being set sharply at the mark.

They reached across with a good breeze and light sea, the times at the second mark being:

	Actual.	Elapsed.	Gain.
Ethelwynn	2 03 40	0 26 03	0 00 45
Spruce	2 06 40	0 26 48	

The next leg was run with sheets well off to port after the jibe. The end of the round was timed:

	Actual.	Elapsed.	Gain.
Ethelwynn	2 33 38	0 29 58	0 01 00
Spruce	2 37 38	0 30 58	

Ethelwynn had gained 1m. on the last reach and 4m. on the whole round. The beat to windward was made in short tacks, fourteen to the two miles, Ethelwynn steadily gaining. There was very little interference on the part of outside yachts at any time, but in this windward work a well-known racing 25-footer made herself conspicuous by the ignorance or bad taste of her helmsman in crowding under the lee of Spruce. At no time was either yacht interfered with, but it was necessary on several occasions to use the Oneida's whistle to warn off boats that were needlessly near.

The first mark was timed:

	Actual.	Elapsed.	Gain.
Ethelwynn	3 23 19	0 49 41	0 03 38
Spruce	3 31 07	0 53 19	

This time the crew of Ethelwynn was ready and the balloon jib went up at the turn, the boat reaching off at a good speed. The times showed a gain for Spruce of 1s. in a two mile reach in a good breeze:

	Actual.	Elapsed.	Gain.
Ethelwynn	3 47 50	24 30	
Spruce	3 55 37	24 29	01

The last leg was a procession, the lead of the American boat being increased by an unfortunate fluke at the finish. Ethelwynn covered the whole leg with a reaching breeze, but some minutes after she finished the wind shifted to the south, and Spruce was compelled to tack four times to cross the line. The times were:

	Actual.	Elapsed.	Gain.
Ethelwynn	4 30 09	42 19	
Spruce	4 40 50	45 13	02 54

Ethelwynn won by 10min., 41sec., at least 5min. of which was made by fair sailing.

The work of Ethelwynn and her crew in the last two races completed retrieved the reputation of both, and showed that the boat was faster on nearly all courses and in all weathers but a drift than Spruce, the latter's best point in real sailing being on a reach. That he was defeated at all is due to Mr. Brand's boat and not to himself, he did all that was possible to get the best speed out of her.

The use of the Oneida as the committee boat, through the generosity of Com. Benedict, made the work comparatively easy for the committee. With everything aboard the yacht running as if by clockwork in its regular routine, the committee was saved much extra labor that at times the use of a tug or launch for this business, Com. Benedict, while resigning the yacht to the committee for the trial and cup races, was active in assisting them in every possible way. The delay in the races compelled him to alter his private plans, but as soon as the com-

STEAM YACHT RONA.—Designed by Geo. L. Watson for A. E. H. Wood.

mittee was set ashore after the race on Saturday the Oneida ran over to Greenwich, dropped one guest and took aboard several more, and by dark was jogging along under sail and steam for a fishing trip in Buzzard's Bay.

The management of the cup and races has been from the first in the hands of the race committee, Messrs Oliver E Cromwell, Chas W. Wetmore, W. L. Kerr, Dr. Valentine Mott and Chas. A Sherman. The preliminary negotiations were carried out to the satisfaction of both parties. Everything possible has been done for the suitable entertainment of those connected with the two yachts, and the races first and last have been well managed; so far as the challenger is concerned, every point has been strained to meet has wishes and to give him a perfectly fair chance.

Not a little credit is due to the Indian Harbor Y. C and to its representative, Mr. F. B. Jones, for the great interest which the club has taken in the new class. The club has provided two new yachts for the trial races, one being the winner; it has done everything to help Ethelwynn in the races, the club launch being used as her tender, and every race has been followed by yachts of the club. The north shore of the Sound has been well represented throughout the racing by yachts from Greenwich, Riverside and Stamford, the sloop Sagitta, with a large party, being out every day.

The racing season of the Seawanhaka C. Y. C. ended with the annual dinner on Friday and some special races on Saturday. The dinner was given in the main hall of the club house, which was handsomely decorated, the floral decorations for both room and table being given by Mr. Wm. Swan, the first commodore of the club in 1871. Mr. Brand was seated on Com. Benedict's right hand, while on his left were Major-Gen. Nelson A. Miles and ex-Com. J. D. Smith, there being fifty-four members and guests. An excellent dinner was followed by speeches from the Commodore, Mr. Brand, Gen. Miles, Mr. Smith and a number of others. Gen. Miles made a very good speech, his theme being the desirability of fraternal relations between the great English-speaking nations. Ex-Com. Smith spoke at length on the prospects of a race for the America's Cup next year, and gave some interesting particulars of Mr. Rose and his challenge.

The necessity for sailing the final race on Saturday made it impossible for the two contestants to start in the open race for the 15ft. class, though Trilby, Olita and Question were ready. Trilby has been much improved by a new rig with smaller headsail, and Olita has been entirely re-rigged and fitted with a deeper centerplate of the Linton Hope pattern. The races were started over the inside course, Indolent and Mirth, in a special match, sailing around Matinnicock Buoy, while the other classes sailed entirely inside. The wind inside was at times fluky and untrue. Trilby, sailed by F. B. Jones, won easily in the 15ft. class, and Audax won in the larger class. The full times were:

CLASS 1—START 11:20.

	Length.	Finish.
Audax, H. W. Eaton	28.75	3 20 04
Nameless, R. C. Wetmore	24.92	3 30 05
Meteor, William Trotter	26.58	3 08 07
Trinket, T. S. Young, Jr.	....	Did not finish.

CLASS 2—START 11:25.

Question, J. Clark	15.00	3 18·25
Olita, H. C. Rouse	15.00	3 11 47
Trilby, G. G. Tyson	15.00	2 48 10

SPECIAL CLASS—START 11:30.

Indolent, S. V. R. Cruger	....	4 49 21
Mirth, J. W. & G. Beekman	....	4 46 57

Mr. J. F. Tams won the race for club catboats.

On Sept. 30 a challenge was received by Secretary Hayden from the Royal St. Lawrence Y. C., of Montreal, in behalf of Mr. George H. Duggan, an amateur designer and experienced boat sailor, for a race next season for the cup.

The Steam Yacht Rona.

The accompanying picture, from a photo by Adamson, of Rothesay, shows one of the finest of modern steam yachts, the Rona, designed by Mr. G. L. Watson, and built last year for Mr. Arthur H. E. Wood by D. & W. Henderson, of Glasgow. Rona is of 1.053 tons, 243.7ft length, 30ft. beam and 18.25ft. depth of hold, her loaded draft being 16ft. She has two decks and six bulkheads, and is built to the highest class at Lloyds. Her engines are 23, 38 and 64 by 36in. The picture shows her making a speed of 15 knots in her trials on the Clyde, her contract speed being 14 knots. This speed (15 knots) was held on a run of 60½ knots. The yacht is fitted with every possible convenience, electric plant, ice machines, and so on to a photographic laboratory. The interior was designed by Mr. T. Watson, a cousin of the designer. Among the decorations are a series of photos showing every stage of her construction, from the laying of the keel to the trial trip.

One remarkable feature of her outfit is her navy of small boats, no less than thirteen being carried at her davits. One of these is a 2½-rater; there are two racing 1-raters exactly alike, designed by Mr. Watson, and various power launches, gigs, etc. Mr. Wood is a young yachtsman who takes the greatest possible interest in the personal management of his noble craft. It is just reported that there will be three new Watson yachts in American waters next season, one already designed for Mr. A. J. Drexel, owner of Margarita, to be built by the Ailsa Shipbuilding Co., of Scotland, 280ft. long and 30ft. beam, with a speed of 16 knots. Another will be built for Mr. Eugene Higgins, who has had the Watson yacht Sapphire under charter this season, and a third for Mr. Ogden Goelet, who now has the White Ladye under charter.

Corinthian Fleet.

The special race of the Corinthian Fleet for the 15ft. class was sailed on Sept. 30, in a hard breeze Neither Spruce nor Ethelwynn were present; Question, sailed by Harry Huntington, and Trilby, by Chas. Olmstead, being the only starters. Question led from the start; as the wind increased in the latter part of the race, Trilby was knocked down and parted her starboard shrouds, causing her to withdraw. The race was for the Center trophy, presented to the club some time since by the late Robert Center, but never raced for. Mr. Arthur Iselin sailed as crew of Question.

International Racing.

Lord Dunraven sailed for Southampton on Sept. 28 from Newport, as the guest of Mr. Laycock on the steam yacht Valhalla. Mr. Watson, who has been very busy of late on the general plans for the 1,500 ton steam yacht for Mr. Eugene Higgins, sails on Oct. 2 on the Teutonic, with Lord Dunraven's daughters. To the surprise of everyone last week, just as Valkyrie was expected to sail, her crew set to work to unship her stores and dismantle her, and she has been laid up at Tebo's, Lord Dunraven having decided to race here next year, presumably in open regattas. At the Seawanhaka dinner ex-Com. Smith made the statement that Lord Dunraven had spoken to him unofficially as to the possibility of the reception by the New York Y. C. of a second challenge from Valkyrie next year. While such action would of course be contingent upon the Rose challenge and other matters, Mr. Smith suggested that a second race on the part of Valkyrie was by no means beyond possibility.

On Sept. 23 the following were posted at the New York Y. C. house:

Ryde, England, Sept. 23.

The Secretary, New York Yacht Club:

I, on behalf of the Royal Victoria Yacht Club, and in the name of Charles D. Rose, a member of the club, challenge to sail a series of matches for the America's Cup in 1896 with the cutter yacht Distant Shore. Load waterline length, eighty-nine (89) feet Letter follows.

Percy Thellusson,
Secretary Royal Victoria Yacht Club.

THE ANSWER.

Sept. 23.

Percy Thelluson, Secretary Royal Victoria Yacht Club, Ryde, England:

Cable announcing challenge series of matches for America's Cup, 1896, from your club in behalf of Charles D Rose received. Consider same formal. Will be acted upon at special meeting of club, to be called on receipt of your letter.

J. V. S. Oddie,
Secretary New York Yacht Club.

Charles D. Rose, No. 39 Hill street, Berkeley Square. London:

I beg to announce the receipt of a cable to the club from the Royal Victoria in your behalf for series of matches for the America's Cup, 1896 The same is considered a formal challenge and will be acted upon at a special meeting to be called on receipt of letter from Thellusson.

J. V. S. Oddie,
Secretary New York Yacht Club.

A meeting of the sailing committee of the Royal Victoria Y. C. was held at Ryde, Isle of Wight, on Sept. 28, at which the following challenge was decided upon:

"Royal Victoria Y. C.,
"Ryde, Isle of Wight, Sept. 28.

"To J. V. S. Oddie, Esq., Secretary New York Y. C.

"Dear Sir: I beg to confirm by letter my telegram of Sept. 23, as follows:

"I, on behalf of the Royal Victoria Y. C. and in the name of Charles D. Rose, a member of the club, challenge to sail a series of matches for the America's Cup, in 1896, with the cutter yacht Distant Shore, load waterline length 89ft.

"In the event of the challenge being accepted I should be much obliged if you would inform me what dates courses and conditions the New York Y. C. will propose to govern the races.

"I have the honor to be, sir, your obedient servant,

"Percy Thellusson,
"Secretary Royal Victoria Y. C."

Two more challenges are now in the air, one from Mr Herbert Moir, an Englishman long resident in Australia, the yacht to be named West Australia, and one from Sir George Newnes, a wealthy London newspaper man.

YACHTING NEWS NOTES.

Defender has been stripped and her gear stored at City Island, and she will lay up at New Rochelle.

The Huguenot Y. C. will hold a race for the 15ft. class on Saturday, Oct. 12, entries to be addressed to A. Embury, Pelham Road, New Rochelle, New York.

Canoeing.

Passaic River Annual Meet.

The annual meet of the Associated Canoe Clubs of the Passaic River was held at Bend View, on Sept 21 and 22.

All the Passaic River clubs were well represented, besides a number of outsiders, and the number in camp was swelled by members of the Passaic Boat Club, of Newark, who are interested in canoeing and have been competing in the canoe races on the Passaic this summer.

There were an unusual number of new men in camp, coming mostly from the Pequannock C. C. of Passaic, and the Rutherford C. C. This little Association is doing good work in catering to new men who have not been to the larger meets and giving them an insight and interest in camp life that sooner or later takes them to the Division or A. C. A. meets.

The canoeists began arriving in camp early on Saturday morning, and by noon a number of tents were in order. More arrived in the afternoon, and some came up just for the evening camp-fire. The races were held in the afternoon with the following results:

Event 1, record sailing:

J. L. Douglass, Jr., Ianthe C. C.	1
George Manley, Orange C. C.	2

Event 2, record combined:

George Manley, Orange C. C.	1
J. L. Douglass, Jr., Ianthe C. C.	2

Event 3. record paddling:

Louis LeRoy, Ianthe C. C.	1
J. L. Douglass, Jr., Ianthe C. C.	2
George Manley, Orange C. C.	3
H. K. Schuyler, Arlington C. C.	4

The result of the sailing and the combined races left Douglass and Manley even, and the paddling was the deciding race, and was a hot one between them, Douglass coming in ahead and winning the record trophy with 5 points to Manley's 4.

Event 4, paddling, open canoes, single blades:

DeWitt Pell, Passaic Boat Club	1
H. K. Schuyler, Arlington C. C.	2
F. L. Newell, Pequannock C. C.	3
A. M. Burroughs, Orange C. C.	4

Event 5, paddling tandem, open canoes, single blades:

H. S. Farmer, Ianthe, and DeWitt Pell, Passaic Boat Club	1
F. L Newell and E. Outwater, Pequannock C. C.	2

Event 6, paddling tandem, decked sailing canoes:

Louis LeRoy and Chas. Urquhart, Ianthe C. C.	1
G. W. Petty and W. Van Riper, Rutherford C. C.	2

The camp broke up on Sunday afternoon, and the canoes made quite an imposing appearance as they came down the river in one large fleet.

The Texas State Shoot.

The original and only Texas midwinter tournament, under the auspices of the Texas State Sportsmen's Association and the Business Men's Club of San Antonio, will take place Jan. 9, 10 and 11. The added moneys will be furnished by the clubs throughout the State that are members of the State Association. There will be no guaranteed purses. Everything will be added in cash. Texas Field.

Rifle Range and Gallery.

Rifle at Shell Mound Range.

San Francisco, Sept. 22.—Shell Mound Range was favored to-day in a very unusual way, viz., a total absence of wind, a condition of the air that does not obtain two shooting days of the year. The various Schuetzen clubs held bullseye shoots, and the militiamen were practicing in large numbers. The Columbia Club held its regular semi-monthly all-comers' shoot.

President Rodgers had his shooting nerves with him, and as he yearns to possess the elegant Kuhnle medal for target rifle at 200yds., he took advantage of the day. His first and second scores each footed 86. Third score, 8 10 10 9 9 10 10 10 6 10—93; fourth score, 8 9 10 8 10 10 10 8 10 9—92.

Young and Pape were not lucky, Young making only 82 and Pape 68.

For the handsome Glinderman medal for military rifle Frank Poulter rolled up the following fine score (circular 8in. bullseye is used by this club):

Poulter	4 5 5 5 5 5 4 5 5 5 5—48
Young	5 4 5 4 5 5 4 5 5 4 4—46

The Blanding Pistol medal contestants found the unusual heat demoralizing to their steadiness of aim. C. M. Daiss made 93, J. E. Gorman 93, F. O. Young 92.

Two ladies appeared to compete for the Rodgers medal, .22cal. rifles only allowed, 50yds., off-hand, standard target.

Mrs. L. J. Crane made the very fine score of 10 10 10 10 10 10 9 10 10 10—99, following this with 10 10 9 10 10 10 10 10 9 10—98.

Mrs. O. M. Peck, a beginner, made 85, 88, 93.

The members of the club hope for many more windless days.

Robet.

Cincinnati Rifles.

Cincinnati, O., Sept. 22.—These scores were made by members of the Cincinnati Rifle Association at their range to-day. Conditions, 200yds., off-hand, 8lb. trigger pull, rifles under 10lbs. weight, at the standard target, 7-ring black. We had with us to-day Mr. Frank Speth, an old member of this Association, who, for the past three years, has been sojourning in Denver, Col., on account of ill health. We are glad to say that he is looking well and hearty, and by the looks of his scores is able to hold his own yet. Mr. E. D. Payne added another clean score, counting 84, to his credit. Mr. Brumback, a long absent member, was with us to-day, but did not participate in the shooting.

Gindele	10 7 10 9 10 8 9 8 9 8—88	
	7 9 8 10 8 8 10 10 7 8—85	
	9 9 10 8 7 8 7 10 10 7—85

Trap-Shooting.

FIXTURES.

Oct. 8-10.—Sheridan, Wyo.—Tournament of the Sheridan Gun Club, under the management of Frank Crabill and Mark R Perkins.

Oct. 9-11.—Newburgh, N. Y.—West Newburgh G. and R. Association tournament. W. C. Gibb, Sec'y.

Oct. 9-11.—Reading, Pa.—Tournament of the Independent Gun Club; first two days targets, third day live birds.

Oct. 15-16.—Worcester, Mass.—Tournament of the Worcester Sportsmen's Club; $100 added money, and a $50 diamond ring to highest average. Chas. E. Forehand, Sec'y.

Oct. 15-17.—Aledo, Ill.—Annual tournament of the Aledo Gun Club; live birds and targets. J. W. McRoberts, Chairman of programme committee.

Oct. 16-17.—Weir City, Kan.—Live-bird championship of the State under the auspices of the Business Men's Gun Club.

Oct. 16-17.—Elizabeth, N. J.—Fourth bi-monthly tournament of the Elizabeth Gun Club; first day, targets; second day, live birds.

Oct. 19.—Chicago, Ill.—Third shoot of the Cook County Trap-Shooters' League, on the grounds of the Garfield Gun Club, at 2 P. M. W. F. de Wolf, Secretary of the League.

Oct. 22-24.—Baltimore, Md.—Dupont Smokeless Powder Company's tournament at live birds. Stanley Baker, Sec'y.

Oct. 23-25 —Atlanta, Ga.—Annual tournament of the Clarke Hardware Company; targets; $700 added money.

Oct. 25-26.—Seattle, Wash.—First annual tournament of the Washington State Sportsman's Association, under the auspices of the Seattle Gun Club; live birds and targets. C. F. Graff, Sec'y.

Oct. 27-30 —San Antonio, Texas.—First annual tournament of the San Antonio Gun Club; $1,000 added money. Willard L. Simpson, Sec'y.

Nov. 5-7.—Kewanee, Ill.—Annual tournament of the Kewanee Gun Club.

DRIVERS AND TWISTERS.

Club secretaries are invited to send their scores for publication in these columns, also any news notes they may care to have printed. Ties in all events are considered as divided unless otherwise reported. Mail all such matter to Forest and Stream Publishing Company, 318 Broadway, New York.

The first fall tournament of the Business Men's Club, Weir City, Kans., will be held at Sportsmen's Park, in Weir City, on Oct. 16 and 17. The main event is the Individual State Championship contest for $100 diamond trophy, 50 live birds, entrance cost of birds. Other events are on live birds and targets. For full particulars address the Secretary, W. W. McIlhany, Weir City, Kans.

The second annual tournament of the Aledo Gun Club, Aledo, Ill., three days beginning Oct. 15, is completed in all the preliminaries. Shooting commences at 8 o'clock each day. Twelve shooters or less, three moneys; over twelve, four moneys. Three moneys, 50, 30 and 20 per cent. Four moneys, 40, 30, 20 and 10 per cent. On Oct. 15 the team shoot between Aledo and Kewanee will take place. W. K. Wells, Secretary.

The American E. C. Powder Co. claims May 5 to 8 for its tournament in 1896. It announces that $2,000 will be added, and that a special Pullman car will leave New York Saturday, May 9, for the Memphis tournament.

Three teams participated in team shoot of the Galesburg Gun Club, Galesburg, Ill., last week. Six men, 10 targets: Canton 52, Galesburg 51, Kewanee 48.

The Leavenworth (Kan.) Gun Club tournament is reported as being a success. A good attendance of trap shots made the competition interesting.

Meadville Gun Club.

Meadville, Pa., Sept. 25.—No. 1, 25 targets, unknown angles: Lashells 15, Krider 15, Prenatt 20, Hayes 15, Decker 12, Baker 9, Gundaker 19, N. Affantranger 17, Nelson 14, E. L. Affantranger 13, Reisinger 16. No. 2: Lashells 16, Stine 15, Krider 13, Gundaker 20, Hayes 14, Prenatt 16, N. Affantranger 15, Nelson 15, E. L. Affantranger 12, Reisinger 17. This looks like a poor score, but it is not so bad, considering the wind blew as the targets flew, giving added velocity and carrying a cloud of black powder smoke to dim the vision of the shooters.

Choke Bore.

Charleston vs. Marshall.

The contest of the Charleston and Marshall (Ill.) Gun Clubs resulted as follows: Marshall 305; Charleston 270.

Brunswick Gun Club.

NEW BRUNSWICK, N. J., Sept. 28.—I inclose the scores made at the regular monthly shoot this afternoon, known traps and unknown angles. The regular shoot is at the first 25 targets, and is for medals, R. McDowell winning the A Class, E. Reynolds the B Class, and I. W. Howell the C Class. The 50-target race was for the championship cup, and resulted in a tie, V. S Voorhees, C. Oakley and H H each scoring 42. The tie, which was not shot off on account of darkness, will be shot off next Saturday. Messrs. Van Dyke and McAlpin did not compete for the cup:

HARRY H. STEVENS, Sec'y.

Herron Hill Gun Club.

ALTOONA, Pa., Sept. 28.—The Herron Hill Gun Club, of Pittsburg, held an all-day shoot at their grounds on Brutno's Island on Thursday of this week that was quite a success, the entries running as high as thirty three in one event. The weather was fine and everything moved off very smoothly. Shooting began at 10:30 A. M., and the firing was continuous until the last event was shot out. All events were at 15 targets, and a uniform entrance fee of $1.50. Money divided 40, 30, 20 and 10 per cent. Event No. 6 was at 5 unknown traps, 21yds. rise and use of both barrels, one man up, standing opposite No. 3 trap.

Shooters were classed A and B. A class shot from known traps and unknown angles, and B class from known traps and angles. Shooters in B class who won or shared first money were advanced to A class, and A class men who failed to win any money in an event were dropped to B class, and so graduated throughout the day. Dropping for place was carefully watched and not tolerated. The scores:

The Wilmerding (Pa.) Rod and Gun Club, which was recently compelled to vacate its grounds on account of the same having been purchased for the purpose of erecting buildings for manufacturing purposes, has recently purchased a plot of land near East McKeesport for $2,500 and will shortly erect a handsome club house thereon. Once their plans are completed they will have one of the most convenient and attractive places in the country.

A very pleasant little live-bird contest was indulged in at the Altoona Driving Park grounds yesterday afternoon. A 25-bird sweep was to have been shot on this occasion, but two of the men who were to participate failed to make connections and the three men named below shot a series of eighteen miss-and-out events. The intention at the start of the races was to shoot to one gun, but Clover and Clark were in such fine form that it seemed during the second event that James would get very little shooting. They therefore decided to divide after one more had dropped out. James, who warned me at the outset not to use his name for publication, is one of the best shots in this part of the country. He was in very poor form and was much handicapped by a new single trigger gun he was using that was not working properly. The birds were only an ordinary lot of the summer variety. The scores:

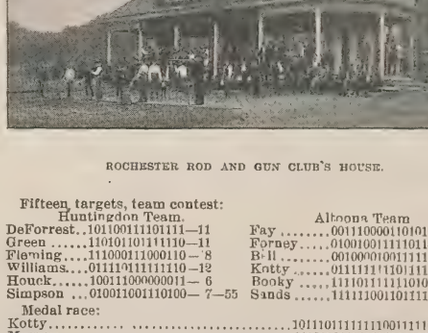
To-day was the last scheduled date for the Altoona Gun Club's bi-weekly shoots. The Huntingdon (Pa.) Gun Club had, through a misunderstanding, failed to appear on Saturday, the 14th inst., the date set for a team race between these two clubs. It was decided during the week to extend an invitation to the Huntingdon boys to participate on the occasion of the closing shoot of the season. This proposition pleased them and a delegation of fourteen enthusiasts from that old town, famed in Indian war history and Pennsylvania canal days, headed by Chief-of-Police DeForrest all dressed in a new brass-buttoned blue suit of clothes, put in an appearance on the first morning train. There were J. A. Fleming, W. Wilson, John McCahan, Elmer Stewart, W. S. Houck, Dr. G. W. Simpson, Wm. Hastings, W. K. Crites, Walter Leister, F. H. Green, L. R. Leister, Harry Corbin, G. S. Williams and W. A. DeForrest. A jollier lot of boys one could not wish to meet and if appearances go for anything they enjoyed themselves immensely. We started from Altoona at 9:30 and a half hour later were shivering in the cold blasts on Wopsononock Mountain. The mercury was loitering around the forty mark and seemed content to remain in that neighborhood throughout the day. A fire was built in the club house, overcoats at hand were donned and other remedies of a warming up nature were brought into play, so that the crowd was soon in an enthusiastic mood for the day's sport.

Once the shooting had begun it was plainly evident that there would be few high scores. The wind in many instances controlled the flight of the targets much more than did the traps, and as a result all conceivable angles were the best conditions obtainable. Squad succeeded squad in rapid succession until the end of the seventh event, when the mellow peals of the "Wopsy" farmhouse dinner bell caused a sudden stop. The hotel had closed for the season and the local club had sent a notice to Mrs. Williams, the hostess of the old dwelling, to prepare a dinner for us, as she has always done on these out-of-season occasions. For some reason which our own "Davy" has not yet explained, she did not receive the message and was naturally in a great dilemma after our arrival. We told her to prepare for us an old-fashioned country dinner, and when, at 1:30, we gathered around a line of tables in her spacious dining hall, she apologized for one of the best dinners we had ever set down to. Stewed chicken, boiled cabbage, potatoes in a half dozen forms, and auxiliaries to please the most fastidious. What the cold wind and bracing exercise had not done to sharpen our appetites a neat and cleanly dining room and generous attention made complete. I, for one, shall never forget that dinner.



After dinner two more sweepstake events were shot, and then came the six-men team race between representatives of the two clubs. The Altoona team was selected from Class B in the percentage record. The result of this race showed very evenly-matched combinations. The only stake in this event was the price of the targets, it being entirely of a friendly nature. The next event was the 25 target medal race. This was converted into a sweepstake, and such of the visiting shooters as desired participated, the local club members' scores counting as in a regular medal race. Clover won the gold, Sands the silver and Bastian the leather medals.

Following the medal race were sweeps, which continued until 6 o'clock, when a special train, which President Patterson, of the Altoona, Clearfield & Northern Railroad, had kindly placed at our disposal, carried us down the mountain.

Event No. 6 was a walking match, the purse to go to the high gun. Sands and Booky each scored 9, and in the shoot-off Booky won by a score of 7 to his opponent's 6 out of 10.

Events 7 and 8 were at unknown traps and angles. All other events were at known traps and angles. Moneys were divided 50, 30 and 20 per cent., and targets extra. The scores:

There are yet two postponed medal races to be shot off to determine who shall hold the medals until next season. These will be determined at an early date. GRANT.

South Side's Saturdays.

Editor Forest and Stream:

What might be considered the opening of the fall and winter season's shooting of the above club commenced on Saturday, Sept 28. There was not a large gathering; although Mr. Banks, the popular editor of the trap-shooting columns of FOREST AND STREAM, had given those shoots such a pleasant notice in the last week's issue, and the secretary had sent over 200 notices through the mails, the shooters had not yet started on their fall campaign, and many New York men were prevented from attending on account of the close proximity of that dreaded period, "the first of the month." The afternoon was spent principally in the discussion of "10 bird sweeps," the style being known traps, unknown angles. Col. Breintnall, the President of the club, was only able to stay a short time, as he had another engagement and was not feeling just right, having only partially recovered from a painful header from a bicycle, which rendered him rather stiff. Folsom, of the Elizabeth G. C., wheeled over from his home in that town in time to be on the winning team. Couch, one of the new members, was unfortunate to be on the other side. Harry Craft, just from a long trip in Texas, and the irrepressible Duston were on hand to test South Side's new departure, and they and the others who were on hand "went away satisfied" at the programme calls for.

The team match, captained by Messrs. Walters and Whitehead, caused no end of fun, although the latter was over-matched from the start, which gave the victory to Walters by the score of 124 to 107. This was shot at known traps, known angles, and a sweepstakes combined with it in which the two captains tied on 24, Hedden with 23 for second, and Duston third, 22.

But perhaps the greatest amusement was afforded by the match for the "Essex County Cup" which was not shot until late in the afternoon and had four entries, known traps, known angles. As it was at 50 targets some of the participants ran short of shells and were obliged to fall back on the old reliable (?) "soft coal," formerly known as black powder. Geoffroy fortunately had a good supply of E. C. and landed winner for the week with the handsome score of 47. The match was like old times and many a wait was called for the clouds to roll by. But they "old stuff" held its own and Duston made 44 and Walters 43. The spectators were almost deafened by the racket and it was laughable to see the anxiety of the shooters to hear the referees call, as it was impossible to see the results of the shots through the thick smoke. And yet it is only a half dozen years since we were all doing the same thing. Verily *tempora mutantur.*

Although it was nearly three o'clock before the first shot was fired, nearly one thousand targets were thrown before sunset by this perfect set of traps and scarcely one balk marred the enjoyment of the shooters.

Appended are the scores in full:

The following were all 10-bird events, known traps, unknown angles:

Events:	1	2	3	4	5	6	7	Events:	1	2	3	4	5	6	7

F. M. D.

Bridge City Gun Club.

LOGANSPORT, Ind., Sept. 26.—Heavy winds added to the difficulties of the shooting on the second day (26th). A good attendance of noted shots contested, as will be seen by the scores appended.

Sept. 25.—No. 1, 15 targets: Young, Rike, Ruble, 15 each; Dando, Thomas, King, Hill, 14 each.

No. 2, 15 targets: Trimble, Elliott, 15 each; Cornelius, Dando, Thomas, King, Livenguth, Ruble, 14 each.

No. 3, 15 targets: Thomas, Ruble, King, Rike, Young, 15 each; Elliott, Baycon, Raymond, Livenguth, 14 each.

No. 4, 15 targets: Sample, Townsend, Trimble, Dando, 14 each; Weaver, Elijah, Livenguth, Raymond, Young, Thomas, 13 each.

No. 5, 15 targets: Hill 15, Elijah, Baycon, Young, 14 each.

No. 6, 15 targets: Parks 15, Dando 14.

No. 7, 20 targets: King, Elijah, 20 each; Raymond, Ruble, 19 each.

No. 8, 20 targets: Rike, Trimble, Livenguth, 20 each; Skinner, King, Thomas, Raymond, 19 each.

No. 9, 20 targets: Sell, Hill, Thomas, Ruble, 19 each; Elijah, Parkes, King, Elliott, Young, Livenguth, Raymond, 18 each.

No. 10, 20 targets: Townsend, Livenguth, 20 each; Young, King, Parkes, 19 each.

No. 11, 20 targets: Ruble, Young, 20 each; Thomas 19.

Sept. 26.—No. 1, 15 targets: Trimble Hill, Townsend, Ruble, 15 each; Lavenguth, Reeder, Dundoo, Young, Baycon, Pike, 14 each.

No. 2, 15 targets: King Reeder, Lavenguth, Baycon, Park, 15 each; Thomas, Raymond, Trimble, Young, Pike, Elliott, 14 each.

No. 3, 15 targets: Elliott, Ruble, Baycon, 15 each; Thomas, Dando, Raymond, Trimble, Townsend, 14 each.

No. 4, 15 targets: Thomas, Lavenguth, Dando, Pike, Elliott, King, Skinner, Townsend, 15 each; Trimble, Young, Baycon, Cornelius, 14 each.

No. 5, 15 targets: Young, Cornelius, 15 each; Thomas, Trimble, Ruder, Ruble, 14 each.

No. 6, 15 targets: Townsend, King, 15 each; Dando, Livenguth, Trimble, Elliott, Rubb, Ruder, Baycon, 14 each.

No. 7, 20 targets: Elliott, Pike, Young, 20 each; King, Skinner, Dando, Raymond, Thomas, Baycon, 19 each.

No. 8, merchandise shoot, 20 targets: Livenguth, King, 20 each; Elliott, Young, Park, 19 each; Thomas, Dando, Raymond, Trimble, Townsend Ruble, Baycon, Cornelius, Skinner, 18 each.

No. 9, 20 targets: Livenguth, Hill, Ruble, 19 each; Elliott, Young, Dando, Trimble, 18 each.

No. 10, 20 targets: Livenguth, Ruble, 20 each; Young, Trimble, Pike, King, 19 each.

No. 11, 20 targets: Thomas, 20; Livenguth, Elliott, Cornelius, 19 each.

Sweepstakes, 10 targets: Livenguth, Elijah, Young, 10 each; Thomas, Raymond, Ruble, 9 each.

New Utrecht Gun Club.

The Rochester Tournament.

WARM COMPANY AT THE FLOWER CITY SHOOT.

THE Rochester, N. Y., Rod and Gun Club, when it picked its dates for its fourth annual tournament ran a risk of being left out in the cold, as the fag end of a shooting season doesn't often bring forth successful shoots. The boys are all pretty well played out, so far as attending tournaments goes, when the month of September arrives. This year there has been an abundance of tournaments, we might truthfully say a superabundance, because we cannot help thinking that the tournament craze, which has been a marked feature of the trap-shooting season of 1895, has been rather too rampant, and that the reaction may be hurtful to the best interests of the sport.

But tournaments like that which was brought to a close at Rochester, N. Y., on Thursday afternoon, Sept. 26, are not in any degree hurtful to the sport. It was productive of much good fellowship and was full to overflowing with that spirit of "generous emulation" so often referred to in the constitutions of gun clubs. It was not a money-grabbing tournament either. If there was any dropping for place we did not notice it, and only one instance that seemed to suggest such methods was called to our notice. This tournament was really a gathering together of

A BAND OF BROTHERS,

all full of life, and all aiming to get the honorable post of high average.

Among those who were there were: G. S. McAlpin, of New York city; C. H. Burbridge, Hartford, Conn.; Eddie Collins, Hoboken, N. J.; Chas. Wagner, Syracuse, N. Y.; E. D. and J. Fulford, Utica, N. Y.; Ralph Redwing Worthington, of Cleveland, O.; Harry Whitney, Phelps, N. Y.; F. D. Kelsey, East Aurora, N. Y.; C. Lane, North Barma, N. Y.; G. W. Kendall and C. W. Hobbie, Binghamton, N. Y.; I E. Brigden and James Carr, Auburn, N. Y.; Dutchy Smith, Plainfield, N. J.; A. Rickman, John Lowden and C. Skinner, Greece, N. Y.; George Wride, Sodus, N. Y.; E. F. Hammond, East Ashford, N. Y., etc.

The craft was well represented, those particularly termed "crackajacks" being considerably in evidence: Rolla O Heikes, Ferd Van Dyke and Jack Parker representing the Winchester Repeating Arms Company; Capt. A. W. Money, of the American E. C. Powder Company; Harvey McMurchy, carrying the L. C. Smith gun well to the front once more; Dan Lefever, of the Lefever Arms Company; T. H. Keller, of the U. S. Cartridge Company; O. R. Dickey, of Boston, Mass., a dangerous man for anybody to tackle judging from the way he and his Parker gun scored straights; George Mosher, of the Hollenbeck Gun Company, and Capt. B. A. Bartlett, of the Burgess Gun Company, Buffalo, N. Y., who won new honors for his gun on the last day of the shoot. One must not forget also Wanda, Mrs. M. F. Lindsley, of King's Smokeless, who was in too poor health to show correctly what she can do to the targets. W. Fred Quimby, of the Empire Target Company, was also on hand, but was not shooting.

THE HOME CLUB

was well represented: H. M. Slocum Stewart, E. C. Meyers, Sim Glover, L. V. Byer, Dr. Weller, John Norton, W. C. Hadley, H. Perry, etc., helping to make the shoot a success.

The Rochester Rod and Gun Club is certainly a live organization. It has erected within the past two years a really excellent club house, fitted within and without just as a model club house should be. It is located a few yards or so beyond the city limits on the north side of Court hill, and faces the Wide water of the Erie Canal, into whose depths many tons of lead have fallen after being aimed at targets thrown from the gun club's traps. The background is not perfect by any means, but still it cannot be considered a hard one, judging from the scores made at this shoot. Water, trees and distant houses, however, do not form a good combination for a target background. The club, which was organized in 1891, has for its officers: President, H. M. Stewart; Vice-President, W. C. Hadley; Secretary, John P. Mullan; Treasurer, City Treasurer Sam B. Williams; Shooting Master, L. V. Byer.

In arranging the programme for its shoot the club decided to add $500 to the purses as a drawing card for shooters. This sum of $500 was not added in dribiets—a little to each event—but was partitioned into good lump sums and added to certain events. This scheme seemed to work well and appeared to be perfectly satisfactory to the shooters. Some of the "pots" were well worth getting. Yet there were no really big winners at this tournament. There were too many good shots, and straights were common indeed; we cannot recall a shoot at which so many were made. Carr won the best "pot" of the shoot by breaking a loue 25 straight in No. 6 on the first day.

The weather, except on the morning of the third day, as told later, was all that could have been desired. It was not too hot and yet not even chilly, the weather reminding one more forcibly of the glorious days of the Indian summer rather than the efforts of an expiring September.

TWO BIG RUNS.

The third day of the shoot was rather a startler. Everybody was shooting "way up," but Bartlett and Meyers made the day a red-letter one by making big runs. Meyers started his run of 129 straight in the third event, in which he missed his first target, finishing the event with 19. He followed this with 50 straight in the Walsrode contest, and then made a 20 and a 25 straight in the 5th and 6th events. He brought his run to a close by missing his 16th, 17th and 18th targets in No. 7.

Bartlett also started his run in the third event, in which he had missed his 4th target. He didn't miss a single target in all the programme events that remained to be decided, running out with 151 straight! Out of the 195 targets he shot at, all at unknown angles, he missed but five, his 2d, 22d, 31st, 33d and 44th targets. Both he and Meyers were warmly congratulated upon their good work.

The programme was gotten through each day in good time. This was due in a great measure to the majority of the shooters entering for "all day." Squads were made up, and in some instances were unchanged throughout the shoot. The "Pumpernickels" was a very warm squad—McMurchy, Heikes, Van Dyke, Dickey, Parker and Keller; it made some great team totals during the shoot. Another hot squad was the following: Fulford, Bartlett, Hammond, Redwing, Whitney and Kelsey. On the first day these two squads tied with grand totals of 823 breaks each; on the second day the "Pumpernickels" led by 2 targets, but on the third day their adversaries took 23 more than they did.

GUNS, SHELLS AND POWDERS.

A canvass of the guns and ammunition used by the principal shooters at this tournament resulted as follows:

Name.	*Gun.*	*Powder.*	*Shell.*
Heikes	Winchester	E. C.	Leader.
Van Dyke	Winchester	E. C.	Leader.
Keller	Smith	E. C.	Rapid.
McMurchy	Smith	E. C.	Rapid.
Dickey	Parker	E. C.	Rapid.
Parker	Winchester	E. C.	Blue Rival.
E D Fulford	Greener	Schultze	Smokeless.
Bartlett	Burgess	Schultze	Smokeless.
Hammond	Burgess	Schultze	Smokeless.
Redwing	Greener	E. C.	Smokeless.
Hobbie	Burgess	E. C.	Smokeless.
Kelsey	Smith	Schultze	Lightning.
Collins	Lefever		
Money	Smith	E. C.	Trap, Smokeless.
Wagner	Smith	E. C.	Smokeless.
D Lefever	Lefever	DuPont	Smokeless.
Glover	Greener (10-gauge)	Schultze	Smokeless.
Meyers	Smith	DuPont, Walsrode.	U. S. Walsrode.
Forrester	Lefever	E. C.	Smokeless.
Lane	Smith	American Wood	Smokeless.
Dutchy	Smith	E. C.	Rapid.
Brigden	Parker	DuPont	Leader.
Norton	Smith	Walsrode	Eley.
Whitney	Smith	E. C.	Rapid.
Carr	Lefever	DuPont	Nitro.
Slocum	Lefever	King's Smokeless	Peters.
J Fulford	Lefever	E. C.	Smokeless.
Byer	Hollenbeck	Schultze	Smokeless.
McAlpin	Francotte	Schultze	Nitro.
Kendall	Lefever	E. C.	Smokeless.
Wride	Smith	American Wood	Chamberlin.

In speaking of his load, Sim Glover was particularly enthusiastic, declaring that he had at last found out what he wanted. Meyers shot DuPont's Smokeless during the tournament until the Walsrode contest, in which of course he had to use that powder. He used it for the balance of the day, hence the two powders are given in the above table.

Further details of the shoot must be gathered from what follows:

First Day's Scores.

Events:	1	2	3	4	5	6	7	8			
Targets:	*20*	*20*	*20*	*20*	*20*	*25*	*20*	*20*	Shot at.	Broke.	Per cent.

Wayne	..	..	..	..	..	..	..	11	20	11	55

The entrance money in Nos. 1, 3, 5 and 7 was $2.50; in Nos. 2, 4 and 8 it was $3, with $30 added to each purse by the club; No. 6, the 25-target event, had $50 added money, the entrance fee being $4. The $50 added in No. 6 was donated by the Rochester Brewers' Association.

The following extra events were also shot on this day:

No. 1, 20 targets, $3, unknown angles: Dickey and Hadley 20, Burbridge, Heikes, Van Dyke, Carr, Fulford, Redwing, Hammond, Bartlett and North 19. Money, Meyer, McMurchy and Glover 18, Smith, Brigden, Whitney, Kelsey, Foley and Norton 17, Wagner 16, J. Banks 15, Wride 14, Borst 13, Keller, Mosher and Byer 12, Nichols 11.

No. 2, 20 targets, $3, traps in reversed order: Dickey and McMurchy 20, Glover and Carr 19, Hadley, Bartlett, Kelsey and Heikes 18, Byer 17, Wagner, Redwing, Parker, Whitney and Fulford 16, Meyer 15, Mosher and Money 14, Burbridge 13.

Another extra event or two was also shot off, of which we have no record.

Second Day's Scores.

Events:	1	2	3	4	5	6	7	8			
Targets:	*20*	*20*	*20*	*20*	*20*	*25*	*20*	*20*	Shot at.	Broke.	Per cent.

The programme of events, so far as entrance moneys, added money, etc., is concerned, was precisely the same as that arranged for the first day.

THE THIRD DAY

was one that was full of incidents of more than general interest. The early morning was gusty, with lowering raindclouds that now and again discharged heavy showers of rain which lasted anywhere from 10m. to half an hour. Of course the result is shown by the scores made in the first two events. In No. 1, Jack Parker was the lucky man. He arrived late on the grounds and shot as the last man on the list. Nobody had a straight ahead of him, so Parker set to and pumped out 20 breaks, a very nice thing indeed with 28 entries in the event.

Then the sun dispersed the clouds, the wind nearly died away, the targets were not going either so far or so fast as usual, and the boys all had their eyes with them. Look at the records and see what was done. The details of the Walsrode Powder contest, No. 4 on the programme, are given below. And think of it—48 out of 50 was only worth $360, the entrance fee being $30, with $50 added to the purse! The big runs made by Bartlett and Meyers are referred to above, so that we can pass by those features of the third day's shoot.

HIS SQUAD SCORES.

To give prominence to all the day's squad scores might be tedious, still it wouldn't do to pass over one or two worthy of special mention. For instance, in event No. 3 on the third day, the fourth squad broke 118 out of 120, as follows: E. D. Fulford, Redwing, Whitney and Kelsey 20, Bartlett and Hammond 19, Bartlett missing his fourth target in the event, that miss being his last one for the balance of the day in all the programme events.

In event 6 the same squad broke 142 out of 150: Bartlett 25, Hammond, Redwing and Whitney 24, E. D. Fulford 23, Kelsey 22. In the same event the "Pumpernickels" produced a unique score: Heikes 25, Van Dyke 24, McMurchy 23, Keller 22, Dickey 21 and Parker 20.

THE SCHMELZER TROPHY TIE.

As is already well known, Bartlett and Parker had tied on 92 each in the Schmelzer Trophy contest at the Detroit shoot, the tie being set for decision during to-day's shoot. The contest was productive of much interest, shooters and non-shooters crowding up to watch the shoot-off. The conditions were 100 targets per man, traps pulled in reverse order, the trophy representing the championship of the world at that particular style of shooting. The light was certainly poor and had much to do with the comparatively low scores, in addition to which there was a good deal of delay owing to the targets breaking in the traps and the battery giving out. As the score shows, Parker won easily by 85 to 80. The start promised big scores, the end of the thirty-third round showing Bartlett 32 to Parker's 31. The latter lost the last two targets of the match through careless shooting; he had previously run 24 straight. The full 100 targets per man were shot at with no more rest than that afforded by the delays mentioned above. Score:

Parker.....1111111111111111111001111111111111101110101100111111—83
1110111101111101101110011111111111111 11111111100—42—85

Bartlett.....0111111111111111111111111111111111101011000110011—41
1111001100101111110111101111001111111111111011110—39—80

Parker having won the toss sent Bartlett to the No. 1 trap score, taking No. 3 himself. The detailed score shows that the missed targets were distributed as follows:

	No. 1.	No. 2.	No. 3.	No. 4.	No. 5.	Total.
Parker	5	0	0	4	6	15
Bartlett	9	1	2	2	6	20

The officials chosen by the two contestants were: T. H. Keller, referee; Edward Banks, of FOREST AND STREAM, judge for Bartlett, and Harvey McMurchy judge for Parker; puller, Eddie Collins; official scorers, Jacob Pentz, of *Shooting and Fishing*, and Will K. Park, of the *Sporting Life*. The usual work of the referee, that of calling "dead" and "lost," was performed by Capt Bartlett's judge, who stood slightly to the left of No. 1 score. McMurchy, at the right of No. 5 score, watched the targets for his man, while Keller sat behind No. 3, ready to decide any differences of opinion. His work, however, we are glad to say, was a sinecure, not a decision being challenged. It should be mentioned that Bartlett, after missing his first bird, ran 32 straight before dropping another. In analyzing the above score it must be borne in mind that each man had already fired 195 shots, and that the traps were pulled in reverse order.

SOME VERY HIGH SCORES

were made in the Walsrode Powder contest, the conditions of which were as follows: 50 bluerocks per man, $3 entrance, targets extra, unknown angles, four moneys, and all contestants obliged to use Walsrode powder. All the shooters, with the exception of Heikes, Van Dyke and Parker, used in this event shells loaded specially by Neaf Apgar, of New York city. The scores show two straights, two with 49, seven with 48, four with 47 and four with 46, the latter being shut out, as there were only four moneys. Although McMurchy was credited both on the manifold sheets and on the blackboard with 49, he says himself that it was a mistake, as he broke but 48. His percentage of the purse as a 49 man was $19 odd, but he refused to take it, as he said he was not entitled to it really. By this action he drew out only his entrance, $3, the other $16 being handed to Whitney, who was thus the only 49. The scores below are given just as they appear on the manifold sheets:

Bartlett.....1111111111111111111111111111111111111111111111111111—50

Other scores were: Wride 38, Storey 35. Collins 34.

SCORES IN THE PROGRAMME EVENTS

shot on the third day are given below in the usual FOREST AND STREAM manner. On this day twenty shooters out of a total of only thirty-seven made averages of 90 per cent. or better! If that isn't hot company, what would be considered such? Eleven shooters had averages of 93 or better, Bartlett leading with 97.4. McMurchy's average, according to the score sheets, was 95.3; taking his own statement that he broke 48 and not 49 in the Walsrode contest, it would be 94.8, his position as fourth on the list not being affected by such a change. Scores:

Events:	1	2	3	4	5	6	7	8			
Targets:	*20*	*20*	*20*	*50*	*20*	*25*	*20*	*20*	Shot at.	Broke.	Per cent.

Wanda	..	..	..	..	..	17	..	10	60	37	61.6

Nos. 1, 3, 5 and 7 were $2.50 entrance; No. 4 was the Walsrode contest; Nos. 2 and 8 were $3 entrance, $35 added to each purse; No. 6 was of the same character as on the preceding days.

GENERAL AVERAGES.

The club gave five premiums, $15, $12.50, $10, $7.50 and $5, to be awarded to the five highest general avera es made in all the programme events. This necessitated a total number of 525 shots, many excellent records being made. Glover by his great work on the last two days beat Heikes out for second average, Redwing being close after Rolla, who was off color on the last day. Bartlett's burst of speed on the last day landed him just far enough in front of Van Dyke to cut the latter out of fifth average. McMurchy (it seems natural now to add of course) won first average with the capital record of 500 breaks out of 535 shot at, a percentage of 95.2. The fourteen best averages were:

	Shot at.	Broke.	Per cent.
1. McMurchy	165	158	95.7
	165	156	94.5
	195	186	95.3
	525	500	95.2
2. Glover	165	151	91.5
	165	158	95.7
	195	188	96.4
	525	497	94.6
3. Heikes	165	156	94.5
	165	158	95.7

		525	477	90.8

FIGURES ON THE ENTRY LIST.

That the Rochester shoot was a success is guaranteed, if further proof than that already given is necessary, by the following figures

which give the number of entries in each programme event during the three days of the shoot:

	First day.	Second day.	Third day.
1	34	26	28
2	29	40	30
3	32	35	30
4	35	36	26
5	36	42	28
6	33	36	28
7	34	35	28
8	32	36	29
	265	296	227

The above figures give an average entry in all events on the first day of 33.1; on the second day 27, and on the third day 28.3, making in all a general average for the 24 events of 32 8.

THE NUMBER OF TARGETS THROWN

averaged somewhere very close to 7,000 per day, if not actually quite up to that mark. In the programme events on the first day 5,465 targets were thrown, while 1,500 would about cover those thrown in the extra events on that day, making a total of 6,965. On the second day 6,100 were thrown in the programme events; add to that number 1,200 more as the number probably thrown in the ex ra events and we have a total of 7,300 for that day. During the third and last day 5,460 were thrown in the programme events; add the 200 in the Parker-Bartlett match and another 500 as the number likely to have been thrown in the two extra events, that brings the total for the day up to 6,160, making a probable grand total of 20,425.

THE MANAGEMENT AND ITS HELP.

The success of a tournament depends to a very great extent on the *personnel* of the management and its help. President H. M. Stewart himself occupied the onerous and important position of cashier, being ably assisted by C. J. Wilkinson. The squad hustling was looked after by George Borst, who kept things moving along very smoothly. Superintendent E. D. Hicks was here, there and everywhere, his chief care being the trappers and after them the traps, which were blue-rock experts, bluerock targets being thrown throughout the tournament, while Paul North's electric pull was used to release the traps. Considering the diminutive size of some of the trapper boys, everything passed off satisfactorily so far as the working of the traps went. The blackboard and manifold work was cleanly and plainly performed, this tournament being in that respect a marked improvement on some that we have attended.

It is a cause for sincere regret that we cannot mention by name those gentlemen who acted as referees during the tournament. Theirs is a thankless task at best, and the faithful performances of their duty demands due recognition at the hands of the press and the shooters. We have unfortunately mislaid the slip of paper on which their names were written. We can, therefore, say merely that, so far as we could judge, there was no cause for complaint at their decisions. Humanity is not infallible, and one man cannot see everything.

A REMARKABLE TOURNAMENT.

As a tournament remarkable for the extremely high averages made by the shooters attending it, the Rochester (N. Y.) Rod and Gun Club's fourth annual tournament, held Sept. 24-26, 1895, will be remembered by those in attendance for many months to come. The quality of the company was something extraordinary, and we venture to say that a team of 10 or 12 men could have been picked from the ranks of those present that couldn't have been beaten by a team of a like number picked with the whole world to choose from. It was a hot crowd.

EDWARD BANKS.

John Parker's Fifth Tournament.

THE four days of Sept. 10 to 13 were busy ones for the many trap-shooters who engaged in the Des-Chree-Snos Ka annual tournament, under the able management of Jack Parker, skillful and popular as ever in all that pertains to the trap.

The scores made were quite good, as will be perceived by the records of the events. Much interest was centered in the Gilman & Barnes gold medal, which must be won three times by one person before an ownership is established. Most unexpectedly, the winner of it at this tournament was Mr. Bortle, a member of the River Rouge Club. Winning it from such stern talent as opposed him was indeed a great honor.

The E. C. Powder Co.'s cup also attracted much interest and struggle for possession. McMurchy won it in fine form and received congratulations a plenty. He also took the diamond medal for the best average.

The attendance of spectators was excellent, much more than commonly attends a trap-shooting event.

A close and vigorous competition was that in the two-men team race, of which the prize was the Gitschlag diamond medals. Parker and Wood made the excellent score of 49 out of a possible 50, but were tied by Upson and Redwing, and in the shoot off they repeated their score, while Upson and Redwing shot without a miss, thus winning the event.

There was a misunderstanding in the competition for the Schmelzer Cup. Owing to some errors in scoring, Bartlett was given a bird more than he was entitled to, the error not being discovered till later. It was conceded that Parker won it, but it was thought best to shoot again for it under the circumstances, so they agreed to shoot off at Rochester.

First Day.

No. 1, 10 targets, 21yds., both barrels, entrance $1.50: Heikes 7, Glover 7, Upson 9, Sexton 7, W. H. Allen 5, W. S. Allen 5, Duley 4, Kelsey 6, Baker 9, Bartlett 5, Dickey 8, Van Dyke 5, Hill 6, Trimble 7, McMurchy 8, Fleischer 4, Courtney 8, Young 6, Herbst 7, Keller 2, Fulford 6, Denman 8, Redwing 4, Park 5, Erhart 8, Cicotte 6, Hunt 3, Money 6, Stein 6, Yerkes 5, Kimmel 2, Hamilton 2, Simmons 4, Toornton 2.

No. 2, 15 targets, entrance $2.75: Heikes 15, Glover 13, Upson 15, Sexton 15, W. H. Allen 12, W. S. Allen 10, Duley 12, Kelsey 14, Baker 14, Bartlett 14, Dickey 15, Van Dyke 13, Trimble 14, Hill 15, McMurchy 14, Fleischer 13, Young 14, Keller 14, Fulford 14, Redwing 15, Courtney 13, Cotter 11, Erhart 12, Cicotte 11, Hunt 14, Stein 14, Money 15, Osmun 14, Herbst 15, Park 13, Yerkes 10, Parker 13, Kimmel 11, Simmons 14, Shaw 10, Walton 13, Avery 15.

No. 3, 20 single targets, $3.75 entrance, bird handicap: Heikes 20, Glover 18, Upson 20, Sexton 16, W. H. Allen 17, W. S. Allen 16, Duley 15, Kelsey 19, Baker 19, Bartlett 18, Dickey 17, Van Dyke 20, Trimble 19, Hill 17, McMurchy 18, Fleischer 17, Young 18, Keller 16, Fulford 18, Money 19, Herbst 19, Cicotte 17, Redwing 20, Courtney 14, Erhardt 18, Hunt 18, Walton 17, Avery 18, Osmun 19, Keller 19, Parker 14, Huston 18, Bortle 18, Cotter 16.

No. 4, 15 targets, entrance $2.75: Heikes 15, Glover 14, Upson 14, Sexton 13, W. H. Allen 12, W. S. Allen 12, Duley 10, Kelsey 15, Baker 14, Bartlett 13, Dickey 13, Van Dyke 14, Trimble 15, Hill 15, McMurchy 14, Fleisher 12, Young 14, Keller 12, Fulford 13, Money 15, Herbst 13, Cicotte 12, Redwing 15, Courtney 15, Walton 11, Avery 15, Stein 15, Klein 12, Erhart 14, Park 12, Hunt 14, Osmun 15, Cotter 13, Huston 12, Parker 13, Bortle 13, North 13.

No. 5, 25 targets, two-men team shoot, Gitschlag diamond medals, entrance $1.50:

Glover	1111111111111111111111111—25
Fulford	1111011111011101111011111—21—46

No. 3, 20 bluerocks, entrance $3.75, $100 guaranteed, amateurs allowed an extra shot: Kelsey 20, W. S. Allen 20, Redwing 20, Watts 20, Sexton 19, Trimble 19, Upson 19. Heikes 19, Bartlett 18, Von Lengerke 18, Avery 18, Dickey 18, McMurchy 17, Duley 17, Banker 17, Van Dyke 17, W. H. Allen 17, Hill 17, Young 17, Herbst 17, Wood 17, Visger 17, Parker 17, Valade 17, Glover 16, Fulford 16, Hank 16, Money 16, Bortle 15, Bronson 15, Keller 14, Walton 14, Gray 14, Lane 13, Fleischer 12, Klein 12.

No. 4, 15 single bluerocks, entrance $2 75, $75 guaranteed, same conditions as before: McMurchy 15, Dickey 15, Heikes 15, Trimble 15, Hill 15, Young 15, Wood 15. Erhardt 15, Glover 14 Upson 14, Baker 14, Bartlett 14, Van Dyke 14, Fleischer 14, Redwing 14, Money 14, Walton 14, Duley 14, Sexton 13 Kelsey 13, W. H. Allen 13, W. S. Allen 13, Hank 13, Keller 13, Fulford 12, Avery 12, Allo 11, Herbst 10.

No. 5, 10 singles, $1 50 entrance, 21yds. rise, unknown traps and angles, use of both barrels: McMurchy 8, Glover 8, Dickey 8, Upson 7, Cicotte 7, Heikes 6, Buker 6, Kelsey 6, Trimble 6, Courtney 6, Lane 6, Gray 6, Duley 5, Bartlett 5, Hank 5, Young 5, W. S Allen 5, Fleischer 4, Von Lengerke 4, W. H Allen 4, Sexton 4, Wood 4, Walton 4, Allo 3, Hill 3, Money 3, Avery 2, Brownson 3, Borneau 2, Fulford 2, Van Dyke 2, Vesper 1.

No. 6, Schmelzer trophy contest, 100 bluerocks each man, $10 entrance: Bartlett 92, Parker 92, Young 91, McMurchy 89, Dickey 89, Heikes 84, Trimble 82, Glover 82, Fleischer 82, Kelsey 87, Fulford 80, Money 74 Courtney 78, Sexton 82, Upson 90, W. H. Allen 83, Cicotte 63, Avery 68, Duley 56. Clan 70.

No. 7 15 singles, $2.75 entrance: Upson 15, Van Dyke 15, Hill 15, Kelsey 15, Redwing 15 Glover 15, Lane 15, Erhart 14, Keller 14, Bartlett 14, Dickey 14, Heikes 14, Fulford 13, Sexton 13, Buker 13, Herbst 13, Hank 13, Fleischer 13, Trimble 13, Woods 13, Young 12, Avery 12, Money 12, Duley 10, W. S. Allen 9, W. H. Allen 9.

Third Day.

No. 1, 10 bluerocks, entrance $1.50: Fulford 9, Heikes 8, Kelsey 8, Bartlett 7, Fleischer 7, Trimble 7, Dickey 7, McMurchy 6, Sexton 6, Redwing 6, Young 5. Glover 5, Upson 5, Duley 5, Buker 5, Carpenter 4, Hill 4, Van Dyke 3, Parker 6, Lane 7.

No. 2. 15 bluerocks, entrance $2.75, with $75 guaranteed: Upson 15, Buker 15, McMurchy 15, Dickey 15, Young 15, Bartlett 15, Kelsey 15, Watts 15. Trimble 14, Fulfoed 14, Heikes 14, Van Dyke 14, Sexton 14, Parker 14, Howes 14, Fleischer 14, Redwing 13, Glover 13, Carpenter 13, Klein 13, Keller 12, Wolf 12, Lane 12, Hank 12, Duley 11, Holton 10.

No. 3, 15 bluerocks, entrance $2 75, with $75 guaranteed: McMurchy 15, Holton 15 Upson 14, Keller 14, Lane 14, Redwing 14, Bartlett 14, Trimble 14, Hill 13, Buker 13, Kelsey 13, Holton 13, Heikes 13, Van Dyke 12, Glover 12, B. F. Wilcox 12, C. Wolf 12, McWhorten 12, Haufs 12, Parker 12, Young 12, Watts 12, Dickey 12, Howes 11, Klein 11, Sexton 11, Duley 10, Carpenter 10, Fulford 10, Bortle 9, Courtney 8, Chamberlain 6.

No. 4. 20 bluerocks, entrance $3.75, with $100 guaranteed: Trimble 20, Young 20, Redwing 20, Bartlett 20, Kelsey 20, Sexton 20, Glover 20, Upson 20, Van Dyke 19, Herbst 19, Watts 19, Hanks 19, Holton 10. Trimble 10, Hill 19, Buker 19, McMurchy 19, Howes 18, Keller 18, Barker 18, Heikes 18. Duley 17, Wolf 17, Lane 17, Carpenter 16, Fleischer 16, George 16. Courtney 15, Bortle 15, Fulford 15.

No. 5, 10 bluerocks, entrance $1.50: Kelsey 10, Glover 9, Buker 9, Dickey 9, Fulford 8, Bartlett 8, Hill 7, Heikes 7, Sexton 7, Fleischer 7, Dickey 6, Van Dyke 6, Upson 6, Trimble 6, McMurchy 6, Lane 5 Young 4, Herbert 4, Holton 4, Wilcox 3.

No 6, Gilman & Barnes medal, 25 bluerocks, with unknown traps and unknown angles: Bortle 22, Kelsey 21, Upson 20, McMurchy 20, Redwing 19, Glover 19, Trimble 18, Lane 18, Walton 18, Fleischer 18, Heikes 18, Fulford 18, Van Dyke 17, Hill 17. Parker 17, Bartlett 16, Buker 16, Money 16, Keller 15, Herbst 15, Dickey 15, Carpenter 15, Duley 15, Sexton 15, Fox 14, Howes 14, Visger 14, Courtney 14, Hanks 13, Cheny 13, Hill 13, Wieber 13. Park 12, Daniels 11, Hill 11, Wieber 9, Avery 9, Brusser 8, Marks 7, Elred 6, Holton 4.

No. 7, 25 bluerocks, entrance $4 75, with $150 guaranteed: Burker 25, McMurchy 25, Carpenter 25, Duley 25, Glover 24, Wolf 24, Heikes 24, Klein 24, Daniels 24, Kelsey 24, Trimble 24, Dickey 24, Fulford 23, Bartlett 23, Herbst 23, Holton 23, Parker 23, Lane 23, Brady 23, Van Dyke 23, Sexton 22, Upson 22, Avery 22, Renick 22, Young 22, Redwing 21, Keller 21, Walton 21, Marks 21, George 21, Eyer 20, Fox 20, Hill 20, Bradenburg 19, Money 19, Parker 17, Wilcox 17.

No. 8, 10 bluerocks: Redwing 9, Bartlett 9, Fulford 8, Dickey 8, McMurchy 8, Heikes 8, Kelsey 7, Buker 6, Money 6, Young 6, Upson 6, Duley 6, Glover 6, Hill 5, Trimble 4, Fleischer 4, Fox 4, Sexton 3, Van Dyke 3.

Fourth Day.

No. 1, 10 singles, entrance $1 50: Bartlett 9, Upson 9, Dickey 8, Sexton 7, McMurchy 7, Fleischer 7, Courtney 7, Van Dyke 6, Burke 6, Duley 5, Young 5, Kelsey 5, Fulford 5, Glover 5, Heikes 5, Redwing 5, Money 4, Osmun 4, Trimble 4, Wood 4, Hill 3, Webb 2.

No. 2, 15 singles, entrance $2.75: Sexton 15, McMurchy 15, Upson 15, Trimble 15, Howe 15, Schilling 15, Parker 15, Heikes 15. Cooper 15. George 15, Webb 14, Courtney 14, Carpenter 11, Redwing 14, Baker 14, Van Dyke 14, Young 14, Kelsey 13, Bartlett 13, Hanks 13, Hill 13. Glover 13, Money 13, Keller 13, Duley 12, Holton 12, Brummet 12, Bortle 12, Enos 11, Klein 11, Wood 11, Fulford 11.

No. 3, 15 singles, entrance $2 75: Carpenter 15, Fleischer 14, Osmun 14, Trimble 14. Heikes 14, Bortle 13, Schilling 13, Parker 13, Money 13, Redwing 13, McMurchy 13, Dickey 13, Upson 13, Herbst 13, Van Dyke 13, Burke 13, Webb 12. Bartlett 12, George 12, Glover 12, Wood 12, Fulford 12, Sexton 12, Brummet 11, Howe 11, Hill 11, Wolf 10, Duley 10, Young 10, Kelsey 10, Courtney 9, Parker 9, Park 3

No. 4, 20 singles, entrance $3 25: Van Dyke 20, Buker 20, Dickey 20, Trimble 20, Money 20, Howes 20, Schilling 20, Walker 19, Hilton 19, Fleischer 19, Glover 19, Heikes 19, Fulford 19, Bartlett 19, Sexton 19, Duley 18, Young 18, McMurchy 18, Upson 18, Herbst 18, Courtney 18, George 17, Carpenter 17, Kelsey 17, Hill 16, Redwing 16, Keller 16, Klein 16, Parker 16, Wood 16. Bortle 15, Osmun 15, Park 13, Webb 10.

No. 5, 10 singles, entrance $1 50: Bartlett 9, McMurchy 9, Duley 8, Van Dyke 8, Kelsey 8, Dickey 8, Glover 8, Sexton 6, Young 6, Trimble 6, Wood 6, Fleischer 6, Redwing 5, Money 5, Fulford 5, Upson 4, Heikes 4 Hill 3, Burke 2.

No. 6, American E. C. Powder Co.'s cup, 50 singles, handicap championship: Glover 47, Daniels 38 Klein 42, Webb 36 Acklim 49, Webb 46, Keller 38, Redwing 46, Wood 49, Walton 45, Osmun 39, Fleischer 49, Visger 48, Fox 38, Moore 33, Cicotte 41, Michie 42, Hall 24, Duley 45, Sexton 47, Van Dyke 39, Young 42, Kelsey 44, Baker 48 Brummet 41, Schilling 42, Proctor 41, Herbst 45, Carpenter 47, Howes 45, Trimble 45, Hill 41, Holton 31, Heikes 43, Money 44, Courtney 44, Parker 42, Bartlett 46, McMurchy 50, Dickey 46, Fulford 44, Upson 35.

No. 7, 25 singles, entrance $5: Trimble 25, McMurchy 24, Dickey 24, Heikes 24, Glover 24, Redwing 22, Sexton 22, Van Dyke 22, Kelsey 22, Fulford 22, Parker 22, Vallad 21, Bartlett 21, Duley 20, Young 20, Upson 20, Esper 20, Hill 20, Wisar 17, Hall 10.

Trap at Willard Park.

SEPT. 24.—The birds were a good lot and a large crowd witnessed the shooting. There will be another shoot on Saturday, Oct. 5, same conditions as this big sweep. Out of the dozen entries received but five appeared, and they were placed as follows: T. W. Morfey, 32yds.; Ferguson (New Utrecht), 30yds.; Harrington (Pompton), 28yds.; Hollis (Newark), 28yds.; Jones (Paterson), 27yds. Jones started off poorly and missed his first two birds. He missed two more out of his first ten, and this practically put him out of the race. Herrington also shot in bad form and lost four out of his first ten. Morfey lost his tenth, a fast driver. Ferguson and Hollis killed their first ten straight. Morfey and Hollis were tied with eighteen each. The others were practically out of it. Herrington lost his twenty-second, it dropping dead just out of bounds. He also lost his thirty-fifth bird out of bounds, but killed the rest of his birds cleanly, using his second barrel with good effect. Morfey missed four out of his first twenty-five and three out of the second. Jones continued to drop behind and finished out with thirty-one killed. Hollis used his second barrel very little and killed thirty-five with one barrel each. Herrington dropped out at forty birds, having missed ten up to that time. Some 10-bird sweeps were shot after the main event. Following is the score of the 50-bird handicap:

Fifty birds, entry $25, Hurlingham rules, 50yds., 5 traps:

Morfey (32)	1122111210211221212021202•202—21

No. 2, 15 birds: F. Goodrich 7, McHale 9, French 1, Hervey 3, Giddings 10, Briggs 1. G.

PUBLISHERS' DEPARTMENT.

Tour to the South via Pennsylvania Railroad.

THE last of the Pennsylvania Railroad Company's very attractive early Autumn tours to the South will start from New York in a special train of parlor cars on Oct. 8

The tour covers a period of ten days, and includes the battle-field of Gettysburg, picturesque Blue Mountain, Luray Caverns, the Natural Bridge, Grottoes of the Shenandoah, the cities of Richmond and Washington, and Mt. Vernon.

The round-trip rate, including all necessary expenses, is $55 from New York, $53 from Philadelphia, and proportionate rates from other points.

For detailed itinerary apply to Ticket Agents or to Tourist Agent, 1196 Broadway, New York, or Room 411, Broad Street Station, Philadelphia.—*Adv.*

Peer's Camp Range.

CHAS. A. GRAHAM, of Louisville, Ky., writes of Peer's Folding Camp Range:

"I am very much pleased with it. It is just what is needed with an ordinary camp outfit. I spent five weeks in Michigan this summer, and when I left I was afraid that the weak point in the range was that it would sink in the sand under the weight of, say, a heavy kettle of water to heat. I came to the conclusion, however, that you knew what you were about, and found no difficulty in that respect. It is easy to carry, and very much shortens the time required for the cooking of a meal in the woods, and it will be a permanent addition to my outfit."

Montgomery Ward's Catalogue.

MESSRS MONTGOMERY WARD & CO., who conduct one of the largest mail order businesses in the world, have just issued a new catalogue for the fall and winter of 1895-96. This is No. 58 of "The Buyer's Guide," and it will be mailed to any address on receipt of 15 cents to partly pay postage or expressage. As the book weighs 40oz. it will be seen that it costs considerably more than this to send it. It contains 625 pages, prices, and describes 40,000 different articles, and has 10,000 illustrations.

Adjustable Seat.

Boyd's Adjustable Revolving Seat for hunting and fishing is a great promoter of comfort. It provides, in the first place, a water-tight box for shells or tackle, and also a comfortable seat, which may be automatically adjusted to various heights and which will revolve at pleasure. James Boyd, 342 Iglehart street, St. Paul, Minn., the patentee and manufacturer, will send full particulars upon application.

Defender.

MESSRS. EDWARD SMITH & Co., of New York, who furnished the inside and outside varnish for the Defender, have issued a handsome photogravure of the yacht suitable for framing. The picture shows Defender in a full sail breeze, and is one of the most attractive views we have seen.

"The Boys

HAVE something to say about Dixon's Pure Flake Graphite" is the title of a little book sent out by the Jos. Dixon Crucible Co., of Jersey City, giving the opinions of railroad engineers regarding the lubricating value of Ticonderoga pure flake graphite.

ANSWERS TO CORRESPONDENTS.

R. F. T., New York.—Would you kindly inform me through you paper where you think the best place would be to get off at on Long Island for the deer shooting. Is Smithtown a good place, and could accommodation be secured there for the week? Ans.—No deer hunting on the Island this year. See the law.

It will give us great pleasure to forward a copy of our catalogue to any one who "goes a-fishing." Some people charge for their catalogues, some charge for the postage, some charge for both. We are more than willing to give away our catalogues and prepay postage on them. No angler, after looking at the catalogue, can resist buying from us or from our trade-customers all the fishing-tackle he can afford to pay for. That is where WE get back a good deal more than cost of catalogue and postage.

ABBEY & IMBRIE,

18 VESEY STREET, NEW YORK CITY

MARSTERS HAS WORMS.

Sand Worms, 12c. per dozen. White or Blood Worms, 25c. per dozen.

I am with you again with lower prices for Fishing Tackle. I find by experience that putting down the prices and increasing the quality, increases my business every year.

One lot of Split Bamboo Fly and Bass Rods will be sold at 98c until all are sold. These Rods are all nickel mounted, solid reel seats, beaded butts, silk wound. Extra tip. Complete in wood form and cloth bag, and will give satisfaction. Lengths and weights of Fly Rods are: 9ft, 6oz; 9½ft. 6½oz.; 10ft., 7oz; 10½ft., 7½oz; 11ft., 8oz. **Reel seats below hand.** Lengths and weights of Bass Rods are: 8½ft., 9oz; 9ft., 10oz; 9½ft. 11oz.; 10ft., 12oz.; 10½ft., 14oz; reel seats above hand. Any of the above rods sent by mail on receipt of price and 30c. extra for postage.

No. H.—A special lot of hard rubber and nickel, raised pillar, multiplying reel, with balance handle and side spring click, 40yds. 68c.; 60yds, 78c; 80yds., 88c.; 100yds., 98c. Any of the above reels sent by mail on receipt of price and 10c. extra for postage.

No. E—Special lot of hard rubber and nickel, raised pillar, click reels, 40yds., 48c.; 60yds., 58c. Sent by mail on receipt of price and 5c extra for postage.

No C—Special lot of extra fine nickel plated, raised pillar, multiplying reels with click and drag, and screw off oil cup, 40yds., 58c.; 60yds, 68c; 80yds., 78c; 100yds, 88c.; 150yds., 98c.

Single gut leaders, mist color, 1yd., 20c. per doz.; 2yds., 40c per doz; 3yds, 60c per doz. Double gut leaders, mist color, 2yds., 75c. per doz. Hand twisted treble gut leaders, 3ft long, 10c each, 90c. per doz.

A special lot of Trout Flies at 16c. per doz. Sent by mail, 1c. per doz. extra for postage.

A special lot of Bass and Pickerel Spoons at 5c. each. Sent by mail, 1c. extra for postage.

All kinds of **Hollow Point best quality hooks**, snelled to single gut, 10c per doz.; double gut, 15c per doz; treble gut, 20c. per doz; four ply, 25c. per doz Sent by mail, 1c. per doz extra for postage.

300ft braided linen reel lines on blocks, 40c.; 300ft. hand made linen reel lines on blocks, 9 thread, 38c Sent by mail, 3c. extra for postage.

Brass box swivels, all sizes, Nos. 1 to 12, 15c per doz. Sent by mail, 1c. per doz. extra for postage

FOREST AND STREAM'S OUTDOOR SCENES.

FROM ORIGINALS IN WATER COLORS AND OIL, PAINTED EXPRESSLY FOR THE FOREST AND STREAM.

HE'S GOT THEM.

AS PREMIUMS.

We have prepared as premiums a set of four beautiful and artistic reproductions of original paintings of realistic outdoor scenes. The art work is the best obtainable in New York; the pictures are rich in effect and are intended for framing. They are done in 12 colors. The yacht race is from an oil painting; the others from water colors. The scenes are shown in the small cuts herewith. The plates are 14¾ x 19in. The pictures are sent both to **new** subscribers and to **old** subscribers upon renewal, on the following terms:

Forest and Stream *one year and the four pictures*, $5.
Forest and Stream *6 months and any two pictures*, $3.

If subscribing for 6 mos. designate by title the two pictures desired. Single pictures will be sold separately, price $1.50 each, or the set, $5. Remit by express or postal money order, payable to Forest and Stream Publishing Co., 318 Broadway, New York.

The pictures are sent by mail, postpaid, wrapped in tube.

Copies of them may be seen at this office, and inspection is invited.

The FOREST AND STREAM is put to press on Tuesdays. Correspondence intended for publication should reach us by Mondays and as much earlier as may be practicable.

Forest and Stream Water Colors

We have prepared as premiums a series of four artistic and beautiful reproductions of original water colors, painted expressly for the FOREST AND STREAM. The subjects are outdoor scenes:

Jacksnipe Coming In. "He's Got Them" (Quail Shooting). Vigilant and Valkyrie. Bass Fishing at Block Island.

SEE REDUCED HALF-TONES IN OUR ADVT. COLUMNS.

The plates are for frames 14 x 19 in. They are done in twelve colors, and are rich in effect. They are furnished to old or new subscribers on the following terms:

Forest and Stream *one year and the set of four pictures*, **$5.**
Forest and Stream *6 months and any two of the pictures*, **$3.**
Price of the pictures alone, $1.50 each; $5 for the set.

Remit by express money order or postal money order. Make orders payable to

FOREST AND STREAM PUB. CO., New York.

REVOLVER PRACTICE FOR THE NEW YORK POLICE.

THE Board of Police Commissioners of New York city are about to adopt in part the suggestions made by FOREST AND STREAM last July for familiarizing the force with the use of their revolvers. The need of some system of practice has long been apparent, and it is hardly an exaggeration to say that heretofore the police force with relation to its firearms has been more of a menace to peaceable citizens than a power to restrain the unruly. Compared with the long night stick the revolver has had little moral effect where the criminal classes are concerned.

While FOREST AND STREAM is thoroughly in sympathy with the action of the Police Board, we do not think the system they have decided upon for practice will be as conducive to practical results as the plan at first proposed. It differs in two important respects. The target to be used will be the ordinary Creedmoor target, of sufficient size to meet the requirements of novices in the art of revolver shooting, and the time for shooting any string will be unlimited. FOREST AND STREAM proposed a time limit of at least one minute for strings of five shots and a target the size and shape of an average man, which was to be divided into three sections—head and chest, trunk and arms and legs, and values given to shots on these, parts relative to their deadliness.

In view of the results to be accomplished we still believe this to be the better plan, inasmuch as it reproduces actual conditions much more closely than the other, and as it is calculated to teach the policeman both the limitations of his weapon and its effective use in cases of emergency in the most easily comprehended way, and also in the shortest possible time. It would have the further advantage of giving him some idea of anatomy, and after he had learned to make good scores under the original conditions, the rating could be reversed, so that crippling shots would gain a higher percentage than those likely to be fatal, and in this way the cause of humanity would be served.

The ordinary rifle or revolver target is a very deceptive thing even to the practiced eye when the range is unknown. To a man squinting along the sights of a revolver there is little difference in the appearance of a target 4×6ft. in size at a distance of 50yds. and of one 10×14in. at a distance of 10yds. The one thing that interests him about the target is its appearance relative to his front sight. The actual distance, which for all practical purposes is a much more important factor, is a matter of little moment after his sights have been properly adjusted. This is one of the main reasons for the fact, so well known to sportsmen who handle the rifle, that target-shooting and actual hunting are very widely separated—that a man may be a good shot at a target and his accomplishment stand him in poor stead when he comes to shoot at game.

It therefore seems not unlikely that the policeman may be trained to be a reliable shot at the target and still be worth very little as a marksman under conditions of actual service. A target at any distance is a very different looking thing from a man, and the policeman may practice a long time at the target without getting much idea of how big a man would look through his sights, or where to hold at various ranges to compensate for the vicious recoil of his treacherous weapon.

And here lies the essential difference between the two systems; on the one hand, in the man target the policeman is given a standard with which he is familiar and a training that will clear up in his mind just those points he needs to be enlightened upon, while on the other hand he is taught something he has to unlearn every time he brings his revolver into actual service.

We believe that the time limit has a very practical value, as it is of the utmost importance that a policeman should know how to shoot effectively upon instant notice. Criminals and mad dogs must be stopped quickly if they are to be stopped at all, else the policeman would better reserve his fire.

To train the police to be passable marksmen at the target will be, in our opinion, only half doing the thing. What they need is a training which shall reproduce as nearly as possible the actual conditions they are likely to encounter.

A VANISHED HERO.

IN the mechanical world the passing away of the muzzleloader and the advent of the breechloader simply marked transitional stages in the mechanical evolution of firearms, a mere incident in the multitude of incessant changes taking place in the mechanical world, a necessity in the march of progress. In the world at large, however, the introduction of the breechloader had a much wider and more potent significance. The breechloading rifle soon cleared the element of danger from the atmosphere of the wilderness and opened up that vast area to the uses of civilized man.

But the muzzleloader was not driven out instantly. It contested the field stanchly, though steadily losing ground. It had the prestige of long use and valiant deeds. It was endeared by associations of success at the target, of trusty service in time of deadly peril, of pleasant associations afield. It was a friend whose life and peculiarities were known. It had antecedents. It had character.

But regardless of sentiment or partial judgments, in the march of progress there must be change; the good must yield to the better, the weaker force must yield to the stronger, and all things rejected from the uses of men must sink into the oblivion which comes from perpetual disuse.

But of the work which the hardy pioneer, trapper, miner, hunter and adventurer were able to accomplish with the aid of the breechloading rifle and fixed ammunition in preparing the wilderness for man's peaceful pursuits, often contending against fierce beasts and savage man, history has many times recounted.

It is unnecessary to dwell upon this phase of the subject, but another though less direct phase is worthy of more than passing attention; that is, the effect of the breechloader upon the literature of the country. In this respect it wrought a great change also. Its destructiveness was so great that at one swoop it wiped out the materials of the romantic school which pitched its action, scenes and adventures in the American wilderness.

Had the breechloader been in use at the time of which Cooper wrote, the charming Leather-Stocking tales would never have been written, and the same is true of all similar tales, although of many of them it can truly be said that if they had never been written the world would have been a gainer by it.

In literature the limited power of the muzzleloading rifle, with its cumbersome accessories of powder horn, bullet pouch, patches, ramrod and flint lock or percussion caps, supplemented with the hunting knife in times of desperate need, gave the writer every opportunity to bring the personality of the hero into conspicuous play. The author of fiction in particular revelled in the personal prowess of his hero. If death did not result from the first shot the whole *dramatis personæ* then came into action, the hero went to the front and all the complexities and perils began to swirl. If the hero or the villain had had a repeater and fired eight or ten shots in rapid succession, a few deaths would have resulted and the action of the story would have ceased. The physical prowess of the hero would, at the same time, have had no play.

It was an easy matter for the novelist to balk the one shot of the muzzleloader. A twig in the line of flight deflected the bullet; the cap, being damp, failed to explode; the victim stumbled at the moment and the bullet went hurtling and whistling over his head. At the worst, if a man were killed it was but one character gone, and such in no wise affected the unity of the story. But the shot being fired, or the besetting dangers being too many for the hero to face, his physical powers and mental cunning came into play against the like opposing powers—the rifle, or bow and arrow, or captivity, being a constant menace and a possible danger, a spur to the most desperate effort. Were the hero hotly pursued by savages or maddened panthers or grizzly bears, he loaded his rifle as he ran; and this shot failing, the author had in reserve a most thrilling description of a desperate knife fight. The hero, ambidextrous if necessary, made such rapid play, had such wonderful bodily activity, so clear an eye, and judgment and generalship so just, that a squad of charging Indians against him were no match for his lightning thrusts and bodily shiftiness. But in the event that it was desired that he be overmatched, then there was the long run through the woods with the relentless pursuers madly on his trail; the fleet runner who led his fellows; the turning back of the hero to give the leader battle; the desperate encounter which ended barely in time for the hero to resume his flight; the desperate leap of the chasm or plunge into the deep torrents when nature had been strained to her utmost, and the escape.

And the breechloader changed all this. It wiped out the physical prowess of the hero and all its festooning of romance. In an encounter it put the physically slight man on an equality with the giant, all else being equal. The old school of literature was then a further impossibility. As to comparing the old literature of the wilderness with the new, it cannot be done, for the breechloader soon ended the wilderness and made it the home of men. But of the old literature, the best of it is not without interest and merit. While the breechloader accomplished a great good in opening up a vast country for man's habitation, who is there who does not regret the passing away of the wilderness and its literature?

SNAP SHOTS.

WE begin the publication to-day of a new series of chapters in the life history of Uncle Lisha Peggs, Samuel Lovel, Solon Briggs, Pelatiah Gove and those other personages of Danvis in Vermont who have taken their places among the worthies of the Green Mountain State, and have been given lasting fame by the magic of Mr. Robinson's pen. The former series, "Uncle Lisha's Shop," "Sam Lovel's Camps" and "Danvis Folks," originally printed in our columns, are reckoned among the classics not only of sportsmen's literature, but of New England life. In this new series we shall look in on Uncle Lisha in his camps on the Little Otter marshes on Lake Champlain, and the incidents and human nature to be chronicled will prove not less entertaining than those that have gone before.

There is our contributor, O. H. Hampton. Follow his example. When he comes across a good game country where there is something left for another, he sits down at his next stopping place and writes about it to the FOREST AND STREAM. Do likewise. If you know where there is good shooting, tell of it in these pages. There are those who want to know all about it. When we were moved to write a paragraph the other day about the busy folks who with all their press and push of work find time now and then to go into the woods with a gun or to cast a line where the bass lurks in the lake, we had Mr. Hampton in mind among others. We ought all of us to admire his good sense in going shooting when he can, and to be grateful to him for demonstrating, as he does so well by precept and example, that "you don't have to be chained to business all the time if you don't want to be."

The extreme drought which has prevailed over large areas of the country has seriously affected shooting conditions. Covers which usually contain woodcock and grounds where snipe are looked for have been so parched that it is useless to look to them for a solitary bill. The foliage, too, is withering up, and the autumn has not in store for those who go afield the gorgeous coloring which makes so much of a tramp in October.

The Sportsman Tourist.

UNCLE LISHA'S OUTING.

I.—Planning the Campaign.

THE company in Uncle Lisha's shop, after discoursing of hunting and lamenting the decrease of game, lapsed into a meditative silence, which was broken at last by Sam Lovel's deep-toned, deliberate voice.

"I tell ye what, I'm jest a hankerin' tu go daown tu Leetle Otter Crik, a duck-huntin'. Don't ye remember, Antwine, what a mess on 'em the' was, a hengin' 'raound that spring we was a trappin? The' must be sights on 'em there in the fall, when the wild oats is ripe."

The Canadian grunted emphatic assent without interrupting the energetic pulls at a pipeful of damp tobacco, till it was in full blast, then he gave further testimony.

"Yas, seh, dey was great many dauk dat tam, but naow dey was two dauk quarrly for every wil' hoat, an' dey was more as honded taousan' bushil wil' hoat."

"That's ruther more'n I should ha' sot 'em at," said Uncle Lisha, punching a hole in a patch with a crooked awl and inserting the bristle of a waxed end. "But I've seen slews on 'em on the ma'shes, an' I do' know's you're lyin' much, for you, Antwine. Why don't ye go, Samwil, you an' Solen an' Jozeff an' Peltier an' 'mongst ye? Ye might jest as well as not, right arter ye git y'r corn cut up, an' stay a good spell 'fore tater diggin'.

"Bah, gosh! Ah'll go, me," cried Antoine, "Ah'll can show you haow for shot de dauk! Ah'll was be preffick mans for kill dauk, me."

"Me an' yer father an' the women folks c'ld git along wi' the chores, julluck rollin' off'm a lawg," Uncle Lisha continued without noticing the Canadian's self-invitation, "an' I don't see as there's nothin' tu hender ye goin'."

Sam pondered the proposition for a considerable time before he replied with a question.

"Why won't you go, Uncle Lisher? The chores hain't no gret, an' I c'ld git Billy Wiggins tu help du 'em."

"Me go?' said Uncle Lisha, casting a quick glance on Sam to see if he meant what he was saying. "Good airth an' seas! I'm tew ol' tu go skylarkin' 'raound wi' a passel o' boys! I should jest sp'ile the rest on ye's fun. Better take yer father, Samwil."

"You couldn't snaike him daown there wi' a yoke o' oxen. He'd a sight druther stay 'long wi' the women folks. You wouldn't spile no fun an' if we settle on goin' you got tu go tew."

"Yas seh, you jes' good leetly boy as we was Onc', Lisha," Antoine declared for his further encouragement.

The old man sat meditating for some time with idle hands upon his knees before he answered:

"Wal, the' hain't no denyin' but what I'd luf tu. I use tu squirmish 'raound them ma'shes consid'able when I was a 'whippin' the cat' daown there thirty year ago. An' I sh'ld luf tu see the folks. I p'sume tu say the's some 'at haint fergot me yit. But I guess I'd ortu stay tu hum an' help yer father an' the women folks." He heaved a sigh of resignation and gave the patch a resolute punch with the awl.

"You needn't let that hender ye," said Pelatiah Gove, "for I c'n turn tu an' help 'm if the's any extry job."

"Why, you'll go 'long wi' us, Peltier," said Sam.

Pelatiah shook his head in slow but determined negation. "No, I don't want to go—not down there," and they all knew why.

"Wal, you'll go, Jozeff?" Sam asked.

The first response was a dubious squeak of the rickety chair as Joseph Hill shifted his position in slow perturbation of spirit, and then as he leaned cautiously aside to inspect his unstable seat, assuring himself in an undertone, "I ruther guess 't won't, not yit," he answered:

"Wal, I s'pose I'd ortu, an' then again I s'pose I hedn't ortu. I'd ortu go an' git rested up, which I hain't hed no chance sence hayin'. Then again the's lot tu du 'at I hain't seemed to git 'raound tu, an' father he's kinder peaked, do' know but he's sorter failin', do' know's I ever see him quite so docyle. An' I do' know as M'ri an' Bub c'ld git along wi' the chores erless they c'n punch that 'ere 'Lige Kellick tu help 'em some, they can't never git him up tu in the mornin', the lazy shote. But I do' know 's father'd let me hev his gun, if Bub 'ld spare it, he's a whangin' 'raound wi' 't ev'y chance he gits. But if the ducks is as thick as you tell on it seems 's 'ough a feller c'ld git feathers 'nough tu fill a tick, an' that's jest what M'ri wants. I got tu make that the main p'int in talkin' on 't over with M'ri, an' I can't answer fer sartain until I du, but I'm hopesin' the feathers 'll fetch her."

"An' what du you say, Solen?" Sam asked.

Solon Briggs heaved a sigh so deep that it served to clear his throat as well as to express regret.

"Well, I'm obleeged tu say that my goin' on sech a taower has got tu be forewent, because I have heretobefore gin my bonafied promise tu Mis' Briggs, betwixt hoein's, tu take her over tu Adams to visit her folks, if she'd wait till after hayin', which she hevin' done so, I can't intricate myself aout on, hon'able."

"I s'pose not," Sam admitted, "but I s'pect all onus 'at goes hev got tu talk aour women folks raound fust. They gen'ally hev objections tu stag parties. If it hain't the work 'at ortu be done, it's your health. Stag parties is turrible onhealthy."

"Bah gosh," said Antoine, straightening and swelling himself to his greatest dimensions and speaking in a big voice, "when Ah'll took notion Ah'll goin' somewhere, mah hwomans make off hees min' Ah'll goin', an' ant said nothing 'f he aint want hees head slap."

"Wal," Solon said, "my idee is 'at moral persuasion goes furder'n rambumptiousness in argyin' wi' femaline folks."

"Antwine's got the advantage o' most on us," Sam explained, "in hevin' of him a he wife 'at's twicte as big as what he is."

"O, Sam, no he an't, too. Ah tol' you, seh Ah'll took it w'en he was young an' Ah'll brought it up for suit me, not hesef. An't you see, Hein?"

"Wal, I cal'late the truth on't is, she's glad tu git red on ye as often as she ken," Uncle Lisha said as he rubbed down the seam with the handle of the awl.

"It 'pears 'ough aour huntin' party was simmered daown tu Uncle Lisher an' Jozeff an' Antwine an' me, anyways, for Peltier won't an' Solon can't an' mebby the' can't none on us, not for sartain 'fo 'fore we find aout what aour women folks says. But s'posin' we du go, we want tu borry Peltier's scaow boat—over 't the pond, haint it, Peltier?—for Uncle Lisher an' Jozeff, an' me an' Antwine 'll hev my canew, an' we c'n lwud them an' aour tent promiscuous ontu a waggin an' drive daown within tew rod o' where we camped when we went fishin' an' git aour team kep' somewher's nigh."

"Why, Samwil, you've got us so nigh there a'ready, I can e'enamost smell the camp-fire," said Uncle Lisha.

"We don't want tu kerry no gre't var'ty o' pervisions," Sam continued, "jest some pork an' taters an' a leetle smidgin o' bread tu start on—we c'n buy bread o' the folks daown there when we git aoutan', le' me see—"

"An' onion, Ah'll drudder not have had anyt'ing as not had onion, me."

"Of course, so's 't you c'n be strong whilst we suffer," said Sam, and went on enumerating the necessaries of the trip. "An' a slew o' paowder an' shot an' caps an' waddin' an' blankets an' lemme se what else?"

"Why, Samwil, you goin' tu du julluk t'other feller 'at went a-huntin'? He got already tu start wi' his ammernition lwuded intu his pockets, an' tu make sure he hedn't forgot nothin' he went over 'em all. 'Here's my shot,' says he, a-saippin' his hand on one pocket, 'an' there's my paowder,' a-puttin' his han' on another, 'an' there's my caps. All right,' an' off he went till he come tu the woods an' a pa'tridge a-stan'in' on a lawg, not six rod off. 'By thunder!' says he, 'I hev forgot suthin', an' it's my gun.'"

"Yes," Sam said, "guns might be hendy an' we'll have us some, an' le' me see—"

"We want tu kerry a gre't big bag tu put them 'ere feathers in," said Joseph Hill; "I do' know as sech an almighty gre't bag, but a tol'lable middlin'-sized sort o' bag, but I've got tu kerry a bag for 'em if I don't kerry nothin' else, 'cause the heft o' my argyment lays in them feathers. An' Samwil an' Uncle Lisher," he leaned far forward and spoke in a loud, impressive whisper which was emphasized by a prolonged creak of the unstable chair, "you don't want tu say nothin' 'baout it tu your women folks, 'cause they'd up an' tell M'ri' an' then daown 'ould go my shanty." He settled back in his seat with spasmodic chuckles, to which the chair responded with a series of short squeaks, then its legs began to slip and sprawl apart; there was a gathering sound of splitting and breaking wood fibers, till with a final crash and resounding bump chair and occupant went down to the floor together.

"I'm almighty glad on 't," Uncle Lisha roared, almost like an echo of the brief sudden uproar. "I wish't it had bruk two year ago, the dumb'd squeakin' thing. Open the stove door, Peltier, an' chuck in the pieces 'fore some tarnal fool sets tu mendin' it. Hurt ye any, Jozeff?"

"Wal, not ra'ly," Joseph answered, looking helpless and foolish as he sat amid the ruins. "I sod daown a little sollider 'an I cal'lated tu, an' it jarred me some, an' I b'lieve I bit my tongue, seems 's 'ough."

"Where was de litlin' struck?" Antoine asked; and Aunt Jerusha appearing at the door of the kitchen, cried out in a tremor of anxiety:

"What in the livin' airth! Has the stove fell daown? Lisher Peggs, be you hevin' a fit?"

"It's that dumb'd chair, an' I'm glad on 't."

"It's fort'nate 'at the linter hain't un lerminded by no suller," said Solon, as he viewed the wreck, "or Jozeff might have been promulgated into the dep's."

"Sam Hill!" Joseph ejaculated, as he began to push aside the wreckage with deliberate hands preparatory to rising. "Ef that wan't a kerwollups! Wal, I guess I'll g' hum an' kinder begin tu hint tu M'ri 'baout the feathers. Don't seem 's 'ough I sod daown on none that time sca'cely." And as he went forth the other visitors departed after him.

MAINE GAME NOTES.

Jock Darling.

JOCK DARLING is a representative of the old type of hunters and pioneers that is fast disappearing, and which in a few years will be a thing of the past. Born and brought up under the shadow of Maine's pine trees, he has that intimate sense of acquaintance with nature that comes to few, and I doubt if a man more at home in the woods could be found. He is a master of all the intricacies of woodcraft and hunting, and a man of great originality.

Though sixty-five years of age he stands erect and his step is springy and tireless. Even now you can't get Jock to ride over a road if there is a chance to walk. His features are clear cut, of the old Roman type, and betoken determination and resource. In manner he is gentlemanly and obliging. He is a good conversationalist, possessing a fund of interesting anecdote and reminiscence, and as a companion in the woods he is the same the last day as the first, and I know of no greater tribute.

Jock has his own ideas on the game laws and the manner of their enforcement, and his honest convictions have caused him to run foul of the wardens more than once, but no man has a greater respect for law and order. He holds the office of first selectman in his native town, which shows the regard of those best situated to know him, and as a game warden he has a long and enviable record.

Next to his many-sided knowledge of woodcraft the thing that impressed me most about Jock Darling was his great ingenuity. He has not only learned what other woodsmen know, but also, through his quick-wittedness, he has acquired an extra power over nature which is entirely original.

A single instance will suffice to explain what I mean. Tired and wet one winter's evening he came to a deserted lumber camp, where he proposed to spend the night. His first requisite for comfort was a fire, but when he examined his matches he found that all were wet, and that the heads came off without producing a light.

Another man in his predicament would have spent a cheerless night, but the dilemma only set Jock's wits a-working. He had heard of fire being produced by friction, and this principle furnished him a working basis.

Inside the camp was a "deacon seat"—a plank bench supported by four rude legs cut from saplings—and Jock set to work to whittle a smooth groove in its side. When he had finished this to his liking he procured a cedar stick that nearly fitted the groove and rubbed it briskly backward and forward. Soon he had the bench smoking hot, and placing one of his matches in the groove began the drying process. By repeating this a number of times he succeeded in getting the match so dry that it was no trouble at all to start a fire.

This is only a circumstance to some of the obstacles Jock has overcome in the woods. In fact, he does not recognize obstacles except to get the better of them. If he wants a piece of cord he takes it from a cedar or basswood tree. The woods afford him shelter, bedding, means of transportation (by water at least), food for sustaining life and a thousand other things as well.

When one sees a man so thoroughly the master of the situation it seems hard to realize how some people will get lost and starve, and suffer cold and hardship in the same woods that are such a generous storehouse of gifts to the one who has the key.

Jock About the Camp.

Jock not only does a lot of difficult things, but he also does everything well, even if it is so simple a thing as building a fire or pitching a tent. I found this out the first day in camp as I watched him do the two things mentioned. As soon as the wagon which had brought our boats and outfit, the first stage of the journey, disappeared, Jock proceeded to erect the tent, and the programme thus inaugurated was at every future camp rigidly adhered to—shelter first, grub afterward.

Jock cut his poles a little longer than necessary. After he had sharpened the two uprights at the bottom he proceeded to trim out the crotch designed to hold the ridge pole and this he did in a masterly way, supporting the pole in one hand and wielding his light axe with the other. He changed the V which nature had given to a full U shape by means of adroit cuts with the inside edge of the axe delivered over the upper arm of the crotch, and he finished by trimming the points short so as not to punch holes in the tent roof.

Taking the uprights in both hands he drove them into the ground by successive blows till they were sufficiently steady to stand erect, after which he took them down. He inserted the ridge pole in its proper position in the tent and then from the inside fitted the ends to the crotches. It only remained to raise the uprights and place them in the holes in the ground which had been prepared and to anchor the tent to convenient trees or roots, lacking which pegs were used.

Having pitched the tent satisfactorily and gotten our things under it, including some straw, which in the absence of balsam was used our first night in camp for bedding, Jock made his preparations for supper.

As a preliminary he procured two dry logs which he placed side by side. Next he cut huge chips from a seasoned stump near by, some of which he whittled with his knife into a series of long shavings, grouped like the feathers in a rooster's tail. These he arranged between the parallel logs, heaping up the other pieces above. He applied a lighted match to the shavings and thirty seconds after had as good a fire as heart could wish.

To satisfy our woods appetites Jock was compelled to bake bread for every meal. I knew his bread was good, but I was a little surprised to hear a practical cook of the other sex acknowledge that she had never eaten anything better. How this lady came to taste his bread I do not know, but she said that she had and that her opinion was based on the actual thing. Jock mixed his own flour—and I don't know what went into it, except that I saw him once direct a thin stream of pork fat from the frying pan into the dough—but it was good bread and wholesome. And in this regard I think my word should carry weight, for I lived off Jock's bread for ten days and came out of the woods a better man than I went in.

When Jock came to bake the bread he had to rearrange his fire, so as to get from it a direct outward heat.

Sometimes he would accomplish this by setting up perpendicular splinters of dry wood against a back log, while at other times he arranged them horizontally. The effect

JOCK AND THE STONE DOG.

was always the same—a glowing fiery mass that sent great waves of heat into the open front of the oven and that baked the thin bread to the core.

Jock cooked other things at the fire—one day it was a mixture of resin and boiled oil, designed to make his new canoe watertight. I asked him how he was going to apply this, and he replied: "With the only brush I've got." That paint brush proved to be his naked hand, and a good brush it was, and a good job he made of the canoe.

So much for Jock about the camp.

Moose Facts and Theories.

Jock is a most interesting conversationalist on topics pertaining to the woods, and you may be sure that what he says is the result of his own experiences. He dislikes to talk from hearsay, and when he tells you there are three kinds of yellow lilies in the Maine streams, you are morally certain that the knowledge came to him at first hand and that he can back it up. He does not confine himself to his facts, however, but generalizes from them and puts them to interest.

Years ago, when he was a young man, Jock hunted through the wildest portions of Maine for moose. One year he killed a hundred of these great animals. He would not do it again if he had the opportunity, but in those days things were very different, and the moose had no extrinsic value such as the sportsman has since given it.

In the fall of the year in question he killed twenty-six moose for the market, all of which were put to good use in supplying meat to the settlements. As the winter advanced a party of Canada Indians came into Jock's hunting country, which was no great distance from the spot where he told the story, and began an indiscriminate slaughter for the hides alone.

The game seemed certain of extermination, and not willing to see the Indians get all the profits, Jock took

BACKWOODS BREAD BAKING.

a hand also. Before spring he had secured seventy-five moose hides—a statement which contains a volume in itself. Most of the moose of course were killed in the yards, and it is a wonder that any of the race survived.

Parenthetically Jock remarks that moose are at any time of year much easier to kill than deer, provided you can find them. He says that on two occasions he shot four moose in succession from the same spot with a muzzle-loading rifle. He dropped each moose with a single shot, and the others stood and looked on while he measured his powder and rammed home the ball designed for their special benefit.

In connection with the abundance of moose Jock told of the scarcity of deer. In fact there were no deer at all in the Sebois country at the time of which he spoke. Moose and caribou had the region entirely to themselves.

The wolves even had followed the deer further east and south. Around the settlements the deer led an unenviable life. Harassed on one side by the ever hungry wolves and on the other by scarcely less bloodthirsty men who killed by the wholesale on the crust, they were thirty years ago nearly exterminated. Darling says that he traveled on the snow once for a week through what had been one of the best deer ranges in Maine and only saw the tracks of three deer. The wolves and crust-hunters between them had made a clean sweep.

This very depletion of their numbers proved the salvation of the remaining deer. The wolves migrated to better hunting grounds, and public sentiment was aroused against crust-hunting, with all its cruelty and wastefulness. One incentive for this style of hunting had been the open market for venison at any time of year.

A rigid close season, which included the months of heavy snows, made illegal venison unmarketable, except perhaps to the lumber camps and in small quantities, and thus one of the greatest channels for the drain was closed.

The law limiting the number of deer killed by any one man was a deterrent upon skin-hunting. And so by degrees the situation improved until to-day the deer are far more abundant in most localities than they ever were in the history of the State.

The great increase in the number of deer began twenty years ago, and Darling thinks it was due in a measure to immigration from some section further west. He argues that the breeding stock left in the State was not sufficient to account for the great and miraculous increase that took place, and that it must have been due to some extraneous source.

When the wolves migrated the deer moved into the moose range, and to-day they are as abundant there as elsewhere. The only limit to their increase seems to be the amount of food available. The number killed by hunting, both legal and illegal, has not apparently as yet checked the increase.

A Dog With a Fad.

The dog shown with Jock in the illustration belonged to Brown, the driver who carried us back in the woods. She was a most intelligent animal, and possessed an exuberant store of vitality. She also was mistress of an abnormal appetite for stones—not that she actually ate them, but she always carried one in her mouth like a quid of tobacco, or perhaps in deference to her sex I had better say "a portion of chewing gum."

When we learned to know her better we found that this little idiosyncrasy of hers was a direct result of her exuberant spirits, and that she carried the stones to play with them. Her owner pointed out a lump on her forehead that he said she received by failing to catch in her mouth a stone thrown her; and her teeth were much the worse for wear as a result of her over-enthusiastic play.

For the first part of our journey she was content to have a little game of solitaire with the stones, which were only too abundant along the highway, but after a while she tired of this, and I noticed her looking wistfully at the wagon upon which we were riding. A little later I felt something slimy deposited on the seat beside me, and turning suddenly beheld the dog, her head cocked on one side, ears forward and eyes twinkling, ready to play the moment I should reach out my hand for the stone. I tossed the stone into the road, and in a moment she had jumped down and recovered it, and was back on the rapidly moving wagon.

Long before we reached our destination she was reduced to solitaire again, but her enthusiasm never waned. She stopped the game but once, and then she had provocation, for a large field mouse ran across her path. She dropped the stone then only long enough to bolt the mouse.

At Hay Brook Farm she was as full of play as ever, and the picture shows her just after she had sneaked up to Jock and laid a stone upon his knee. She has withdrawn to what in her opinion is a proper distance, and is ready for play.

It is interesting to note that a pup of hers at this same farm has inherited her love of playing with stones, but the mother is the friskiest and most indefatigable at the game.

Uncle Jock's Log Cabin.

After selling out at Nicatous, Darling began looking about for a new hunting country. He cannot rid himself of his love of the woods—that lies at the root of his nature—and though he could well afford to give up guiding and settle down, inaction and comfort have no charms for him.

Nothing could quite make up to him for the excitement of the chase, for his balsam bed at night or for his light canoe by day that knows and obeys his touch like a thing of life. Jock loves these too well to put up with the humdrum of civilization, and for an excuse to be in the woods he guides.

He has selected the Sebois country as being one of the best large game sections in Maine, and one of the few localities where moose, caribou and deer are all to be found in numbers.

He has secured a lease of a large tract of country about Grand Lake, and has nearly completed a roomy permanent camp near the outlet. This will be known as "Uncle Jock's Log Cabin," and will no doubt hereafter be the headquarters of many hunting parties. Though as yet uncompleted, I can picture it now, as I hope to see it this winter, with somber-colored carcasses of game hanging from its eaves—perhaps a moose, possibly only deer and caribou, maybe a bear in his coat of brilliant black—the whole garnished by festoons of partridges, and set off by a background of fleecy whiteness.

J. B. Burnham.

THE END OF THE CARRY, WORDLEY BROOK.

A DAY'S SPORT.

Mr. George W. Hatchett had, during his vacation in upper New York State, a rather remarkable experience with the fauna of that region.

"It seems almost a pity," said Mr. Hatchett, "that I was alone at the time. I am rather apt to understate things (Mr. H. is a drummer) and my horror of exaggeration, or of what might appear to be such, compels me to omit all account of my fishing."

My host at the little place where I stopped kindly gave me some valuable pointers (seeing I was from the city and inexperienced), and when I was starting for a day in the woods he thoughtfully fitted me out. A quantity of hard crackers, a piece of uncooked salt pork and a quart of molasses as indispensables, together with a package of ground coffee and a coffee pot, made a compact parcel he slung across my left shoulder. From my right shoulder he slung a hatchet, a frying pan, a coil of clothes line and a hand saw. He intrusted to me his own fowling piece, which he called a Queen's arm, with ammunition, and with kindly enthusiasm beaming from his eyes he wished me good luck, his honest wife and daughter coming to the doorway and almost laughing at my ardor.

Once into the trackless woods with my trusty weapon, I was alert for game, but for several hours trudged on seeing nothing. Suddenly in a glade just ahead I saw two grayish brown objects not far apart and instantly fired. My host must have put in a heavier charge than he intended, for there was a fearful report and the recoil of the piece nearly knocked me over, but I killed both animals, which I soon saw were woodchucks. At the sound of the report I noticed a reddish streak flash into the end of a fallen tree and I at once set to work with my saw and evened off the hollow end, then with stout stakes trimmed with my hatchet I securely barricaded the opening; imprisoning the fox, as I had no doubt it was, until I could come back and get him. My long tramp had made me hungry, so I built a fire, and with some crackers, fried pork and strong coffee had a good snack. I was smoking my third pipe when a crackling of dried twigs caused me to turn around and I saw two bears, an old one and a half grown cub, making toward me. Leaving my arms, provisions and implements I mounted into a tree, my coil of clothes line still across my shoulder. The bears at once began eating my crackers and pork and were particularly pleased with the molasses, which they licked from the bottle as one after the other they took it in their paws and upturned it. The big one was sitting up preparing to finish the bottle when I dropped a noose over her head and swayed away at the rope, which I had thrown over a limb above me. Gentlemen, I have sold a bill of goods to old C. up in Connecticut, but never, with that exception, did I have such a tussle. Indeed, without some assistance from the younger bear I might not have succeeded. He in his surprise and wrath grabbed the loose end of the rope, which had fallen to the ground, and yanked at it, thus materially aiding my efforts. The old one was finally done for, and while the young one was moving around her I slipped down from the tree and with a charge from the gun and a few blows with the hatchet finished him. I saw I would barely have time to get back to the house before nightfall, so I prepared to return. I now observed that the shaking of the branches in my struggle with the bear had created a disturbance in the tree. Bees in great numbers were buzzing around, and I had to dodge about to avoid being stung. It was, I saw, a bee tree. As nothing could be done till the next day, I made my way homeward and spent a restful evening arranging for the bringing in of the honey and game. I ticked off the results of my trip as follows: One-sixth dozen woodchucks, one-sixth dozen bears, one-twelfth dozen red foxes, one bee tree (E. and O. E.).

AN OUTING IN THE SIERRAS.—IV.

Glenbrook and Out.

On Aug. 12 I left the California part of Lake Tahoe, and in an hour the Meteor carried me to Glenbrook, Nevada, nearly opposite Tahoe City, and thirteen miles distant. Glenbrook is for the present at least a busy, thriving little town, with a most home-like inn kept by a lady from Maine.

There are stores, a number of good houses, schoolhouse, church, and what has made it, but will in the end let it die or live a feeble existence, a large saw-mill, that has perhaps more than any other factor contributed to the prosperity of the Comstock and other mines.

This mill is the property of a company of which Mr. Duane Bliss, my host and pleasant companion for a couple of days, is the president and general manager.

Beginning a quarter of a century ago, when the mountains—which encircle the lake—were covered with a magnificent forest of pines, cedars, firs, tamarack and other trees, this company having acquired many thousand acres began a most thorough course of exposing the rocks and crags and manufacturing romantic and grand scenery as well as timber, lumber and firewood. The timber is carried up a ten-mile railroad, built first along the edge of a cañon with a sharp rise, then crosses its head on trestles, then by a three-legged zigzag ascends the face of a mountain—on which a healthy goat would grow weary, about 1,000ft. in ten miles—to the summit. Here the lumber is cast into a twelve-mile flume; and the swift current of clear mountain snow and spring water shoots it down to Cañon City, built of it, whence it is distributed to Virginia and other cities; and millions of feet of timber go into the bowels of the earth to timber the mines, the firewood to furnish pump power and heat the cities of the mining region. Year after year the denudation has spread; peak after peak has thrust its naked head into visibility, and the border of available timber within paying distance has gone further away, until at another point on the lake shore it became necessary to build nearer to the supply another city, Bijou, with more railroad, and a long wharf over which to its end the railroad extends; and from it the logs are dumped into the lake, made into rafts, towed by the company's steamers to Glenwood, hauled out through the saw-mill and sent up the mountain and down the flume as were their predecessors. But a few years more and there will come an end. With no more trees within profitable distance there will be no more uses for the mill, the railroad and the flume. With them out of demand, no more work for the men, no more need of the houses, school-house and church, and Glenbrook and Bijou will be deserted villages. It is fortunate for those who must remain that the location is pleasant; and when pushed to it pleasant hotels may attract a share of the summer travel.

That afternoon Mr. Bliss invited me to a ride up the mountain on the railroad. I accepted with pleasure, but must confess that when given the choice between the cab and the cow-catcher my first thought was in favor of the cab, but when he remarked, "Here's my favorite seat," at the same time taking a seat across the head of the engine, I did not have courage enough to decline, and we mounted, using the cow-catcher to rest our feet. After a bit I began to enjoy it, with our backs against a guard on the front of the boiler—the entire horizon open to our view—and no dust. The ride up the two legs, when we went ahead, was exciting and very pleasant; but on the middle stretch where we had to back the heat was perceptible. We dashed ahead at good speed around mountain Cape Horn, over high trestles, along the edges of deep cañons, until we reached a table land or flat almost up to the summit, along which we ran quite a distance, and I wondered at the thrifty appearance of the grass. It is a cattle ranch.

On the whole, the ride up and down again from the flume will be long remembered.

After a pleasant dinner at his home I had a pleasant chat with Mr. Bliss and family. We had all been in China, Japan and India, and had much in common.

The next morning early the Emerald took us over to Bijou, 12 miles; then leaving us on the wharf, she tackled an immense raft of great logs to tow back, while we mounted this time the cab of the locomotive, backed down the wharf for our use, and started for Myers Station, 10 miles. This road, leading along a comparatively level route, along the base of mountains and edges of valleys in which many cattle were grazing, was less picturesque, but actually more dangerous than the Glenbrook road; for there were lots of chances for steers, cows or calves to be on the track. One such chance—and one only—has had a serious termination. A few years ago a suddenly awakened or startled calf lying unseen near the track jumped up and onto it, ditched the engine and killed two or three men. We went along very carefully, throttle in hand, and had no adventure.

Along the road there are branch roads and switches leading up cañons.

At Myers Station, which we reached at 9:30, a handsome pair of good and safe horses were hitched to a very comfortable buggy, and we started across the Sierras on the old stage road from Carson and Virginia City, the road over which so much treasure has been hauled, and immortalized by Bret Harte and other Western writers. The first three miles was a steady climb and a steep one, for we went up about a thousand feet in three miles; then at about 8,000ft. up, and from one of the highest of surmountable summits, we began our way down, reaching Strawberry, where we had a very excellent lunch at about noon. We lay off there until about 3 P. M., for it was blazing hot and the horses needed rest.

The little hotel is temptingly near the banks of the American River, and hot as it was I did not resist the temptation to put my rod together and make a few casts—a very few it turned out, for I did not, and ought not to have even expected to, get a strike. But there occurred something which brought to my notice a fact that I had not hitherto observed. In all of the work I had done at the high altitudes I had panted a great deal, but perspired very little. Here the reverse was the case. A hundred yards of tramping caused profuse perspiration, this at about 4,000 or 5 000ft.

The road, although so old, and according to the views of Mr. Bliss, who had gone over it often, now in bad shape, struck me as very fair, except for the dust. Going down a steep grade just before reaching Strawberry (and very glad that the horses were good holders back), Mr. Bliss told me that this was the identical hill made historic by the gallop down and by a short turn almost a countermarch over "Slippery Ford," given by Hank Monk to Horace Greeley years ago. There's a bridge over the river now, but the approach to it over bare rocks would no doubt, if wet, be slippery enough. I can readily believe that in his account of the occurrence Mr. Greeley did not exaggerate his emotions.

Several places were pointed out where more or less successful and historical "hold-ups" had occurred, and here and there where a grizzly had been encountered; but the great number of wagon loads of campers, men, women and children on their way in, and a goodly number of established camps in suitable locations, of a few adventurous bicyclers pushing their wheels before them up the hill, of women and children strung along and whipping the American River for trout, and of herds of calves and young cattle tranquilly cud chewing, and at no time a great distance apart dwelling houses, dairies, ranches and taverns, indicated that the danger of meeting either road agent or bear was at a minimum. Jack rabbits, California quail and hare we did meet in abundance, and no end of chipmunks.

We reached the Pacific House, thirty-nine miles from Myers Station, at 5:30 P. M., and there spent the night. I must give a free ad. to this hotel, simply this: I never in my life had in any country, at any resort for travelers, so excellent a supper and breakfast so splendidly prepared as those here given us by Mrs. Zimmerman—enough of everything for three times the capacity of Mr. Bliss and myself, and each course better than the other.

As the Pacific House was only about 50yds. from the bank of the American River, I thought I would try it again with my rod, but when I walked to the edge and looked down a steep almost up and down climb of about 300ft. I concluded, in remembrance of my climb up and sliding down the railroad embankment at Truckee, that I wouldn't. A half-pound fish would have been a heavy one before I got him up that bank.

In this vicinity the forest has been nearly obliterated, and fertile stock ranches and dairy farms have taken its place.

At 6 A. M the next day we got under way again, and after an eighteen-mile drive, so dusty with the ground-up, red, gold-bearing earth that all that had gone before seemed by contrast dustless, we at noon reached Placerville on the railroad, and bidding Mr. Bliss good-by my outing was at an end. In spite of the dust and heat I don't know that I have ever more enjoyed a drive. Mr. Bliss was thoroughly familiar with the country, and pointed out many places and scenes of which I had read, and snatches of Bret Harte's and Joaquin Miller's writings were being constantly recalled.

There were places where the road, wide enough for safety with a good team and skillful driver, had but little over, and the ravines below, the mountain sides above, were very close to our wheels. One place a forest fire, due to camper's carelessness, had landed the burning end of a great pine across a part of the track, and a slight shy by the horses would have precipitated us to a great depth; but at a word from their master they steadied down and we passed in safety. Again, near the Pacific House, we encountered a wash-out and had hardly a foot to spare. It was a grand ride of nearly sixty miles by carriage, eleven by railroad and twelve by boat, and a fitting termination to a delightful outing. Pisco.

GROUSE HUNTING IN PIKE COUNTY.

A trip at this time of the year through Monroe into Pike county, Pa., is particular interesting; and especially so to any one who has had business ties confine him in any of our large cities without rest or change during the entire hot summer now happily at an end.

But to the man who takes this trip in a comfortable wagon, behind a good pair of horses, with George Stiff (the pathfinder of Mount Pocono) as driver and guide, with a pet, set purpose in view, and the complete wherewith stowed away in the wagon, to carry out that purpose, it was delightful. A few nights of frost had tinted those old hills, and those vast slopes of green had changed, mottled here and there with a light yellow and red, as a warning to all nature of the closing of summer and the coming of fall. The robins and crows seemed to travel in company instead of alone, the mountain ash was perfection in its happy combination of colorings, red and green.

A six hours' drive from Mount Pocono brought us to our destination; the Promised Land (right in the center of glory). From out the wagon we secured our guns, ammunition, hunting clothes and George Stiff (he had been most carefully packed in), also a pair of young English setters. Ben Hadad was to begin his second season on grouse; and my little blue Belton, Countess Jennette, was to have her first whiff at these gay birds of the forest.

We found the Promised Land almost a deserted timber camp. Some years' chopping, drawing and sawing and forest fires have left little for the woodsman of this day to do. One house is, however, well occupied by sturdy Ed. Wilson, his good wife and six golden-haired children. The name of this place should be changed to Hunter's Paradise. A fine pond three miles long is full of gamy pickerel and other fish; wild ducks are in plenty, with often a bear, sometimes a deer, and grouse galore.

Grouse hunting in Pike county is all right for any one who can stand it. I cannot conscientiously recommend it as a health-giving pastime for the weak and weary of limb and body, nor the proper exercise for those suffering with the gout. Nor does a man need to be an all-around acrobat and athlete, but awfully near it. I will add, neither is it a good place for a man to learn to shoot. Learn to shoot first and go grouse hunting afterward, and see how little you actually know about the art. There is no "ready?" "right!" "pull," in grouse shooting. Mr. Grouse is essentially a bird of the brush, and he sticks pretty close to his native heath. I can prove that by the owner of that unknown wonder, Donald, who in the estimation of his master will surprise the dog world next year.

In this country one will find more fallen timber (always black), huge rocks (always on edge), bull briers (full grown), rhododendron thickets (proof even against cyclones and forest fires) to the acre than in any other part of this whole country. Many times one will hesitate whether to go over or under a particular log, and in many cases will decide to do both, and come out with a well-knit, close-fitting brier collar on and his religion just a point or two below par.

But even in this anti-watermelon growing country there are beautiful places, restful to mind and body alike—the mystic spring all alone on that great hillside, surrounded by a carpet of soft fine grass, a small picture framed in rugged mountains, cool, refreshing and invigorating; the long shady road through the swale to Link's, full of old moss-covered rocks and logs—one of the few places that have escaped the awful fury of the forest fire and the modern cyclone. A rest here is quite a real dream of the wilderness, with that splendid sportsman and indulgent companion, my brother the Doctor, by my side. The Doctor's only kicks are, that the day don't last longer and the morning don't come sooner, and that we don't have a wagon to ride home in when the hunt has ended five miles from camp, and the excitement of chasing some old bird has died out with night close at hand, and he discovers after all that his legs are not built of steel springs.

I will not tire the readers of Forest and Stream with all the details of that three days in Pike county, but my love of the dog tempts me to tell of some of them.

On the first morning out we struck for a point of low timber that looked promising. The dogs passed in well in advance of us. Soon Ben took on that solemn air and slow tread that with him means "get your gun." Jennette, less familiar with this sort of work, quickly slid to the front and hesitated a second only. The scent was new, but the sense was native and inborn. She straightened, I called "Steady!" A superfluous noise, however. She was down, steady, fast and true, with patient Ben's head well drawn forward at her flank, her first grouse, well done. The Doctor flushed, but in such a cover his shot were not effective.

On we go, two more flush wild; we separate and follow, Wilson and I to the left, the Doctor and George to the right, up through an old oak woods whose entire foundation was heavy broken rocks and fallen timber. Another fine point by Jennette and the left barrel brings to earth a handsome fellow. While reloading, up go two more; but alas! the gun was open. Ben comes in and finds my bird, which Jenn. could not locate.

A few yards further and two more take to wing, again the left does the work. My bird falls with a broken wing. We go to find. The Doctor and Ben have left us. We must search alone. From rock to rock bounds Jennette, seemingly coming no nearer to that hidden cripple. She takes a wider cast down with the wind, swings and comes up. With head high and every sense on the alert, on she comes, straight as an arrow, until confronted by a high flat rock, apparently too high for the leap, but fearful of losing for an instant what those delicate nostrils contain, up she goes, lands on the edge, starts to cross, hesitates, stops; the hanging tongue is drawn in, with it one side of the upper lip; she gently raises that slender left paw, lowers that knowing head, straightens the bushy tail and all is still. The only motion in that dumb animal was the beating heart, the breathing even seemed hushed. For 200yds. in any direction could be seen this small statue of mottled marble, on its immense brown stone base in this old woods, where all was so still. It was a sight to gladden the heart of any true sportsman. To me it was beautiful. Ten paces in front of her, crouched at the foot of a tree, well hidden under a rock, we found my bird, a handsome cock, only wing tipped. The guide secured him, and we pushed on until the noon hour, flushing some birds, but in too heavy cover for effective shooting.

The early afternoon found us four miles from home with no birds in our bags and in a drenching rain. With coat collars turned up and hat brims turned down, we struck for camp Indian file. Nearing the end of this forced wet march, in an old road, with our bedraggled dogs well in advance, we were surprised to see them both swing half around and come to a full point at the edge of a brier patch. Before we could come up, however, a half dozen birds flushed and took to cover. We didn't. We immediately took after them, and in less than an hour, from this lot and another one, we had four and a half grouse in our pockets. George Stiff had the half, and it's remarkable how his gun will shoot at short range. He killed, picked and stewed that bird with one blow. We were soaked to the skin and broke for home.

The second day netted us a wonderful outing; in fact, as I recall it, we were out from sunrise until dark, and took in most of Pike county; Wilson as guide in the morning, his friend (and now, I hope, mine) Sam in the afternoon; but we got few birds. I shall never forget Sam cutting loose with his 10-bore and 5drs. of black powder (one could readily imagine himself at the proving grounds) on a hen grouse. When the smoke had cleared away we found two feathers and some badly shattered timber, but no bird. Shortly afterward I flushed this same bird. Of course she got up well back of me, Jennette being well to my right in some short timber. My two barrels only served to make that thoroughly frightened bird go all the faster and hide all the closer. I marked down carefully, in a thick brier patch, too thick for the dog. She followed part of the way in, however, and as I supposed turned to go out. Raise that bird we couldn't, and passed on over the hill into an old road, and called the dog. It was of no use. I must go back and find her. This I did, in a tangle of briers pricking her in twenty places, down fast on a full point, and she had been in that position until she trembled from tip to tip. The timber was scant, the way was clear and my empty pocket filled me with desperation, to say nothing of my obligation to the faithful animal. That bird must die. Three days later, comfortably seated at my own table, I picked its bones.

I traveled the track of the fiery fiend and scrambled in the wake of the cyclone, and explored the thicket of rhododendron, yet wearied not. I must get another. The sun had not only tinted, but had painted the west in dark colorings; the distant bells told of the going home of the wandering mountain cow. We had passed from the early twilight of the woods into the remaining light of the road and had taken up the wearied tread of the tired hunter homeward bound. The night of despair smothered me. I had a little hen grouse to show the Doctor, and wondered what had been his luck. Jennette, footsore, worn and weary, would run ahead, lie down and rest her blistered feet, await our coming and then on again.

During one of these painful spurts those sensitive nostrils detected a late diner by the roadside. Around like a flash she became motionless, one foot up (only three hurting in this position). I swung my heavy artillery in at the right, S. to the left, commanding the heavy gun to open the battle while I covered the retreating enemy with

my light 12-bore. A whirr, a whiz, a boom, a bang, bang, and the darkness deepens (caused partly by Sam's power explosion) as I retrieve a magnificent cock handsomely ruffed.

The lightness of heart partly relieved me of the weight of my boots. I found the Doctor in camp changing his clothes and telling the natives that Ben Hadad was the greatest dog on earth.

The third day gave us some fine sport with many points and flushes, and some birds in the bag, more left in the wood, dogs' feet so sore they could scarcely stand, the breaking of camp, packing the wagon, the twenty-five mile drive out of the wilderness, and some comforting conclusions, we had all had a good time. The Doctor had only had use for his Hebrew and Greek in getting over and under Pike county logs, and while weary and worn many times I don't think his "chair" ever occurred to him; and Ben Hadad had opened his second season handsomely.

And as for me—well, had my best customer asked me the price of an eighteen-twill henrietta or the extent of the advance in mohair I should have told him I was out of the business and didn't know. And Jennette don't understand me to infer or claim that she was perfect, only awfully near it. Her mistakes were only those of want of judgment born of lack of experience; the heart was always right and more than willing, and no one error was committed twice in one day. I would rather witness one good day's work of the well-broken dog than a pass to all the playhouses in America and the time to take them in.

Early night found us once more at the Doctor's cottage. Next day early forenoon again at business, full of vigor and anticipation of the next trip two or three weeks later, and again I call for "woodland echoes" while I recall the mountain brooks. THOMAS ELMER.

New York, Sept. 21.

FOREST AND STREAM CONTRIBUTORS.

O. H. Hampton.

FROM my earliest recollection guns and explosives fascinated me, and the hunting tales told by my uncle fed an inherited love of shooting. Father's youngest brother was but five years my senior and a born sportsman, so he became my teacher and companion in all manner of ways to capture the wild creatures of the woods that surrounded our homes, but we pursued them under many difficulties, for it was a hard struggle to wrest the means for subsistence from among the roots and stumps of the newly cleared lands, and there were no idlers in either of our homes. Two or three half holidays a year was all the time that could be spared from work, except such odd hours as bad weather gave us. Of money we had none, except from 25c. to $1 earned each spring helping neighbors plant corn after our own was done.

Our first weapons were cross-bows, which we made ourselves at odd hours and of evenings. The stocks were made of black walnut fence-rails, and white oak saplings made good bows. One of my uncles was a wagon maker, so we had plenty of tools, and as both of us were natural mechanics we turned out goods that were quite creditable; in fact, they would have been worthy of a place in the recent Sportsmen's Exposition. At a distance of two or three rods our best arrows seldom missed the center more than an inch, and flew hard enough to penetrate an inch board. Many chipmunks, woodpeckers and an occasional gray squirrel came to grief from these arrows. Grandfather had two guns—an old-fashioned rifle and a single barrel, brass-mounted shotgun, with heavy barrel, 36in. long. It was an English make, and a good gun. Properly charged, it seldom failed to bring a squirrel from the top of the tallest tree, but grandfather did not believe in encouraging boys in anything but work, so we got no good from those guns until I was 12 years old, then we began to steal them out when grandfather was away from home. We knew very well that dire punishment would follow if we were found out, but the temptation was so strong that we would have risked almost anything for two or three hours in the woods with those guns. Dear old grandmother said we must not do so, but we knew she would not tell on us, and she cooked many a squirrel for us that grandfather never knew about.

Father had a rifle also, and I remember the first time he ever knew of my using it. While he was gone to town and I at work in the sugar camp, I saw a fox squirrel, the first one I had ever seen, and probably the first that ever visited that part of the country. Running to the house, I got the rifle and made haste to the big ash, and saw the squirrel lying flat on a big horizontal limb 80ft. from the ground. He hugged the other side of the limb, so there was but little chance for killing him, and when I went on the other side he slipped away from me. This was repeated a number of times, and it looked like that squirrel was going to be too smart for me. At last I thought of a long string in my pocket, and hanging my hat and coat on a bush, tied the string to the bush and went to the other side of the tree, taking the end of the string with me, the squirrel slipping round the limb as usual. Then I got all ready to shoot, and jerked the string, shaking the coat and hat on the bush; the squirrel instantly slipped to my side of the limb, and got a bullet through his body. I was too proud of this trophy not to show it, and did not believe father would frown on such success. The squirrel was a curiosity to him, and perhaps he was a little proud of the boy's shot too. Besides that, it would be a hard-hearted parent that would punish such a happy boy as I evidently was; so the reproof was a very gentle one indeed.

When I was fifteen years old one of my cousins bought grandfather's shotgun for $3, but soon tiring of it offered it to me for $3 15, and I bought it, going in debt 50 cents, as I had but $3, and must have some cash to buy ammunition. This was in the early summer, and we worked so hard that father had a good deal of trouble to get us out of bed in the mornings; so we asked him if we might have Saturday afternoons if we would get up at 5 every morning, and he agreed to it. This was on Sunday evening, and the following week was a mighty long one. Every day during the noon hour that gun was oiled, wiped and touched up generally, and on Friday night I hied myself to the store with my 35 cents and two bottles, in one of which I got ¼lb. of powder and 2¼lbs. No. 8 shot in the other, buying no caps, as I had found some G. D.'s in father's shot pouch. Saturday afternoon at last. At 1 o'clock on that afternoon there might have been seen a freckled boy going across the cornfield toward the woods. He was dressed in blue cotton shirt and trousers. An old straw hat covered his head and his feet were bare. In his pockets were those bottles of shot and powder, and in his shirt bosom were some newspapers for wadding, while across his shoulder is that shotgun, which he fully believes to be the best gun in the world. If it isn't, why did grandfather own it? That boy has done a man's work for thirteen hours every day this week, all the clothes he has on him cost less than $1, and his shooting outfit was about as primitive as could be imagined. He knows that next Monday he will have to take up the drudgery again, but now, just now, he feels that he has earned his half holiday, and has it before him, and has the means to make it enjoyable. His soul is filled with anticipation till there is no room for the memory of past hardships or trouble about future ones. How little, how very little it takes to make us happy if it is just what we want!

At the edge of the woods the boy stands on the fence a moment watching some neighbor's boys bending over their hoes in a cornfield, then with a long-drawn breath of pure happiness he slips from the fence and begins a noiseless tramp through the cool, shady woods. Wood pewees here and there sing a lazy note, bees hum drowsily about the poplar blossoms, and woodpeckers cling idly to the sides of dead trees; everything seems to invite repose, and if that boy only knew it, he is tired enough from his week's drudgery to lie down and sleep till sundown, but he never felt less tired or sleepy in his whole life. Not once during that long afternoon does he sit down or abate his watchfulness in the least, but at dark, when he reaches home and throws down two squirrels and a monstrous horned owl, he suddenly finds himself faint with hunger, weariness and collapsed excitement, but mother has saved some fried chicken (the rest of the family had supper at 5 o'clock), and gives him a cup of coffee, a rare treat in those days, so hunger is gone and weariness subsides into a feeling of perfect comfort. Father comments on the unusual size of the owl, says they are very hard to get, and asks how the boy managed to get him. Then the boy, with eyes bright enough to illuminate the freckles on his face, recounts in detail all the exciting events of the hunt, not omitting mention of a crippled one that got into a hole before the gun could be reloaded. Father says the boy did pretty well, but mother says, "I'm sorry for that crippled squirrel; it may suffer lots of pain;" and the boy mentally resolves not to let mother hear about any more cripples.

Excitement subsides ones more, and drowsiness overpowers him till he twice falls asleep while washing his feet. He thinks he has not been in bed five minutes when father's voice at the foot of the stairs says, "Come, come, boys, get up." Every day of the following week he reviews that shoot and plans for the one to come, and the second half holiday is anticipated with even more eagerness than the first. Doubtless there are some people who can see no enjoyment in such (what are to them) trifling matters. If so, it's just because they were not built that way, while this boy was built that way. He was born with the hunting instinct in him as strong as it ever was in any setter or pointer, and the enjoyment of it all was keener because it could be so seldom indulged, and because it was such a contrast to the drudgery of a new farm in a forest country.

I often look back on that boy's life, not as my former self, but as some other boy whom I knew very intimately, and there is always something pathetic about that freckled barefooted boy with the old single-barrel, and even that could be used so seldom. I wonder if that boy would have gone crazy with happiness if somebody had given him a modern hammerless ejector and an unlimited supply of shells loaded with nitro powder, though I guess he would have prefered black powder; the loud report would have harmonized better with his exuberance.

The Saturday afternoon shoots continued through this summer, but the following winter there came an enthusiastic teacher for our district school. He boarded at father's and roamed with me. Before spring he had so enthused me on the subject of getting an education that the gun was almost forgotten, and the following spring I became practically the foreman on the farm, in which I began to take an interest, as from it had to come the means to pay my way through college. We also got some machinery which made some of the hardest work comparatively pleasant. From this time until my 27th year I was too much occupied with other things to have much time for field sports, though hunting occasionally; sometimes borrowing a gun, but owning none after the old single-barrel. I cannot remember how long I kept it nor what became of it.

In the autumn of 1870, being about to remove to a region where there were plenty of squirrels, and engage in a business that would allow some time for sport, I bought a double 20 gauge gun for $15. One of my neighbors in the new place had a setter dog and quail were very abundant. I could do some wing shooting, but had never seen a dog point a bird. This neighbor invited me to go quail shooting with him. I shot fifteen quail on the wing that day, and came home a confirmed dog and quail crank. For the next three years I never neglected a chance to go quail shooting and often made chances to go, if they did not come along of themselves.

The 20-gauge gun not being very satisfactory, I sold it and got a new 12-gauge, W. More, for $35. It was an excellent cylinder bore, a muzzleloader of course, and did service until '74, being then displaced by a breechloader.

In Sept., '73, I went to Dallas county, Ia., to shoot prairie chickens. At that time there were vast reaches of wild prairie there, and chickens, ducks, geese and cranes were abundant on all the prairies, while quail were numerous along all streams where there was timber. The shooting was so fine, the country so pleasant, and my recovery from a recent severe illness was so rapid and complete, that I decided to stay there. During that autumn I shot 1,200 chickens, 600 ducks and 600 quail. What did I do with them? Sold them. You see I did not begin to read FOREST AND STREAM till a year after that, and it did not say much about market-hunting at that time.

The following summer I got a 12-gauge breechloader of one of the prominent American makes. The advertisement said it was bored to throw shot "thick, even and with great force." As I had seen a few breechloaders that made a closer pattern than my muzzleloader I expected this one would, but it did not, and shot no harder either. Quick loading and easy cleaning were its sole advantages over the muzzleloader. The firm's advertisement in FOREST AND STREAM caused me to buy the gun; not only that one, but several others.

For three years I remained in this section, shooting much of the time during the shooting seasons. They were years of great enjoyment, for I had good health, few cares and abundant shooting. They were the best three years of my life.

Business interests in another part of the country made it necessary to leave there in the autumn of '76. After everything was ready for our departure my wife said: "Let me go, and you go out on the prairie and shoot till you get enough of it, for you can't shoot where we are going." As I sorely regretted leaving such happy hunting grounds, I saw her safely started East, then I and Flora, my favorite dog, started for Uncle Benny Hoyt's, way out on the north prairie, and stayed there twenty-one days. Every day we hunted from sunrise till dark, and were often two miles from the house when dark came. I do not remember that either of us ever stopped once to rest, except an hour at noon each day. Flora's feet were worn till they bled every day, but she never let up nor stopped except to point birds. She traveled more than 2,000 miles in those twenty-one days, galloping at least ten hours every day. She ate an incredible amount and grew very thin and so did her master, but a tougher, better seasoned pair seldom go into the field. On the twenty-second day I sold the gun, gave Flora to a friend, and with keen regrets turned my face away from what had been the happiest spot on earth for me.

Shooting had taken too much of my time and I determined to abandon it altogether, and succeeded fairly well for nearly four years, but the season of '80 found me at Wall Lake, Ia., equipped with a new gun, a spring wagon and pair of horses, and knocking down chickens right and left. Once more the gun was sold and dog given away. (I've owned thirteen dogs and never sold but two.) For the next two years but little shooting was done. Then my shooting brother came to live with me, bringing his pointer, and I bought another gun, and quail began to get scarce in our neighborhood. Since then I have shot in eighteen different States. I was never fonder of shooting than now, but in these later years a moderate amount of time and ordinary bags are entirely satisfying. It is a matter of regret that a complete diary of all my shooting has not been kept, so that in the winter of old age I might live it all over again.

[When we wrote to Mr. Hampton for a portrait to go with this story of his shooting days, he wrote: "I will furnish the desired picture, but am sorry to say it will hardly be one that does me justice (and you know I've no good looks to spare), for the reason that some time last June I undertook to keep the garden, the potato patch, the strawberry plants, the sweet potatoes and the melon patch clear of weeds, as well as repairing fences, mowing fence corners and trimming the orchard, in addition to which a good many miles have been tramped in search of squirrels that were very hard to find. All the above, combined with very hot weather, has got me in very thin condition and not in good shape for being photo'd. However, the grass is still very green, apples and pears are ripe, we have bacon and string beans for dinner, had fox squirrel for breakfast, and Jack Cates says he knows where there are twenty woodcock and is going to-day to see if he can spot them for me. A hundred watermelons are absorbing juice and sweetness from the moist earth and the hot sunshine, and we will begin to shuck them in about two weeks. All previous invitations to help roll on the grass still hold good." The photo has not been received; we shall give it some other time.]

EHEU.

Editor Forest and Stream:

I was an earnest and tireless admirer of O. O. S. prior to reading his "eheu" effort in FOREST AND STREAM, Oct. 5. And why the change? Because in that pleasing sketch he assumes to be historical, and everyone knows that a historian is nothing if he is not accurate, impartial and full—not too full.

In treating a biographical chapter of that noble and talented sportsman, Uripides, sometimes erroneously spelled Euripides, or in diminutive Rip, as his friends were wont to call him in moments of endearment, he left out several important essentials of the story. Moreover, he is wrong in circumstance and inference, as I will proceed to show. I boldly contend that Rip was neither the inventor nor discoverer of the compressed composite exclamation now coming into vogue. He did not properly identify Rip as the *bona fide* all-round personage who rode three days on a bicycle to a river bank merely to say "Eheu!" when he found that he had no worms.

Rip only had the advantages of a common school education, and his real name was Willie, and he was so known till his ninth year, when he was spontaneously renamed after the following curious manner: He was basking in the springtime of life and also taking his schooling. His precocity and ceaseless study won the interest and approbation of his tutor, a grave man with a low, narrow brow, but with much back head and ears. While the latter sat one day with his pupils silently grouped around him, thinking an hour or so perspicaciously over the possibilities of eheu, as they did twice each pleasant day, the teacher suddenly looked at Willie and said, "Willie, U-rip-i-des out of your head as a carpenter rips shingles off an old house," then he relapsed into silence. At this they all pondered earnestly to discover the meaning concealed under such simple words, for the wise tutor often spoke mystically in parables, or epilogues, or dialogues, or even in the house. But the solemn saying took root, and Willie was known as Rip thereafter. At a much later period in his life, when he had bestowed his name, or what was left of it, on a helpmate, his eldest daughter asked permission one morning to buy a sealskin jacket; he curled his patrician lips and said, "Naw." Her uncle, who was standing by, interceded and said pleadingly, "Let her, Rip," and this terse saying is in use till this day.

As Rip grew older his natural proclivity for fishing and shooting could not be repressed. He could often be seen seated on the peak of Parnassus, his feet hanging reposefully on the side, and that thoughtful, serious look on his face which fishermen affect when they are thinking of nothing. Although the peak was as sharp as a toothpick, as may be verified by reference to the illustrations in any atlas—he would sit, I say, on the peak in the ides of March, pul-

ing bullheads out of the Castalian spring, jerking them in wide, rainbow circles over his head from one side of the mountain to the other.

Now, on the trip which O. O. S. so charmingly describes—that is, when Monsieur Rip invited his friends Maj. Simon Kylus and Judge Philip Hidias, *et al*, to go fishing in the Hylocæ River with no other implements than three cayuses in mule harness and a two-wheeled buckboard which was intended for sale and for use in Barnum's circus—O. O. S. basely libels that noble sportsman. His hospitality was not of that sort. He would not take three friends on a three days' trip in a vehicle hardly large enough for one, with no provisions, no tackle, no worms, nothing but a thirst. But they did go on that trip and had the worms along in a jug. But eheu, while the party was absent from camp fishing or rather accumulating the germs of some big stories, a base villain sneaked into camp and stole the jug. Within two seconds after the return to camp the loss was discovered and Rip raised his voice aloft in grief and anger and said: "Quick, let us raise the eheu and cry, that the thief may be apprehended!" O. O. S., who was about in the 50s, and who evidently knows his way about now, happened to hear the one word eheu; because Rip raised eheu in a loud way, he immediately and with evil result imagined that Rip was saying naughty things. Not Rip's prothonotaries, nor his captain of the host, nor his chief mandarin, nor his master of the horse, nor any of his other numerous statesmen ever used the word, and for that reason I object to it entirely as not being sanctioned by usage, good derivation or necessity. Eheu!

DICK OF CONNECTICUT.

WORDS FOR BUNCOMBE.

BY CHAS. HALLOCK.

One may as well write as talk for Buncombe: *Hinc illæ verbæ.*

Situated 2,000ft. above the common level of man's habitat, walled in by mountain ranges, and accessible only by two underground passages, one from the west and the other from the east, which are reached by steep and tortuous ascents up the beds of streams, the territory of Buncombe seems almost another Vale of Rasselas, the similitude being strengthened by the profusion of fruits and flowers which cover the slopes, the opalescent atmosphere, and the luxuriant pastures and fields which crown the topmost summits. With an axis thirty miles in extent, and a fertility which would make an Eden smile, it is not only agriculturally self-sustaining, but it would be almost possible to close the gateways of Paint Rock and Swannanoa against the outside world, and stand a protracted siege. Few knights of feudal times could boast such goodly or secure domain.

Asheville, the beautiful, much extolled and world wide known, is the roof garden of Buncombe. It is its focus and culminating point. Proctor Knott, down by the level of his great unsalted sea, could never hope to attain so high an eminence, oratorical or topographical. It is Mecca for tourists the whole year round. They come in crowds from the South in summer and from the North in winter, lingering until the solstices are well spent. Only in May and October do breaks occur in the pilgrimage. Frosts and heats do not check the tidal fluxes any more than they interrupt the migration of wild fowls: any meteorological excesses being accepted as preferable to home conditions. Nights are invariably cool at all seasons; and so are the mornings in this month of September. But the afternoons at present are hot: not so much purposely to distress lawn tennis players as to ripen the corn and fruits for the farmers, which is a benison to them. As for mid-summer, I have found from continuous experience the entire season through that the day temperature in these mountains and throughout the whole Appalachian chain is oppressively hot in July and August, even at altitudes 2,500ft. above sea level. I should say the average was at least ten degrees above that of the Laurentian ranges, and perhaps of the Catskills as well. The nights, however, are refreshing, and that is a comfort to contemplate when one's collar is limp and the blood at fever heat. On Roan Mountain, for instance, at the "Cloudland Hotel," 6,394ft. elevation, the man without an overcoat must exercise to keep warm.

What Lenox in Massachusetts is to the Berkshire Hills ocially and transcendently, the town of Asheville is to Buncombe county, N. C.; only the conformation of the inclosing mountains is more massive and the conventionalities less exacting. Pretension is not much overstrained and the glitter of wealth does not blind the unaccustomed eye, so that Mr. Slimpurse contemplates its visible expression as he does the afterglow of sunset, delighting in its radiance because the solar power is not felt. Even the dominating magnificence and scope of Biltmore is tempered to the shorn and impecunious, who regard it less as a wonder than a cornucopia of superabundance disseminating blessings in its overflow. The multitudes of workmen who are still employed in creating, erecting and enlarging the premises recognize its beneficence. Like the craftsmen of King Solomon's Temple they seem bound together and to the master builder by some impelling tie, and few of them, I ween, would decline a life service. Mr. Vanderbilt's intercourse with them is affable, it is said, and his wages liberal; no less than $12,000 being distributed by him among the citizens of Asheville every week in the way of salaries and other expenses in connection with his establishment.

And so it happens that Asheville in all its æsthetic and economic aspects is made inviting to sojourners and transients. Its dimpled hills and undulations are soft and velvety. Shade predominates; foliage and sward are as green in September as in June. Every residence has a lawn, and every lawn a hammock. Drives and trolleys wind everywhere. The French Broad River, 100yds. wide, incloses half its environs. From its central eminence on Battery Park, dominating the surrounding streets like the Capitol at Washington or the State House dome in Boston, that inimitable structure known as the "Battery Park Hotel" looks out on every side across an interval of compacted bricks and mortar to circumjacent hills and wooded ridges crowned with modern villas. Beyond this tangible horizon, away off in the blue distance under the cloud line, in phalanges almost unbroken stand the circumvallate mountains reaching north, south, east and west—the Great Smokies, Balsams, Black Mountains and Blue Ridge all in full view; not just one single "Presidential Range" aligned in grim array as in the White Mountains, but Titanic elevations all around, out of whose serrated ranks rise no less than forty domes and peaks exceeding 6,000ft. in height. Gaze in whatever direction we may, there loom inimitable heights. It is grand! The outlook has no counterpart on the continent.

In darkest nights, when its electric lights are on, the myriad windows of the hotel gleam like fireflies, while observers who gaze out from its storied heights over the shadowed plain below seem to survey a sea brilliant with phosphorescence, out of which the intenser coruscations from the many electric masts flash in the darkness like stars of extra magnitude. From this high point of vantage one also sees such kaleidoscopic sunsets as he never saw before, so varied in their cloud effects and displays of color that no two ever appear alike. Perhaps it is because the ether is purer, and vapors gather in more fantastic shapes among the mountains! Or that the argon in the atmosphere is better suited to the exactions of argonauts and globe trotters!

Until the Western North Carolina Railroad first scaled these battlements of "cloud land" with its iron ways, a dozen years ago, Asheville was practically isolated and unknown. Now it is the *ultima thule* of tourists. Visitors come all the way from Europe to inspect the great American dukedom and the castle which has no equal on the Rhine; indeed, no such watermelons on the rind. And since it has been included in the comprehensive Southern Railroad system, brick blocks are going up *en masse* on the principal streets, and villas by the score: Asheville rising, Phœnix-like!

In the reorganization of the old Richmond Terminal system and the consolidation of no less than thirty different railroad lines in one, the Southern Railroad Company has achieved a stupendous and complicated undertaking with remarkable celerity and efficiency at a time of great financial depression, and to-day it is a most potential factor in the industrial economy of that vast section of country which is best illustrated at the Atlanta Exposition. People used to taunt the schedule-makers of Dixie with allowing their Northern patrons to stop off by the wayside to pick cotton, but now the time made by all the principal lines vies with the best. Indeed, the time is coming soon when a mile a minute on the magnificent flyers of the B. & O., the C. & O. and the Southern Railway will cease to be regarded as anything extraordinary, for only recently a delayed vestibule train under Engineer Kinney made the 140 miles between Charlotte and Danville in 144 minutes, with stops at Salisbury and Greensboro. The twenty-three miles between Concord and Salisbury were covered in twenty-one minutes.

West of Round Knob, on the division approaching Asheville, the scenery is very grand and the tortuous ascent almost equal to the zigzag up the Cascades, on the Pacific division of the Great Northern Railroad. From one point the track over which the train has just climbed may be seen on fourteen different grades, and the course is so sinuous that the sun beams into the car windows first on one side and then on the other; while silvery cascades leap from the mountain sides so close as to almost wet the coaches with their spray. It is just after this toilsome ascent that the train draws into the long tunnel at Swannanoa, and thence out of the gloom into the upper firmament and sunshine of Asheville. The two spurs of the same railroad which run northwest to Paint Rock and southwest to Murphy, 120 miles, are romantically rugged almost all the way, and are reckoned among the most daring pieces of railroad engineering in the country. This region is not only attractive to lovers of scenery, but sportsmen as well.

About the end of September, when the leaves are turning brown and the mast is dropping in the woods, the Southern Railway combination issues its annual dog tariff in the interest of the craft, providing for the carriage of one dog free in baggage cars and additional ones at moderate rates. The management also places at the disposal of those who shoot a special service of hunting cars which may be chartered by the day or week; and as an additional help it distributes "free gratis" an 80-page illustrated pamphlet which outlines the game laws of Virginia and North Carolina, and designates no less than sixty-two localities in the latter State alone, all accessible by its own lines, where deer, wild turkeys, grouse and quail may be found and hunted *ad libitum* or by permit. A bag of 100 quail is claimed to be a fair day's average to two guns throughout the State. As for Buncombe county, where I write, the mountain system is complex and much forested, and there is "right smart" of turkeys, reputed to be wild, and a few deer and bear. On Turkey Creek, so named for the abundance of these gallinaceous birds found there ninety years ago, I have seen with my own eyes no less than fifty in a single day's reconnoissance picking grasshoppers on the hill slopes. In further attestation it is recorded that not more that three years ago a festive party of sixteen New Yorkers headed by G. Randolph Curtis, who subsequently bought an upland farm in the vicinity and cut out a mountain highway abreast of the picturesque French Broad, camped down at Blackwell's Springs, a cosy nook in a little valley twelve miles out of Asheville, where I recently spent a pleasant month, and in the course of two weeks' time shipped home five brace of noble bronze backers which were true to color and form. It was just after a heavy snowfall in November, and the party were so fortunate as to secure the most of them within easy range of the Major's (Blackwell's) house, thus saving the hardship and exposure of a wide range through the slushes. I may add that in my candid opinion turkeys reasonably wild can be found almost anywhere within gunshot of any farmhouse in Buncombe—if hunted before next Christmas.

Sportsmen need not get easily lost in Buncombe. The lay of the land is easily cast by the trend of the mountains, and from almost any eminence one may trace the courses of the French Broad, New Found Creek, Bear Creek, Turkey Creek, or Sandy Mush. He may go astray, to be sure, and yet not be actually lost. "Indian not lost; wigwam lost." So much of the country being cultivated and open makes the way plain.

By the way, Mr. Editor, has it never occurred to you as singular that the average sportsman with his bag and gun will wander all over a new country in quest of game, most diligently avoiding traveled highways, and always find his way home; while the same individual, perhaps, with umbrella and carpet-sack, will be most particular to inquire the turnpike road and miss the way after all? and perhaps have to lie out all night with his destination not half a mile distant? Perhaps Fido can explain.

Just now the mast is shedding abundantly in the woods: chestnuts, hazelnuts, chinquapins, walnuts, hickories and acorns. It is "a mast year," and game should be abundant. There is no end of rabbits in the brush, on the ridges, and in the graveyards, too. There will never be a better chance than now for sportsmen to secure a rabbit's foot. The left hind foot of one of these graveyard rabbits, carried in the trousers pocket, will always bring good luck. The country negroes affirm it and stand prepared to prove it.

It is a favorite drive out from Asheville to Blackwell's Springs. Parties of a dozen will often go out to drink the sulphur water. Wayfarers and tourists always stop for sample draughts and tramps even are not denied. Invalids who have full faith in sulphur cure sojourn there for months together, drinking and bathing until they become well saturated, and inasmuch as sulphur water is used almost wholly for cooking, laundry and household purposes it has been insinuated that the body odor from an old habitue is like an exhalation from a matchbox. The Major himself is a picture of florid health, due to innate good nature no less than sulphur, and being 6ft. 4in. high and pursy in proportion is the correct cut for a drum-major. Consequently, when he heads the advance on the corn pone and butter cakes at the call of the big plantation bell which swings in the tower, the procession which files into the dining hall from the outlying summer houses, tennis courts and swings is imposing. In respect to provender there can be no such word as fail. The Major served as home commissary for Buncombe county during the trying times of the war to provide subsistence for the helpless and bereft and can be depended on now. His garden teems with fruit and vegetables, his coops with poultry and the creek with catfish, hornyheads and suckers. The clover fields drip with milk and honey. Many of his guests come from New Orleans, but he has representatives from all sections, down East as well as out South.

On moonlight nights, when the full-blown orb, rising like a resplendent soap bubble over the mountain which faces the Major's house, shines through the foliage of the poplars, oaks and sycamores aligned along the border of Turkey Creek, the semi-somnolent observer who is seated on the front veranda may discern in bold relief the silhouettes of guinea fowls at roost upon the lower limbs. Guinea fowls, we know, are æsthetic in their tastes and fond of *al fresco* life. Disdaining the artificial shelter of coops which barnyard fowls accept, they nevertheless indulge that sense of security which the vicinage of man begets, and in this way sometimes come to grief. For, the great horned owls (the Major says), watching their opportunities, drop down noiselessly beside them, hypnotizing them by their bodily warmth, and gradually edging them off toward the end of the limb, which bends beneath their weight, catch them on the fly! The victim has hardly begun to dream that he is falling before he finds himself being borne silently and helplessly away. The owl does not snatch his prey bodily off the limb, but maneuvers until, quite clear of impeding branches, he can exercise an unobstructed wing movement, making reprisal doubly sure.

I love to hear the Major sophisticate! One day I asked him how he managed to keep his premises clear of the suckers which spring up from the roots of the silver leaf poplars, of which he has many. He said: "I always cut them in May, the day before or after the full of the moon. Oaks and locusts the same way. In fact, whole forests are systematically 'deaded' by wood-choppers at that time. They dead them by ringing the bark with an axe a few feet above ground. The trees are sure to die. Boards made of the same will last four times as long as others. Rails will last fifty years longer, and so will posts, if set reversed, but ends up. I always cut my timber at such a date, and cord wood, too. I get 50 per cent. more fuel." And he added, "I suppose the sap is in its fullest flow at this time, so that the trees more readily bleed to death."

"That's all right! But what has the full of the moon to do with it?"

"Reckon it draws the sap."

The Major enjoys to get the attentive ear of his hearers when he can. Next to the minor tones of the mountain wren, I love the Major's. His voice is like the mocking-bird's.

Natural History.

THE WAYS OF NATURE.

ONE of the pleasures of an outing in the mountains or woods is to observe the workings of nature. The time was when I took no pleasure in the woods or fields unless carrying gun or rifle and in scearch for game. To be sure, I like shooting as well as ever; but I can also enjoy much in nature that made no impression on me years ago.

The past spring and summer were spent by the writer in the mountains of central Idaho, camping in one locality the entire time.

Many an idle half hour was whiled away in watching the birds, the squirrels, the chipmunks, or the numerous insects that made their homes about our camp. The most interesting of all were the black ants; but I could never decide what relation those of middle size bore to the large ones, if any. They would sometimes march together—at least it seemed like a parade—and then the smaller ones apparently acted as scouts for the big ones; one of their parade grounds was right in front of our tent.

One performance that puzzled me more than anything else was to see many of them each carrying another ant; sometimes the one being carried was grasped by the back, though oftener by the "nippers;" but in either case the one carried was all doubled up. Of a great many examined very few were found to be injured; if released they would scamper away as lively as the rest.

We were troubled very little by insects; woodticks and mosquitoes were the only real annoyances; the latter were not bad, but the woodticks were a great annoyance for a month. The insects that were most numerous are as follows: Black ants, three sizes, with us all summer; green flies (blow flies), all summer; mosquitoes, May 15 to July 15; woodticks, May 15 to June 15; horse flies, five kinds, June 15 to Aug. 15; gnats, July 15 to Aug. 15; house flies, July 1 and on; small green worms on the trees, July 1–15; small white butterflies, Aug. 1–30; yellow jackets, Aug. 15 and on; black hornets, Aug. 20 and on. Of course they did not all come or go on the dates given, but the greatest

numbers were observed between those dates. Some of the insects probably stayed until frost, but I left the mountains before the heavy frosts appeared.

ROLLIN SMITH.

EXTINCTION OF THE BLUEBIRD.

PASCHAL, Ga.—The little bluebird (*Silvia sialis*)—Wilson's ornithology—once common in the United States and Canadas, has not been seen alive in Georgia since the extreme cold weather of Feb. 7 and 8 last.

On the morning of both of those days the thermometer registered from Columbus, Ga., to Florida 8° above zero, and southward to Ocala, 9 to 11° above.

It is now regarded as almost certain that these little birds—down to the 30th parallel—were destroyed by the cold snap, and as a result some very interesting questions are now being discussed by those supposed to be versed in natural science. The bluebird was indigenous and resident in every Southern State summer and winter, and only a summer resident in the North. The first pleasant spell of weather in March never failed to bring him as far North as the St. Lawrence, and he was regarded as the *courier avant* who came to tell of the countless hosts of pretty birds that would soon come to people the fields and woods and lakes and streams of that far-away country.

But it will be a long time, if ever, before he becomes common as he once was. During the same cold snap immense numbers of robins, thrushes and other birds were found dead along the highways and in the woods and fields—all over the South—but no species suffered to the extent of the bluebirds.

My purpose of this communication is to obtain from persons interested in natural history and living in the extreme Northern States some facts connected with the migration of birds last spring, that might be the subject of future correspondence, and also to find out if the bluebird has been seen in any Northern State the present year.

W. R. GORMAN.

Signs of Early Winter.

DETROIT, Michigan, Sept. 30.—*Editor Forest and Stream:* If the earliness of construction of the muskrats' winter quarters is any sign that we are going to have an early fall, we can look for winter any time now. The muskrats started to build their houses in August, several weeks earlier than usual. In the marshes controlled by the Swan Creek Shooting Club the houses are apparently all ready for the frosts and cold of the winter, but they are being added to daily, the busy animals cutting everything within reach. As a natural consequence, old marshmen predict a severe and unusually early fall.

Lake Erie is extremely low, and the marshes above mentioned are very dry, with little or no water in them. Snipe, of course, are scarce and wild, while ducks, barring a few bluebills and wood-ducks, are marked "N. E. I."

During the extremely hot weather of one week ago there was a fair sprinkling of snipe in the Swan Creek Club's marshes, Messrs. Paul Weise and W. H. Brady in two days bagging forty-seven snipe, three mallard, one teal, one wood-duck. Twenty-seven of the snipe were killed one day in a short hunt, the heat was too oppressive for swamp work.

BLUE BILL.

They were not Wild Pigeons.

LANSING, Mich.—*Editor Forest and Stream:* A few days ago I reported the killing of about twenty pigeons at Pine Lake, Mich. I made the report on the say so of one of the shooters, who I supposed knew all about the passenger pigeon. To-day I am in receipt of a letter from Mr. Duane, of Chicago, asking for full particulars. I have just called up Mr. Launt Thompson, one of the shooters, and a gentleman who knows all about pigeons, and he has told me that the report was not correct. The birds killed were what is known in the South as Carolina doves. Mr. Thompson calls them mourning doves.

JULIAN.

[Julian sends us this note from Mr. Deane: "I was much interested in seeing your note in FOREST AND STREAM regarding the killing of wild pigeons in your State. I have been investigating the present scarcity of the pigeon, and in the last (July) issue of the *Auk* published such records as I could gleam of occurrences in the States of Indiana and Illinois in the past ten years. One specimen, a young female, was shot near here on Aug. 7, and in June a flock of about ten birds were seen in Wisconsin."]

Two Broods in One Season.

WAVERLY, Miss., Sept. 29.—It is quite cool here now, but dry as powder. You may recollect that I wrote you about seeing a good many pairs of birds without a brood, very late in the season. I now find many young broods that can barely fly which must be from the late hatching of these same birds. Perhaps this is in a manner a solution of the hatching of two broods a year, the finding of late broods giving that idea; though birds whose nests have been broken up may nest again later and may thus give the idea that they are the parents of two broods.

W. W. TITUS

Buzzard and Bolt of Jove.

THE Reidsville, N C., *Weekly* says: A remarkable occurrence was witnessed by Messrs. Henry Jeffries and George Ellington, of the Oregon section, recently. They noticed a buzzard flying in the midst of a storm, and pretty soon it was struck by lightning, one wing being severed from the body. They found the wing and it was scorched by the bolt, and the remainder of the unfortunate bird was found soon afterward.

The Linnæan Society of New York.

A REGULAR meeting of the Society will be held at the American Museum of Natural History, Seventy-seventh street and Eighth avenue, on Tuesd y evening, Oct. 22, at 8 o'clock. J. A. Allen will read a paper "On the Mammals of Southwestern Texas, from Field Notes and Specimens collected by Mr. H. P. Attwater."

Business.

CAROLINA, R. I.—I have sold out nearly all my dogs from the little advertisement in FOREST AND STREAM. I find it the best paper for sales I have ever tried. A. E. BROWN.

Game Bag and Gun.

A CAMP ON ROARING RIVER.

XI.

"A monster of so frightful mien
As, to be hated, needs but to be seen."

THE camp-fire burned unusually bright that night. It had been a successful day all around. Fortune had smiled upon the boys as she had seldom, if ever, smiled before. There was plenty to talk about, and everybody was disposed to talk, for they were all happy and contented.

Even the sparks from the well-fed camp-fire flitted here and there and gracefully played hide and seek among the foliage overhead.

All in all the conditions were propitious, and the boys were full of good things, even to the Doctor's prize elk steaks. They were just tired enough and just happy enough to seek easy positions and smoke and tell yarns. Each felt that he was a kind of hero and had a right to tell his experience. So they swapped stories and smoked. The Doctor had been through several Indian campaigns and told of many thrilling experiences.

It need not be recorded that he had at least one very attentive listener. Neither Mead nor Swift could produce quite so much blood and thunder, but their yarns were of that happy-go-easy kind that please and help to pass away time. Smyth's cougar and bear stories made even others besides the Chinaman a little bit nervous under the existing circumstances, for it was awfully dark and dreary just back a few yards from the camp-fire. When Smyth told of how a cougar had followed close at his heels over a lonely mountain trail one night, entering into all the minute details of how his only protection was a small bunch of matches, of which he had to be very economical, burning only one when the cougar became too pressing and earnest in his attentions, etc., One Lung sought a more comfortable seat on the ground between the boys and the fire. For some reason best known to himself, Smyth delighted in persecuting that poor, harmless creature, which was very, very wrong in Smyth; and maybe some time he will have to account for his conduct.

About this time, just when he must have known that One Lung was almost afraid to draw a long breath for fear something would immediately proceed to devour him, Smyth got very thirsty and insisted that the Chinaman should go to the spring and get a bucket of fresh water. It was cruel and hardly in keeping with Smyth's general reputation for manliness and kindness of heart, but a bucket of fresh water he must have. Mead and the Doctor wanted to go, but that wouldn't do. Smyth had "employed the Chinaman for the sole purpose of doing camp work and not as a traveling companion." One Lung hesitated, looked at Smyth, said something in his native tongue which he knew Smyth couldn't understand, but went. Swift called him back and gave him a blazing limb from the camp-fire, which seemed to encourage him a little, for he had doubtless gathered from Smyth's cougar and match story that the varmints were all afraid of fire. "These Chinamen," remarked Smyth, "are a cowardly set. Bret Harte's story of Ah Sin gave people a wrong idea about these heathen. They may be smooth and cunning in small matters, but there is no bravery about them except when they fight among themselves."

"It's a little like Cooper's Indian of the 'Leather Stocking Tales,'" remarked the Doctor.

"That's so," said Swift, "I have never in my travels seen a Chingachgook or Wah-ta-Wah."

"They all died with the last of the Mohicans," put in Mead, and added: "I wonder what J. Fenimore would say of the Indian of the present day—greasy, lousy, drunk and dressed up in a battered plug hat and a pair of cast-off doeskin pants with the seat cut out for convenience sake."

"What's that?" said the Doctor, as shriek after shriek came from down the trail toward the spring. "O, that's only that monkey scared at his shadow," remarked Smyth, and continued, "I'll fix him plenty if he comes sneaking back here without water." But the shrieks continued, and One Lung was evidently approaching rapidly. "Clougar! clougar! clougar!" he yelled, as he dashed into camp empty-handed, dodged Smyth and dove into the shack. Smyth's ire and the other boys' uneasiness were just beginning to manifest themselves, when with a graceful bound a long-tailed, tawny beast, with eyes all aglow, alighted on a log not a dozen yards from where they sat and glared at them. Some, you know, call it ague, while others insist that it is fever. Anyway the boys had it. They were not exactly hypnotized, but they didn't get a shot; for after a momentary survey of the gang his royal highness quietly and gracefully disappeared in the darkness before the boys even thought of their Winchesters.

XII.

"Methought I heard a voice cry, 'Sleep no more!'"

With something akin to feelings of thankfulness and gratitude the boys welcomed Saturday morning's light. They had passed a very wretched night. If they could have been permitted to sleep in peace after their hard day's work of the day before they certainly would have enjoyed the blessing immensely, for they were very, very tired. But it was a long time after the cougar incident before they sought their beds. And then all through the night there were just enough rustlings and growls, and snarls and "scraps," and strange noises to keep them awake.

The trail of fresh blood from six or seven miles back in the elk country, with that from the salt lick, had led quite a delegation of varmints to their camp. Two or three times during the night they heard yells just human enough to let them know that the bloodthirsty cougar was around; while the growls and snarls and crunchings might be from either wolves or bears disputing over the bones and other remnants left from supper. Sometimes the sides of the shack would perceptibly shake as some more venturesome creature would try to get at the meat that had been discreetly piled inside in one corner. And then, as if to add to the distressing conditions, the fire burned out and all was darkness.

Of course there was no particular danger, but such conditions and surroundings induce insomnia in most people, unless it is some cold-blooded fellow like Smyth. Poor One Lung mutely cowered in the corner, half dead with fright. He was having a hard time of it. Not only Smyth, but all the varmints in the Cascade Range seemed to have it in for him for some unaccountable reason. The wonder is how the poor wretch lived at all, for even his days were full of terror, and he had not been known to sleep a wink since he left Portland.

"I'm going to get up," said Mead. "And so am I," said the Doctor. "And here, too," said Swift. Smyth pretended to be asleep, and maybe he was, for Smyth is a very practical fellow.

What a relief these declarations must have been to the poor Chinaman! Then the boys sat up and yawned and rubbed their eyes and felt about as mean as some of their neighbors outside.

"We might as well have a little fun out of it while we are at it," said the Doctor; "let's hurt some of these wretches." That just suited the other boys, of course, and so they all got their guns and crept outside. The moon cast a few bashful glances down through the thick foliage—just enough to make moving objects discernible at a short distance. Presently the boys' eyes had become sufficiently accustomed to the darkness to perceive two or three dark objects moving about just down the trail a little way, and at a given signal they turned loose and kept on turning loose until they had emptied their magazines.

It was a kind of satisfaction to be in at the wake anyway, you know.

Then they reloaded and all went in a body for wood. The camp-fire soon blazed brightly and the boys went out to investigate the results of their fusillade. "Here he is," said Mead, who was a little in advance of the others. "What?" asked Swift and the Doctor together. "I don't know what," replied Mead, "except that he is black and has a breath like a buzzard." "And strange to say, the nasty, snarling devil has hung to his elk rib even in death," remarked the Doctor.

XIII.

"I am as free as nature first made man."

The boys held their customary council of war after breakfast and decided to be "free lances," as Swift expressed it, this last day in the elk country. That is to say, each fellow might follow the course that best pleased his fancy. Mead's experience at the salt lick the previous day gave him an appetite in that direction. Smyth and the Doctor wanted a bear, while Swift was "ready for anything, from murder down to petit larceny." Smyth thought that One Lung might put in the day profitabiy practicing climbing trees. So Mead took his rifle and struck out for the salt lick. Again he approached very cautiously, but there were no pretty horns sticking up out of the hole this time. Lightning seldom strikes twice in the same place. It was all right though with Mead, for they didn't need any more meat, and he felt a secret gratification that he was not tempted. Then he sat down on the bank and soliloquized:

"There was a time," thought he, "when the Indian roamed over these mountains and through these lovely cañons, and supplied the hungry mouths in his wigwam with plenty; and his only arms were the spear and the bow. Now the most improved arms even in the hands of the expert can scarcely secure as much, and I will probably live to see the time when the deer, the elk and the bear will be only fading memories of the half-forgotten past." But what's that object that catches his eye away below, down almost under him. It moves. It must be a deer, and yes, there's another—both does, for no proud antlers grace their pretty heads. Mead knew that he ought not to shoot, but then—well, you know how it is yourself. He fired. They moved not. He fired again. Still they moved not. Five times more he fired. Five times more they moved not. But while he was filling his magazine there was a dissolving view below, and when he was again ready to shoot there was nothing to shoot at. Then Mead discovered that his rear sight was on the 400yds. notch—hardly adapted to almost perpendicular down-hill shooting—and his bullets had probably found a resting place in the bank on the other side of the cañon. But in his heart Mead was really glad of it, for Mead's heart is all right even if he does get a little off himself once in a while.

The Doctor and Smyth had crippled a bear early in the day by breaking one of his forelegs. They followed him six or seven miles over the mountains and through the cañons, but he seemed to be doing quite well, thank you, at 5 o'clock in the afternoon, and so the boys gave up the chase as a bad job and returned to camp.

But there was one member of that camp that didn't get skunked; no, sir!

That was Mr. Frederick Thayer Swift, "which I wish to remark."

He was following a trail through one of those little grassy parks that are found in all mountains; going along carelessly, aimlessly, without any particular object or design, when he saw a black object of some kind rise up from a bunch of grass on ahead a couple of hundred yards. The animal looked at him and then disappeared. Naturally enough he thought it was a young bear that had stood up long enough to satisfy himself who Swift was or what he was, and then "skinned out."

He sauntered on, and when he got a hundred yards or so nearer imagine his surprise at seeing the black object rise up out of the grass, take another look at him and again disappear. Now, Swift is nobody's coward, but the conduct of this varmint didn't strike him as being in accordance with established usage or such as might be expected of a plain little black bear of reasonable intelligence, and that ought to manifest at least regard enough for Swift's reputation as a bold and fearless hunter to run away. Swift was probably just a little bit suspicious and nervous in consequence of the animal's foolish and almost suicidal conduct, and so he mechanically cocked his gun and put in position for immediate use should the animal persist in its idiotic course. It was well that he did, for when he got within a rod or so of the bunch of grass out sprang a gigantic black wolf, which came straight at him with its great red mouth wide open and its green eyes all ablaze.

Swift pulled the trigger without putting his gun to his shoulder, and, in keeping with Mead's luck with the buck, he tore the whole top of his head off. And he brought the scalp back to camp as proof of the truth of his remarkable story. "That animal," said Smyth, "is the only varmint in either the Cascade or Coast ranges, except possibly the mealy-faced bear, that won't run from a man. That cuss will go clear out of his way to pick a

fuss; but a few more such thumpings as this fellow got may teach him better sense."

XIV.

"In all the trade of war, no feat
Is nobler than a brave retreat."

"Exhausted nature seeks repose," said the Doctor, as he crawled into bed. And nature must have asserted her rights with the boys (except possibly One Lung), for they were soon all asleep. And they slept right soundly too, all night, notwithstanding the somewhat restless condition of affairs outside. However, the previous night's experience had taught the marauders to be a little more considerate in their conduct and general deportment.

The peep of dawn Sunday morning found the boys well along on the trail that led down to the main camp. And, it being all down hill, they reached camp before 10 o'clock A. M. The mules had stuck to the sweet bottom grass of Fish Creek, and seemed perfectly satisfied to spend the balance of their days there. As the boys had anticipated, however, an investigating committee of bears had been in camp and had either eaten or despoiled everything but the canned goods and One Lung's Nordenfelt.

But then the boys didn't care much, for there was less to carry out.

A hearty lunch and a couple of hours' rest prepared them for a very pleasant afternoon with the Dolly Varden, rainbow and black spotted denizens of Roaring River, in which sport the whole camp participated.

And when night came and they had completed their arrangements for an early start home Monday morning, it scarcely need be recorded that the boys all slept soundly and sweetly. Success begets contentment, and contentment begets sleep. Even One Lung slept the gentle sleep of tired innocence. He had outlived more than a whole week's exposure to all the dangers of the Roaring River country and his scalp seemed to sit even closer than ever to his head this Sunday night; for he was very tired, and reaction from his severe nervous strain had already set in. He had worked hard; had gone into the elk country with the other boys and had even carried the antlers of a forest monarch down from those dreary realms and was still alive and—tired. Weariness is a wonderful narcotic.

Monday morning, when the last stake had been drawn, the last hitch been taken on the packs, the last long, lingering look taken at the ashes of the old camp-fire, and the cavalcade had right-about-faced for home, all the boys—yes, even the mules—joined in One Lung's song: "No more fun!" S. H. Greene.

Portland, Oregon.

CHICAGO AND THE WEST.

A Dakota Chicken Hunt.

Chicago, Ill., Oct. 5.—As I was saying, a week or so ago, I was anxious to meet my old friend the prairie chicken, and to kill him and be sorry for it. So I went aboard the N. P. train at St. Paul one evening and the next morning was in Fargo, N. D., and a few moments later was talking with Clint Smith, who once upon a time had asked me to come up for a hunt.

"We got thirty-six the last time we were out," said Clint, "three guns of us. Of course, that isn't very many, but we can promise you those six birds which you say will be enough for you. And, moreover, I think I can show you your old friend the chicken dog, too." This seemed to me to be good enough for anybody, so I hung my hat up in Fargo for a while.

Clint Smith is the village blacksmith, and though his shop isn't under a spreading chestnut tree, because they only have cottonwoods mostly in the Red River valley, it is none the less a gathering place for children, boys and men, who hang about the forges and take delight in watching the sparks fly from the red iron. In my belief, every man ought to have a trade, something that he can do with his hands. The wealth of the world is produced by the men who can do something with their hands. They dig it out, and the fellows who don't try to work with their hands try to take it away from them, being themselves mostly robbers and parasites, who have no real right to live, since they do not add to the total of wealth and comforts. If I could only begin over again, I should not be a blacksmith—in journalism, but a blacksmith in fact. It must be such a comfort to be able to lam the everlasting life out of a piece of iron when you get hot at something or other. And then there is a dignity to any finished product in iron which does not pertain to any other metal. Gold and silver are the metals of women, children and Hebrews, but iron has always been the metal for a man. Look at Clint Smith's arms, for instance. What dumb bells would do that?

"I don't know why it is," said Clint, as he hammered away at a horseshoe he was making for a white-eyed pinto that had to have a rope twisted on his upper lip before he would engage in thought deeply enough to stand still, "I never did know why it is that everybody seems to like to hang around a blacksmith shop. My friends come in and sit here by hours watching me pound horseshoes, and they never seem to get tired of it."

I did not tire of it myself, though Clint grumbled because there was so much of it that he could not get off chicken hunting till the next day. So we talked shoot, and tied up horses' upper lips and nailed on shoes and had a good time till evening, and then Mr. C. E. Robbins, of the First National Bank, came around and took me out for a little trap shoot, there being a club meeting that afternoon. Here we met several very pleasant gentlemen, who cheerfully and easily beat me shooting targets, which seems to grow much the same in the Red River valley as elsewhere. And Mr. S. S. Lyon gave me a fine fat prairie chicken for breakfast, he having accumulated the same out of some friend's buggy, I presume. We admired together the beauty of the big brown bird, agreeing that no land produced a handsomer game bird. It had been years since I had eaten a prairie chicken (for I make it a point never to buy game, and will not eat it unless killed by myself or friends), and it seemed to me that if handsome was as handsome did no criticism could be urged against this wild chicken of the prairies.

It is customary, in describing a fall shooting trip, to mention the "crisp autumn air." A story is no good without crisp autumn air, with puffs of brown feathers floating in it. It is with regret, therefore, that I say that on the morning set apart for our start on the chicken shoot the air was by no means crisp enough to be considered up to the artistic standard. To the contrary, it was just the other thing, moist, damp, clammy and of a nature to remove the last trace of curl from the hired girl's bangs. (By watching the hired girl's bangs you can always tell when the shooting conditions are favorable. On bright, crisp days the hired girl's bangs curl tight and aggressively, with positiveness and vigor. On rainy days they hang stringy, limp and helpless. This is a good barometer). But time was short, and we decided to start anyhow, crisp or no crisp. Clint Smith and Ed and Charlie Bowers have a hunting rig with canopy top and close side curtains, so it doesn't make much difference whether it rains or shines, for all the hunting in that country is done by wagon, the shooter never getting out except to walk up to the dogs on point. Into this tidy carryall we bundled ourselves and belongings and pulled out into the rain about 3 o'clock in the afternoon, intending to drive out about eighteen miles to Mr. Sam Corbett's farmhouse, there to pass the night and hunt in the neighborhood the following day. There were these four of us, and we had three dogs, to wit: Nancy, black pointer; Don, ancient liver and white pointer, and Joe, pointer puppy, of small experience, but with ideas of his own.

In the East, when a man goes hunting, he walks, so that he can crawl through fences and thickets. In the South, he rides horseback over the fields, where he could not with any wheeled vehicle. In the West, the real West, where there are not yet any fences, he rides in light wagon or buggy. We used to hunt chickens so in Iowa when I was a boy, but now Iowa has been fenced up into measly little farms and is no good any longer. Up here in Dakota we were still on the prairies, the actual, unfettered, unfenced, open prairies that you read about, but don't often see. Far as the eye could reach the ground was absolutely flat and treeless. This was the wonderful Red River country, that great, gold-lined alluvial plain, with soil black as your hat, which lies up and down in Dakota and Minnesota about 60×200 miles in extent. This is the wheat granary of the world, and every foot of it is worth $25 an acre now. I called it the prairie, but it is only apparently so. There is no prairie left. It is a continuous wheatfield, with only strips of grass and scarce a cornfield in a dozen miles. The chickens actually nest in the wheat, and we saw their nests marked by the eggshells, and farmers told us of seeing many nests during their fall plowing. The birds simply refused to give up this country even after the farmers had sowed it all over with wheat instead of the ancient grasses.

We drove on out over this vast prairie that is no longer a prairie, meeting never a fence in forty miles. The dogs worked wide, forward, back and across, as only real chicken dogs know how. Poor old Don, the veteran, could not stand the gait he once could, but he kept going wide as he could. Joe was not so winded. But Nancy, the pointer of color, was all the dog we needed. I have never seen a better chicken dog for just this sort of work. She ranges very fast and wide, and is absolutely staunch. Moreover, she knows why she is running, and she uses the wind perfectly, and knows where her birds are when she scents them. In short, she is a chicken dog of the good old sort, devoid of frills, but full of sense, and of just the sort to assist prairie chickens into a canopy-top buggy.

In my chicken days we hunted on a grass and stubble country, and had certain hours of the day and certain sorts of country which we considered in our plans. Here in Dakota these seemed to be of no service. The birds were scattered all over, as apt to be found in the middle of the stubble in the middle of the day as not, and it was impossible to figure on their habits. It was now the 21st day of September (as we might have known from our equinoctial storm), and the birds having been shot at for a month were very wild. During the evening we saw I suppose 100 to 150, in bunches, single and small coveys, but the rain had made them restless, and we got small chance at them, the stubble offering no close cover. But they were great, glorious, strong-flying fellows, and we felt all the more delighted when we did get one. Clint and Ed Bowers shot one sharp-tailed grouse between them (the only one we saw on the trip), and then Clint shot a chicken out of a half dozen wild fellows that got up in the dusk, and I was led up to shoot over the last point of the evening, which Nancy made for us. This bird we found to have a leg already freshly broken by a former shot, so the boys asked me if cripples were the only sort I could kill. Total for the afternoon, three birds. But none the less, under Mrs. Corbett's kind care, we slept well that night after a big supper, and hoped for the morrow.

But the morrow wasn't any crisper than the day before it. The cold equinoctial rain continued to fall. The boys pulled on big fur overcoats and didn't complain of the heat, and I found a mackintosh none too warm. We started out in the morning with dogs and were shivering, and the curls of the hired girl were limp and desolate. None the less, within our curtains all was merriment and joy, and we concluded that the weather was something a sportsman should never mind—provided he has curtains.

Our persistence was finally rewarded. My chicken trip to Fargo was a success. By noon the rain had nearly ceased. The dogs kept up their fine work, black Nancy fairly proving a wonder. We began to find birds, a few, a few more, a good many, in droves and strings and little broken coveys. We all did fairly well, and the pile of big brown, plump birds in the back of the buggy began to grow. We got that half dozen birds which I had said would satisfy me, and then began on another half dozen. Then we made it a dozen and a half, and before night it was two dozen. With a long shot Ed Bowers killed our 25th bird just before dark, and then we drove home, perfectly contented so far as I at least was concerned. I had seen my old friend the chicken and felt sorry for him, and had seen also my old-time friend the genuine Western chicken dog, which comes in all sorts of breeds and all kinds of shapes. (Nancy is about the shape of a small greyhound.) Moreover and most of all, I had once more met with the courtesy and kindness of the shooting craft, which is much the same the country over, always very good to know. I suppose I killed rather more than my six birds to my own gun, and that is plenty, I can testify, to make one feel he has had a grand time with a grand game bird, and to feel grateful to those who offered him the chance.

My friends Clint Smith and the Bowers boys know about as much of the chicken shooting around Fargo as any of the shooters there, I presume, and they tell me the chickens are unusually scarce this year. On their opening hunt they only got seventy odd birds in two days to three guns. The week before I was with them they had been out with the success above stated, and they averaged a hunt each week. They thought the rain and hail had hurt the nesting in the spring. They said they knew of very little illegal shooting and believed the law was better observed each year. They expected the shooting to be better rather than worse next season and perhaps it will. The prairie chicken is certainly not yet extinct in the Red River valley, though that country no longer has charms for the "sportsman" tourist who wants to kill 50 or 100 birds each day himself.

The stock of chickens and sharp-tailed grouse all over eastern Dakota is annually affected by migration of the game. In October and November great bands of these birds come down from the north, no one knows from where. Often thousands in a day cross Fargo going south. They stop only temporarily and are very strong and wild. They go south into lower Dakota and Nebraska, where they can winter on the cornfields. In the spring they work back north again, many, of course, nesting all along this line of migration and so keeping up the local supply, subject, of course, to local conditions. The sharp-tailed grouse cling among the sandhills about thirty or forty miles south of Fargo, while the pinnated grouse breed more in the open prairie and hang about the stubble fields.

At Sheldon, forty miles southwest of Fargo, I saw a great many pinnated grouse while riding over the country during the greyhound races there. I should think one could have had very good shooting there, though local men said the crop for '95 was short.

At Moorhead, Minn., which is just across the Red River from Fargo, I went out for a few miles one evening with Mayor A. A. Lewis and his friend Mr. Douglas, and even so late in the season and so near the town we saw forty or fifty birds and bagged five fine ones. It seems clear that with fair observance of the game laws all this part of Dakota and Minnesota would continue to furnish moderate shooting for moderate men during an indefinite period yet to come.

Speaking of Illegalities.

Speaking of illegalities in shooting reminds me of a little incident of which I got track at Moorhead. A few of the shooters of that city, I regret to say, and men who should not have been guilty of such an act, could not wait for the season to open, but began shooting ahead of the date. They would sneak out and bring their birds in under cover, and they thus had on hand about 200 birds before the season opened. They hung these down in a well, as offering the coolest and safest place of concealment. Unfortunately one day the rope broke. The illegal shooters lost their chickens and their well at the same time.

The Upper Mississippi Valley.

Chicago, Ill., Oct. 5.—Mr. H. B. Jewell, Mayor of Wabasha, Minn., and known to Forest and Stream readers as Wapahassa, writes me that he was last week out in southwestern Minnesota and had one day's shooting, but met very bad weather (no doubt the same storm which struck us at Fargo). He says:

"I would rather hunt in my old haunts in the grand old bottoms of the Mississippi and get only a few birds where we are sheltered from storms and wind than to shoot a hundred on the prairie. I wish you could have been here and helped me eat some of the big fat mallard baked that we had for dinner yesterday, also some of the broiled jacksnipe and teal another day. I got seven ducks right near home over the river, and jacks are very abundant. The prospects for game in the Mississippi Valley about here are better than for some years, owing principally to the rise of the river and the late heavy rainfall. I have put up my big tent "down in the marsh" twelve miles below town, in the prettiest camping spot imaginable, and I expect to spend considerable time there this fall. It is one of the best duck grounds in this part of the country. Wish you could come and spend a few days with me. Not so very much game, but a mighty fine place to spend the time."

Indians and Duck Eggs.

Mr. W. J. Gilboy, of St. Paul, Minn., now a conductor on the "Soo" line, personally told me of an instance of Indians gathering the eggs of wildfowl in great numbers. "I was on the Great Northern Railway then," said he, "the next year after it was put through. The track end was away out in Montana, near one of the Milk River tributaries, along which there was and is to-day a vast marsh. At that time this marsh was alive with ducks and geese, and it was in the nesting season. The Indians went out and gathered thousands of the eggs and brought them in to the railroad to sell. They had no good way of carrying them, so they loaded them into their blankets and brought them in that way, holding up the corners of the blankets. Of course they broke most of the eggs, and most of the rest were addled or partly hatched, so the Indians got very little for the eggs, but they kept on bringing them in, actually by thousands. That was on the marsh near Malta, I think. C. F. Waldo was then division superintendent and saw all this egg industry. To-day there are very few ducks and geese on that marsh."

Away Down South.

It should be the mission of the true newspaper man to spread peace, calmness and content about him as he walks through life, never to incite mutiny, foster sedition and cause heart-burnings. Col. A. B. Pickett, editor and manager of the Memphis *Evening Scimitar*, is a true newspaper man, as anyone who sees the *Scimitar* must know. Yet I must accuse him of violating the soft and soothly mission of the perfesh; for that he with deliberate intent and design prepense has invited me to have the best time in all my life. And I can't go! Truly, it is one's friends who break one's heart! But listen to the siren song of this man in Memphis, and say if it is not enough to cause a man to go home and kick the dog—provided he couldn't accept the invitation; which I can't, being obliged to do a little work once in a while, to sort of jolly my job along a little. Col. Pickett says—if he will allow me to quote from his letter:

"On the 31st day of October I leave Memphis on special car for Aransas Pass, Tex., over the Cotton Belt Route. Mr. S. G. Warner, the General Passenger Agent of the Cotton Belt, and Mr. Martin, of the Aransas Pass Railroad, are doing everything in their power to make the trip a pleasant one for our party, and we are all very anxious to have you join us. We expect to remain about two weeks.

I have invited Mr. DuBray, who is an old friend of mine, and also Mr. Burch, of Chicago, who is an all-around good fellow and a thoroughbred. The remainder of the party, which will number about fifteen, will be from Memphis and all of them representative men. Among those who have signified their intention of making the trip are Col. Napoleon Hill, the cotton king of Memphis; Col. John Overton, Jr., one of the land barons of Tennessee, and a crack shot with an 8-bore; Gen. Sam Carnes, lately Brigadier-General of the State and the organizer of the famous Chickasaw Guards; Judge J. M. Greer, Mr. J. H. Watson and Mr. R. D. Jordan, all prominent members of the Memphis bar; Mr. W. H. Bates, the proprietor of the leading printing house of this section; Mr. Tom Williamson, prominent farmer of Fayette county; Mr. John G. Hendon, of the same place; Mr. John R. Sloan, Chancery Court clerk, Tipton county, this State; Mr. T. A. Divine, whom you know, and T. K Riddick, a Somerville banker and lawyer. All of these gentlemen are enthusiastic sportsmen and most of them are excellent marksmen. I am satisfied you will enjoy the trip and we will be delighted to have you join us. We shall have one of Pullman's finest private cars."

To meet such company on such a trip and in such a country would make an epoch in one's life. Is it any wonder, I say, that since I can't go I feel that life in Chicago is a failure, under which mutiny and insurrection can be called only natural and fit? Heine's old German song says:

"Und dies hat mit ihrem Singen die Lorelei gethan!" which, being translated, means: And this has, with his singing, this Southern shooter done. I shall surely kick the dog to-night. It's an iron dog too. You can't keep a live dog in Chicago.

The Flight of the Fowl.

The wildfowl flight is now working down from the North. On Sept. 26, when I was up in Fargo, I met Mr. Walter Smith, who, with Clarence Lyon, of Fargo, John Burkhard, of St. Paul, and another shooter, had just returned from a hunting trip about twenty-five miles north of Dawson, N. D., on the N. P. line. They shot two days and bagged 50 geese, some of them monstrous Canada honkers, besides a great many ducks and a number of chickens and grouse. They report the shooting very good, and apt to improve.

Jacksnipe have made appearance in this region. Dr. W. H. Waterman bagged eight one evening along the Des Plaines, near Chicago. Reports of scattering bags are at hand also from lower Wisconsin and upper Indiana. No heavy shooting as yet, so far as I know.

Wants to go to Texas.

The FOREST AND STREAM emigration bureau continues to work. The last inquiry is from Providence, R. I., where Mr. Newton Dexter wishes to learn about winter accommodations on the Texas Gulf coast. He is sure to go, though I trust not beyond the reach of Providence.

Accident in the Mountains.

Mr. M. B. Thrift, of Chicago, is just back from a hunting trip in Colorado, which was terminated in a deplorable manner. Mr. Thrift was joined in Colorado by four companions, and they went into the mountains some eighty miles southwest of Laramie, Wyo. Among the party was Mr. G. H. Brewster, of Haworth, Col., formerly of Beatrice, Neb. The party were in the woods and engaged in felling a tree. In some way Mr. Bristol's foot slipped as he was about to step aside to avoid the falling tree, and the tree struck him on the head, crushing his skull and killing him instantly. The friends of the dead man had the hard duty of taking his body eighty miles in a wagon to the nearest railway point. The hunt was of course abandoned.

'Lunge.

The muscallonge are now biting well in the Wisconsin lakes. Mr. H. L. Stanton, of the Natchaug Silk Co., and his friend Mr. Willard went to Squirrel Lake, near Minocqua, and got twenty odd, mostly small, however. Mr. Roth, of the Wilkinson Co., this city, showed me a fine 'lunge the other day (38lbs.) which was just down from the Elk River, near Phillips, Wis. A 40lbs. specimen from Lakota waters was this week displayed (mounted) in a Madison street restaurant window.

E. HOUGH.

909 SECURITY BUILDING, Chicago.

Nitro Powder.

PHILADELPHIA, Pa.—*Editor Forest and Stream:* Having used nitro powders since Schultze was introduced, I agree with Mr. C. M. Stark. Any one using common sense in loading nitros I think will obtain good results.

I don't think Mr. A. E. Gibson has given nitros as exhaustive trials as I have. I have used every brand of nitro on the market. I also find that 2¾ to 3drs. of nitro give good satisfaction in a 12-gauge gun for any kind of field shooting, barring pheasant, or pigeon shooting from the trap. I have seen several minor accidents with nitro powders, some purely through overloading, some from firing-pin bursting through the primer. I have had the heads of several shells pulled off, some loaded with 2½drs. only, to which I put down the cause as defective shells. I have seen plenty of heads come off at tournaments, the majority, I think, through improper loading.

P. H. D.

In the Indian Territory.

LOCO, I. T., Oct. 1.—I have seen no chickens as yet, but a few early ducks are here. I never saw quail more abundant, and doves are so numerous that no notice is taken of them as a game bird.

I anticipate excellent duck and chicken shooting a little later on. We also have any quantity of curlew in season.

"Pot shots," either on land or water, are violations of the unwritten law of true sportsmanship, and should be discouraged by every one. BRUNT GRAY.

Sunday Shooters in New Jersey.

HACKENSACK, N. J., Oct. 4.—Game Warden Ricardo arrested four men from New York and Brooklyn, last Sunday, at Woodridge, for illegal gunning. Two were fined $22 each by Justice Collins, of Rutherford; two were brought to Hackensack and fined $20 each by Justice Cumming, leaving their guns as security for the fines.

NEW ENGLANDERS WITH GUNS.

THE open season on gray squirrels and rabbits in the State of New Hampshire begins Sept. 1; on partridges and woodcock Sept. 15. Therein lies a solid cause of complaint in the opinion of many sportsmen who live in the southern portion of the State. The season on birds used to begin Sept. 1, and it is claimed by many of the shooters that the recent change to the 15th has been very hard on those who respect the law and do not go out until that date. An Exeter friend who delights in partridge shooting tells me that in Rockingham county (in which Exeter is located) there were many broods of birds previous to Sept. 1, but a visit to the same localities after the 15th showed the birds to be very scarce, and what few there were left extremely shy. His experience was only a repetition of many others', and the only conclusion to draw is that the rabbit and squirrel shooters have been bagging the game. It is not difficult to tell whether or not birds have been hunted, and all agree on that fact. It would have been far better to leave the opening day as it was, thus giving to all an even chance. In southern Massachusetts and in Rhode Island many bird shooters are complaining bitterly over the non-enforcement of the Sunday law. There are many mills in that region, and large numbers of foreigners are numbered among the help. It is the custom of these people to go out Sundays and bang away all day, making it almost an impossibility to bag any game during the remaining six days of the week. This is particularly true in many parts of Rhode Island. It would appear to be an easy matter to stop a good part of this Sunday shooting, and as the law is plain it should be enforced.

With the exception of northern New Hampshire woodcock are reported very scarce in all the New England States. It is said that a good rain is needed to drive them down from the covers high up in the Granite State, but the season has been so extremely dry that the birds have suffered and it will be hard to find them anywhere else. Partridges, on the contrary, are reported quite plentiful, especially in Maine. Along the coast line shore bird-shooting has been slow. Ducks are coming in slowly, but are scattered and few of the shooters have done much. Coot have been fairly plentiful down around Cohasset, and one ambitious gunner with a large gauge gun succeeded in killing enough the other day to thoroughly blacken his shoulder with the recoil. The Cedar Beach Gun Club, who have a club house and a good stretch of marsh down at Cedar Beach, Nantasket, have had the best luck I have heard of. During September they killed a large number of plover and yellow legs and had good sport. The club members are T. H. Rollinson, G. M. Woodman, S. Y. Nash, B. T. Dyer and J. D. Scudder, all from Waltham, Mass., I believe, and all royal good fellows who would rather shoot or fish than do anything else known to them.

Allimoosic Lake, Maine, is a favorite resort of C. D. Haskins, of Boston, one of our electrical experts. This gentleman, accompanied by Mrs. Haskins, returned a short time ago from that country, and was so pleased with the trip that he is going down again soon. He had some excellent bass fishing, on one occasion taking 10lbs. in twenty minutes. His largest bass weighed 3½lbs. and there were several others near that size. He also had good duck shooting, saw many partridges, as every one else has who has visited Maine this year, and was treated to the sight of a few deer. His only adventure of note occurred with a Canada lynx. He met one of these vicious brutes in the road one evening, and having no firearms with him was satisfied to wait until the animal had moved on. Desiring to do his share toward ridding the community of these animals, Mr. Haskins adopted a novel method to secure a shot. Procuring a squirrel he tied him to a long string and fastened the other end to his person on going to bed. During the night he was awakened by a vigorous pulling of the cord, and Mr. Lynx walked off with the bait while his would-be slayer was minus the shot. He intends to get revenge for that trick later on. Lynx are altogether too plentiful down there for the comfort of the people, and one of 45lbs. weight was recently killed by a well-directed shot from the hands of a resident.

The number of big-game shooters who have gone into Maine up to the present time this year is something phenomenal. For the last few years New York and Pennsylvania people are going into the Maine woods in considerable numbers, and at present this fact is more noticeable than ever. It certainly speaks well for the attractions of the old State that so many from distant States are finding and learning to love its mountains, streams and forests. From Boston, and in fact all parts of Massachusetts, almost innumerable parties are making up to go, and this fall the deer are destined to suffer a thinning out never before equaled. His Honor, Mayor Edwin M. Curtis, of Boston, and Mr. Fred Conant, of Portland, are in the Moosehead region. They have a fine camping outfit, with good guides, and will use every effort to get their share of the deer and perhaps a moose during their two weeks' stay.

Edward Belcher, of South Easton, Mass., and John Weber, of Wrentham, Mass., leave on Oct. 12 for a shooting trip in the neighborhood of Mt. Katahdin. It is to be entirely a camping trip of three weeks' duration. Last year they were in near Lobster Lake and succeeded in getting two deer. They hope to do even better this time.

That veteran sportsman, Dr. M. A. Morris, of Charlestown, accompanied by his friends, Dr. E. D. Robbins, W. B. Hastings and N. F Tufts, has gone away on a two or three weeks' trip into Maine after large game. Their destination is kept secret, but it is said they have gone to some unknown region where every man of the party is sure to get all the law allows. Dr. Morris has been a very lucky man in the past, and I hope this time their hopes will be fully realized. It is whispered that somewhere near the Katahdin Iron Works is the wonderful place selected for the slaughter, but as that is only a guess, perhaps it is far from the real truth.

Dr. Heber Bishop, another one of Boston's best sportsmen, with J. C. Whitney and Charles T. Cockey, Jr., of Baltimore, and J. B. Seward, of Boston, have just returned home from an extensive trip into Nova Scotia and northern Maine. Mr. Cockey killed his first bull moose in Nova Scotia, and all hands enjoyed the best of partridge shooting there. A long jump was made from here to Moosehead Lake, Maine, where the party went into camp at the head of the lake. They arrived there just before the opening day of the season (Oct. 1), and saw many deer while waiting until the law was off. On Tuesday, the first day of legal shooting, they bagged two fine bucks, and left for home on the following day, much pleased with their good fortune. Dr. Bishop is a great hustler on a trip of this kind, and it pays to hustle, even in the woods, when you can get results as he does.

Since Jock Darling left Nicatous I have not heard of many Boston men going into that country. I dare say the new management is just as competent and the accommodations just as good, but Nicatous without Jock does not seem natural. The only party that has come to my knowledge as going down there left some time ago and must have returned ere this. Chas. A. Eaton, Chester Eaton and W. A. Read, of Brockton, and Mr. Burley, of Newburyport, were the men who composed the party. I hope to find out from them how affairs are progressing at the ancient place.

W. C. Vaughan and D. C. Roberts, of Cambridge, and H. L. Talbot, of Lowell, leave in a few days for Mount Katahdin and the Sebois Lake region. This party were in the same region last year and did so well that they felt encouraged to repeat the visit this fall. Both birds and deer are their hopes for the trip. May their desires be realized during the ten days they expect to be away.

HACKLE.

ADIRONDACK DEER FLOATING.

BOSTON, Mass., Sept. 28.—Having seen a good deal in your magazine relative to hunting in Maine, I thought I would give you particulars of a recent trip that I made to the Adirondacks.

I left Boston Friday night, Sept. 20, and reached St. Regis Falls, N. Y., at 10:30 Saturday morning. From there I drove eight miles to Lake Ozonia (formerly known as Trout Lake). From there I boated two miles to the south end of the lake, where my camp is located. It only took a short time to make preparations for a night's hunt. We left camp about 4 o'clock in the afternoon and then had four miles to travel in a straight line, but the way trails are cut the actual distance is about six miles. The walking was very good over these trails and we reached Weller Pond about 6 o'clock. After supper and a rest we concluded to try Train Pond, which is a mile east of Weller Pond. We reached Train Pond at 9 o'clock, walking the distance between the two ponds by lantern light, as the trail was well marked and a good one.

I hunted with a closed jack and had a first class paddler, but owing to the excessive light from the stars the pond was very light, and although we could hear deer at different parts of the pond, before we could get to them they would sneak out and get off in the woods. We took two long runs of about two hours each during the night and drove out eight or ten deer, but were unable to get near one of them, therefore had no venison for breakfast.

We went back to camp Sunday morning and spent the day at Lake Ozonia in camp. The day was beautiful and the scenery was fine. The white maples on the shore were as highly colored as beets and the tints through the woods were all the way from a beet hue to a dark green. Although I have made many trips to the woods I have never at any time seen the foliage finer than it was on Sunday. Sunday evening we walked back to Train Pond and about midnight concluded to try our luck again. We went out on Train Pond and it was not as light as on Saturday night and was very still, as there was no wind. We could hear everything that moved, no matter if it were quite a long distance away. There was one fawn playing around not more than 100ft. from our landing, but we did not take the trouble even to look at it, but went out on the pond with a closed jack. It was so still that only a paddler of great skill could paddle a boat without a noise, especially where there were large quantities of weeds and lilypads. After listening a while we decided to go to the north shore of the pond, where there were several deer out in the water. We consumed about half an hour going a distance that could easily be accomplished in five minutes; but my paddler, honest John Wait, of Parishville, one of the most skillful paddlers and best cooks that there are, did not make a sound and no motion of his body above his wrists in going across the water. When ponds are so light deer will detect the slightest motion and will leave the water. When we came near the shore I opened my light and I could see one eye of a deer through the grasses that was feeding a little distance away. I waited for a moment until it raised its head and started to walk away, when I fired, and from the noise I felt sure that I had broken a leg. The deer moved about 75ft. to the edge of the woods and we could hear no more noise.

I then heard a rustle about 50ft. to the right of where I had shot my first deer, and turned my light in that direction and the guide immediately turned the boat around. I could see a deer in the edge of the woods facing me, and not knowing positively whether I had shot the first deer, and being desirous of securing one deer, I fired at this one. This deer made one or two jumps and was dead. We drew the deer out and dressed it. It was a fine two-year-old buck, in first-class condition. We then looked for our other deer, but were unable to find it; therefore we went back to our bark camp to sleep until morning.

Early Monday morning we went out to look for our other deer. We found it in the edge of the woods, dead. It was a three-year-old dry doe. We dressed this deer, and left the forequarters for the guide and took down the saddles to Lake Ozonia for some friends. I took the buck home with me to Massachusetts.

I had a warm job of it packing the saddles down to Lake Ozonia Monday morning, and John and his son did not have a very easy time taking down the whole deer strapped to a pole.

I had dinner at Lake Ozonia, and drove back to St. Regis Falls and took the 3:38 train and was back at my office in Boston Tuesday morning.

Now I think this is as good results as any one can show in Maine. I was only gone from my office two business days and Sunday; traveled by rail 704 miles, by boat four miles, by trail fourteen miles, by carriage to and from St. Regis Falls sixteen miles, and the result two fine deer, shot within a minute of one another.

If any one can show a quicker or more successful trip and the same distance traveled, I would like to hear from them.

FRANK A. CUTTING.

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday, and as much earlier as practicable.

RANGE FOR SHOOTING GAME.

HALIFAX, N. S.—*Editor Forest and Stream:* Dick of Connecticut and Another Dick have severely criticised my action in shooting at a running moose 200yds. away, but they do not say at what range I would be justified in shooting. I can only surmise from both articles that I am only to shoot when absolutely sure of my shot—but no; I am wrong, because I see in the article in the issue of Sept. 21 that absolute sureness is an impossibility.

I quite agree with the writer in thinking so, in so far as I myself and the great majority of big game hunters are concerned. Some few may, I believe are, quite sure where they will hit before pressing the trigger.

Now, to illustrate how difficult it is to fix a range for yourself or for others at which you may fire at a moose, let me quote a few examples, for the accuracy of which I can vouch:

In the fall of '93 my guide took out moose calling two young friends of mine, both belonging to the militia, and counted among the best shots in their regiment. In due course one very clear evening, as the sun had just gone below the horizon and a beautiful moon was shining and not a vestige of wind (in fact, every condition was such as to afford them an excellent opportunity to make a good shot), my Indian called up a moose. It came out from the sheltering woods and walked out on the open barren to within thirty paces of the spot where my friends were concealed behind a large boulder.

Now, I think every one will surely agree with me when I say they had a splendid and almost exceptionally good chance to kill that moose, but note the result—both men aimed at the shoulder of the moose, standing quite still and broadside to them; after the shots the animal ran a few paces and fell, but was by no means dead. They stood off fifteen or twenty paces and fired seventeen more shots at the poor animal lying there struggling on the ground before one bullet, more well directed than the rest, found the animal's brain and quieted its struggles, and, I might add, ended its agonies. Its head was so torn by bullets as to make it useless for mounting, and of the two first shots fired one struck it in the abdomen and the other one never hit at all.

Again, the first time I ever had the fortune to go moose hunting, and the very first day we were out, the Indian went down to the lake near our camp to draw some water for tea, and saw swimming across the lake a young bull. He ran back for me, and I picked up my rifle and three shells and hurried to the water's edge, a distance of some 20yds. The animal was then within a few yards of being obscured from view by a point making out into the lake and about 100yds. away. I fired two shots at him quickly, and both missed, owing to a mistake in my elevation. My third and last shot hit the animal in the nose somewhere, as we could well see by the way it threw up its head and made directly for the shore and cover.

Now, any hunter knows what a very small part of a moose's head is exposed when swimming, and of the small exposed portion a smaller portion constitutes the brain and vulnerable part.

Here is a case where a deviation of one inch in the course of the bullet would alter a miss from a kill. The chances to kill were nearly as great as the chances to miss, if the head were hit at all; and yet, because I might, and in fact did, shoot two or three inches out of the road, I suppose from D. of C.'s and A. D.'s point of view I should never have fired at all.

But I did fire and did hit the mark, and although only a few inches out of the road, I did not kill the animal, and it would probably become all well again in a few days.

Another case still—one of our most successful hunters tells the story of his first moose as follows: "We were cruising along through the woods and came out suddenly on a small clearing 50yds. across, and there was a moose standing on the far side, quietly browsing, with his shoulder to us. I fired at him, and away he went tearing through the bushes, and as no blood was visible on the bushes or ground we had to conclude that I had missed."

A moose 50yds. away, standing still and with an exposed shoulder! Surely this was an easy shot, and the man could be excused for shooting, and yet he did not kill.

So much for instances where a moose, although well within the bounds of what we might call easy shooting distance, was missed.

In my last article I mentioned two particularly difficult shots which were successful. In the case in point the animal, as before stated, was in plain view 200yds. away among bushes which by no means presented an obstacle to my shooting it, and when my first shot was fired was hardly under way, although I did startle it while throwing a shell into the firing chamber of my rifle. The bullet was sufficiently well directed to go through the lung, and possibly 2in. more one way or the other would have made the shot result very differently.

Moose have frequently been known to stop still at the sound of a gun, even when hit; in fact, I know of one such case in my own experience, and had this one done so of course I would have had a second good chance. I think, therefore, that in consideration of the above authenticated cases any man going moose hunting should avail himself of every possible chance of shooting his game, be the range long or short, or the conditions good or bad.

The element of chance in moose hunting is very great, and a man can ill afford to lose one, for goodness knows 'tis a hard enough job to find a moose, let alone to shoot it. It does not usually run across your path unsought; and any man who can point to a moose head and say, "I shot it," has just reason to be proud of his abilities as a hunter (I won't say sportsman).

Such, therefore, is my opinion of the range at which we may shoot moose.

D. of C. and A. D.—the latter of whom I suspect of being none other than D. of C. himself—bring into the discussion matter entirely at variance with the heading of the article—"Range for Shooting Game."

They accuse me of not being a sportsman. Now the definition of a sportsman I would like to see made the topic of another article; I must say that for myself I really could not define a sportsman, and I could not be the judge of sportsmanlike conduct in another; I can, however, in this article answer one or two of the statements in A. D.'s letter.

He implies that a sportsman to be a sportsman must make use of the meat he kills and must not kill the animal unless his meat be utilized.

Now must the man who hunts the tiger, the lion and the grizzly, or the people who follow the hounds in a fox hunt or wildcat hunt or even the coon, must they be unsportsmanlike because they do not utilize the flesh or in fact any portion, but kill only for what I always called the sport of it.

I most certainly think that in the case of a moose all the meat should, if possible, be taken out and used. In the case in point we used what meat we wanted; I sent a small piece to some of my friends, the balance I gave away to the nearest country people, who were very glad to get it, and I could easily have disposed of ten carcasses among them, as lots of men were willing, aye, more than willing, to hitch up their oxen and pull out any quantity of meat for the sake of one hind quarter. I have, however, known cases where the moose was killed so far from any habitation that the meat would all spoil before it could be taken out.

Perhaps though, in such a case, to be sportsmanlike, we should try and drive the moose out toward a settlement and then knock it on the head with an axe, the surest way of killing it.

A. D. says "Tiam clearly implies that the sportsman sallies forth for the mere gratification of killing." Now I don't quite see how my words could be made to convey any such idea; in the first place the greater portion of men do not go to the woods on a moose hunt for no other purpose than killing a moose; they go for the rest, recreation and change incident to the life lived in the woods, also for the hundred and one little pleasures incident to life in the woods. I have been asked why I go away hunting alone with an Indian, my answer is always ready—"I am fond of the woods." The killing of the moose is merely a link in the chain, it furnishes a definite end for you to keep in view, the very difficulty of attainment making the fulfillment of which all the more desirable.

Did a sportsman go to the woods with only a desire to kill something, I have no doubt some country farmers would be very much obliged to him if he would go to their houses and shoot their fatted steers, etc.

Re the sportsmanship question also, I would like to ask my friend A. D. if he saw a grouse sitting on the ground a short distance ahead of him, I presume, in order to carry out his role as a sportsman, he would put up the bird and shoot at it on the wing. Now, why do sportsmen flush birds before shooting? (I am, of course, dealing now with the shotgun, not taking off heads with a small rifle.) Simply because a bird on the wing has a much greater chance to escape and consequently of getting slightly wounded, and still getting away and possibly dying in some corner.

Now a moose and a grouse are both game and both are noble game; won't you, please, A. D., allow me to give the poor moose a chance, even though an occasional one does go away maimed? All wild animals are the property of the people and rightly so. I hope the day in America is far off when the animals will become so guarded that only the wealthy will be able to shoot, as is the case in England to-day.

The law, however, allows a man two moose in a season here, and that is wise, as evinced by the fact that they are increasing slowly and surely.

This being the case, no sportsman need hesitate one moment about killing two moose if he can.

In our case there were two of us, and naturally we were each anxious to take home a trophy even though one man did shoot both animals, and so I do not think the accusation of being selfish and of killing for the mere sake of killing holds good.

You must also remember every one is not so fortunate as to get away moose hunting more than once or twice in a lifetime, and if he shoots up to the limit at one time when the chance presents itself, I would not be the one to censure him for it.

Nobody hates killing more than I do—it is the only portion in the sport which I do not like. I can hunt for weeks and enjoy it immensely up until the point when the animal dies. To see a moose lying there on the ground, a few moments before full of life and vigor, thinking only of his lady love, whose voice he had heard so seductively calling him to her—to look at him there, I don't see how any one, barring a butcher, could feel any other way than sorry for what he had done—for the life he had taken to satisfy his love for sport.

But not only a moose; a wounded rabbit, grouse, snipe, duck, or in fact anything, they all inspire the same feeling of regret in me, and many a time have I resolved not to kill again, but the very next chance finds me at it as hard as ever.

It is one of the queer phases of human nature, I suppose.

Now I will close this screed with an honest confession made up of the above facts. I do not know what range to shoot game at in order to be sportsmanlike, and I do not know what a sportsman is.

I am going away on my fall hunt this year on the 7th of November, and should another moose show up at 200yds. away, I am afraid the temptation to shoot will be too great for me to overcome. TIAM.

Railroads and the Park.

SIOUX CITY, Ia., Oct. 2.—*Editor Forest and Stream:* I inclose clipping from the Omaha *Bee* of to-day, which reads: "Much speculation has been indulged in concerning the plans of the Burlington in building into the Yellowstone Park country. News from that section of the country is to the effect that a surveying party is now at work in Johnson county, Wyoming, on a survey that is supposed to be under the direction of the Burlington. Along with the survey is an irrigation company that proposes to reclaim thousands of acres of arid lands along the line. The survey will tap the north end of the Salt Creek and Powder River oil fields, cross the Big Horn range and enter the National Park either at the Yellowstone River or in the Stinking Water Valley. Railroad men generally believe that the Burlington is seeking a Pacific coast line of its own, and believe that the National Park extension will be built soon." I don't know what there is in the story. Judging, however, by the way the Burlington people get everything they want, it looks as though they might break into the Park. W. R. HALL.

Game Laws in Brief.

THE *Game Laws in Brief*, current edition, sold everywhere, has new game and fish laws for more than thirty of the States. It covers the entire country, is carefully prepared, and gives all that shooters and anglers require. See advertisement.

SHOOTING FOR RECORDS.

ENGLEWOOD, N. J., Sept. 28.—*Editor Forest and Stream:* It's not often that I sit down to write with the special object of adding to the mass of "rejected addresses" in some waste basket, and if you wax mad and kick because of my useless work you must lay it all on the shoulders of B. Squires.

In his contemptuous sneer at record hunters he touches a sympathetic chord in the soul of every true sportsman; yet I cannot see why he might not consistently have included trap-shooting "record hunters."

Many long years ago, before gray hairs increased my wisdom, I had a reputation for skill in shooting of which I felt as proud as an American beauty of an English title. My hobby was difficult bush shooting, but trap-shooting I was then, and am still, almost a stranger to, having never indulged in it more than half a dozen times in my life.

An acquaintance in Cincinnati sometimes spoke of a friend of his whom he considered the best shot—"present company excepted"—that he ever saw, and he always hankered after getting us together.

One day his friend came to town and he introduced us, and we agreed to test our skill at pigeons, each one paying for his birds, and no stakes. We both scorned single birds, looking upon it as simply bird butchery, affording no test of skill; so we agreed on twenty double birds each, and we tied on eighteen. Now, that might be considered a pretty good score even in this enlightened age; but as that was either my first or second trial at the trap, I am quite sure I might have made a straight twenty with a little practice and without the excitement of a crowd. I also, at St. Louis, killed 130 English snipe in one day when out with some members of the St. Louis Hunting Club, and for this my only excuse was that they took me to their famous snipe ground for the express purpose of showing me how to shoot.

That was my only day's shooting that I look back on "with shame and confusion of face," and I'll never forget the scoring I got from Falstaff Hackett when I told him exultingly of my famous feat.

Since then, if not before, many other snipe hogs have smashed that record and they ought to blush for doing it.

In those early days I thought my skill was something to be proud of—but was it? With the almost constant practice that I had and with a gun that exactly suited me I must have been stupid not to become a first-class shot.

I have not the slightest admiration for professionals who waste their time in constant efforts to break records, for I do not look upon such efforts as anything to boast of. I think the usual distance for trap-shooting is 30yds. at single birds, and in many cases good strong birds will get a start of 5 or 10yds. before being covered, and at a distance of 35 or 40yds. the shot is so scattered that even when the aim is perfect the bird may not be hit in a vital part.

A dozen shot through the breast of a pigeon will fail to stop him; so the result of a match between two men of equal skill may depend on the merest accident and sometimes on superior nerve; so that where there are hundreds of men all over the country who are about on a par, contesting matches seem like folly.

Shooting as an accomplishment and a source of pleasure is commendable, but sensible men should not indulge in "record-breaking." DIDYMUS.

Editor Forest and Stream:

In last week's issue Mr. B. Squires asks what true sportsman does not read with contempt the accounts of the performances of would-be "record" hunters. The answer can be but one thing. Not one. No, not one. If FOREST AND STREAM and others more generally understood the nefarious practice these hunters have of banding together and scouring a section of the country for a week and then one of their number takes a trunk load of birds to New York, there would be many a public retort. Of course the law has not been violated, for the birds were accompanied by the owner.

Living as we do in a border country we have the best opportunity to observe the working of the laws. There are a number of men near the State line who after Oct. 1 carry on their guerrilla warfare on the birds, shooting in New York and carrying over the line to ship. There was consternation in their camp when that law passed the Pennsylvania Legislature last winter. They boasting said they would kill every bird if they were obliged to throw it away to rot. Those in position to best know give but little credence to the report of these record makers. If they are such wonderful live-bird shots and it is money they are after why is it that they don't come and take a hand in some of the live-bird shooting going on around here? They can get as big money as they want and good big odds as well.

There is but one alternative, "Stop the sale of game." Surely B. Squires harped upon the right key of a responsive chord, and many a hearty amen has gone up in echo to his reply to Braggadocia. H. W. BROWN.

[A Mexican Game Country

LAS CRUCES, N. M., Sept. 24.—*Editor Forest and Stream:* In view of the rapidly growing scarcity of game in the United States and the inadequacy of game laws for its protection, attention is invited to a tract of 2,000,000 acres in the State of Chihuahua, Mexico, which is situated in the southeast part of the State and lies on the Rio Grande River. The eastern portion of this tract is broken by rough hills, furnishing almost inaccessible refuge for bears, deer and turkeys. Tributaries to the Rio Grande flowing from the hills abound in trout and other fishes. The plains are covered with antelope, wolves, foxes, and other smaller game—jack rabbits and quail of several varieties.

During a recent visit, President Bell, of the New Mexico & Chihuahua Land and Stock Co., headquarters El Paso, Tex., authorized me to invite friends who might look favorably upon such an enterprise, and to say that conveyances will meet a party at an eligible point on the Mexican Central Railway to transport it, free of cost, across the country.

Concessions can be obtained from the Mexican Government, and all arrangements will be made at the Custom House at Juarez for free entry on conveniences for excursionists. W. R. FALL.

THE WATER-KILLING OF DEER.

Editor Forest and Stream: I have been an eye-witness to a number of such scenes and am frank to confess that I have, on two occasions, myself shot deer that had been driven into the water by dogs: once when I was rowed by my guide to an easy shot, and again when I was alone on watch and pulled a boat nearly half a mile and killed a buck at fair range with a .38-cal. Winchester, while the boat was being tossed up and down by the waves, caused by a strong wind which swept the lake. The spirit of fair play within me revolted against such methods, and I ever afterward declined to take a watch upon pond or lake, and if I was not assigned a position to watch some known runway, to take my chance as well as to give the deer a chance, I kept aloof from the hunt.

To a person who has never killed a deer there is, of course, a measure of excitement in thus obtaining one, and many are induced by their guides to believe that it is the proper way to have a deer drive. This may be because it is far the easiest and involves but little work for either guide or sportsman. In a region like the Adirondacks, so full of lakes and ponds, in which deer pursued by dogs will invariably seek to elude them, it is very rarely the case that one escapes, and the sportsman of a reflective disposition is not at all jubilant over the result of such an unsportsmanlike procedure. If dogging must be permitted in this region, by all means let the FOREST AND STREAM add another plank to its broad platform, and let it be entitled: "No water-killing of deer in the Adirondacks, either before dogs or by jacklight at night." Both are certainly "crying evils," and rapidly decreasing the quantity of game in that region. Of the two, it is my opinion that the jacklight system is by far the lesser, and does not alarm and drive the deer from localities that they frequent near as much as is done by the hounding system, which I hope will eventually be altogether prohibited.

Were the tract simply mountainous and with only rivers and creeks, there might be some excuse for hounding, as the chance shot on a runway and the baying of the hounds in pursuit of the game affords satisfaction to many; but with its immense number of ponds and lakes the result is simply slaughter by wholesale—for but few escape—and the practice is followed up nearly every day that the party remains in camp, and, as much proof is attainable, very often the hindquarters only are used.

E. S. W.

A TEXAS DEER HUNT.

DEER hunting in most sections of Texas is comparatively a thing of the past, there being only a few deer left in any except the very sparsely populated portions of the State. There are almost none at all in this (Van Zandt) county, and consequently we local sportsmen are always obliged to go quite a distance by rail when we want a shot at a deer.

Three of us, a D. D., a wholesale grain merchant and a civil engineer, generally manage to get together every three or four years and take a trip, and what we lack in number of deer we make up in genuine pleasure.

In the fall of 1891 we three, with one other, made a 250-mile trip and return in wagons.

Our destination was the Devil's River, in Val Verde county, southwest Texas. We were out a month, killed nine deer, eight "peccary" or javelina, and hundreds of quail, besides catching plenty of bass out of the Devil's River, two miles below its source, where it boils out at the base of a perpendicular cliff 250ft. high. On this trip the writer killed his first deer, and experienced his first "buck ague." This latter, however, came after the deer was hit twice with .40-60-260 rifle bullets, very fortunately for the shooter.

It was not the '91 hunt that I started out to tell of, however, but one taken by the same three, together with two others, during September, 1895.

The D. D. of our trio is now living in Palestine, Texas, and he having written a very urgent request for my brother and myself to join him in another deer hunt, we ended the matter, as sportsmen always end such things when practicable, by taking the train for Palestine, with a friend, a lawyer, Smith, for shoot on Sept. 14, '95.

Monday morning by 9:30 we had gotten our wagons loaded, and by the early part of the afternoon had arrived at our camp at Big Lake, on the Trinity River, and two hours later we had two tents up, a camp table and cook's table in place, and were feeling quite at home.

For cook we had a colored individual yclept George, who acquired, before the hunt was over, a considerable reputation through the unprecedented size of his biscuits, which were so liberal in their proportions that no man was ever known to take two during one meal.

The undergrowth being very thick in the Trinity bottom, it is necessary to drive with hounds and place standers to hunt the deer successfully.

On the first day's drive the dogs jumped a deer, but it went off up the river, whereas the stands were all down the river; so that settled the deer hunting for that day. We all shot squirrels in the afternoon and spent the most of the night anathematizing mosquitoes, as we had left our mosquito bars at home on the statement of some unmitigated prevaricator, who assured us with an oath that not a single mosquito was to be found in the vicinity.

Wednesday our luck was better, the D. D. killing a nice deer on the first drive.

On the next drive we put Smith, the lawyer, on the best stand, as he had never shot at a deer in his life. The stands for this drive were on a road leading out across the river bottom at right angles to the river's course, and the drive was made above. The dogs did not jump a deer for some time, and when they finally jumped a nice buck he took his first run off in the opposite direction. Later, however, he came back down the river directly toward Smith's stand.

Smith, when placed on his stand, waited very patiently to hear the dogs commence to run; he heard them jump the deer and start up the river, and then turned his attention to two squirrels which were playing on a large oak directly over him, and the longer he looked at these squirrels the more he wanted to shoot them. So engrossed was he with them, indeed, that he professes never to have heard the dogs as they brought the deer back, and so, when the deer was coming directly toward Smith's stand, boom! boom!! went his old Lefever hammerless, and he had killed both the squirrels! and the deer turned back and got away.

We let him off that time, but he says he knows he'll never shoot another squirrel while he's on a deer stand.

We stayed in camp till Saturday and got another nice buck and one wildcat, besides plenty of squirrels. We would have killed several more deer if we had known the drives, but, being without anyone who knew the country, we were considerably hampered.

However, as we were out for sport and not for any great quantity of game, we were all well satisfied and parted with mutual promises to go again.

E. A. WINGO.

MAINE GAME GROUNDS.

BOSTON, Oct. 4.—Holeb, Me., is being mentioned as a good deal of a hunting and fishing resort. It was a place little known before the Canadian Pacific passed through that section of the country. Formerly it was reached only by the Canada road, a military road built by the Government, following about the trail of Benedict Arnold on his memorable trip to Canada in winter. Now to go from Boston to Holeb, or that part of the country near the boundary line, it is only necessary to embark by rail for Cookshire junction on the Canadian Pacific, and from thence to Holeb, where are numerous lakes and ponds, with large game considered to be remarkably plenty. Mr. Charles S. Cook is now absent on a hunting trip to that section. His son has already been there once or twice this season, with reports of excellent fishing. There are camps at Holeb and other points along the line of the Canadian Pacific, in that part of the country, both in Maine and in Canada, where the weary hunter is taken good care of. Guides are to be obtained, the rates depending largely on how much these gentlemen of the backwoods have already been spoiled by indescreet and inexperienced hunters and fishermen.

The open season on moose, caribou and deer began in Maine on Tuesday, October 1. As has already been mentioned, this class of game, at least so far as deer are concerned, was never in so great an abundance in that State. But it is a curious fact that Boston gunners have not rushed off to the hunting grounds in so great number as last year, so as to be there at the beginning of the season. In very many cases the hunters are going to wait till the first snows, well knowing the difficulties of deer hunting without snow on the ground, and especially during the falling of the leaves. Reports say that owing to the dry weather the trees will easily be stripped of their foliage. But then comes the other difficulty of the rustling of dried leaves on the ground. The ideal hunting of all is a freshly fallen snow of sufficient depth for tracking, but not deep enough to load the trees or impede progress. Such snows are always looked for in Maine in November.

Mayor Edwin U. Curtis, of Boston, is in the Maine woods on his vacation, and doubtless he is looking for game, since he is both a hunter and a fisherman. He is anxious to be beyond the reach of mail or telegraph, and hence he has not left word with everybody as to just what point he has gone. It is understood, however, that he intends to bring home a deer, and the lovers of economy and good city government hope that he will bring back another batch of veto messages that will be equal to those he put forth just before his departure. Mr. E. J. Shattuck is absent at his camp in Aroostook county, Me. His brother, of San Francisco, is with him. The camp is in the vicinity of Patten, and the hunting and fishing are about all that can be desired. Mr. C. P. Stevens, of Boston, is still at Camp Vive Vale, Narrows, Richardson Lake. He is stopping for the deer and partridge shooting.

Again Mrs. Westley Jones, of Boston, has brought down a deer in the Adirondacks, according to report. A special to the daily papers dated Brandon, N. Y., Sept. 30, says that there is rejoicing in Kickabuck Camp, where Mrs. Jones is spending a vacation with her husband and guests. A noble buck came along pursued by the hounds. The lady simply raised her Winchester and fired and the buck dropped dead in his tracks. Her son, Rodney Jones, 10 years old, was her only companion at the time. Now it is to be hoped that this story is true, but it will be remembered that it sounds very much like the one told of the same parties for a couple of years in succession. At any rate the Jones party is reported as having excellent luck, taking its full share of large game. Dr. C. F. Nichols and his daughter, of Boston, who were guests of the Jones party earlier in the season, have returned. Mr. Rolin Stuart, also of Boston, has gone to join the same party.

S. H. Kauffmann, editor of the Washington *Star*, with George P. Rowell, of New York, than whom few men are better known to the newspaper fraternity, have gone home from a camping and fishing outing at Mr. Rowell's camps on Crystal Lake, New Hampshire. It will be remembered that the celebrated ten-acre pond law was fought by Mr. Rowell at this lake, and that he was beaten in his attempt to control the fishing and shooting there. The case was carried to the Supreme Court, I believe, and this time also the cause of the residents, who desired to fish and shoot there, was sustained. But no trouble is now experienced. The campers own all the land bordering on the pond, and the residents do not seem to care to trouble them. To reach the pond trespass must be committed, but this would be punished very lightly by the local courts.

Mr. E. Frank Lewis started to-day for his fall shooting in Maine. He goes to Lee, which is in the neighborhood of Costigan. Mr. Bradford will accompany him. A little later Mr. Sawyer and Mr. Phineas Sprague are expected to follow. Still later a couple of Lawrence gentlemen are expected. Mr. Lewis proposes to remain in the woods three or four weeks. It is a new place to him, to which he is going, but he expects to find good camps and equipments. His guide of former seasons will be there. Mr. Lewis says that one deer is enough for him, and that it must be a buck at that. Now, if there were only more hunters like him!

SPECIAL.

West Virginia's Quail Dearth.

MILTON, W. Va., Oct. 4.—In your issue of Oct. 5 Texas Field says under the heading of "Texas and the Southwest" that game is going to be very plentiful this winter. It is going to be just the reverse here. I have asked a good many farmers if there were any quail on their farms and with one exception all said that they had not seen a quail this summer. I went through some of the best cover I ever saw this spring, and I did not see a quail or any indications of any. Rabbits are very scarce.

BURKE WILSON.

A TEN DAYS' HUNT IN NORTHERN MAINE

THE fall of '94, as most of the sporting fraternity are well aware, was remarkably free from snow, thus making it very difficult to track anything through our dense woods, as what little we had up to the middle of December would prove more of a hindrance than a help. I had, however, made all the necessary arrangements; so, having gotten through Thanksgiving Day without any serious mishap, I embarked on the morning of Nov. 30 at 6 o'clock for the country lying south of Ashland, known as the St. Croix and Black Water region.

I had procured a small horse sled as a means of conveyance and had thereon placed my "wongun box," in which I put eatables, cartridges, etc. I had also procured the services of one Dan Carter, a rather peculiar personage, as he was cross-eyed, almost white-headed and would lie "to beat the band." So I considered myself pretty well equipped.

We had thirty-five miles to travel before we could see the guide, and, as the most of us know, it requires a fairly good disposition to ride on a sled in this country with less than 2in. of snow, and there was many a bare spot in the road. However, after ten hours of hard work we succeeded in arriving at our destination, having walked at least twenty miles of the distance.

Here we found the guide, Frank Snow, of Masardis, who, hustling us into the house, took care of our horse, after seeing that we were o. k. for a good supper.

At 5 o'clock, as I was dreaming, I was suddenly awakened by Frank, who informed me that if I hoped to reach camp by noon it was high time we were up and moving. Hastily dressing I hurried down stairs, where, after bolting my breakfast about in the manner of an ostrich, I donned my sweater and ulster and we started for a camp on Black Water, about seven miles away, it being necessary to travel this distance on foot, but it can now be done with horses.

Frank had strapped our provisions, cartridges, etc., to a low sled with runners 3 or 4in. wide, and the way that thing would ride rock piles, stumps, logs and anything it came across was a caution.

The whole country here is ideal for sportsmen, and on almost any of the hills a beautiful view of Katahdin can be secured, lifting its lofty head high above the surrounding country.

After traveling through the woods and fields to the stream about four miles away, we struck up for about three miles to Goding camp, a small affair, built about forty rods from the stream, with a hole cut through the roof to let the smoke out, but I failed to see wherein it did the business, as before we had a fire fifteen minutes I was nearly choked, and my eyes felt as they used to when I was a small boy living in Bangor and building bonfires in the spring, to run back and forth through the smoke.

After dinner we took our rifles and started for an old camp of Dunn's, about a mile further in, keeping our eyes open for game. We had scarcely got out of sight of camp when Frank, reaching over a fallen tree which lay across our path, sprung an enormous bear trap, making me turn several degrees whiter when I heard the jaws come together, as I thought it had caught his arm.

We had seen track after track of deer since leaving the house, but the first moose track was discovered after crossing a cranberry bog which lies about one-half mile from camp, and though two or three days old yet it gave me that peculiar feeling of exhilaration known to all sportsmen. We had hardly entered the woods again when we heard the whistle of a deer and stopped just in time to see the flag of a big buck disappear over a fallen tree surely 7ft. above the ground.

This ground, including the streams, was literally alive with game of all kinds. While gone I saw not less than a dozen beaver houses, as many more otter and countless numbers of tracks of deer, loupcervier, sable, etc. Arriving at the camp we found that the office was in fairly good condition, so we decided to move up, as with a little labor the invincible Dan could soon make it into quite a comfortable abiding place. Upon our return to camp we found a brother and also a friend of Frank's there, who, seeing our tracks as they were returning from a trip farther in, had stopped to tell us that a moose had crossed South Branch about two miles further up. That night was, I believe, the most uncomfortable one I have ever spent, as five of us had to lie in a space 4 or 5ft. wide, and the only thing needed to make us equal to the proverbial "sardine in a box" was the oil, as each man had to lie on his side and was firmly fixed when once in position; this was the "straw that broke the camel's back," and when morning came we each took a load and started for the main camp.

As this was Sunday we made up our minds to go it easy, so leaving Dan to fix up the camp Frank and I started to do a little prospecting and if possible to locate something for the next day's hunt. Returning to the stream by means of an old "tole rode," thus striking it about a mile further up than where we had left it, we proceeded up for half a mile, then took to the woods on the left or opposite bank. Here we found another old camp of Woodford Brown's, and turning to the right circled for North Branch, starting two deer on the way, but owing to the scarcity of snow and the direction of the wind failed to catch a glimpse of them.

Upon reaching North branch, we walked down for a short distance, thence struck for a high ridge, which lies between North and South branches. The outlook from this ridge would have thrilled the heart of an artist. Directly beneath us lay the dense woods, and in the distance was the stream, looking like a silver thread, with its coating of ice and snow, winding in and out among the trees. Pushing on we soon arrived at its banks, then starting up kept our eyes wide open for signs of game; as we knew this was the best part of the country, and we were not disappointed, for we found two caribou tracks, which Frank claimed were about two hours old.

As it was then 3 o'clock, we decided to return to camp, then six miles away, and make ready for a long tramp next day.

Next morning we arose with the lark or rather blue jay, and after a good breakfast started, Frank taking a frying-pan and coffee-pot, and a little tea and hardtack, as we expected to have to stay out that night. Arriving at our destination, we at once started on the trail of our friends, through as bad a rabbit swamp as it has ever been my ill luck to meet, and as there had been a slight fall of snow during the night, it was then and still is a mystery to me how Frank managed to keep the track.

At 11 o'clock we stopped a few minutes to eat a lunch and then on we went. The trail lead directly to Scat Pan swamp, which was about six miles away, near a large lake by that name. Here the track circled, and we crossed our old track made at least two hours before. At 1 o'clock we found the spot where they had stopped that night, so now we had a clear, fresh track, and could travel much faster.

They were now headed for South Branch again, which we crossed about three miles further up than where we had at first settled. We now had to use much caution and not step on twigs, as the slightest noise might be the cause of starting them, and then it would be good-by.

At 3 o'clock, as we were moving through a piece of second growth maple, there suddenly appeared to our vision the darkest caribou I had ever seen. He walked from behind a thick clump of bushes and kept on browsing, as he had not noticed us. In about three seconds I planted a bullet from my .40 82 Winchester in his neck, just ahead of the shoulder, dropping him without a struggle, it having gone clear through.

The other was "out of sight," and we never caught a glimpse of him, although we found the spot where he had turned and made off.

After starting a rousing fire Frank went at the dressing of the animal, and succeeded so well that at dark he was entirely through with the work, and we rolled the hide into a compact bundle, after which we hung the meat high up in a tree, out of the way of all animals. Building a wind-break from boughs, we lay there until morning, when we blazed a way to an old tote road, about half a mile back, then returning took up our traps and started for camp, arriving there at 1 o'clock.

Dan had wonderful stories to relate of the "Indian devil" he had heard during the night, and other things equally as bad or worse, but as he is scarcely out of his teens he is to be pardoned if a little nervous, for staying alone in the Maine wilderness is rather poky business to one not accustomed to it.

Next morning Frank and Dan started toward St. Croix to locate a moose, three having been started two days before scarcely a mile from camp. They stopped that night fully fifteen miles away, but found no fresh signs, so returned next day.

We tried all kinds of dodges to secure a deer, but in vain, as the snow was rather crusty, thus making more noise than we would had we had bare ground.

Friday I again struck out, determined to secure another caribou if possible. Striking due south we walked along an old logging road for a few miles, where Frank started to still-hunt a deer. Leaving him to fight it out, I retraced my steps for a short distance, keeping a sharp lookout for anything that might lead to the coveted game.

Suddenly I discovered an enormous track, which I knew must have been made by a caribou or moose, so, proceeding carefully along I followed on a still-hunt, hardly moving when I left the road and took to the woods.

This was slow and tedious work, as it was necessary to choose carefully each spot where to place my feet, as the snapping of a twig would likely have started my quarry. Fortunately the wind was favorable, so I had nothing to fear from that direction.

I had a small pair of opera glasses with me, and would often stop to examine more closely objects which would catch my eye. I had traveled about three hours in this manner, and had stopped to examine a pile of old trees and brush which was ahead with the glass. Something, I hardly knew what, told me that the creature was behind that clump. I scarcely dared breathe, so intently did I keep my gaze fastened on it, trying to discern the slightest thing that would indicate the presence of game, and keeping the glass so firmly fixed that my eyes ached with the strain.

I had stood and watched in this manner surely five minutes, when I saw an ear shaking over a log which lay on top of the heap.

Nervously putting the glass in my pocket, I cocked my rifle and awaited further developments, but I had not long to wait, for carelessly stepping on a rotten twig, which snapped beneath my feet, and making a noise seemingly as loud as a pistol, caused the animal to start; he gave one look and was off, but hardly quick enough, as I managed to catch him on the jump with a bullet which struck him on the right hip, sadly crippling him, thus giving me time to pump in another, which was the quietus, as it struck him on the quarter, going clear through. Upon pacing the distance I found that I had traveled about twenty rods in three hours' time, pretty slow work, but what sportsman would not feel amply repaid for his labor, as I had added another caribou to the list, thus giving me the law limit.

Bleeding the animal I fired three shots to call Frank, then returned to the road to wait until he came along. It happened that he was quite near at the time I first fired, so hearing two shots he had hurried in my direction, getting along just as I emerged from the woods.

After dressing our game and hanging it up, as we did the other, we returned to camp, and after a good night's rest started for the house to get the team, and swamp a road in to enable us to get the meat out. By dint of hard labor we managed to get them out and ready to leave for Presque Isle by Sunday noon, at which place we arrived at 11:30 P. M.

To any of my brother sportsmen I will say that caribou usually shed their antlers early in November, so that in case you aspire for the head of a bull to use as a piece of art I advise hunting them in October, as both of mine were bulls, but had each dropped their horns.

Rifle Versus Shotgun.

PORTLAND, Ind., Sept. 27.—*Editor Forest and Stream:* Some time ago I called a shotgun a "scatter gun" and said some other uncomplimentary things that were calculated to draw comparisons between shotgun and rifle shooting. I had seen so much about bird-shooting at the trap and over dogs that I began to wonder whether a rifle shot had any claim to the title of sportsman.

Now I feel grateful to Brother Stark, of New Hampshire (I said I would write and call him Brother), for the information that he clips partridge heads with a rifle. And the question is, is it sportsmanlike? If there be he who says nay, let him take a rifle and follow a grouse as it tries to slip away through a thicket.

If the birds are wild, as I usually find them in Michigan and Wisconsin, and will start off through the thickest of the brush as soon as the hunter looks at them, he may have to bring his gun to shoulder a dozen times or more before getting a bead on the head of one. But when he has clipped a head or two he has done something he need not be ashamed of, according to my way of thinking.

What skill would be required to get such birds with a shotgun? Simply point the gun at them and pull the trigger. But not so fast! That would be unsportsmanlike. You must set your dog on, and when he takes wing and goes off as straight as a bee you are at liberty to shoot him in the back, as it were.

I have listened to the yelps of a couple of beagles until their duet was cut short by the report of a shotgun, and poor bunny lay low, sprinkled from end to end with shot. What chance had the hare? He knew no better than to run his circle, and how much marksmanship was required in the killing? If the sportsman had been equipped with a rifle poor bunny would yet have been handicapped, for the yelping curs gave him no opportunity to elude the hunter; but the killing would have required a degree of skill. When I go rabbit hunting I proceed very much as does the shotgun shooter, the difference being that I shoot a Winchester rifle and have no dog. It requires more tramping, and if I miss the rabbit gets away. But if I hit him I get him. With a shotgun I might wound, but not kill.

Sometimes I get a number of shots before the rabbit is out of range, but it is fine target practice, if you will allow the term.

A deer at 75 to 150yds. on the fly in the forest is also a fine target for a rifle. Standing still or running in the open on level ground, it's a pudding.

If it is unsportsmanlike to shoot at a moose on the run at 200yds., how about shooting at geese, ducks, etc., with a shotgun at 50 to 100yds.?

How about shooting at anything, distance waived, with a shotgun? Eheu! G. W. CUNNINGHAM.

In Michigan Covers.

WHITE LAKE, Montague, Mich., Oct 1.—An albino redwing blackbird was shot in the White River marsh by Charles Hall last week; it was pure white with the exception of red feathers on its wings. Owing to the absence of the local taxidermist this rare specimen was not mounted. It was on exhibition at the office of the Montague *Observer*, where it attracted much attention.

Ducks are unusually scarce this fall, few are seen, no good bags have been made yet. Partridges are quite numerous in the swamps and low timber. Squirrels are also plentiful in the hardwood timber, on the shore of Lake Michigan. I have not seen a wren or a bluebird in Michigan this year, although I have traveled a good deal through the State. E. S. D.

On Long Island.

DUCK shooting has begun on the Great South Bay; a number of snipe have been bagged, and quail are reported in great supply in the neighborhood of Manorville.

Don't Buy Your Outfit

IN the East if you are going on a hunting trip in the Northwest. We have everything you want in the sporting goods line, and our experience will perhaps keep you from buying a great many things you don't want.

We have all the modern Nitro Loads at Eastern prices. Don't encumber yourself with stuff until you get on your hunting ground. You can depend on us. Wm. R. Burkhard, 57 and 59 East Seventh street, St. Paul, Minn.—*Adv.*

Sea and River Fishing.

Shad in September.

A TRUE white shad (*Alosa sapidessima*) was caught in the Neuse River below New Berne, N. C., on Sept. 28, by W. F. Moore. This is most unusual. Shad are seldom seen in Southern waters between May and January. Occasionally a stray one is caught in December, but there is no record anywhere of one being caught in September before. Let the ichthyologists make a note of this.

A second shad was caught on Sept. 30 by T. H. Carmine in his nets at the mouth of Neuse River.

Oct. 3.—Sea trout (or weakfish) are now running very plentifully at Moorhead and Beaufort, and anglers are after them with hand lines. Fifty fish to a boat would be a low average. Half a dozen young swordfish 3ft. long were caught yesterday in the nets set at the mouth of Neuse River and were brought up to Newbern, where they were regarded with considerable interest.

CHARLES HALLOCK.

Massachusetts Smelt.

BOSTON, Oct. 4.—Smelts are plenty in the market and of very fine size and moderate price. No hook marks discernible and from the quantity exposed for sale no other decision can be come to than "seined." The law is explicit and anything but dubious regarding seining smelt, and the Fish Commissioners of Massachusetts pay no attention to enforcement even where attention is forced upon them regarding violation of same. These fish were caught on the Cape. They are seeking the small streams and rivers to spawn in immense numbers this fall, in fact, in greater numbers than for some years. What with seining and sludge from the factories in the streams they seek, a few years longer and they will go with other good things of the sea to the *Ewigkeit*. REIGNOLDS.

One More Leap of the Bass.

S. SIMPSON, M.D., who tickles Old Sam and Another Kingfisher, asks what is the explanation of the jumping and shaking.

When a bass once finds that he is hooked his first thought is to see what is at the other end, consequently he comes out to see whether he has a greenhorn or nimrod to fight before he decides upon any definite plan of action.

The shaking may be due to several reasons. There is the "no you don't" shake, and the shake of fear at what he sees in the boat, and the "I guess I will shake you" shake. He generally does the latter. JOE CONE.

CAMBRIDGE.

To Restore the Color of Trout.

IF your St. Louis correspondent wishes to restore the brilliant coloring of trout after they have been on ice for a number of days, he can do so by placing them in very strong brine with plenty of cracked ice in it. Let them remain in this bath five to ten minutes, and then wash them carefully in the brine until all the adhering slime is removed. After drying they will be fully as brilliant as when first caught. The change will be like that of a picture from which old and discolored varnish has been removed. T. G. W.

Do You Fish?

IF so, you may be glad to know that the streams along the line of the Lehigh Valley Railroad have been restocked with many varieties of fish, and it will pay you to visit them if you want good sport. Address Chas. S. Lee, General Passenger Agent, Philadelphia, for full information.—*Adv.*

Game and Fish Protection.

New York State Association.

PRESIDENT F. J. AMSDEN, of the New York State Association for the Protection of Fish and Game, has sent out these circular letters to the Association clubs:

I.

I hand you herewith a list of the game protectors of the State of New York. These men receive a salary, and the Fish, Game and Forestry Commission expect that they will do their full duty in their respective localities. It is my hope and expectation that we are to have better enforcement of the game laws than ever before, and to that end I ask and urge on each club and every individual member to render to these protectors every and all assistance possible, and when they are efficient kindly show them your appreciation. But should they fail to perform their duty report promptly to the president of this Association. Yours truly,

FRANK J. AMSDEN, Pres't.

II.

I would call your attention to the coming annual meeting of the Association next January, and sincerely hope that your club will be represented. Our Association has become a decided factor in the grand work of protection of fish and game. The present Fish, Game and Forestry Commission are fully alive to the importance of protection, and look upon our Association both collectively and as individual clubs as their most valuable allies. We are also recognized at Albany, and much attention is given to our views and wishes. If your club have any changes or amendments to the game law that you wish to present, kindly prepare them in due form together with arguments. Make five copies and forward same to the chairman of our law committee, Mr. C. W. Smith, Syracuse, N. Y., on or before Dec. 1. This affords the law committee opportunity to get their report ready for the annual meeting, at which meeting no other amendments or changes will be considered, in accordance with the by-laws. Yours truly, F. J. AMSDEN, Pres't.

III.

Section 249 of our game laws is a shame and disgrace to our State. It permits the sale of game during the whole year, and is in the interest of the cold storage companies of New York city. It was slipped into the bill in the closing hours of last winter's Legislature. True, it provides that game must be killed 300 miles from New York city, yet I believe this affords no protection to our game, and it certainly is very unfair to our sister States who are endeavoring to protect their game. It actually makes New York a "fence" for game gotten illegally. It must be repealed at the coming Legislature, and I request and urge every game association and rod and gun club to put forward every exertion to that end. Please call a special meeting of your club. Lay the matter before them. Appoint an influential committee to wait on all candidates of your locality both for Senate and Assembly. Explain the matter to them and get their pledges to support bill for repeal of Section 249, and follow it up after election by seeing the successful candidates and secure renewal of pledge. Kindly acknowledge receipt of this, and post me fully on the action you take and what you accomplish, and very greatly oblige yours truly,

FRANK J. AMSDEN, Pres't.

The Kennel.

FIXTURES.

BENCH SHOWS.

1896.

Feb. 19 to 22.—Westminster Kennel Club's twentieth annual dog show, Madison Square Garden. New York. James Mortimer, Supt.

March 10 to 13.—Chicago.—Mascoutah Kennel Club's bench show. John L. Lincoln, Sec'y.

FIELD TRIALS.

Oct. 22.—Columbus, Wis.—Northwestern Beagle Club's third annual trials. Louis Steffen, Sec'y, Milwaukee.

Oct. 29.—Assonet Neck, Mass.—New England Field Trial Club's fourth annual trials. Arthur R. Sharp, Sec'y, Taunton, Mass.

Oct. 30-31.—Monongahela Valley Association Trials, Greene county, Pa. W. H. Beazell, Sec'y, Homestead.

Nov. 5.—Chatham, Ont.—International F. T. Club. W. B. Wells, Sec'y.

Nov. 5.—Oxford, Mass.—New England Beagle Club trials. W. S Clark, Sec'y.

Nov. 7.—Newton, N. C.—U. S. Field Trial Club's Trials A. W. B. Stafford, Sec'y, Trenton, Tenn.

Nov. 11.—Hempstead, L. I.—National Beagle Club of America, fifth annual trials. Geo. W. Rogers, Sec'y, 250 West Twenty-second street, New York.

Nov. 18.—Eastern F. T. Club, at Newton, N. C. W. A. Coster, Sec'y, Saratoga Springs, N. Y.

Nov. 25.—Continental Field Trials Club's quail trials at Newton. P. T. Madison, Sec'y, Indianapolis, Ind.

Dec. 2 to 4.—High Point, N. C.—Irish Setter Club's trials. Geo. H. Thompson, Sec'y.

HUNTING.

Nov. 13.—Western Massachusetts Fox Club's meet.

Oct. 15.—Buckfield, Me.—Monmouth Fur Club's third annual meet. Wesley C. Prescott, Sec'y, Monmouth, Me.

Nov. 18.—Owingsville, Ky.—National Fox-Hunter's Association's second annual meet. H. L. Means, Sec'y, Louisville, Ky.

Oct. 28.—Barre, Mass.—Brunswick Fur Club's meet. Bradford S. Turpin, Sec'y.

1896.

Jan. 20.—Bakersfield, Cal.—Pacific Coast Field Trial Club. J. M. Kilgarif, Sec'y

Jan. 20.—West Point, Miss.—U. S. F. T. C. trials. W. B. Stafford, Sec'y.

Feb. 3.—West Point, Miss.—Southern F. T. C. seventh annual trials. T. M. Brumby, Sec'y.

COURSING.

Oct. 23.—Goodland, Kan.—Altcar Coursing Club's meeting. T. W. Bartels, Sec'y.

Oct. 28.—Goodland, Kan.—Kenmore Coursing Club's meeting. C. F. Weber, Sec'y.

THE OARSMAN'S DOG.

Crouch'd by the door of the hut he lies,
And naps the hours away,
While on the river the oarsman plies
His skiff the live-long day.

'Twas in the gray of the early morn
The boatman took his oar,
When sadly follow'd the dog forlorn,
And watch'd him from the shore;

As deftly gliding the waters clear,
By skill of oar and might,
Master and craft made the islands near,
And pass'd beyond the sight.

Back then he turn'd to his dreary bed,
His path to wend alone,
Heavy of heart, with lingering tread,
And moan'd the lov'd one gone.

Quick are his ears to detect each sound,
Lest any dare intrude;
While, sentinel like, he guards the ground
About the homestead rude.

'Til set of sun thus his vigils keep,
Then tripping o'er the lawn,
Hastes to the river's embankment steep,
And waits another dawn!

'Tis when the boat his keen eyes shall view,
Which bears his master dear,
That plunging in he may breast the blue,
To greet him with glad cheer.

Spying the skiff as it homeward brings
The oarsman o'er the lee,
Into the waters at once he springs,
With welcome, joyous glee.

Reaching the vessel, he clambers in,
And dripping ev'ry pore—
Shakes—and then leaps to his master's chin
And licks him o'er and o'er.

Lolling—aye, laughing—he wags his tail,
And seats him at the prow,
As landward fast thus they proudly sail,
What dog so happy now!

In deep'ning shades of the early night
They make their home retreat;
No darkness there—because all is bright
Beside his master's feet.

Sept. 23. R. H. Lyon.

DAMON AND PYTHIAS.

Jackson, Mich.—*Editor Forest and Stream:* I resurrected an old letter the other day which, I think, is good enough to be deserving of a place in the Forest and Stream. It purports to be the letter of one dog to another very dear canine friend, the two having become separated owing to one removing with his young master to the Western country.

The two had lived together at the same house and an unusual friendship had developed between them. The purported writer, Bruno, was the senior of the two, and a most remarkable dog he was, having on countless occasions given exhibitions of intelligence which were nothing less than human. He was a big fellow with a strain of Newfoundland in him, and was devotedly attached to the young children at his home, with whom he was always ready for game. He was also very fond of accompanying the colored man, William, to the country, where he went frequently for the purpose of getting wood, hay, etc., from the farm which Bruno's master owned. On these occasions he generally devoted himself to woodchuck hunting, and great was the sagacity which he displayed in the pursuit of his quarry. It may also be added that he was a great fighter. He was rather slow to pick a quarrel, but when once he became embarked in one he was a veritable terror, his size, strength and indomitable courage making him more than a match for almost any dog that he ever encountered.

Van, the other dog, was a well-bred setter, being a son of Burgess's Rob Roy, and early in his career he came to entertain a profound admiration for Bruno. He was also very fond of William and the two horses, Dolly and Lady, and he soon came to be a regular member of the country party. Bruno was quick to discover that he could utilize his services in hunting woodchucks, and William used to aver that Bruno would frequently station Van at one end of a hole, after which he would begin operations at the other end, thus penning the woodchuck in between the two and making his escape impossible.

Van, when about a year old, nearly died of distemper, and was only saved by the persistent attentions of his mistress, which Bruno makes reference to in his letter. The postscript refers to dogs who lived in the immediate neighborhood of Van's old home.

The letter was written by Mrs. J. C. Wood, Bruno's mistress, and it seems too good to be lost to the world. It is as follows:

My Dear Van:

I have just returned from a ramble with William in the country. I am weary, sad and dispirited. The woods and the woodchuck holes only made me think more of you and our many happy hours together, hours which were sometimes prolonged into a day and night ere we thought of returning home.

Do you think of all this in your new home? Do you ever sigh for the old barn with Dolly and Lady as your companions? or are you so happy in your new surroundings that your kind mistress who brought you through your childish diseases and attended so strictly to your diet and your old Bruno are alike forgotten?

I sometimes fear that your master, finding you rather undisciplined, may resort to severe measures in order to make you "charge" and "heed." If such should be the case I trust you will be patient, and remember it is for your own good that he does it, and that it is necessary in order to bring about the training that a dog of your breed should have.

A bird dog is very different from one like myself; still I feel that if I had been trained a little more in my youth I should have avoided many dangers which have been near bringing me to an untimely end, which only the kindness of my friends have prevented. You know what a temper I possess and what a passion I have for fighting. Now these are traits which no well-bred bird dog should possess, and I trust you will try to avoid them. Although your disposition is quite different from mine still none of us are quite perfect, and you know you did have a mischievous habit of occasionally nipping men by the pants and other parts of their persons.

I take the liberty of thus talking plainly to you, my dear Van, feeling that my years give me the right to advise and direct the young. I feel, however, that my days are nearly numbered, and that a few more fights and I shall be no mere. I am thankful that my lines are cast in so pleasant a home, and that my dying bed will be smoothed by the hand of affection such as few dogs possess.

I have just asked William if he had any word to send to you, and he says—and I will put it in his own peculiar phraseology—"Tell him I'm jest a-hitchin' up to go to the farm, and if he was here I know he would be a-hollerin' to go, too."

William, if he does have a black skin, was ever a kind friend to us.

Now, my dear Van, although I have volunteered so much advice, I cannot close without admonishing you on another subject. There is much expected of you; do not disappoint your master, but let it ever be your aim to become a most accomplished hunter. Try also, as much as in your power, to protect the house and the lady where you are staying from tramps and burglars.

My rheumatic paw admonishes me that I have written enough, and I must close with much love to all. Your affectionate Bruno.

P. S.—Guess Levy and Flossy Mabley send love. Turk Groom and I are still sworn enemies. Ned Higby always goes on the other side of the street. Jip Chapin is failing slowly. Bruno.

Since this was written both dogs have passed to their final rewards. Bruno's dying hours were indeed smoothed with the hand of affection, and he could scarcely have been more sincerely mourned had he been one of the human members of the family.

Van fell a victim to the malevolent poison fiend in his new home in Kansas City, but not before he had demonstrated to his master's satisfaction that he had hearkened to Bruno's advice, for he developed into a superb field dog.

Peace to the ashes of these two canine friends. W.

ROVER.

Brave old fellow who saved the house on at least one occasion, and once he saved a young lady from a ruffian tramp who had just been given a nice plateful of dinner. The friend and mistress of the house was just going out one warm August afternoon as this burly fellow, calling himself a poor hungry man, stopped to ask for food. So she called for her young friend to see that he be well served. "Bring the things here to the hall rack, please, I must be off now. Good by!" But no sooner had the lady departed than the fellow took up his well-filled plate of food and walked into the dining room, saying in gruff tones: "That's no way to treat a man. Front halls are not dining rooms." Then looking about he said commandingly: "Now just get me some pepper for this meat. Hain't you got some kind of pepper sauce?"

In fear and trembling this was brought to him. Next he wanted some ice water. In great terror the young lady started to do his bidding, wondering what in the name of high heaven he would next demand. Just then he espied a glass decanter, toward which he was no doubt beginning to direct his thirsty attention.

Brave as she tried to appear, she now expected that he would soon start up stairs to rob the house. Great beads of perspiration dropped from her forehead. She knew it was useless to cry out. She was then too far from the front door. What was to be done? Her heart beat so fast that she might betray her fears. In agony of soul she invoked some aid; some one to call to her from the neighbors' back windows; the door bell to ring; oh! anything. Just then by some good chance noble black Rover with his heaving white breast came up from the entrance to the side door leading into the room, though not allowed to enter with perfect freedom; yet he came bravely and fearlessly, as though deeming it his sacred duty, yes, as though by very instinct feeling danger was lurking within the home where he, poor little puppy dog Rover, had once been so tenderly cared for when having fallen down a hatchway he was painfully mangled. Rover loved life as all well ordered beings should and was soon thereafter thankful for life, liberty and human love, for this wise Newfoundland animal was very fond of his human friends. Well, dear, big, happy Rover—how inexpressibly timely was your coming; your most assuring caress; your growl and unwelcome sniff, as, looking hastily at the stranger, who had changed so suddenly all of his rude demands, and looking fairly amazed as saying in subdued tones: "A savage-looking brute of a dog—where did he come from?" "Yes," said the young lady, regaining her courage, "and you had better be gone quickly, or Rover will teach you a heroic lesson. Go quickly!" which he lost no time in doing.

Oh, the terror of that half hour or less of time! Strange to relate, the dog had not even been thought of during the severe crisis, and not before his shaggy form appeared in that dire time of need.

This same dog would weep if he was denied the privilege of eating apples with the family, as they did winter evenings. He could also count when told to bring two, three, four or five little apples; could assist also in housework by getting the dust pan, the brush, the little broom, the duster and other needed articles.

One day Rover became greatly perplexed, as, trying to bring the large broom up a winding back stairway, after much effort, some whining and delay, he proved that some dogs can reason as mortals do; for strange as it may seem he took the broom through the lower rooms into the front hallway and then up the wide straight front stairway—he was determined to succeed.

He could not bear to be scolded, but really was the happiest dog when told that he was a noble fellow and not at all lazy or bad. Sometimes a member of this family of four persons would say, "Come here, Rover. Now listen and do as told. Help us with the housework and when done you may have a nice walk to the bakery or meat shop," to which he gave a happy bark of delight. Why, we often said he laughed with joy just as truly as he wept with disappointment when given no candy or apples.

But to conclude these facts of dog understanding. As the tramp gave him a parting look of hate, repeating "that is an ugly brute," which the noble fellow seemed quite to understand, for he growled him fairly out of the yard; then he had the sense of feeling that his work was well done, as lying down near the young lady's feet he seemed much pleased whenever any of the family spoke of his acts.

He loved to see long dresses on ladies, looked admiringly at such, though he would after step on the moving trains out of sheer delight.

On Sundays his master would take him to his store, which was a long walk, though in the city of Cincinnati.

His mistress yet lives, we think, in Chicago, and we hope she may chance to read of her Rover so bold and brave, the dog friend who guarded her home faithfully and well, yet finally met with the sad fate of many of his knowing kind, that of cruel poisoning.

Now, we love to hope that Rover may still live and understand in some better world where poisons do no longer exist—of course in some further progressed and more ethereal state. Why not? Who can deny this quality of soul? Is not all evolution more likely to exist than retrogression or annihilation? At least wheresoever there is once the germ of any noble impulse and higher desire, how can we deny some degree of conscious immortality? To such may we not ourselves perform much toward making immortal by our teaching these lower beings? as we are wont to speak of them. Wisdom and love can surely create unlimited possibilities. Perhaps man has arrogated too much unto himself. I have noted many times pathetic things done by horses and even by birds, the latter while South one winter.

I will now inclose a quotation concerning a noble horse that wept. I know that many animals do think and reason. I will also request Dr. J. W. Dennis to speak of an interesting thing done by a dog once owned by him. Following is the excerpt mentioned:

"Do horses weep? is a question discussed by our contemporary the *Admiralty and Horse Guards Gazette.* It tells us that there is a well-authenticated case of a horse weeping during the Crimean war. On the advance to the heights of Alma, a battery of artillery became exposed to the fire of a concealed Russian battery, and in the course of a few minutes it was nearly destroyed, men and horses killed and wounded, guns dismounted, and limbers broken; a solitary horse, which had apparently escaped unhurt, was observed standing with fixed gaze upon an object close beside him; this turned out to be his late master, quite dead. The poor animal, when a trooper was dispatched to recover him, was found with copious tears flowing from his eyes, and it was only by main force that he could be dragged away from the spot, and his unearthly cries to get back to his master were heartrending. Apropos of the intense love that cavalry horses have for music, a correspondent of the *Gazette* writes that when the Sixth Dragoons recently changed their quarters a mare belonging to one of the troopers was taken so ill as to be unable to proceed on the journey the following morning. Two days later another detachment of the same regiment, accompanied by the band, arrived. The sick mare was in a loose box, but hearing the martial strains kicked a hole through the side of the box, and making her way through the shop of a tradesman took her place in the troop before she was secured and brought back to the stable. But the excitement had proved too great and the subsequent exhaustion proved fatal." Alto Ventura.

[We have received the Dr. Dennis story referred to above and it will be published in the near future.]

Manitoba Field Trials Club.

Manitou, Man., Sept. 30.—*Editor Forest and Stream:* In accordance with the rules the annual meeting of this club was held at Morris, Monday evening, Sept. 9.

In the absence of the President, F. G. Simpson, who was unable to be present at the trials owing to pressing business engagements, the Vice-President, J. M. Avent, was called to the chair.

The minutes of previous meetings were read and adopted, after which the meeting adjourned till Tueday at noon.

The adjourned meeting was called to order at 12 sharp, Tuesday, when the following resolution was passed: Moved by C. C. Chipman, seconded by W. F. Ellis, that the annual meeting for the election of officers, etc., be now adjourned to meet again this fall at Winnipeg at the call of the president. Carried unanimously.

The meeting then adjourned.

John Wootton, Sec'y.

Bloodhound Pedigrees.

Boston, Mass.—In a recent issue of *Rod, Gun and Kennel* Wm. Carey, of Winchester, Ill., advertised some bloodhound puppies for sale, stating that they were sired by Alchymist. I wrote to him, and in reply he said he had two litters by Alchymist for sale, one litter out of Katie Chester and the other out of a St. Hubert dam. I showed the letter to Dr. Lougest, the owner of Alchymist, and he has asked me to write and deny most emphatically the authenticity of the pedigree. Alchymist never warded Katie Chester, nor the St. Hubert dam.

James Stewart, M.D.

193 West Springfield Street.

Continental Field Trials Club.

Indianapolis, Ind., Oct. 3.—*Editor Forest and Stream* The following named dogs have been dropped from the Continental Field Trials Club's Quail Derby for non-payment of second forfeit: Charlotteville F. T. Kennels' Dowlah and Amen, C. G. Stoddard's Coinage, J. B. Turner's Abdallah Romp, Damon & Holmes's Blazeaway, Avent & Thayer Kennels' Fleet's Pet and ———, H. R. Edwards's Harwick, T. G. Davey's Brighton Maud, F. R. Hitchcook's Tory Celia. P. T. Madison, Sec'y-Treas.

New England Kennel Club.

Following is the list of officers elected for the ensuing year: President, Edward Brooks; Vice-President, Samuel Hammond, Jr.; Secretary-Treasurer, David E. Loveland; Board of Governors, the above with Andrew B. Cobb, Francis M. Curtis, Oscar W. Donner, George H. Fletcher, Jean M. Grosvenor, Jr., James L. Little; Bench Show Committee, Edward Brooks, Samuel Hammond, Jr., Francis M. Curtis. D. E. Loveland, Sec'y.

N. E. B. C. Entries.

Editor Forest and Stream:

The entries to the N. E. B. C. field trials closed Oct. 1 with thirty nominations as follows:

CLASS A—DOGS AND BITCHES, ALL AGE, FROM 15IN. TO 18IN. HIGH.

SPRINGER—H. S. Joslin's b., w. and t. dog (Sport—Belle).

SNYDER III.—H. S. Joslin's b., w. and t. dog (Snyder II.—Naney).

NELL R.—Geo. F. Reed's b., w. and t. tic. bitch (Ned—Haida).

SPARK R.—Geo. F. Reed's b., w. and t. dog (Kennealy's Lea—Skip).

PRINCE—D. Quinn's b., w. and t. dog (Sam—Baby Deane).

LEWIS—Howard Almy's t. and w. dog (Bannerman—Parthenia).

ZENO—Awashonk Kennels' b., w. and t. dog (Deacon Tidd—Daisy).

DRUMMER BOY—W. E. Deane's b., w. and t. tic. dog (Rove—Wenonah).

FRANCES—W. E. Deane's b., w. and t. bitch (Flute D—Lady Glenwood).

BELLE—Walter Randall's b., w. and t. bitch (Fitzhugh Lee—Baby Deane).

SUNBEAM—W. S. Clarke's w. and l. bitch (Buckshot—Nell R.).

——— —F. W. Chapman's (name and breeding not yet received).

CLASS B—DOGS AND BITCHES, ALL AGE, 13IN. AND UNDER.

LOLA LEE—Walter Randall's w., b. and t. bitch (Fitzhugh Lee—Parthenia).

KITTIE—W. L. Redfern's w., b. and t. bitch (Rowdy—Music).

NANCY LEE—Howard Almy's w., b. and t. bitch (Fitzhugh Lee—Jude).

BABY DEANE—John Mullane's w., b. and t. bitch (Fitzhugh Lee—Bell Dimon).

BLOSSOM—A. D. Fisk's w., b. and t. bitch (Fitzhugh Lee—Lady Novice).

BECKY BATES—C. J. Prouty's w., b. and t. bitch (Fitzhugh Lee—Parthenia).

CLASS C—DERBY FOR DOGS AND BITCHES 15 TO 18IN. HIGH, WHELPED ON OR AFTER JAN. 1, 1894.

HEADLIGHT—H. S. Joslin's b., w. and t. bitch (Frank Forest—Triumph).

PHANTOM—A. D. Fisk's b., w. and t. dog (Clyde—Brummy).

TRILL—B. S. Turpin's t. and w. bitch (Royal Krueger—Queenie).

DOMINO—Cornforth & Deane's b., w. and t. tic. dog (Melrose—Wenonah).

SPINAWAY R.—Geo. F. Reed's b., w. and t. bitch (Laick's Rattler—Spot R.).

BARONET—Awashonk Kennels' b., w. and t. dog (Daunter—Racklass).

SUNBEAM—W. S. Clark's w. and t. bitch (Buckshot—Nell R.).

——— —F. W. Chapman, three entries (names and breeding not yet received).

CLASS D—DERBY FOR DOGS AND BITCHES 18IN. OR UNDER, WHELPED ON OR AFTER JAN. 1, 1894.

SNAP—Howard Almy's b., w. and t. bitch (Sport M.—Dill).

SKIP II.—Geo. F. Reed's b., w. and t. bitch (Buckshot—Jute).

W. S. CLARK, Sec'y-Treas.

New England Field Trial Club Entries.

TAUNTON, Mass., Oct. 4.—*Editor Forest and Stream:* Entries for N. E. F. T. Club's open sweepstake, to be run at Assonet Neck, Mass., Oct. 29, are as follows:

POINTERS.

BOUNCE—Geo. W. Amory's liv. and w. dog (Bob—Sal).

COUNT DE CASTELAINE—Hampton Kennels' liv. and w. dog (Nick of Naso—Tyrrell's Passion).

SETTERS.

DAN—P. H. Powel's b. dog (Sport— ———).

SPORT—P. H. Powel's b. dog (Sport— ———).

JOCKEY—Hobart Ames's b., w. and t. dog (Claud—Mollie Dale).

MONTELL—H. L. Keyes's b., w. and t. dog (Mark's Mack—Katie B.).

TENN. VANDAL—W. C. Baylies's b., w. and t. dog (The Corsair—Effie Hill).

OUR PET—Oakland Farm's b., w. and t. bitch (The Corsair—Tchula).

GLADYS—D. A. Goodwin, Jr.'s, b. and w. bitch (Bladley—Matchless IV.).

TENN. ROD II.—D. A. Goodwin, Jr.'s, b., w. and t. dog (Roderigo—Pet Gladstone).

DAN HILL—D. A. Goodwin, Jr.'s, b., w. and t. dog (Ben Hill—Mattie Berwyn).

ARTHUR R. SHARP, Sec'y.

Newburgh Show.

HORNELLSVILLE, N. Y., Oct. 5.—*Editor Forest and Stream:* In your report of the Newburgh show you say, in bull-terriers, that Castle Point Kennels were first and third, with Tarquin and Lord Blandford. This is a mistake, or else the books were juggled. Champion Duke of Rochester was given first without competing, and my Harper Whiskey was given second. There was no first prize card given except to Duke of Rochester in dogs, open class. We do not own Daisy Bell. She is owned by the Rochester and Pittsburg Bull-Terrier Kennels. She was easily the best bitch in the show, and how a great big coarse-headed bitch like Edgewood Tipsey could beat her and Duke of Rochester for specials is beyond my comprehension. After this when I take a string of dogs especially to get John Brett's opinion, he will judge them or else I shall withdraw them.

J. OTIS FELLOWS.

Mr. O. S. Chaffee, Mansfield Center, Conn., offers foxhounds. Harlem Kennels, New York, offer St. Bernards. F. L. Brooks, Farmer's Fork, Va., offers beagles. E. H. Moore, Melrose, Mass., offers St. Bernards. Edward G. Faile, White Plains, N. Y., offers beagles. W. Tallman, Plainfield, N. J., will train dogs. C. T. Brownell New Bedford, Mass., offers setters.

Field Trials on Canadian Prairies, 1895.

WINNIPEG.—*Editor Forest and Stream:* I shall esteem it a favor if you will kindly insert in your well-conducted journal of sporting events a few remarks from me touching upon the recent field trial meetings held at Morris, Man.

I have for some years had a strong desire to see the work of high ranging and well-trained dogs on the great prairies of Manitoba, and the result of recent experience is a mixture of pleasure and disappointment, for, while yielding to none in appreciation of fast, free and wide ranging in pointer and setter work, I must insist on that range being in subjection to the will of the sportsman

MR. W. S. BELL AND WIFE.

A scene at the Manitoba Trials—Mr. Bell watching a dog pointing a mile away.

who follows his dogs for recreation, pleasure and enjoyment, and in their corrected range, pointing and backing all in sight, he has a continuance of pleasing experiences.

On the Scotch grouse moors, which are as open as these prairies, though not so extensive, a free range is indispensable, but it must be controlled and the dog must work by direction of his breaker or handler, and the ground beaten systematically, or the shooting cannot be successful or enjoyable; and these acknowledged rules of sporting are equally applicable on these prairies, and why they should be ignored in these field trial competitions I am at a loss to understand.

The disappointment I have felt in witnessing and taking part in the recent field trials is that wild self-hunting dogs have been held in so much favor; going off in straight lines far out of sight, under no control, and working in a haphazard way, they get a point at a long distance, when a general stampede ensues and the dog on point is accorded great merit.

I will mention as one instance of this the heats between Jingo and Little Ned in the Continental All-Age Stake, the former being lost for a considerable time, the latter meanwhile rushing through a brood of chickens a long distance ahead without the slightest acknowledgment. When both dogs after further very wide casts were seen far away on point near railway track, a most amusing race took place to get up for a closer sight.

During the holding of these meetings at Morris I had opportunities of ascertaining that the wide and untrained worth of the American field trial dog is not held in general esteem, and opinions were freely expressed that dogs broken more in accordance with shooting requirements should find favor, and these opinions I very heartily indorse, and should hail with much pleasure such a change in the conditions of judging as would bring about a closer resemblance between the high class dog to shoot over and the successful field trial dog.

In our English field trials unbroken dogs are not tolerated, and in the code of rules issued and adopted by the Continental and Northwestern clubs obedience is insisted on, but these well thought out rules had a strange interpretation in the events at Morris.

As far as I can see, it is only some few of the more extreme field trial men who still advocate this go out and stay out feature in field trial work, and I am sure that the high-class work of such dogs as Jingo, Sam T. and Minnie T., if more seen would be more appreciated.

WM. BRAILSFORD.

POINTS AND FLUSHES.

In arrangement for a champion stake, the promoters find some problems which are important to the success of the event and yet are difficult to solve. There is some doubt as to the success of a champion stake with the rigid restrictions which governed such events in the past, and on the other hand the bars cannot be let down entirely, for then the stake would in fact lose all claim to a champion event except the name. In the past in the United States the competition was limited to first prize winners. If the conditions were broadened and all winners admitted, there would be a liberal field from which to expect support. To satisfy any demand of those who own winners which have never competed, an auxiliary stake could be run, and thus the quality of the dogs determined. The judges could select such dogs from the auxiliary stake as showed merit enough to compete in the champion stake It would really be a free-for-all auxiliary to the main event. All the proceeds of the stake could be added to the main event. The matter is worthy of the consideration and discussion of owners and handlers.

Entries for the National Beagle Club of America's trials close Oct. 19. Address Mr. H. F. Schellhass, No. 171 Broadway, New York.

In our business columns is the announcement of the sale of twenty-five of Mr. Pierre Lorillard, Jr.'s, setters, surplus stock of his kennel. The quality and performances of Mr. Lorillard's kennel are a part of its world-wide fame. Mr. Lorillard writes us: "I am going to make the experiment of selling at auction each year all my dogs with the exception of actual field trial entries and breeding stock. All dogs that are deficient in any respect we always dispose of without pedigree, therefore you will see that these represent a very high class of shooting dog."

Mr. Brailsford's letter on field trial procedure in this country, published in FOREST AND STREAM this week, is worthy of the earnest attention and consideration of those who compete in the field trials and also those who like sport afield with gun and dog. Mr. Brailsford's experience in these matters dates back to the beginning of field trials in England; indeed, he was the founder and original advocate of them. His experience and knowledge represent the best theory and practice of the sport in England, and his words are therefore those of authority.

Sandy, yellow in color and with misfit legs, holding the job of mascot, won the race for the Defender in the late international match, in which the Valkyrie had its yellow streak in the wrong place—not on the dog. Judging from the description of Sandy, his graces are not entirely perfection. He is described as being a cross between a fox-terrier and a dachshund, with a flavoring of beagle. He is about 13in. high, straight legs in front, hind legs exceedingly bowed, which was inadvertently putting the bowed legs on the wrong end or the bow in the wrong legs, if a dachshund were properly accredited with the authorship—nose sharp, ears long and active, long, upward-curling tail, hair short, and his color a glossy yellow. Sandy raced to and fro, barking and making medicine, which no doubt did much toward winning the races. And now comes forward one Paul Baptiste, colored cook, who avers that Sandy was stolen from him contrary to his own peace and dignity, and the correspondence grows rapidly apace with that of Dunraven. But the great gain is that the "yaller" dog is rescued from the universal opprobrium which has for ages been bestowed on him. Did the author wish to make the villain deeper dyed and more despicable, he made him the owner of a yellow dog. The yellow dog served for all that was ultra currish, or contemptible, or vulgarly common, but now that the yellow dog has forgiven all and saved the Cup, he is worthy of care—yes, reverence. Let the yellow dog have his day.

"THIS IS YOUR COURSE."

(Mr. W. B. Wells, judge, giving directions at Continental Trials).

Mr. W. S. Bell, in a letter of recent date, incidentally refers to the contemplated champion stake and makes the following good point: "That if a dog by his former winnings be permitted to run in the second series without running in the first (as some one has suggested), such would be unjust to those running in the first series; as, if the first heat be three hours or even two hours, that will be the telling heat. To have some dogs run this long heat, then others come up against these dogs in a second

heat fresh, would be a hardship on the first heat dogs. I am in favor of a stake for the winners to compete in and sustain themselves each year. I will have no champions to enter, but will only look on for fair play."

We are informed that Maj. J. M. Taylor, 19 Park Place, New York, will supply catalogues of Mr. Lorillard's setter sale, and will execute commissions for those who desire to purchase. He will attend the sale in person.

IN THE PARK.—Laura—"George, look at that dog! Will he bite?" George—"Bite? If he's a dog of any judgment, Laura, he'll try to eat you! Get out, you brute!"—*Chicago Tribune.*

Mr. Edward Brooks informs us that he has sold his entire kennel of Dandies and Scotch terriers to Mr. G. S. Thomas.

Says the Dog to Himself.

I am happy in knowing that such laws as apply to dogs do not enumerate the misdemeanors of man.

It is a mistake to suppose that I love the people best who treat me worst.

I have noticed that some masters give their dogs a beating under the mistaken belief that they are teaching them a lesson.

I am not always in good health or spirits, hence I can not be active and cheerful always.

The malevolent disposition which prompts a man to kick his dog is the same which prompts a man to kick his neighbor when displeased with him, but the neighbor can kick back and the dog can not.

To call a man a puppy is to take a mean advantage of the puppy.

Do not chain me up and imagine that for me imprisonment is happiness.

A tight collar is quite as distressing to me as it is to my master.

I like plenty of good water to drink when I am thirsty, and suffer when I do not have it.

If I sleep in foul kennels my health suffers.

When in a strange place, if I have to hunt up my own bed, I think my master should first see if there is one at all for me to hunt.

Every dog does not have his day; some have several days.

It is commonly supposed that I bay the moon at night, though I bay impartially, whether there is a moon or not.

Danbury Show.

ENTRIES at Danbury bench show as follows: Total number, 220. Mastiffs 9, St. Bernards 17, great Danes 6, pointers 11, English setters 11, Irish setters 11, Gordon setters 15, spaniels 25, fox-terriers 19, foxhounds 5, bulldogs 6, poodles 6, beagles 9, bloodhounds 4, Russian wolfhounds 4, greyhounds 3, Chesapeake Bay dogs 2, collies 2, bull-terriers 7, Boston terriers 8, dachshunds 5, Irish terriers 7, Bedlington terriers 5, Skye terriers 2, Dandie Dinmonts 1, black and tan terriers 6, Yorkshire terriers 1, toys 1, pugs 6, Italian greyhounds 3, miscellaneous 3. James Mortimer judges all classes.

KENNEL NOTES.

Kennel Notes are inserted without charge; and blanks (furnished free) will be sent to any address. Prepared Blanks sent free on application.

BRED.

Mr. C. W. Travers's Nellie Bland, rough-coated St. Bernard bitch, Aug. 18, to California Bernardo.
Mr. John R. Kelly's
Bonnie Lee, rough-coated St. Bernard bitch, Aug. 6, to California Bernardo.
Princess Royal, rough-coated St. Bernard bitch, Aug. 18, to California Bernardo.
Dr. Belt's Wawaset Lucy, fox-terrier bitch, April 5, to Hillside Royal.
Mr. J. E. Dalton's Winning Hand, fox-terrier bitch, Aug. 21, to Hillside Royal.
Mr. E. B. MacNair's Nancy, fox-terrier bitch, June 8, to Hillside Royal.

WHELPS.

Mr. E. B. MacNair's Nancy, fox-terrier bitch, whelped, Aug. 6, four dogs, by Hillside Royal.
Dr. James Ferris Belt's Wawaset Lucy, fox-terrier bitch, whelped, June 1, five (two dogs), by Hillside Royal.

SALES.

Dr. James Ferris Belt has sold
Wawaset Lady, fox-terrier bitch, to Mr. Jas. Mason.
Wawaset Royal, fox-terrier bitch, to Miss Cecilia Evstaphieve.
Wawaset Molly, fox-terrier bitch, to Mr. Robert Wallis.
Wawaset Dinah, fox-terrier bitch, to Miss Mary Green.
Ferris Glen, fox-terrier dog, to Mr. J. E. Dalton.

Coursing.

Aberdeen Coursing Club's Meet.

THE meeting began on Oct. 1, at Aberdeen, S. D. The Palace stakes, sixteen entries, were run first. W. Stephenson judged. W. Angell, Oakes, slipper. The weather was pleasant, too warm for good work. There were unnecessary delays between courses. The first day's running was as follows:

Pearl, St. Louis, beat Ardgay, Indianapolis; Chartist, Minneapolis, beat Van Troump, Indianapolis; Valkyrie, Indianapolis, beat Major, South Dakota; Van Ollie, Indianapolis, beat Charming May, Fox Lake, Wis.; Longfellow, San Francisco, beat Nancy, Cable, Ill.; Caliph, Oakes, N. D., beat Astronomy, Indianapolis; Raven, Aberdeen, beat Recollection, Aberdeen; Lady Misterton, Oakes, N. D., beat Just Eclipsed, Indianapolis.

Second Round—Pearl beat Chartist, Valkyrie beat Longfellow, Caliph beat Van Ollie. Raven ran a bye, Lady Misterton being withdrawn lame. Further running of this stake was deferred till the 3d inst., the Derby being started in the meantime. Pearl was withdrawn and Valkyrie had a bye in consequence. Caliph beat Raven. R. H. Wood's Raven (Major Glendyne—Humming Bird) beat Dr. Q. Van Hummell's Valkyrie (Lord Neversettle—Partera).

The Aberdeen Derby had twenty-six starters, and was started on Wednesday.

Merry Maid beat Glenrosa, Gyp put out Village Girl, Banker won the course against Van Hoie. The fourth course was won by Van Cloie against Miller's Maid. In the fifth course Van Traale beat Hot Stuff, San Joaquin beat Van Brulie. Mormon Boy won over Colonel D. Lady Aberdeen lost the eighth course to Rochester. Marcello lost to Ravolt. Venture beat Wayfarer. There was no course in the eleventh race owing to a false slip, Volusia alone following the hare to a kill. In the twelfth course Minneapolis beat Master Dennis. The last course of the day was won by Van Bree against Oakes.

On Thursday the running was resumed as follows: Merry Maid against Gyp, in which Merry Maid proved the fleeter and won easily. The next should have been between Banker and Van Cloie, but the former was drawn and the latter ran a bye. Van Traale lost to San Joaquin in the third, Rochester to Mormon Boy in the fourth, Ravolt put out Venture in the fifth, and Minneapolis won against Volusia in the sixth. Oakes ran a bye for the seventh. In the third series Merry Maid put out Van Cloie in the first course, San Joaquin was too much for Mormon Boy in the second, and in the third Ravolt lost to Oakes. Minneapolis ran a bye with Minnehaha.

On the fourth day Merry Maid beat San Joaquin, and Minneapolis beat Oakes. The owners of the two dogs left in divided first money. Merry Maid is by Miller's Rob—Ramona, and N. P. Whiting's Minneapolis is by Glenkirk—Innocence.

Yachting.

THE *Marine Journal* makes a plea for the indicted officers of the iron steamer Perseus, on the general grounds that "they are experts in the business of keeping out of the way of vessels under sail, and * * * they are provided with a pilot house above everybody and everything else, with an unobstructed view, and with no duty before them but to secure safe navigation to their boat." We know nothing about this special case of the Perseus and Adelaide save the published evidence, but we have a pretty clear idea, after some years of yachting in New York Harbor, of what it is to sit in a small yacht on a still summer day, with no wind and jammed with a foul tide in the Narrows, and to listen to the monotonous thump of the paddles while we speculated whether it was the pleasure of the blue-coated demigod, safe in his "pilot house above everybody," to cut us down squarely amidships or only to stave in our side with a blow of his paddle-wheel, or to swamp us with his wash. We would like to see the editor of the *Marine Journal* in such a predicament as is but too familiar to the men who have boated about New York Bay, and have come to look upon the boats of the Iron Steamboat Co. as the worst danger they are called upon to meet. The captain of the steamer, secure in his lofty pilot house, has before him the very remote possibility of an indictment and the still more remote possibility of such just punishment as was dealt out to the drunken pilot who ran down the yacht Amelia several years since. The man in the small boat, often a skillful and experienced yachtsman, has the loss of his boat and very possibly of his life imperiled through the conduct of the pilots of these swift iron steamers.

AFTER the vast deluge of nonsense which has appeared of late in print it is refreshing to turn to the plain sensible comments of Mr. Irving Cox which we reprint this week. While we are not prepared off-hand to indorse the suggested remedy of a standard design, a similar proposition to that made by the British designers in 1892, we are heartily in accord with all that Mr. Cox says as to the cost and general uselessness of the latest yachts; and in particular we agree with him that absolute speed is not an essential factor in yacht racing. The comparison of yacht racing to an obsolete sport such as archery may strike some yachtsmen as very absurd; but it is a fact that the steam yacht on the one hand and the syndicate racing machine on the other are taking all the life out of yacht racing.

THE success of the little Ethelwynn in the trial and international races has naturally awakened a very great interest in her, and we are in receipt of inquiries from all quarters as to the availability of the model for various uses. It must be remembered that the boat was built for one special purpose—match sailing under the conditions laid down by the Seawanhaka C. Y. C., and in ordinary summer weather. Under these conditions she was allowed a little over 200sq. ft. of sail and a crew of two men, with various other limitations. Because she has succeeded in the two sets of races, beating seven other boats in all, and winning six out of the eight trial and cup races sailed, it does not follow that she would win in a class of 15ft. catboats with sandbags and a crew of four or five, or that she would make an all-around cruising and racing boat. The type is an excellent one for many localities; with half a dozen boats of this kind just as good sport may be had as with very much larger craft; in fact, in these days, when elaborate and expensive construction are so essential to speed, it is economy to have a small racing boat of the best possible construction for racing, and at the same time to keep a larger, less modern and altogether more comfortable boat for cruising.

It is only within a very short time that American yachtsmen have begun to appreciate the principle on which the one-raters and half-raters are based, a principle diametrically opposite to that heretofore existing in American yachting.

Under the old-time rules of waterline length, mean length and cubic contents, the only thing to do with a yacht of a given length was to crowd on all the sail she could be made to carry; and this idea has prevailed in a modified form through a dozen years' practice under the Seawanhaka rule, of length and sail area combined. In accordance with it the yacht or boat that carried the largest sail plan has been considered the best in every way, even though no faster than others with smaller rig.

The principle on which the small raters are designed is very different; it is left to the designer in the beginning to select the best possible proportions of waterline length and sail area within a certain fixed limit of measurement, and the success of the boat depends primarily on the skill with which this selection is made. The history of designing in Great Britain within the last eight years shows many examples of yachts in which the actual model is perfect, but the size is too great for the sail plan allowed within the limit of the class.

This idea of a moderate and careful use of several factors rather than the excessive use of one is now gaining ground in America, and as it becomes better understood we look for a material improvement in yacht models; the resulting craft being of superior form and less power, with a more moderate sail plan.

The Adelaide—Perseus Collision.

ON Sept. 30 indictments for manslaughter were found against Capt. Wm. H. Hulse and Pilot James Allen, of the Iron Steamboat Co.'s steamer Perseus, for causing by negligence the death of Robert W. Inman in the collision with the yacht Adelaide on Aug. 26. Both pleaded not guilty and were placed under $5,000 bail for trial on Nov. 18

Yacht Building at Nyack.

MESSRS. CHARLES L. SEABURY & Co., Nyack, N. Y., have just entered into a contract with a New York yachtsman to build him a cruising steam yacht of 135ft. over all, (about) 110ft. l.w.l., 16ft. beam, 9ft. 6in. depth and 7ft. draft. The hull will be composite built, frames of angle steel, keelsons, breast hooks, diagonal straps and fore and aft plates of steel. The planking will be of Tobin bronze through bolts. There will be four steel bulkheads. The rudder will be of bronze with steel shank properly protected from salt water. The deck will be of clear white pine fastened with lag screws from under side of deck timbers.

There will be a mahogany deck house on forward deck, the lower part panelled and upper part fitted with heavy plate glass windows to slide up and down. In the after part will be a buffet, with mirror in center, arranged for glassware, dishes, etc. Aft of dining room and buffet and connected with the house will be arranged a stateroom finished in mahogany, to be fitted with a wide berth with drawers underneath, dressing case with mirror, drawers, etc, and folding washstand. A bridge for steering from will be arranged on top of deck house.

Directly aft of the chain locker and store room will be the crew's toilet room, fitted with marine water closet and stationary wash bowl. Aft of toilet room will be fitted berths and lockers for the crew. This room will also be used as a messroom for the crew, fitted with a folding table for same. Next aft will be arranged two staterooms, one for the captain and one for the engineer. These will be fitted with a wide berth in each with drawers underneath, also small dressing case. All these rooms to be thoroughly ventilated by port lights. Aft of these staterooms will be the galley of the full width of the vessel, fitted with large ice box, dresser, dish rack, locker for coal, sink and pump. A large skylight will be fitted over after part of same for ventilation and light, also port lights on either side. The finish of this room and the other rooms forward will be in butternut, natural color. Abaft the galley will be the engine and boiler room.

Directly abaft the boiler space will be the owner's stateroom, 6ft. 6in. long, to extend full width of vessel, with exception of toilet room, which will be fitted on one side, the room to be finished in mahogany, with a wide berth suitable for two, with drawers underneath, large dressing case with mirror, fitted with drawers and rail around top. A skylight will be arranged over this room for light and ventilation, and there will also be two port lights. The toilet room connecting will be finished in mahogany, fitted with a marine water closet, large bath tub and set basin, all properly plumbed, for hot and cold water, also for sea water connection for bath tub and pipe to heat same.

Abaft the owner's stateroom will be arranged the main saloon, finished in mahogany, paneled on sides and ceiling. Transoms arranged on each side of suitable width to sleep on, and mahogany center table. The entrance will be through a wide companionway leading direct from deck. The guests' staterooms aft of saloon will be three in number, finished in butternut and mahogany. There will be a berth in each room with drawers underneath, also dressing case with mirror. Doors will be arranged to slide and swing.

Abaft the saloon on port side will be a toilet room fitted with water closet, stationary wash-basin, etc., finished in butternut and mahogany; and abaft the toilet room comes the lazaret.

The machinery will consist of a Seabury design triple expansion engine of latest type, and Seabury patent safety water tube boiler with all fittings, etc., required by law. The speed is guaranteed to be 16 miles per hour for three consecutive hours over measured course. The yacht will be flush deck, schooner rigged. She will carry a launch and three other boats, and will also be equipped with electric lights and search light on bridge. The furnishings and upholstering will be of the best, and in all her appointments she will be complete in detail. She will be ready for commission May, 1896.

A large number of yachts and launches are now going out of commission at Seabury & Co.'s yards, among them the 48ft. mahogany flyers Palos, J. B. Edson; Levanter, Alfred Marshall; Imp, A. L. Barber, and So So, A. A. Stewart. There are also the yachts Charliette, W. B. Higgins; Claymore, J. Kennedy Tod; Cricket, Archibald Rogers; Delma, Lilly, and Anemone.

The yachts and launches Margaret, J. H. Rutherford; Marjencha, Dr. H. A. Mandeville; Washita, John P. Duncan; Hurrah, W. W. Hall; Espadon, F. DeCoppet; Daisy, N. C. Reynal; Vanish, J. L. Hutchinson, and others, will also lay up at Nyack when they go out of commission for the season of '95. Thomas A. McIntyre's launch Strae is now fitting out for her usual Southern cruise. J. H. Rutherford's yacht Margaret arrived at Nyack a week or so ago, and immediately fitted out for a trip to Fortress Monroe, Va.

Come to Halifax.

HALIFAX, N. S., Sept. 24.—*Editor Forest and Stream:* If there is ever another contest for the America's Cup, why not sail it at Halifax? The reasons are manifest:

1. It would be in neutral waters, and the American boat would have to make a short, but real, sea voyage to reach it, thereby putting an end to the always repeated charge that she is not fit to go beyond Long Island Sound.

2. The boats would have a magnificent course, with much stronger and truer winds than commonly prevail about New York and even Boston in summer time. In summer four days out of five the southwest wind blows hard and true. Galatea and Dauntless sailed here in 1889, and both their owners said that the course laid out for them was the finest they had ever sailed over; free from shoals and currents, and with a splendid breeze from start to finish.

3. Competing yachts would find all facilities for racing here; a capital harbor, always most easy to enter and leave, and both a dry dock and a first-class marine railway. The latter was used by both Galatea and Dauntless, and Lieut. Henn in particular expressed himself as very much pleased with the manner in which Galatea was handled.

4. As to the crowd of excursion steamers, I venture to think it would be unsignificant. There is no fleet of steamers and yachts here, as in Boston, to cause any trouble. No doubt some steamers, particularly yachts, would attend, but I do not see how it would be possible for the great fleet of excursion steamers to come. They would have to leave their regular work for a, fortnight at least, probably longer, and they would have no huge city at hand to supply excursionists. They would have to depend entirely upon what they brought with them and upon the enthusiasts who might care to come over here specially for the races.

I can say for the yacht club here that it would only be too glad to do everything in its power to render assistance and make matters pleasant.

A BLUENOSE YACHTSMAN.

Friar.

WE have already mentioned the little Dyer boat Friar, at first intended for the 15ft. class, but afterward canvased more heavily, her length over all being 20ft., l.w.l. 14ft., and beam 5ft. 6in. with 300sq. ft. of sail. On Sept. 7 she sailed in the regatta of the Pine Lake Y. C. at Nashotah, Wis., winning the Schmidt trophy. Another new Dyer boat, Avers, also owned by Mr. Robert Nunnemacher, was capsized before starting in this her first race. The times were:

	Actual.	Corrected.
Friar, Robert Nunnemacher	1 18 03	1 11 16
Novice, H. V. Lester	1 15 50	1 13 43
Nyack, H. Niedecken	1 20 15	1 15 42
Allida, A. H. Vogel, J. Barth	1 18 30	1 16 40
Henrietta, George Brumber	1 24 05	1 22 37
Edna, Wm. & H. Manegold	1 24 25	1 23 45

The first race for the new challenge trophy presented by Mr. Fred Pabst was sailed on Sept. 14, being won by 3s. by Avers, 30ft. over all, 20ft. l.w.l. and 8ft. beam, with 650sq. ft. of sail, the little Friar being second and another Dyer boat, Argo, third.

	Start.	Finish.	Actual.	Time Allowed.	Corrected.
Avers	2 16 25	3 07 16	0 50 51	0 00 15	0 50 36
Friar	2 18 15	3 17 05	0 58 50	0 08 11	0 50 39
Argo	2 16 20	3 09 21	0 52 10	0 02 19	0 50 42
Novice	2 16 20	3 15 46	0 59 26	0 02 07	0 57 19
Allida	2 19 50	3 22 46	1 03 16	0 02 19	1 00 57
Edna	2 19 02	3 23 26	1 04 24	0 00 20	1 04 04
Martha	2 17 02	3 24 09	1 07 07	0 02 31	1 06 36
Okauchee	2 17 40	3 26 14	1 08 34	0 08 11	1 04 37
Marvel	2 18 35	3 25 22	1 06 47	0 02 01	1 04 46
Henrietta	2 20 00	3 26 19	1 06 19	0 01 28	1 04 51

Nyack capsized and Emma withdrew. The race was sailed in a S.E. wind of 18 miles per hour, the first three boats beating the club record by 8 minutes.

Capt. Barr and Niagara.

CAPT. JOHN BARR reached New York on Oct. 5 on the Anchor liner City of Rome from Glasgow after a very successful season as skipper of Mr. Howard Gould's 20-rater Niagara. For 52 starts Niagara won 31 first, 8 second and one third prize. She is now laid up in Fay's yard, Southampton, and will be raced again next season.

The FOREST AND STREAM *is put to press each week on Tuesday Correspondence intended for publication should reach us at the latest by Monday, and as much earlier as practicable.*

The Seawanhaka Corinthian International Challenge Cup.

If we may judge from the many letters received by us within the past two weeks, and from the attention paid to the racing by the press throughout the country, the new 15ft. class is likely to be very generally adopted in this country next year, with plenty of good racing. Mr. Brand has announced his intention of challenging again next year for the Seawanhaka Cup, but he has been forestalled by the following challenge, referred to in our story of last week:

MONTREAL, Sept 28, 1895.

To the Secretary of the Seawanhaka Corinthian Yacht Club, Leonard street, New York:

DEAR SIR: Following on my telegram of this day's date, I now beg to officially challenge in the name of Mr. G. H Duggan, through the Royal St Lawrence Yacht Club, of Montreal, Canada, of which he is a member in good standing, for the Seawanhaka Cup, with a boat of 15ft., corrected length, to be met by a boat not exceeding this size. Races to be sailed not earlier than July 1, 1896, under the same general conditions governing the late contest with the Spruce IV. As the boat is not yet built it would be in the interest of a good contest to send our best representative boat. We would prefer not naming her until a later date. We can, however, assure you that the boat will be of British design, build and manufacture.

Hoping for an early and favorable consideration of the above, believe me, sincerely yours. JAMES G. MONK.

The following reply was sent:

OFFICE OF THE SECRETARY, 48 WALL STREET,
NEW YORK, Oct. 1, 1895.

To the Royal St. Lawrence Y. C., James G. Monk, Esq., Secretary, Montreal

DEAR SIR: I have the honor to acknowledge the receipt of your letter of Sept 28 inclosing the challenge of G. H Duggan, Esq., for the Seawanhaka Corinthian Y. C.'s international challenge cup for half-raters, which I shall take great pleasure in presenting to the club at its next meeting, which will be held on the second Tuesday in November. Should you deem this too great a delay and so advise the club, we will consider what can be done to expedite matters, but there seems to me to be an abundance of time for construction and arrangements. Believe me, respectfully yours, HENRY W. HAYDEN, Sec'y.

Mr. G Herrick Duggan, of the Royal St. Lawrence Y. C., of Montreal, is an old canoeist and yachtsman, a mechanical engineer at the head of the Dominion Bridge Co., and a skillful yacht sailor. All of his yachts have been designed and constructed directly under his personal supervision, the designs of several having appeared in the FOREST AND STREAM It is probable that in the event of the challenge being accepted, as is now likely, the challenging boat will be selected by trial races for which Mr. Duggan and others will build. How this new challenge will work in with Mr. Brand's plans remains to be seen. The Montreal yachtsmen have had a 16ft. and 18ft. class for several years, but of late the question of establishing a 15ft. class with a view to international challenge has been discussed, with this practical result The members of the club are well up in the handling of these small craft.

The Seawanhaka Corinthian Y. C. will shortly draw up a permanent set of conditions to govern all future races and to be binding on all future holders of the cup, following in general the special agreement signed by Messrs. Brand and Field prior to the recent races.

AGREEMENT COVERING THE TERMS OF THE MATCH FOR THE SEAWANHAKA INTERNATIONAL CHALLENGE CUP FOR SMALL YACHTS, TO BE SAILED AT OYSTER BAY.

1. The dates for the races are hereby fixed for Saturday, Sept. 21; Monday, Sept 23; Tuesday, Sept. 24; Wednesday, Sept. 25, and Thursday, Sept 26. 1895.

2. The general conditions governing the challenge cup and the general regulations for the control of the match, as set forth in the correspondence between J Arthur Brand, Esq., and the Minima Y C. on the one hand, and the race committee of the Seawanhaka Corinthian Y C. on the other, which conditions and regulations, as finally amended, are fully set forth in Race Programme No. 6, issued by the race committee, are hereby accepted.

3. The number of races shall be limited to five, and the match shall be awarded to the yacht winning three races

4. The course for the first race shall be to windward or to leeward and return, for the second race triangular, for the third race to windward or leeward and return, for the fourth race triangular, for the fifth race to windward or leeward and return, or triangular, to be determined by the contestants by lot at the end of the fourth race.

5. The courses shall be as follows:

Course to windward or leeward and return.—From a line between Center Island Buoy and a keg buoy to and around a mark bearing a red ball, leaving it on starboard hand; distance three miles and return; course to be sailed over twice, total distance, 12 nautical miles. At the end of the first round, Center Island Buoy is to be left on the starboard hand The direction will be announced from the committee steamer before the preparatory signal.

Triangular course.—From a line between Center Island Buoy and a keg buoy anchored S.E. of the same; E. by N. ½ N., two miles to and around a mark bearing a red ball, leaving it on the port hand; N.W., two miles to and around a mark bearing a red ball, leaving it on the port hand; S by W. ½ W., two miles to the finish between Center Island Buoy and the keg anchored N W of the same. Course to be sailed over twice; total distance, 12 nautical miles. On the second round yachts will leave Center Island Buoy on the port hand.

NOTE.—The race committee may in their discretion direct the course to be sailed in the reverse direction, leaving buoys and marks on the starboard hand; and the signal for such reversal of course will be the anchoring of the keg buoy at the start to the N W of Center Island Buoy. In this case the keg buoy will be anchored S E. of Center Island Buoy at the finish.

6. In the event of heavy weather, the race committee may, in their discretion, direct any one of the races to be sailed within the waters of Oyster Bay, including Cold Spring Harbor and Oyster Bay Harbor; and in that event a course will be laid out conforming as nearly as practicable in length and character to the regular course for the day; that is to say, if the regular course for the day was to have been to windward or leeward, the inside course will be laid out as nearly as practicable to windward or leeward; and if the regular course was to have been triangular, the inside course will be made as nearly as practicable triangular.

7. Start and signals.—The start will be a one-gun fiving start with a preparatory signal, and will be made as nearly as practicable at 12 o'clock noon, across a line between Center Island Buoy and a keg buoy. In the event of a postponement from this hour a preliminary signal, a whistle of 15s duration with the hoisting of the letter B of the signal code, from the fore gaff of the committee steamer, will be given

There will be an interval of 10m. between the first (preliminary) and second (preparatory) signals.

Second signal—preparatory.—Whistle 15s. long. The club burgee on the committee steamer will be lowered and the blue peter hoisted.

There will be an interval of 5m between the second and third signals.

Third signal—start.—Whistle 15s long. The blue peter will be lowered and a red ball hoisted.

8. If any race is not concluded within five hours after the starting signal has been given, it shall be postponed to the next succeeding day (excluding Sunday), and any race not finished by 6 o'clock P. M. shall be resailed

9 In the event of heavy weather occurring on any day, the race committee shall, at the request of both contestants, postpone the race set for that day to the next succeeding day (excluding Sunday); but if in the opinion of the committee and either of the contestants the weather is not too heavy, the race shall be started. In the event of foggy calm, the committee shall have power to postpone the start, provided, however, that no race shall be started later than 2 o'clock in the afternoon, except with the consent of the contestants, in which case the race shall be concluded by 6 P M. In case of fog during the race, the committee steamer will blow three short blasts of the whistle at intervals of 30s.

The recall signal shall be several short blasts of the whistle followed by the display of the Union jack for the recall of the challenger and of the American ensign for the recall of the defender.

10. In the event of its becoming necessary to postpone or resail any race, such race shall be set for the next succeeding day (excluding Sunday); provided, however, that in case either of the contesting yachts is injured or disabled a sufficient time to complete repairs shall be allowed The judgment of the race committee as to what constitutes "sufficient time" shall be final.

11. Except in case of conflict with the provisions of this agreement, or with the conditions and regulations therein referred to, the match shall be governed by the racing rules of the Seawanhaka Corinthian Y. C.

Dated Oyster Bay, Sept. 20, 1895.

(Signed) J. ARTHUR BRAND, owner of Spruce IV.
C J FIELD, owner of Ethelwynn.
CHAS. A. SHERMAN,
for the Race Committee.

The general conditions governing the cup, as set forth in race programme No. 6, are as follows:

1. The cup shall be a perpetual international challenge cup The Seawanhaka Corinthian Y. C. shall have the custody of the cup in the first instance, and every challenge shall be through some recognized yacht club of a foreign country, and the cup when won shall be delivered to and held by the club through which the challenge was made.

CHART OF COURSES FOR SEAWANHAKA INTERNATIONAL CHALLENGE CUP, OFF OYSTER BAY, LONG ISLAND.

2. A challenging yacht shall be met by only one competitor.

3. The races shall not be less than three nor more than five in number, the cup to be taken by the winner of the majority.

4 The American courses, while the cup remains in the custody of the Seawanhaka Corinthian Y C., shall be on the waters of Long Island Sound in the vicinity of Oyster Bay or in the bay itself. They shall consist of a triangular course and a course to windward or leeward and return. For the 15ft. class each leg of the triangular course shall be two nautical miles in length and shall be sailed over twice, making a total of 12 miles. The course to windward or leeward and return shall be three nautical miles to each leg and shall be sailed over twice, making a total of 12 miles.

5. The start shall be a one-gun flying start.

6. The races shall be sailed without time allowance.

7. The challenge cup is offered this year for yachts of not exceeding 15ft. racing length (S. C. Y. C. measurement).

The formula for determining racing length under the S. C. Y. C. rules is as follows: Load waterline plus the square root of the sail area divided by 2 equals the racing length.

8. In the 15ft. class yachts shall be measured without crew on board, but instead thereof a weight of 300lbs. shall be carried amidships during measurement to represent the crew.

9. All ballast shall be fixed. (Weighted centerboards shall be considered fixed ballast.)

10 No outrigger or other outboard device for carrying live ballast to windward shall be allowed.

11. In determining sail area a system of measurement shall be employed which will give, as nearly as possible, the actual number of square feet thereof. Sails shall be limited to mainsail, jibs and spinaker. The combined area of mainsail and of the jib used in windward work shall constitute the factor of sail area in determining racing length. The area of spinaker and balloon jib shall each be limited to four-tenths of the total area of the mainsail and jib used in windward work.

12. The helmsman shall be an amateur, and the total number of persons on board shall be limited to two.

13. Future competitions for the cup shall be limited to yachts of classes from 15ft. to 25ft. racing length, both inclusive.
